The interchange platform, provided jointly by the Hydro Electric Power Commission of Ontario's Railways Department and the Toronto Transportation Commission, was built by Toronto Transportation Commission forces, and the umbrella shelter, also provided jointly, was built by the Metallic Roofing Co., Toronto. The contractors for the station, and car barn, repair shop and freight house building, were Sullivan & Fried, Toronto. The buildings were designed by J. C. Crumm, Designing Engineer, Railways Department, Hydro Electric Power Commission of Ontario. Construction was in charge of T. U. Fairlie, Engineer, Railways Department, H.E.P.C., and the design and construction were carried on under the supervision of F. A. Gaby, Chief Engineer, H.E.P.C. Construction was begun about Nov. 1, 1922; all track-age and overhead work were completed Jan. 15, 1923, and the station and car barn and freight shed building were completed and placed in operation March 15.

The new facilities will serve the Hydro Electric Railways' Toronto and York District, Metropolitan Division, including the branch line from Aurora to Schomberg, formerly the Schomberg & Aurora Ry.

Street Car Traffic Conditions in Montreal.

Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., is reported to have said, in a recent interview:—"At two points the limit of density has practically been reached, so that it would not be possible to add additional cars during the rush hour. These points are Bleury St. and St. James St. from Place d'Armes to McGill St. The matter is receiving earnest study by the company and the commission. During the rush hour period we are operating 760 cars, a greater number than ever before. The week-day average of revenue passengers carried numbers approximately 600,000, with an additional 200,000 carried on transfers. Yet, despite that large number, the average number of passengers carried per mile is only 8.5, so that there are periods when travel is very light. Our car mileage is greater than ever before.

"One of the causes of trouble arises from the fact that the winter peak load is carried in a briefer period, between 5.30 and 6.30 p.m. In the summer the load is carried over a longer period, beginning at 4 p.m. As a matter of fact, there are no complaints in the summer, it is only in winter that complaints of overcrowding and delays occur. There are several causes for this. The effort to carry the people by putting more cars

in operation causes density of traffic. Take, for instance, the corner of Bleury and St. Catherine Streets, where a car moves in each direction every 15 seconds. In addition to that, there is considerable vehicular traffic, and motors get in between cars, further adding to the rush hour congestion. I think it would be a good plan to direct the vehicular traffic through other channels during the rush hour period. If this were done, it would greatly facilitate the movement of trams across this intersection. Similarly, if vehicular traffic could be diverted from McGill St., intersection trams could be moved across there more expeditiously. For instance, instead of stopping the westbound trams opposite the Bank of Nova Scotia, they could be shot across to the square and this would permit the trams turning at McGill to swing out of the way. As it is now, there are

service, and he was asked if that had received any consideration. He replied: "Buses could be used as auxiliaries and as feeders. Conditions in Montreal are against autobuses. In summer on asphalt roads they are all right, but in the winter they would be severely handicapped. Even in a good limousine, with nice springs, travel on winter roads is none too pleasant. In a motor 'bus with solid tires and chains, the experience would be most unpleasant.

"Costs now are more than double what they were previous to the war. This is due to the great increases in wages and in the costs of materials. It is true that fares have been increased 50%, but it requires the exercise of great care to prevent the expenses from rising too high and crossing the border of revenue."

Windsor, Essex and Lake Shore Rapid Ry. Organization Changes.

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., who has desired for some time to give up the General Managership, resigned it Oct. 31, 1922, but it was only accepted recently. He remains a director, and as Vice President, and will go into business in Windsor, Ont., in the near future to handle financial investments, real estate, insurance, valuations and adjustment of insurance claims.

T. P. Pinckard, President, has assumed executive charge of the company's affairs, with office at Windsor. He is Manager of the Dominion Traction & Lighting Co., which is a holding company for the Windsor, Essex & Lake Shore Rapid Ry. Co., and the Windsor Gas Co. He has announced the following organization, with offices at Kingsville:—

C. P. Cooper, heretofore Superintendent, to be General Superintendent, in charge of all departments, and reporting to President.

E. S. Hughes, heretofore Traffic Manager, to be Assistant General Superintendent, respecting all employes and departments, also Traffic Manager.

H. F. Macdonald, Auditor, continues in that position.

George C. Graham, heretofore Superintendent of Shops and Rolling Equipment, to be Superintendent of Power and Equipment, in charge of power house, shops and rolling stock.

C. G. Loop, heretofore Roadmaster, to be Superintendent of Way and Structures, in charge of tracks, roadway, overhead lines and gravel pit.

Fort William Municipal Railway Matters.—A. B. Ingram, Vice Chairman, Ontario Railway and Municipal Board, visited Fort William recently, and met the acting mayor, the city's public utilities committee, and some city officials, in connection with matters relating to the municipal railway. The city agreed to replace a Y, which had been complained of, by a loop, as soon as weather will permit. On Dec. 29, 1922, the Board approved of 5 one-man cars, and on Jan. 15, of 4 more, for operation on the railway, but there was some delay in issuing an order, on account of the law stamps required. This was adjusted satisfactorily. The Chippawa Park extension, and rates of fares charged, were discussed, but are still in a somewhat unsettled state. Delay in furnishing the Board with an annual report, and a report in regard to accidents, was discussed and adjusted satisfactorily.

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council: Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee: The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

times when the street is lined with trams back to the square. I think it would be possible to find another passageway for the vehicles and motors during the rush hours, so as to relieve the congestion at McGill St.

"It is noticeable that there has been a decided increase in the use of motor cars during the winter. These automobiles naturally take to the streets in which the trams run, because there the streets are better kept and it is easier to travel, but that practice also adds to the delays.

"In addition to increased car mileage, there are now more large cars in use, and also an increase in the number of cars with trailers."

It was pointed out to Lt.-Col. Hutcheson that the agreement between the city and the company gives the latter the privilege of operating an autobus

Winnipeg Electric Railway Franchise, Finances, Etc.

After negotiations for a year the Winnipeg Electric Ry. Co. has withdrawn temporarily its request to the city council for an extension of its franchise. The city has the option of buying the street railway property in 1927. If it does not then buy, the franchise will be automatically extended for a recurring period of five years. Negotiations, looking to an agreement deferring the period at which the city could take over the railway property for 10 years, to 1937, were undertaken by the company, in order to enable it to do financing which would mean an extension of Winnipeg's transportation system on a large scale. A. W. McLimont, Vice President, who conducted the negotiations with the council, submitted plans for a transportation system that would keep abreast of the requirements of the city, which were incorporated in a draft agreement reached between the company and the city, and which was referred to in previous issues of Canadian Railway and Marine World. Amongst the concessions which Mr. McLimont agreed to, in consideration for the extension, was a schedule of lower fares; payment by the company of a share in the cost of building bridges and subways; placing wires underground in the business section; adjustment of franchises in municipalities outside the city limits, and a number of important extensions to track.

While this agreement met with the favor of the majority of the city council, the labor group raised strenuous objections to the franchise question being dealt with at any time prior to 1927. This opposition protracted the negotiations, and in his letter to the council suspending negotiations temporarily, Mr. McLimont said: "The bankers take the position that the very determined and continuous opposition to the franchise negotiations by certain members of the council, and from influential quarters elsewhere, is very detrimental to the company's financial standing and credit, and on account of the long delay that has taken place in negotiations, the uncertainty as to when the matter will be ended and what the final outcome will be, and the general conditions now prevailing in Winnipeg, the bankers seem very reluctant to consider any arrangement which would require them to provide for the large financial obligations involved, and which would be necessary to carry out the programme outlined in the draft agreement now before council, and advise us to suspend negotiations temporarily. Another matter strongly influencing the bankers is the financial showing made by the company's railway department for 1922, which was very disappointing. Conditions are not improving up to date this year, and it would be impossible, in the face of these conditions, to justify putting into effect the fares proposed in the agreement. Under all these circumstances we feel that the only proper action to take is to suspend negotiations for the time being. After considering all phases of the situation, the bankers intimate to me that they were prepared to consider providing us with sufficient money to meet our immediate and pressing obligations, and we now have negotiations pending with that end in view. When these are concluded we expect to take up the matter of our indebtedness to the city. Permit me to express the hope that the policy of negotiation and conciliation agreed to between

the company and the city, in the late Mayor Parnell's time, may be continued, and that any question that arises between the parties should, if possible, be settled in that way. I shall be glad to meet the city council at all times, in a spirit of co-operation, and in an endeavor to meet all questions arising, fairly and properly."

The company has effected new financial arrangements and a special general meeting of shareholders was held on March 19, to pass a bylaw authorizing a total issue of \$5,000,000 of 20-year 6% general mortgage and collateral trust gold bonds, of which there are to be presently issued \$3,250,000. This amount will be disposed of in retiring current indebtedness for capital expenditures, and for general corporate purposes, and will place the company in a splendid liquid position, with its interest charges less than they are now.

In 1921 the company found it necessary to provide additional electric energy to meet its growing demands and organized the Manitoba Power Co., to produce the required additional power. The Winnipeg Electric Railway owns a majority of the subsidiary power company's capital stock. This modern hydro electric plant placed its first unit in operation in Dec., 1922, and the second one at the end of Feb., 1923. These two units will furnish the company, under the full operating head of 56 ft. a total of 56,000 h.p. additional, being two units of 28,000 h.p. rated capacity. The plant is designed with an ultimate capacity of 168,000 h.p., thus assuring to the company a substantial amount of power for its present and future needs. The W. E. R. Co. is to be the distributor of this big power load, and in order to do so considerable money will have to be expended to instal plant, machinery and appliances for the distribution thereof.

In 1922 the company had 18,673 electric meters in service, with a connected load, as of Dec. 31, 1922, of 106,427 h.p., compared with 88,304 h.p. at Dec. 31, 1921. During 1922 the electric department's total sales were 86,389,905 k.w. hours, an increase of about 24% over 1921.

The city council's finance committee, on March 2, instructed the tax collector that the company must pay its outstanding taxes, some \$1,000,000, on the same basis as any other ratepayer.

London and Port Stanley Railway Results.

A London, Ont., press report says that the London Railway Commission, operating the London & Port Stanley Ry., has issued its report for the calendar year 1922, containing the following figures: Passenger earnings, \$277,100.93; freight earnings, \$206,032.11; miscellaneous earnings, \$13,638.57; Port Stanley park, \$67,710.29; total gross earnings, \$564,481.90. The operating expenses, including the Port Stanley park enterprises, were \$440,081.17, in addition to which the Commission paid rentals of line, \$20,000; sinking fund, \$29,537.50; interest, \$82,594.96; taxes, \$10,496.31, making a total expenditure of \$582,709.94, and leaving a deficit of \$18,228.04, which, deducted from previous surpluses, leaves a balance of \$189,545.33 in surplus account. There was a decrease of 29,506 in the number of passengers carried, and a decrease of 131,363 tons of coal,

coke and steel carried, due to the coal strike in the United States. Operating expenses were reduced \$31,815.53. Interest and sinking fund charges were increased owing to a new debenture issue of \$257,500.

Toronto Transportation Commission's Activities.

The Commission has given a contract for the coal and ash handling plant at new shops at Bathurst St. and Davenport Road, to McNiven Bros. Co., Toronto.

At March 17, the Commission had received 50 motor cars ordered from Canadian Car & Foundry Co., and all of the trailer cars ordered except 17, which were expected before the end of the month. The Ottawa Car Manufacturing Co. will commence delivery of the 50 motor cars ordered from it, early in April. The motor and trailer cars are described and illustrated elsewhere in this issue.

The Commission has given orders recently for: 290 gross tons 85 lb. C.P.R. section T rails, and 550 pairs angle bars, from Algoma Steel Corporation; 10 tons 91-lb. girder rails, from U.S. Steel Products Co., and 3 tons standard track spikes from Steel Co. of Canada. The T rail will be used for track construction in the Hillcrest and other yards, and the girder rail for pit tracks in the new shops at Bathurst St. and Davenport Road.

The Commission will, about April 15, commence the installation of the largest street railway intersection in its system, at the intersection of Queen St., Roncesvalles Ave., King St. and the line to the west along the Lake Shore Road. It is being fabricated by Canadian Steel Foundries, Montreal, and will contain considerably more steel than the grand union installation at the intersection of Bloor and Bathurst Sts., which was described and illustrated in Canadian Railway and Marine World for Sept., 1922, pg. 475.

The Commission has asked the city council for an appropriation of about \$7,500,000 for this year. Of this, about \$2,500,000 is for expenditure on the portion of the Toronto Suburban Ry. within the city limits, the proposed acquisition and rehabilitation of which is looked forward to by residents of the western part of the city as a long forward step in the solution of their present transportation difficulties. Action on the request has been held up for some time, but now that the city's tax rate has been struck, it is expected that the Commission's requirements will receive consideration in the immediate future.

J. B. Carswell, Consulting Engineer of Structures for the Commission, who has been in charge of a large amount of work during the rehabilitation period, has resigned to devote his whole time to the Carswell Construction Co., of which he is President. Major W. E. P. Duncan, Engineer of Structures, continues as head of the Building Department, as heretofore. The maintenance of the Commission's buildings has been transferred to the Building Department, under Major Duncan, thus grouping all that class of work in one department. In the old days, when it was largely a matter of routine, it was apparently found convenient by the Toronto Ry. Co. to have the Building Department run as an adjunct of the Rolling Stock Department.

Included among the expenditures which the Commission propose making this year is one for a new car house at Roncesvalles Ave. and Queen St., in the western part of the city. The present house is inadequate for handling the large new cars which the Commission is operating. The Mayor and other members of the board of control visited the site recently with Commission officials, and on March 19 the city council passed a bylaw authorizing the expropriation of lands in the block bounded by Queen St., Roncesvalles Ave., Marion St. and Sunnyside Ave., and authorizing an appropriation of \$800,000 for the construction of a new car house and office building and radical revision of the yard layout. At present the entrance to the Roncesvalles car house and yard is from Roncesvalles Ave., but on completion of the new house the entrance will be from Queen St., with auxiliary entrances to a loop to be provided on Roncesvalles

Ave. The land to be expropriated includes a parcel at the southwest corner of the block, fronting on Queen St. and Sunnyside Ave., and two parcels north of the present yard. The houses on this land will be torn down as soon as required. The present car house is adjacent to Roncesvalles Ave.; when it is removed all of the frontage on Roncesvalles Ave., with the exception of 50 ft. to be kept to provide an entrance to the loop, will be sold for business purposes. The new car house will be located at about the center of the property, and will be of the same type as the Eglinton Ave. one placed in operation by the Commission recently, and described and illustrated in a preceding number of Canadian Railway and Marine World. Contracts for the removal of the houses on the property to be acquired will be awarded immediately on their acquisition, and tenders for construction of the car house and office building, will be called for.

dale. The council consented.

Winnipeg Electric Ry.—The city council's public safety committee is reported to have instructed its sub-committee on transportation to take up with the company the question of building electric railway lines on Talbot Ave., Scotia St., McGregor St. and Sargent Ave.

Proposed Purchase of Niagara, St. Catharines & Toronto Ry.

The Niagara District Hydro Electric Railway Association met at Thorold, Ont., March 12, to consider a proposal to buy the Niagara, St. Catharines & Toronto Ry. undertaking. Some time ago a conditional option to buy this line for \$3,544,374 was given to the Hydro Electric Power Commission of Ontario, and an order in council was passed by the Dominion Government authorizing the Canadian National Rys. directors to effect the sale if they saw fit to do so. The whole situation was changed recently by Sir Henry Thornton's announcement that he had appointed a committee of C.N.R. officers to investigate the whole question of electrification of lines, and by the defeat of one of the bylaws respecting the construction of a Port Credit-Hamilton-St. Catharines line under the Hydro Electric Power Commission's plans.

The Thorold meeting, by a vote of 19 to 9, passed the following resolution, moved by the Mayor of St. Catharines, and seconded by the Reeve of Niagara-on-the-Lake:—"That this gathering of representatives of the Niagara District Hydro-radial Union desires to go on record as continuing its approval of the proposal that the Niagara district municipalities should be given the power to purchase the N. St. C. & T. Ry., and recommends that the municipalities which have not yet voted be urged to do so without delay, so that the local railway service be enlarged and improved, and that long-needed and much-neglected improvements throughout the system may be carried out." An amendment, asking the Dominion Government to cancel the option, was defeated. The association appointed a committee to wait on Sir Henry Thornton, President, C.N.R., and Sir Adam Beck, Chairman H.E.P.C. of Ontario, in regard to the matter.

Montreal Accident Actions Dismissed.

Montreal Tramways Co. was defendant in four actions for damages arising out of a collision between a tramcar and an automobile at the corner of de Fleurimont and St. Hubert Streets, on the night of May 30, 1921. P. Meunier, driver of the car, claimed \$11,196, owing to his having received permanent injuries, which prevented him following his employment as a chauffeur; and the three other persons injured claimed \$500 each. After hearing all the evidence, Justice MacLennan, dismissed the cases, holding that the plaintiffs had failed to prove negligence by the motorman. The electric car was being driven at a moderate and proper speed and the customary signal was given on approaching the street corner. Meunier was driving his automobile at a dangerous and excessive speed, viz: about 40 miles an hour, and was proved to have been in an unfit condition to drive an automobile. He ran into the electric car while it was crossing the intersection; and he had attempted by bribes to induce persons who knew nothing about the accident to give evidence. The actions were all dismissed with costs.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—A press report states it is proposed to build a second track on Victoria Road, South Vancouver, from Kingsway to 46th Ave. (March, pg. 134.)

Fort William, Ont.—An unconfirmed press report states that an electric railway will be built from Duluth, Minn., to the International Bridge, and probably extended to Fort William; that a water power on the Pigeon River will be developed to provide power for its operation, and that the project will require the co-operation of the Dominion and United States Governments, as the Pigeon River is an international stream.

Fort William Municipal Ry.—The Mission extension line to Chippawa Park, Fort William, Ont., 1.4 miles, was completed during 1922, and this mileage should be added to that given in our February issue, increasing the total of new track laid in 1922 from 12.762 miles to 13.162 miles. Official advice of the completion of this work did not reach us until March 19. (June, 1922, pg. 315.)

Hamilton St. Ry.—The Hamilton, Ont., City Council's street railway committee was, a press report stated recently, considering a proposal to ask the Dominion Power & Transmission Co. to relay the tracks on Main St. East, from Ottawa St. to the junction of the new highway, with girder rails, to conform with the tracks in other parts of the city. (March, pg. 134.)

Hydro Electric Rys., Essex Division.—A press report states that the Walkerville, Ont., Town Council has approved a recommendation by A. F. McGill, Superintendent, for the construction of a Y track on Walker Road. (Dec., 1922, pg. 633.)

Kitchener-Waterloo St. Ry.—Kitchener, Ont., Light Commissioners, operating the Kitchener & Waterloo St. Ry., are reported to have practically completed negotiations with the Waterloo Town Council for a new 25 years franchise for the operation of the railway on Main St., Waterloo. The original franchise expired six years ago. It is proposed to lay a double track on Main St., between Union and William Sts., so as to give a 5-minute service to Kitchener. The new franchise proposals will, it is stated, be submitted to a vote of the ratepayers at an early date. (Feb., pg. 81.)

Montreal Tramways Co.—A joint meeting of Montreal Tramways Commission and Montreal City Council's executive committee was held March 22, to decide on improvements, extensions, etc., of the Montreal Tramways Co.'s lines. J. F. St. Cyr, President of the Commission, is reported to have stated prior to the meeting that the programme for 1922, had been practically all carried out at an expenditure of approximately \$1,500,000, and that the programme prepared for consideration for 1923 involved the expenditure of approximately \$2,000,000. The greater part of the improvement work will have to be done between April 15 and Oct. 15. Among the new lines proposed are the Mount Royal Park project, and some additional lines in Notre Dame de Grace. (Feb., pg. 81.)

New Brunswick Power Co.—A press report states that it is proposed to lay new track foundations on Dock and Mill Streets, and on Main St., from Portland St. and Douglas Ave., St. John, N.B. (March, pg. 134.)

Plaster Rock to Riley Brook, N.B.—Notice is given that application will be made to the New Brunswick Legislature to incorporate a company to build an electric railway from Plaster Rock to Riley Brook, on the Tobique River, in Victoria County. J. W. Stewart, Andover, is the promoter.

Quebec Ry., Light & Power Co.—Residents of Charlesbourg, St. Pierre, St. Joseph and Bourgoyal villages are asking the company to extend the line terminating at the Canadian National Rys. crossing, on the Charlesbourg Road, to Charlesbourg, about 1.5 miles, this year. (March, pg. 134.)

Regina Municipal Ry.—A press report states that the Regina, Sask., City Council proposes to ask the Saskatchewan Local Government Board for authority to expend \$36,500 on the improvement of the municipal railway. (Jan., pg. 36.)

Saskatoon Municipal Ry.—We are officially advised that it is intended to lay about 250 lin. ft. of new track and to install a new track intersection, in Saskatoon, Sask.

Toronto Suburban Ry.—Cooksville, Ont., Ratepayers' Association asked the Toronto Township Council recently to co-operate in an application to the Canadian National Rys. for the construction of a spur line from Cooksville to Erin-

Additional Motor and Trailer Cars for Toronto Transportation Commission.

Canadian Railway and Marine World for Sept., 1922, contained a detailed description of 50 motor cars and 100 trailers ordered by Toronto Transportation Commission from Canadian Car & Foundry Co., and 50 motor cars from Ottawa Car Manufacturing Co. Delivery of the 150 cars ordered from Canadian Car & Foundry Co. has been completed, the last of the trailers having arrived in

Length over vestibule.....	45 ft. 10 in.
Length over bumper.....	47 ft.
Width over side sill angles.....	8 ft. 4 in.
Width over lower deck eaves.....	8 ft. 6 in.
Width inside of side lining.....	8 ft. 1 1/2 in.
Width of center doors between stanchions.....	5 ft.
Width of front doors between door shafts.....	5 ft.
From top of rail to under side of sill at center sliding doors.....	9 3/4 in.
Height from rail to top of roof.....	10 ft. 8 1/2 in.
Height from rail to top of ventilator.....	10 ft. 9 1/2 in.
Center to center of trucks.....	22 ft. 6 in.
Center to center of side posts.....	2 ft. 5 in.

The motor cars are equipped with 35 h.p. motors and are not designed for hauling trailers. They are convertible into cars for one man operation, and will then be operated on the pay-as-you-leave principle, i.e., the center doors will be inoperative, and passengers will enter by the front door nearest to the car body and leave by the front door nearest the front end of the car. These motor cars

Motor Car, Toronto Transportation Commission.

Trailer Car, Toronto Transportation Commission.

March. Both the motor cars and trailers are illustrated herewith. The motor cars are some 4 ft. shorter than those in the large lot acquired by the Commission in 1921, described and illustrated in preceding numbers of Canadian Railway and Marine World. The trailers, although of the same general dimensions as those got in 1921, include a special feature in the door arrangement. The motor cars' dimensions are as follows:—

The trailers' general dimensions are as follows:—

Length over vestibule.....	48 ft.
Length over bumpers.....	49 ft. 2 in.
Width over side sill angles.....	8 ft. 2 in.
Width over lower deck eaves.....	8 ft. 4 in.
Width inside of side lining.....	8 ft. 1 1/2 in.
Width of center doors between stanchions:	
Exit doors	2 ft. 6 in.
Entrance doors	5 ft.
Height from rail to top of roof.....	10 ft. 4 1/2 in.
Height from rail to top of ventilator.....	10 ft. 4 1/2 in.
Height from top of rail to top of floor.....	2 ft. 4 in.
Center to center of trucks.....	26 ft.
Center to centre of side posts.....	2 ft. 5 in.

are now in service as 2-man cars.

The left hand central door of the three shown in the trailer illustration is always used as an exit, while that at the right is always used as an entrance. The central doors may be used as either an entrance or exit, but not as both at the same time. On the inside of the car, adjacent to the central door, is a movable bar, which is controlled by the trailer conductor without leaving his seat. In one

position of the bar, the door is an entrance door, and in the other position it is an exit door. The object of this flexibility is to have the trailer present the maximum amount of door accommodation under all traffic conditions. Experience demonstrates that it is usually the case, where there are a large number of passengers to board a car, there are not many to leave, and vice versa, so that the utility of this original central door scheme in facilitating loading and unloading is evident. The door design was originated by D. W. Harvey, Assistant Manager, Toronto Transportation Commission.

Quebec Railway, Light, Heat and Power Co's Annual Report and Meeting.

The report for the calendar year 1922, presented at the annual meeting in Montreal, March 13, shows gross operating earnings, \$2,858,606.76, an increase of \$100,770.40 over 1921; operating expenses, \$2,010,814.62, a decrease of \$63,214.39; and net operating earnings, \$847,792.14, an increase of \$163,984.79. Deducting fixed charges and tax on earnings due Quebec City, left net income of \$289,830.51, an increase of \$202,317.88. A provision of \$182,545.99 was made for depreciation, after which, and \$21,183.60 for bond discount, there was a balance of \$86,100.92, which was transferred to surplus. From the surplus of \$87,512.63 at Dec. 31, 1921, there was deducted \$10,364.34, for income tax on 1921 earnings, leaving \$77,148.29, which, added to the 1922 surplus of \$86,100.92, and the amount previously at surplus account credit, made a total of \$760,149.45 at credit of surplus at Dec. 31, 1922. From earnings, and sale of treasury bonds, \$192,083.99 was provided for construction during 1922; sundry loans and current liabilities were reduced \$333,829.25, and \$135,495.89 was added to current assets, improving the company's liquid position by \$469,325.14. The company built 1.08 track miles of extensions, including a loop at Parent Square and a curve at Crown and Joseph Sts., which enabled a material improvement of service, particularly during the exhibition and race meeting. Ten cars were bought.

President Robert is reported to have stated at the meeting that when he was asked to take over the presidency 11 months ago, he found the company's financial position to be very weak. It was impossible to do any further financing in the face of a fixed mortgage of about \$10,000,000 on the entire property, except by giving a second mortgage, which would have been disastrous. The company was in no position to meet the citizens' reasonable demands for extensions to lines and improvements in services. It was obliged to give notes for city taxes and to borrow money from a bank to pay bond interest, paying such money back gradually. If the company had plenty of money, the refunding of the Montmorency bonds would be an easy matter, but in the present circumstances it was to be expected that not more than market price—the escrow bonds now selling at about \$75—could be obtained. The situation was such that some reorganization plan had to be provided, elastic enough to permit of new financing to be done, and the company put in better shape. The proposal was the formation of two companies, one to take care of the power situation and the other of the railway and gas properties, with

the Quebec Ry., Light, Heat & Power Co. as the holding company. The stock of the two operating companies would be held in the holding company's treasury, so that there would only be one stock on the market. The directors were not prepared to go into any details of what it was proposed to do in the way of reorganization at present, but it was thought that with the separation of the companies, and a fair return upon the money invested in the railway and gas properties guaranteed by such a commission as is in existence in Montreal, there would be no difficulty in arranging finances.

The following directors were elected: E. A. Robert, President; Senator L. C. Webster, Vice President; A. C. Barker, Senator J. P. B. Casgrain, C. G. Greenshields, K.C., J. N. Greenshields, K.C., Lt.-Col. J. E. Hutcheson, Senator D. O. L'Esperance, K. B. Thornton, Hon. A. Turgeon and N. G. Valiquette. The only change in the directors was that Hon. G. E. Amyot resigned, being succeeded by Senator Casgrain. W. J. Lynch is General Manager.

Electric Railway Passenger Fares.

British Columbia Electric Ry. has filed with the Railways Department a local passenger tariff for its Saanich Division, on Vancouver Island, effective April 1. The division is divided into 9 zones, on which there are 31 stations. Sheets of tickets are issued to residents and settlers at 85c.; school children's tickets are issued in sheets of 20 at 55c.; children between 5 and 12 are carried at half fare, the minimum being 5c., but all fares must end in 0 or 5. The B.C. Minister of Railways has approved the tariff.

Calgary Municipal Ry.—We are officially advised that the reduced schedule of fares put in force recently was authorized for 60 days, to find out if the reduction would increase the number of short haul passengers in proportion to the amount of the reduction. The old rates were a cash fare of 10c., with 18 tickets for \$1, 4 for 25c. or 2 for 15c., for adults, and 32 tickets for \$1 for school children. The new schedule provided for a cash fare of 5c., with 21 tickets for \$1, or 5 for 25c., for adults, and 40 tickets for \$1 for school children. A press report stated that, up to Feb. 28, as a result of the experiment, which was started Feb. 10, not only was there no increase in the number of passengers carried, but there was an actual decrease of 37,211, the total number carried under the reduced fare being 835,789, against 873,000 for the corresponding days of Feb., 1922. During the first few days of the trial period, owing to the prevalence of cold weather, the number of passengers increased somewhat, but as soon as milder weather came it fell off heavily. A press report of March 12 stated that it had been decided to return to the former fares. We are officially advised that there was not a sufficient increase in passengers to justify a continuance of the reduced fares.

Kingston, Portsmouth & Cataraqui Electric Ry. Co.—A bill was introduced in the Ontario Legislature recently to confirm a City of Kingston, Ont., bylaw, dated Aug. 22, 1922, amending the company's franchise agreement by substituting a new fare schedule for that authorized by bylaw of May 22, 1916. The new schedule authorizes the company to charge 7c. cash between 6.30 a.m. and 10.30 p.m., and 10c. cash between 10.30

p.m. and 6.30 a.m., with 4 tickets for 25c., good between 6.30 a.m. and 10.30 p.m.; also free transfers and workmen's tickets at 6 for 25c., good between 6.30 and 7.59 a.m., and between 5 and 6.30 p.m. Tickets for children between 5 and 12 years of age are to be sold 8 for 25c. Policemen in uniform and city detectives wearing badges are to be carried free. The bill passed the private bills committee March 21.

Toronto Transportation Commission.—Toronto City Council passed a motion recently, asking the Commission to issue books of 25 tickets for \$1.50, in addition to the books of 50 now sold for \$3.

Two or three months after the Toronto Transportation Commission began operation of the street railway system, a special fare of 7 tickets for 25c. for school children was put in force. The tickets are sold in quantities to school principals, from whom they are obtained by the children. Only children under 16 years of age are entitled to this fare, and each child is liable to be called upon to exhibit to the conductor a certificate to the effect that he or she is legally enjoying the privilege of the reduced fare. Recently the Board of Education petitioned the Commission to raise the age limit from 16 to 18 years, but that was refused, it being held that 16 is a reasonable maximum age. In addition to the reduced fare for school children, the Commission has a children's fare of 10 tickets for 25c., good for children under 51 in. high, which was instituted when the Commission began operating.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.

	Jan. 1923	Jan. 1922	7 mons. to Jan. 31, 1923	7 mons. to Jan. 31, 1922
Gross	\$928,187	\$907,242	\$6,118,759	\$6,100,157
Expenses	620,856	621,472	4,278,853	4,441,005
Net	307,331	285,770	1,839,906	1,659,152

Edmonton Radial Ry.—A local press report states that the net earnings for January were \$3,678, against \$2,806 for Jan. 1922, and that the railway has set aside for reserve account from January earnings \$4,500, against \$2,645 in Jan. 1922.

Port Arthur Civic Ry.—Passenger revenue for February, \$14,038.40, against \$13,405.34 for Feb. 1922. Total revenue for 2 months ended Feb. 28, \$30,086.17, against \$28,050.34 for same period 1922. (Press report.)

Regina Municipal Ry.—The revenue for the calendar year 1922 was \$362,727.84; operating expenses, \$277,907.62; operating surplus, \$84,820.22; capital charges, \$102,367.47; deficit, \$17,547.25. There was an operating surplus in each month of the year, and a total profit in January, February, November and December. The insertion of the word "operating" twice in this information in our last issue, gave the sentence a wrong meaning. A local press report gives the following:—January passenger receipts, \$34,470; passengers carried, 561,999; February, passenger receipts, \$28,985; passengers carried, 449,146, against \$32,306 passenger receipts, 537,870 passengers carried, for January 1922, and \$31,096 passenger receipts, 499,171 passengers carried for Feb. 1922.

Surplus	71,398	82,237

Canadian Electric Railway Association's Executive Committee Meeting.

The C.E.R.A.'s executive committee met in Ottawa, March 9, the President, Major F. D. Burpee, Manager, Ottawa Electric Ry., in the chair. Considerable routine business was transacted. The President reported the appointment of special committees on accounting of maintenance and depreciation of street railway assets; on public relations; on safety, and on standards. The personnel of these committees as first constituted was given in Canadian Railway and Marine World for Oct., 1922, pg. 532, and Jan., 1923, pg. 82, since when the following additions have been made:—Standards committee: H. T. Gibbs, Canadian Westinghouse Co.; W. G. Gordon, Canadian General Electric Co.; Hugh Millar, Lyman Tube & Supply Co. Safety committee: Jas. Lightbody, Publicity Agent, British Columbia Electric Ry.

The previous decision to hold the next annual meeting in Toronto was confirmed and the views of members as to the most suitable dates have been asked, the choice appearing to be between early in June, or some time in July, this year, or early in Jan., 1924. A joint committee of officials of member companies, and of associate members, was appointed to make arrangements for exhibits of railway supplies, etc., during the meeting, as follows:—C. L. Wilson, Assistant Manager, Hydro-Electric Rys., Toronto & York Division; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Couzens, General Manager, Toronto Transportation Commission; D. W. Harvey, Assistant Manager, Toronto Transportation Commission; W. J. Radford, Assistant Manager, Toronto Suburban Ry.; D. M. Campbell, Preston, Ont.; W. G. Gordon, Traction Engineer, Canadian General Electric Co.; H. T. Gibbs, Sales Engineer, Canadian Westinghouse Co., and O. C. Rehfus, Mechanical Engineer, Canadian Steel Foundries. W. R. McRae, Superintendent of Rolling Stock and Shops, Toronto Transportation Commission, was appointed chairman of the entertainment committee, with power to select the other members. The President, Major Burpee, was authorized to arrange for papers to be read.

Winnipeg Electric Railway Co's Annual Report.

The company's report for the calendar year 1922 shows gross operating earnings, \$5,395,223.52, a decrease of \$22,800.19 from 1921; operating expenses, before charging depreciation, \$3,526,715.12, a decrease of \$32,664.88; net operating revenue, \$1,868,508.40, an increase of \$6,410.31. Adding miscellaneous income, \$121,853.66, to net operating revenue, made income available to meet fixed charges, etc., \$1,990,362.06, a decrease of \$29,688.35. From this the following deductions were made: Interest charges on debenture stock, bonds, bank loans, etc., \$643,028.15; extinguishment of discount on securities, \$16,000; city percentage and car license taxes, \$175,036.20; taxes, \$164,639.26; miscellaneous non-operating expenses, \$3,783.22; other income deductions, \$52,500.28; total, \$1,054,987.11, leaving net income, excluding depreciation, \$935,374.95. After payment of all fixed charges, and making usual provisions for depreciation, the net

income was \$734,324.95. Deducting dividends on preference stock, \$210,000, and additional allowance for depreciation, \$138,459.84, left \$385,865.11, which was transferred to surplus.

The year was marked by a continuation of the general industrial depression from 1921, with manifestations of improvement in the closing months. The result was a still further drop in number of passengers carried, and a slight decrease in gas sales. A small reduction in fares, made Aug. 1, 1921, to effect a final settlement of litigation with the city, in respect to the Public Utilities Commissioner's 1920 judgment, regarding fares, which was appealed by the city, exerted its influence throughout 1922. This reduction, together with the fewer passengers, caused a decrease of \$151,738 in railway gross earnings. Operating expenses received the benefit of decreases in wages from May 1, and the gas utility received the special advantage of lower coal costs. The advantage of reduced wages to the railway and electric utilities was not sufficient to offset expenses incurred on account of increases in service, and the necessity of using much steam generated power pending completion of the Great Falls power station.

At a shareholders' special meeting, March 19, the issue of \$5,000,000 20-year general mortgage and collateral trust 6% gold bonds was approved. Of the total issue authorized, only \$3,250,000 are being sold. The shareholders' annual meeting was called for April 2.

Electric Railway Employees' Wages, Working Conditions, Etc.

Brantford Municipal Ry.—For some time past negotiations have been going on between the Brantford, Ont., Municipal Ry. Commission and its employees for a revision of the wage schedule, but as an agreement could not be reached, the employees applied to the Department of Labor for the establishment of a board of conciliation, and named Jas. Simpson, of Toronto, as their representative. The present wage schedule went into effect June 1, 1920, the rates per hour being: First year men, 46c.; second year men, 48c.; third year men, 50c.

Calgary Municipal Ry.—The city commissioners were reported recently to be considering the wage schedules of employees of all departments, and to have met representatives of the municipal railway employees, March 6. A report was expected to be considered by the city council by March 31.

London & Port Stanley Ry.—A press report of March 20 stated that a notice has been issued, retroactive to March 16, reducing trackmen's wages from 40c. an hour, plus 10%, to 38c.

London St. Ry.—Employees are reported to be negotiating with the company for the adoption of a seniority list, whereby the senior employees will be given preference in the operation of the one-man cars. The company recently gave notice that operators of one-man cars would be paid 5c. an hour extra.

London St. Ry. Co.—A press report of March 20, stated that the street railway men's union's London, Ont. branch had given notice to its members engaged in the operation of one-man cars that should a lawsuit or manslaughter charge result from a collision with one of these cars, the operator involved need not expect any assistance from the union.

Ottawa Electric Ry.—Employees were

reported on March 15 to have decided to ask for a new wage agreement, to provide for an 8-hour day, with an increase of wages. The existing agreement, which expires April 30, was not signed until Sept. 17, 1922, and was the result of negotiations after the finding of a majority of a board of conciliation which sat in May, and recommended a reduction of approximately 12½% in wages and the continuance of the 9-hour day. Conductors' and motormen's wages under the agreement are, per hour, first year, 43c.; second year, 45c.; third year, 46c.; fourth year and afterwards, 48c. It is stated that the company is prepared to renew the present agreement for another year.

Saskatoon Municipal Ry.—Following the passing of a resolution by the city council authorizing a reduction of the wages of employees, it was reported on March 19, that the men have applied to the Labor Department for a board of conciliation.

Toronto Transportation Commission.—After negotiations, between the Commission's management and the men's representatives, the Commission has agreed to renew its agreement with its conductors and motormen for one year from March 31. The rates of wages per hour are: First 3 months, 55c.; next 9 months, 57½c.; after one year, 60c.; operators of one-man cars 5c. an hour extra. The men, in opening the negotiations, made a number of requests, the most important of which were for 2 weeks holidays annually with pay; time and a half for all work in excess of the regular day's work of 8 hours; that extra men be given a guarantee of 6 hours work, or the equivalent pay each day; seniority for shopmen, and some wage increase for certain other grades, and minor adjustments. The Commission could not see its way to grant any of these requests.

Toronto Railway Arbitration Award Appealed.

As was generally expected, both the Toronto Ry. Co. and the City of Toronto have appealed against the majority award, by Hume Cronyn, K.C., chairman, and Sir Thomas White, representing the company, of the arbitration board appointed to determine the value of the Toronto Ry. Co.'s property taken over by the city on the expiration of the franchise, Aug. 31, 1921. The city was the first to give notice of appeal. The company's notice of appeal asks that the city's appeal be set aside; that the whole matter be referred back to the arbitrators, with instructions that they include in the amount the value of the main office building at King and Church Sts., the Scarborough Beach property, and the St. Lawrence St. property, and some other items which the arbitrators rejected. The appeals were entered in both the weekly court and the Ontario Superior Court's Appellate Division, and were formally mentioned March 14. The City Solicitor is preparing particulars of the grounds upon which the city is appealing, and expects to have them ready for filing early in April.

It is reported that some conferences have been held between the company and city representatives, with a view to a payment being made on account of the award. It is stated that there is no dispute between the parties with regard to items making up about \$7,000,000, out of the \$11,188,500 awarded by the majority report.

Mainly About Electric Railway People.

Albert Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., who has resigned as General Manager, retaining the position of Vice President, was born in Bosanquet Tp., Ont., Aug. 21, 1870. He entered transportation service in 1889, and was to 1891, operator, Michigan Central Rd.; 1892 to 1900, freight and ticket clerk and operator, G. T.R., Detroit, Mich.; 1901, assistant agent, Michigan Central Rd.; 1901 to Nov., 1902, Travelling Express and Passenger Agent, Detroit United Ry.; Dec., 1902, to May, 1903, General Express Agent, Utica and Mohawk Valley Ry.; May to Nov., 1903, Division Superintendent, Detroit United Ry.; Nov., 1903, to Nov., 1907, Superintendent of Employment, Public Service Corporation of New Jersey; Nov., 1907, to May, 1910, General Express and Passenger Agent, New York State Railways, Syracuse and Utica, N.Y.; May, 1910, he was appointed General Manager, and in 1914, also Vice President, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont. He was Vice President, Canadian Electric Railway Association, 1917-1918; President, 1918-1919, and was Honorary Secretary-Treasurer, Dec. 4, 1919, to Jan. 31, 1921. He intends to go into business for himself, and will open an office in Windsor, Ont.

Mrs. Fearman, wife of Lt. Col. G. D. Fearman, Chief Accountant, Dominion Power & Transmission Co., Hamilton, Ont., died there, March 4.

George C. Graham, who has been appointed Superintendent of Power and Equipment, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., was born at Ottawa, Ont., and entered electric railway service in 1902, since when he has been, to 1908, Superintendent of Rolling Stock, International Ry., Buffalo, N.Y.; 1908 to 1911, Superintendent of Shops, United Traction Co., Albany, N.Y.; 1911 to 1914, Superintendent Shops and Equipment, Los Angeles Pacific Co., Los Angeles, Cal.; and since Sept. 1921, Superintendent Shops and Rolling Stock, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont.

R. M. Hannaford, heretofore Assistant Chief Engineer, Montreal Tramways Co., Montreal, has been appointed acting Chief Engineer, vice W. F. Graves, Chief Engineer, resigned.

J. J. McWilliam, Division Superintendent, Dundas Division, Toronto Transportation Commission, died at Toronto, March 4, after a short illness. He entered the Toronto Railway Co.'s service in 1886 as conductor, and was made inspector in 1892, car starter in 1898, and Divisional Superintendent in 1906.

H. H. Pitts, who had been a director of the Toronto Ry. Co. for several years, died suddenly in Ottawa, March 8, aged 64. He was formerly a newspaper publisher in Fredericton, and a member of the New Brunswick Legislature, but moved to Ottawa in 1901, where he became President of the People's Gas Co., manufacturers of acetylene gas generators, etc. He was buried at Fredericton.

Paul Seurot, Chief Engineer, Montreal Tramways Commission, addressed the Engineering Institute of Canada's Montreal Branch, recently, in French, on "Causerie sur l'exploitation des tramways de Montreal."

W. Y. Soper, Vice President, Ottawa Electric Ry., is spending some time in North Carolina.

G. L. Snelling, Secretary-Treasurer, Ottawa Electric Ry., and Mrs. Snelling, left Ottawa, March 6, to spend some time in Cuba.

Electric Railway Notes.

The New Brunswick Power Co. is considering purchasing 10 Birney safety cars.

The Cape Breton Electric Co. is considering buying 8 one-man Birney type safety cars, and 2 snow sweepers.

The New Brunswick Power Co. has ordered 125 tons of rails, from the United States Steel Products Co.

Calgary, Alta., City Council is reported to have authorized the purchase of 80 car wheels for the municipal railway.

Kingston, Portsmouth & Cataract Electric Ry. is, we are officially advised, in the market for 1,300 ft. of 90 lb. rails, A.S.C.E. section. H. C. Nickle is General Superintendent, Kingston, Ont.

Woodstock, Ont., City Council called upon the Woodstock, Thames Valley & Ingersoll Electric Ry. recently to provide sleighs, wagons or other conveyances for public use, in case its cars were unable to run owing to snow, in accordance with the franchise.

Port Arthur Public Utilities Commission has, it is reported, decided to provide each conductor on the civic railway with \$30 for use in making change, for which notes are to be given by the conductors. Heretofore conductors have had to provide their own funds for change.

The Winnipeg Electric Ry. Co., a press report states, spent \$17,200 for snow removal for the three months ended Feb. 28, against \$6,100 for the corresponding three months of 1921-22. The heaviest snowfall occurred March 8 and 9, and it is expected that the total cost of snow removal for this winter will be about \$25,000.

The Calgary, Alta., Municipal Ry. department is reported to have paid \$9,800 in sick benefits to employees during 1922. The city commissioners have under consideration proposals for the examination of all men taken on in future, as to their physical condition, with a view of reducing the claims for sick benefits.

Two of the one-man cars operated on the Hydro Electric Railways, Essex Division, in Windsor, Ont., took fire within 10 minutes of each other while in service on March 11. One of the operators was burned rather seriously about the hands and arms. A press report states that an investigation made by the chief of the fire brigade showed that the fires were due to short-circuiting.

The Hydro Electric Rys., Essex Division, is reported to have bought a larger freight car than that used heretofore to transport beer from breweries in Windsor and Walkerville, Ont., to the Detroit River shore, whence it is exported to the United States. It is stated that the beer car is in service 16 hours a day; that approximately 10,000 cases of beer are carried daily, and that the receipts from the traffic are sufficient to pay the cost of depreciation on the entire system.

A bill was introduced in the Nova Scotia Legislature recently to change the rule of the road in the province, to conform with the rest of the Dominion, the change to take effect April 2. An act was passed for this purpose in 1922, the change to be made at the beginning of 1923, but it was found that some technical matters had not been attended to, and the N.S. Government asked the Dominion Government to disallow the act, which was done. It was reported

that the N.S. Tramways & Power Co. would ask for the fixing of a later day for the coming in force of the new rule, in order that it might have time to change its cars, crossovers, etc.

The body of the Brantford & Hamilton Electric Ry.'s car 210 was totally destroyed by fire on March 13, the circumstances being somewhat unusual. The car was entering the switch at Cainsville, Ont., at about 9 p.m., when the trolley wire, which had been pulled loose from the hanger by a preceding car, struck the stove pipe in the car, and grounded through the car, setting it on fire. Ordinarily, the car would have broken the contact, and the fire would not have occurred, but for some reason the motors were short circuited by the contact, and the car burned where it stood. There were but a few passengers and no one was injured.

D. W. Houston, Superintendent, Regina, Sask., Municipal Ry., addressed the Northside Ratepayers' Association there recently on operating expenses. He stated that the total expenditure on the railway for 1922 was \$277,907.62, which included the converting two-man cars into one-man cars at a cost of over \$1,000 a car. This, together with other special expenditures, will not have to be met this year, which will better the situation somewhat, but still the general costs of operation, especially the provision of power, will continue to be somewhat high. The surplus for 1922, after meeting operating charges, was \$84,820, and the deficit was caused by interest charges on debentures. A number of questions were asked by ratepayers, which resulted in some interesting information being given. The present cost of power is 1.3 cents a kilowatt hour; car heating costs \$4,000; car tickets and transfers cost \$3,582; revenue from advertisements in cars and on car tickets brought in \$4,274.35; injuries and damages cost \$4,994; office maintenance cost \$10,000; cars last from 10 to 15 years; and those now in service are about 10 years old. (From press report.)

FOR SALE Construction Plant

The Commission offers for sale the following Construction Equipment. Sealed tenders, addressed to the Chairman, endorsed "Tender for Construction Equipment," will be received at the offices of the Commission, Public Utilities Building, until noon of April 16th. Tenders to be based on acceptance of plant as and where located.

- 1 Thew Revolving Shovel, 1 1/4-cubic-yard dipper; traction wheels.
- 1 Thew Revolving Shovel, 3/4-cubic-yard dipper; traction wheels.
- 1 Marion Revolving Shovel, 1 1/4-cubic-yard dipper; traction wheels.
- 13 Two-way Dump Cars, 3-foot gauge; 4 cubic yards capacity.
- 1 20-ton capacity McMyler Interstate Locomotive Crane; railroad trucks.

Each tender must be accompanied by a cheque for 5% of the offer, payable to the Toronto Transportation Commission, and accepted by a Canadian chartered bank.

The highest or any tender not necessarily accepted.

H. H. COUZENS,
General Manager,
TORONTO TRANSPORTATION
COMMISSION.

Marine Department

Canadian Pacific Railway Motor-Car Ferry to Vancouver Island.

With the improvement of highways, particularly in Washington, Oregon and California, and the gradual completion of paving on the Pacific Highway, an increasing number of tourists are arriving at the coast, seeking new fields to explore, and as Vancouver Island is widely known as a most attractive playground, with good roads from Victoria, to Campbell River on the north, and to Alberni, on the Alberni Canal; with timbered areas, fine streams for fishing, etc., the motor car tourist naturally wishes to extend his trip, taking in these attractions. When the C.P.R. built its pas-

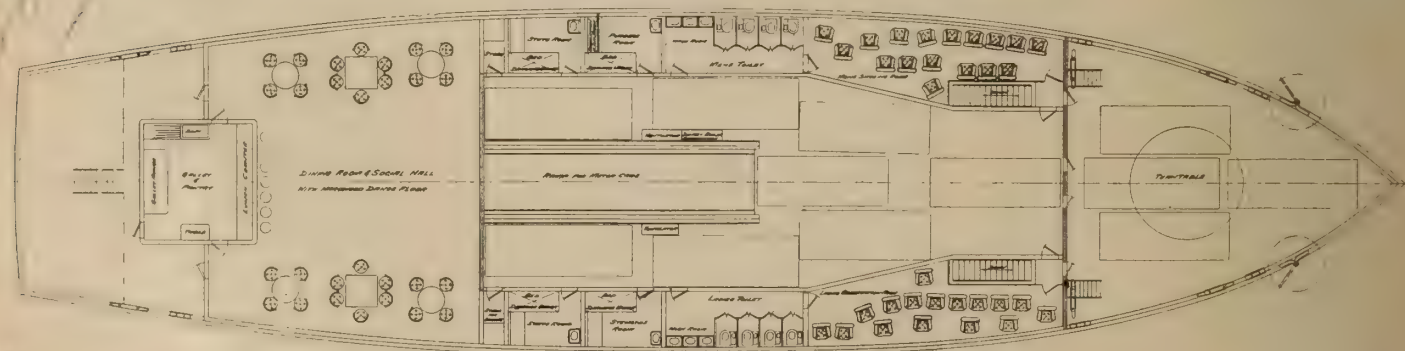

In order to meet the situation, the C.P.R. decided to build a ferry for the purpose, and tentative plans were prepared by its staff, and numerous designs were submitted by builders. Finally the contract was placed with Yarrows, Ltd., Esquimalt, B.C., to build a fast ferry, which would carry from 35 to 45 cars, according to their size. The ship is being built of wood, and is of V-bottom construction. The length of the hull is 170 ft. overall, moulded breadth 42 ft. 8 in., depth 11 ft. 5 in., and as the dimensions and design were somewhat out of the usual, the plan was submitted by the

with 6 cylinders of the 4-stroke cycle reversible marine heavy duty type. Ordinary California fuel oil, as furnished for oil burning steam vessels on the Pacific coast generally, will be used. The engines will develop 600 b.h.p. at 200 r.p.m., and have been built to Lloyd's Register. The tail shafts, brackets and propellers, which will be of bronze, are being built by Yarrows, Ltd., and the entire machinery installation will be made by that company under the direction of a representative of the McIntosh & Seymour Co.

As it may become necessary at times

Motor-Car Ferry Steamship, British Columbia Coast Service, Canadian Pacific Railway.

Upper Deck Plan, Motor-Car Ferry Steamship, British Columbia Coast Service, Canadian Pacific Railway.

senger steamships for British Columbia service some years ago, the motor car had not developed, and was not in evidence so far as transportation was concerned, therefore they were not designed with side ports sufficiently large to accommodate automobiles, with the result that it was necessary to lower the tops and take off wind shields before cars could be taken on board. During the last year or two, the number of enclosed cars has increased greatly, and it became apparent that if any considerable number of tourists were to make the Vancouver Island trip, some better method of ferrying must be provided. Last summer two improvised boats were used as ferries between Anacortes, Wash., and Sidney, Vancouver Island, and quite a large number of cars were ferried in this way.

builders to Dr. G. S. Baker, O.B.E., Teddington, Eng., where experiments were made in the William Froud national tank, and a set of lines were developed suited to the ship. It is expected that a speed of nearly 14 knots an hour will be obtained.

The accompanying cross section plan shows the arrangement for carrying cars on two decks. At the bow, cars will be loaded on both upper and main decks, direct from the shore, and at the stern they may load or leave only from the main deck. A ramp is being provided to enable cars to pass from one deck to the other within the boat. The ramp is arranged directly over the main engines, and will, therefore, not waste any space. The boat will be propelled by full Diesel twin screw engines, built by McIntosh & Seymour Co., Auburn, N.Y.,

to operate the ship on routes where rough water may be encountered, she is being built to Lloyd's classification throughout, and under special survey, and will be ship-shape forward, to keep the decks dry in a head sea. Comfortable seating arrangements are being made for those who do not care to remain in their cars. Large observation windows are provided on both sides. The deck plan shows a dining room with convenient kitchen arrangements, where meals and refreshments will be served a la carte. This room will have a maple floor, which may be used for dancing.

The route decided upon for the ferry service is between Bellingham and Sidney, Vancouver Island, about 42 nautical miles, and passes through numerous channels and passages, with scenic beauty unsurpassed in Puget Sound and

British Columbia waters. From Sidney to Victoria the distance by paved road is about 18 miles. It is expected that the ship will be ready for service by May 15.

Mail Subsidies and Steamship Subventions Estimates.

The estimates for the year ending March 31, 1924, submitted to the House of Commons recently, contain the following items for steamship services between the points named:—

Atlantic Ocean.	
Canada and Newfoundland.....	\$35,000.00
Canada and West Indies and South America, or both.....	340,666.66
Canada and South Africa.....	146,000.00

Pacific Ocean.	
Canada and New Zealand on the Pacific Ocean.....	\$130,509
Prince Rupert, B.C., and Queen Charlotte Islands.....	21,000
Victoria and San Francisco.....	3,000
Victoria, Vancouver, wayports and Skagway.....	25,000
Victoria and West Coast Vancouver Island.....	15,000
Vancouver and Northern ports of B.C.....	24,800
Vancouver and ports on Howe Sound.....	5,000

Quebec or Montreal, and Gaspé and ports on south shore of Gulf of St. Lawrence	30,000
St. Catherine's Bay and Tadoussac, winter service.....	2,000
St. John and St. Andrews, calling at intermediate points.....	4,000
St. John, and Bear River, and other wayports.....	2,000
St. John and Bridgetown.....	1,500
St. John and Digby.....	15,000
St. John, Digby, Annapolis and Granville, along west coast of Annapolis Basin.....	2,000
St. John and ports on Bay of Fundy and Minas Basin.....	8,500
St. John and Wedgeport.....	5,000
St. John, Westport and Yarmouth and other wayports.....	10,000
Sydney and Bay St. Lawrence, calling at wayports.....	9,000
Sydney and Whycomagh.....	13,000
Sydney and Bras d'Or Lake ports, and ports on west coast of Cape Breton.....	14,000
Inspection of subsidized steamship services.....	4,500
	\$1,128,275

Canada Steamship Lines' Report.

Canada Steamship Lines, Ltd., report for the calendar year 1922 has been issued. The total revenue was \$11,614,870.97, or \$1,171,808.75 less than in 1921, due largely to loss of 569,365 tons of

000, were cancelled, and an equivalent amount of 20-year first mortgage collateral sinking fund 7% gold bonds were issued and sold. The company also sold 4-5 year notes for \$850,000.

The surplus account at Dec. 31, 1922, was \$2,902,685.41, or \$708,034.11 less than in 1921. From leases, contracts and goodwill, \$1,424,646.79 was written off, and a surplus of \$330,366.52 arising from sinking fund purchases of debenture stock was transferred. The drastic writing down followed one of upwards of \$5,000,000 in 1921.

The company bought, on July 1, 1922, 4,266 shares of Century Coal Co., Ltd., and \$430,000 of its first mortgage bonds, and paid off that company's bank loans, aggregating \$700,000, thereby discharging Canada Steamship Lines' contingent liability of \$1,000,000, on account of notes endorsed for its allied company. All Century Co. bonds and shares are now owned by Canada Steamship Lines.

The condition of the company's physical property is satisfactory, and a large new passenger steamship, to be named Richelieu, will be in operation about July 1.

The s.s. Monte Grappa Disaster.

The Minister of Marine, Mr. Lapointe, stated in the House of Commons recently in answer to a question by H. Deslauriers, St. Mary, Montreal, that the Government had no information to the effect that the foundering of the Italian steamer Monte Grappa, in mid-Atlantic, on Nov. 14, 1922, was brought about by improper stowage of her cargo taken on board at Montreal. The Government is fully satisfied that the casualty has not cast any reflection on the harbor. There is no authority for holding an enquiry into a casualty of this nature. See Revised Statutes, chap. 113, sec. 776. If a definite charge should be made charging any person or persons with improper conduct in connection with the stowage of cargo, the necessary authority would be obtained to hold an enquiry under the terms of the Inquiries Act. In answer to the questions: "Is it not a fact that the Port Warden and Deputy Port Warden at Montreal are incapable of speaking French, although the majority of those employed loading and discharging vessels at Montreal are French-Canadians, and whether in the event of future appointments being made to the Port Wardens' staff, will the Government give an undertaking that a person capable of speaking French is appointed," the Minister replied: "The Secretary of the Montreal Board of Trade advises that neither the Port Warden nor Deputy Port Warden speak French. The appointments are made by the Montreal Board of Trade under the provisions of the Port Warden's Act, Statutes of 1882, chap. 45."

Steamship Launched in England for Canada.—The first of the 10 Welland Canal size steamships ordered by Eastern Steamship Co., Buffalo, N.Y., and Port Colborne, Ont., in Great Britain, details of which were given in Canadian Railway and Marine World for February, page 91, was launched by Earle's Shipbuilding & Engineering Co., Hull, Eng., March 16, and named Robert W. Pomeroy. This company is building 2 of the 10 ships ordered, and the second is on the stocks and the work well advanced. According to the contracts, all the ships are to be ready for delivery by the beginning of May.

coal traffic caused by coal miners' strike, to loss of passenger traffic caused by railway strikes, and to serious port congestion which prevented prompt dispatch. Expenses were \$9,574,122.53, or \$859,978.15 less than in 1921. Net earnings, before interest, depreciation and taxes, were \$2,040,748.44, or \$311,830.60 less than in 1921. The profit, after all charges and reserve, was \$429,910.72, or \$349,932.68 less than in 1921. The balance left available for dividend purposes was equivalent to 3.41 on the preferred shares, or slightly less than half the amount required for the full payment of the dividend. Current liabilities were reduced by merely \$4,000,000, against a reduction of about \$1,000,000 in current assets. The bank loan item of \$1,944,318 in 1921 has been wiped out.

Through operation of sinking fund, \$376,210.88 5% debenture stock was retired. Underlying first mortgage bonds, against which cash had been deposited for redemption, were reduced from \$523,046.71 to \$59,460.00. The company's 10-year serial first mortgage bonds, which had been issued for \$6,000,-

Wage Dispute, C.P.R. British Columbia Lake & River Service.

Toward the latter part of 1922, the C.P.R. British Columbia Lake and River Service employees applied for the appointment of a board of conciliation, to enquire into their wages and working conditions. A board was appointed, consisting of R. S. Lennie, chairman; E. A. James, for the C.P.R., and John Fyfe, for the employees, who comprised ship masters, mates and engineers. The complaints covered the company's refusal to acknowledge committees of the men's organizations, readjustment of the basic rate of pay, and to be made retroactive, change of working conditions to allow of one free day in seven, establishment of a system of seniority, that the men be rated as steamship men, and that they should be allowed subsistence in home ports when ships are unable to supply them with meals.

The service consists of passenger and tow boats on the Kootenay, Slocan, Arrow and Okanagan Lakes, making connections between various points on the railway. This service has no connection with, or similarity to, the company's British Columbia Coast Service, the operation of which is entirely separate from that of the railways. The matter was handled for the company by F. W. Peters, General Superintendent, and C. A. Cotterell, Assistant General Superintendent, British Columbia District, and by E. Reed, Secretary, National Association of Marine Engineers, and A. Goodlad, Secretary, Pacific Division, Canadian Navigators' Federation, for the men.

After the evidence was in, F. W. Peters, speaking for the company, stated that the officials were willing to meet a committee of the company's own men at Nelson, B.C., to discuss working conditions, and he believed that any objections there were to the working conditions could be removed, not perhaps all the men desired, but as near that as was reasonably possible. As to the proposal that the 10% reduction be restored, he stated that the reduction could be justified, in view of the rates paid in other directions, and the company could not consider restoring that reduction, nor any part of it.

The board recommended unanimously, that one free day in seven be allowed each officer, and when this could not reasonably be done, that such days be cre-

ditied to the man and allowed another time; that the principle of seniority be recognized in the creation of responsible positions as far as possible, except for special reasons; that the company's general rule of recognizing only men in its employ in negotiations should be satisfactory to the men; and that, in view of the fact that the men's board is, admittedly included in their wages, a subsistence allowance be made to engineers in their home port, when they are on duty, and unable to secure their board on

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; M. J. Haney, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

the boat when she is laid up for repairs, and that the amount suggested, viz., \$1.50 a day, is reasonable in the circumstances. The company accepted the board's recommendations.

Bay Steamship Co's Steamships.

The 10 steamships which were sold by the Anderson Co. to interests connected with the Ogilvie Flour Mills Co., and which were formerly owned by the French Government, as mentioned in

Canadian Railway and Marine World for February, have been renamed, and individual companies have been incorporated to own them. The Bay Steamship Co. Ltd., the incorporation of which was announced in our last issue, will be the operating company. The 10 ships mentioned are of steel, of the following principal dimensions: length 217 ft., breadth 34 ft., depth 14 ft. 5 in., and they have 3 cargo hatches. They are equipped with triple expansion engines, with cylinders 12, 20 and 31 in. diam. by 16 in. stroke, 700 n.h.p., and are supplied with steam by two boilers. The machinery in each case is placed aft.

Ashbay Steamship Co., Elmbay Steamship Co., Pinebay Steamship Co., Birchbay Steamship Co., Beechbay Steamship Co., Maplebay Steamship Co., Poplarbay Steamship Co., Palmbay Steamship Co., Sprucebay Steamship Co., Willowbay Steamship Co., Yewbay Steamship Co., and Oakbay Steamship Co., all limited, have been incorporated under the Quebec Companies Act, with \$20,000 authorized capital each, and offices at Montreal, to own and operate ships and carry on a general navigation and transportation business. The incorporators are: F. B. Common, L. H. Ballantyne, C. R. McKenzie, F. G. Bush, and G. R. Drennan, Montreal.

Toronto Harbor Commission.—R. S. Gourlay, who has been a member of the Toronto Harbor Commission for some 12 years, having been appointed by the Dominion Government, on the Board of Trade's nomination, has desired for some time to retire, so that he might be succeeded by a younger man, and he decided in February to tender his resignation, but owing to his familiarity with the Commission's work, and his undoubted capabilities, he has been urged by colleagues to continue at least for this year, especially as the Chairman, R. Home Smith, expects to go to Great Britain in April, for some little time, and it is desired that Mr. Gourlay should act as Vice Chairman during his absence. Mr. Gourlay's resignation is in the hands of the Board of Trade, but is not likely to be sent to Ottawa for a time at least.

Transportation to Labrador.—A Sydney, N.S., press dispatch says that W. N. Macdonald, steamship owner, has made a contract with Labrador Gold Fields, Ltd., to transfer 5,000 men and 100,000 tons of freight, from Sydney to the reported gold fields in Labrador.

Ships Registered in Canada in December, 1922.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Enquiry Into Alleged Combine Among Great Lakes Steamship Owners.

The sittings of the commission, consisting of S. J. McLean, L.L.B., Assistant Chairman, Board of Railway Commissioners; Brig.-Gen. T. L. Tremblay, and Levi Thomson, at Winnipeg, were concluded Feb. 23, most of the evidence given being summarized in Canadian Railway and Marine World for March. Final evidence there showed that 266,917,000 bush. of wheat were shipped out of Fort William by lake steamships, of which 96,982,000 bush. were for Canadian ports, and 129,935,000 for U.S. ports. Of the total, 174,000,000 bush. were chartered by two brokerage firms, viz.: Standard Shipping Co. (including Western Shipping Co.) and Tomlinson Shipping Co., and these firms chartered all but 4,000,000 bush. of the Canadian shipments, and 42,000,000 and 40,000,000 bush., respectively, of the U.S. shipments. It was claimed that the evidence established that there was a control of lake shipping, with the Standard Shipping Co. predominating. Other evidence showed that one firm shipped 22,000,000 bush., on which \$137,000 insurance was paid, the brokers' commission on the insurance being 35%, or \$41,000. A saving of \$11,000 could have been made by placing the insurance with outside companies, and paying the brokers the same commission, and \$18,000 more could have been saved by only paying the brokers commission on the lower insurance rate. R. D. Smith, ship broker, Winnipeg, stated that he had negotiated an arrangement with A. E. Mathews, Mathews Steamship Co., Toronto, regarding the chartering of that company's ships, but that it fell through, and subsequently he was unable to obtain space on any Canadian ships. He was approached later by L. H. Wolvin, Standard Shipping Co., to sign an agreement of brokers to the effect that no charters would be made unless insurance was effected, but he declined, and was eventually threatened with elimination from the business.

L. H. Wolvin, Standard Shipping Co., towards the conclusion of the Winnipeg sittings, stated that the suggestion to form a chartering committee came from James Stewart, in 1917, subsequent to the lake carriers refusing to join a lake mobilization scheme of Canadian and U.S. lake ships, which, in his opinion, meant the turning over of Canadian ships to U.S. owners, though, of course, there would have been a Canadian representation on the committee. He stated that the first cause of the congestion at Georgian Bay ports is at Montreal, and there was congestion, from the opening to the close of navigation. He had known 60 ocean steamships in Montreal harbor waiting to be loaded, with 25, or more, canal ships, with grain from Port Colborne, lying around, and, at the same time, 3,000 cars of grain on the tracks, with the elevators at Bay ports blocked. Montreal needs two or three times the facilities it now has. It is not a question of being able to get grain there; the neck of the bottle is too small. Tonnage was booked ahead, during the winter, for movement at the opening of navigation, or a few days thereafter, and these contracts had to be carried out. Contracts were made in the U.S. for loading and holding grain there during the winter, with the option of sending to Buffalo or Port Colborne, and on the opening of navigation, these cargoes were rushed to Port Colborne, and thus manufactured,

for Canadian ships, a real congestion problem.

H. J. Symington, K.C., counsel for the commission, on being asked by counsel for the shipping interests, as to the line future evidence might take, stated that from the evidence then in, he thought that there was proof of a combine of ship owners, and that an arrangement as to rates had been established.

The commission visited Fort William, Feb. 26, where evidence was taken covering grain shipments, and the decline in the package freight made, and spent some time during early March in Duluth, Milwaukee, Chicago, Cleveland and Buffalo, for the collection of statistics, etc., which were to be classified and analyzed for its use.

Sittings were resumed at Montreal March 12, when E. N. Todd, Freight Traffic Manager, C.P.R., stated that certain U.S. trunk railways had suggested cutting rates on grain, at and east of Buffalo, to U.S. Atlantic ports, and he had obtained the aid of lake carriers to explain the limitation of the all-water route. The U.S. roads claimed that too much grain went by water to Montreal in 1921. He emphasized the necessity of more elevator capacity at Montreal, which, he claimed, is the only reason for congestion. With reference to the rate meeting at Toronto, May 3, he had been invited to attend, but took no part in the discussion on rates. He identified an agreement, based on the minutes of the meeting, whereby rates were arranged between five trunk lines and the lake shipping companies, from Fort William and Chicago to points east. There was no suggestion that the at and east bay rates were not reasonable; in fact the export rate was regarded as a very low basis. He considered that railway at and east Buffalo rates were reasonable.

T. R. Enderby, Operating Manager, Canada Steamship Lines Ltd., gave particulars of the change in conditions which resulted in an increase of approximately 25% in rates, and of the business conducted at meetings in Toronto and New York, including the method used in establishing rates with regard to operating costs, and competition to and from various lake ports, so as to hold a fair share of the business. He said that a loss from May to July had caused an increase in the rates. He presented statistical statements of costs and earnings for Canada Steamship Lines, which will be proved later. He characterized statements as to discrimination as nothing but malicious chatter on the Winnipeg Grain Exchange. He stated that negotiations had taken place with the Maple Leaf Milling Co., for the use of its unloading apparatus at the same rate as charged at the Government elevator, at Port Colborne. The Government rate was \$4.35 a thousand bushels, to take grain out of upper lake ships, and \$1.15 to load it into lower lake ships, a total of \$5.50. The Maple Leaf Milling Co. charged \$5 more than that per thousand bushels. No diversion of grain had taken place. He gave numerous details of the effects of the tide, age and fuel capacity of the ships, etc., in relation to the operating costs and grain carrying, and also mentioned the competition of 475 U.S. ships, as against 42 Canadian ships. He stated that the information given to the Minister of Trade and Com-

merce, which led up to the suspension of the coasting laws, was so hopelessly inaccurate, that he had asked the Standard Shipping Co. to have some shippers wire the Minister the correct information. Under cross examination, regarding the Maple Leaf Milling Co.'s elevator charges, he stated that, in some cases, his company paid the additional charges, and in others it did not, as arranged on a particular business, and that it would probably be correct to say that on about 50% of the business handled for it by the Maple Leaf Milling Co., half a cent a bushel was paid, and in other cases, it would be as arranged. He did not wish to do the company an injustice, and would produce the record. A contract produced, with the Standard Shipping Co., for 1,000,000 bush., to Buffalo at 1½c., was a standby contract, made in Jan., 1922, so as to have some work ahead.

A. A. Wright, Honorary President, Dominion Marine Association, and formerly Managing Director, St. Lawrence & Chicago Steam Navigation Co., now absorbed by Canada Steamship Lines Ltd., stated that he did not believe that a common rate could be fixed for water carriage. Anyone carrying grain at 2c. or 2½c. to Buffalo in May, 1922, would have lost money. He did not look upon giving one particular shipper a lower rate than others, in return for some future possible favor, as a discrimination. He estimated that the price of wheat delivered from the local elevator in the west to a continental market, per 1,000 bush., would be \$391.51, out of which, the lake steamship, carrying all the way to Montreal from Fort William, would get \$82.92, and the raising or lowering of the freight rate would not affect the farmer, because the price he got for his grain was based on the value that the shipper would get in Europe, less the cost of getting it there through the Buffalo-New York line, which is the only way he can ship all the year. In cross examination, he stated that lake freight rates could not be controlled, and that the suspension of Canadian coasting laws, while the U.S. coasting laws remained in force, would destroy Canadian shipping. He stated that a ship, returning light, would earn \$9,000 the round trip, for 8 days, and with a return cargo it would earn \$13,900 in 11 days; the only extra expense would be the additional coal consumed.

W. H. McLean, Manager, Hutchinson & Son, Cleveland, Ohio, stated that by reason of unemployment in the ore and coal business, U.S. steamships went into the grain business. He considered that the congestion was caused by lack of terminal facilities. The rate of 3c. from Fort William to Port Colborne was, under the conditions existing, a low one, and the rate of 2c. or 2½c. to Buffalo, was a losing one under any conditions. It is generally accepted on the U.S. side that it costs more to operate U.S. ships than Canadian ones of similar size. Bunker coal increased from \$5 to \$11 at the peak, and therefore a 25% increase in grain rates was not unreasonable. Shipping brokers in Cleveland were paid on the basis of 20c. per 1,000 bush. carried. When the coasting laws were suspended in 1917, under war conditions, there was a difference in the rates, as both countries were affected, but if Canadian laws were alone suspended, it would

be disastrous to Canadian shipping, as a large fleet of U.S. ships would go into the grain carrying trade, when the ore and coal business slacked about November, if the rates were attractive, but some fleets would not engage in the grain business under any consideration. His company's ships carried grain last season at the 2c. rate and lost money. In carrying at that rate, he calculated the revenue for a round trip as \$3,900, and the cost, \$7,200, a loss of \$3,300.

J. A. Jamieson, engineer, Montreal, specializing in grain elevator construction, stated that the congestion could be traced directly to the inability to handle the volume of grain at Montreal. The port had been developed along lines of catering to ocean steamships, and is poorly equipped for handling small cargo steamships, tramps and grain carrying steamships into Montreal. The remedy is increased capacity of the terminal loading elevators, especially in the lower St. Lawrence and Montreal, or Quebec. This would have the effect of lowering rates, as quick dispatch meant low carrying rates.

Frank Chamberlain, ship agent, Chicago, Ill., stated that a ship of 300,000 bush. capacity should get a sufficient income to pay, on one-third of a cent a bushel a day, and a ship of 100,000 bush. capacity would need an income of from four-tenths to half a cent a bushel.

The Montreal sittings were concluded March 16, and an adjournment made to Toronto, where sittings were opened March 21.

J. E. Armstrong, ex-M.P. for Lambton East, Ont., who had, for several years, introduced bills into the House of Commons to place lake steamship freight rates under the Board of Railway Commissioners, was prevented from submitting a mass of documentary evidence which he had accumulated, but it was agreed that the commission's counsel would go through the papers and deal with them, according to their value as evidence and their relevancy to the matter before the commission. He contended that the Board of Railway Commissioners is the proper body to fix rates on lake steamships, and that a maximum rate should be fixed, which should apply for all seasons and all months, the same as applied to railway rates.

J. C. Murray, Quaker Oats Co., Peterborough, Ont., stated that his company had been compelled to bring nearly half its oats requirements by the all-rail route during the latter part of 1922, owing to it being impossible to secure tonnage from Fort William. He felt that "some method of co-ordination of transportation services between Fort William and the seaports should be devised, by which some of the evils could be mitigated or lessened, and that much of the congestion could have been prevented by a method of co-operation and supervision."

F. W. Grant, counsel, Great Lakes Transportation Co., and A. B. Clarke, Mathews Steamship Co., who gave evidence, were asked to submit lists of earnings and expenditures, contracts with Buffalo and Duluth, and direct contracts, also details of operating expenses.

R. E. Burns, Auditor, Great Lakes Transportation Co., stated that the depreciation adopted by the companies was 4%, which was the rate permitted on steel ships by the Income Tax Department. The per diem cost of each steamship is based upon the insurance value of the ship, and not on the appraisal value or the book value alone.

Further evidence by H. B. Clarke, Secretary-Treasurer, Mathews Steamship Co., covered details of the purchase of the company's steamships, etc. It owns 11 steamships, and the whole administrative staff consists of a manager, a secretary-treasurer and two clerks. The actual operating cost of the ships in operation in 1922 was \$191,000, against \$165,000 in 1921, and he believed that if delays had not been experienced, the difference would have been greater, less trips having been made in 1922 than in 1921. A loss on steamship operation until Sept. 1 of any year, is not infrequent; in fact, is rather the usual incident. Depreciation amounted to one-eighth of the value of the ships, which meant a total of \$350,000 on ships valued at over \$3,000,000.

Captain J. B. Foote, Toronto Vessel and Insurance Agency, on examination as to the method of arriving at the present physical value of ships, stated that he deducted 4% for depreciation, each year after the first year the ship had been built, and this made the valuation of the Mathews Steamship Co.'s ships as \$3,270,000.

Hugh Calderwood, American Bureau of Shipping, stated that he had made an appraisal of the Great Lakes Transportation Co.'s ships, which had a total value of \$3,251,000, with a depreciation of \$325,000. If, however, this valuation had to be made up to date, there would be an additional 10% for the increased price of steel.

H. Green, J. Richardson & Son, Kingston, Ont., stated that his company had chartered the steamships Canadian Pathfinder, Canadian Adventurer and Canadian Sower, from Canadian Government Merchant Marine, the rate being 4½c. for October, 5c. for November, and 6c. for storage.

During the sitting on March 22, H. J. Symington, counsel for the commission, stated that he thought the onus was on the companies to prove that the cost of coal was a contributing factor to justify an increase in rates, and if the companies felt they had submitted sufficient evidence on that point, he did not think they had proved justification. In reply, Britton Osler, for Mathews Steamship Co., stated that the companies had proved that the increase was justifiable, and that they made a ridiculous profit in proportion to the business. It had been declared that the profit of one company had been less than 1c. a bush. during 1922.

F. H. Markey, counsel for certain shipbuilders, in dealing with the question of the suspension of the Canadian coasting laws, desired to submit a number of resolutions by boards of trade and other organizations, to show that U.S. competition would be strengthened and Canadian shipbuilding interfered with, but was prevented on the ground that the commission had decided not to accept resolutions as evidence. The commission counsel stated that "if the suspension of the coasting laws permitted U.S. competition, it seemed axiomatic that Canadian shipbuilding would suffer. It is all a question of argument."

H. B. Smith, President, Collingwood Shipbuilding Co., stated that that company has a physical valuation of \$4,400,000, and employs about 1,200 men at its yards at Collingwood and Kingston, Ont. The suspension of Canadian coasting laws would seriously interfere with the operation of Canadian ships, and also seriously affect the shipyards. He would be wary, as a business man, to invest

any money in the industry with the cloud hanging over it, of the Government having power to suspend the coasting laws. He claimed that the total Canadian tonnage on the Great Lakes is sufficient to handle all the grain trade.

T. R. Enderby, Operating Manager, Canada Steamship Lines, in further evidence, stated that the company's net operating loss for the 1922 season on grain carried to and from U.S. ports, was \$80,532, and the net operating profit on grain to and from Canadian ports was \$62,651, no allowance having been made for profit and invested capital. His evidence in regard to the Maple Leaf Milling Co.'s charges at Port Colborne had been given in good faith, but he had overlooked, at the time, the fact that the government elevator charged \$1.15 on shovelling and loading of canal boats, and he wished to state that the Maple Leaf charges were not excessive.

The Toronto sittings were concluded March 23.

United States Merchant Marine.

Operation of ships by the U.S. Shipping Board for Nov. 1922, caused a loss of \$3,457,621; for Dec. 1922, \$4,329,806; and for Jan. 1923, \$4,942,337.

After a series of stormy sessions, the bill to provide subsidies for the operation of U.S. steamships, failed to reach a vote in the Senate, and lapsed. It was officially stated later that the President had decided that the proposals be abandoned. Some details of the bill, as originally presented, were given in previous issues of Canadian Railway and Marine World, but while the bill was before the House and Senate, considerable alterations were made, and it is stated that a majority of U.S. ship owners favored its defeat, in preference to its adoption in this final form. There is no doubt that the bill lacked popular support, although in its original form it was strongly favored by ship operators.

The U.S. Shipping Board has appointed a committee, consisting of Commissioners Lissner, Thompson and Chamberlain, to study and prepare details of a plan for transferring the Government-owned steamship lines to private ownership; and invitations have been sent to the American Steamship Owners Association, the U.S. Ship Operators Association, and the Council of American Shipbuilders to send a committee to confer on the subject. Among matters to be discussed by the committee, are included the following: Whether buyers can be found for the ships, who would give guarantees to maintain the ships in prescribed services, if the Board, in return for such guarantees, were willing to sell the ships at less than the world market price for similar tonnage; the time such guarantees should remain in force; the nature of such guarantees; the sale of good tonnage not required for operation upon desirable trade routes, especially regarding sale to citizens and to aliens; regarding tonnage of inferior design, equipment and general condition; and the raising of capital on shipping in today's financial market, and the financing of the purchases from the Board.

New Brunswick Shipping Co. Ltd. has been incorporated under the New Brunswick Companies Act, with \$15,000 authorized capital, and office at Sea View, N.B., to own and operate the schooner Nettie C. The incorporators are: C. and J. Splane, J. S. Tait, J. A. Moore and H. M. Clark, St. John, N.B.

Ocean, Coast, Lake and River Steamship Officers for 1923.

The following appointments made by Canadian navigation companies for their steamships and tugs, have been reported to Canadian Railway and Marine World. The first column contains the names of the ships, the second, those of the captains, and the third, those of the chief engineers:—

Alberta & Arctic Transportation Co., Edmonton, Alta.

Port Colborne Grain Elevator.

Acting Minister of Railways Graham stated in the House of Commons recently, in answer to R. J. Manion, Fort William and Rainy River, Ont., that the Dominion Government owns and operates an elevator at Port Colborne, Ont., which handled 53,349,811 bush. of grain in 1922, the charges on which were as follows:—On grain forwarded by ship: Shovelling and elevating into elevator, \$4.35 per 1,000 bush.; delivery to canal ship loading, \$1.15 per 1,000 bush. On grain forwarded by rail: Shovelling, \$4.35 per 1,000 bush.; elevating, domestic grain, 0.01c. per bush.; elevating, export grain, 0.00¾c. per bush.; storage, when in excess of 15 days allowed, 0.00¼c. per bush.

The profits for 1922 were \$210,395.29, less an amount to be determined for electric power. The total amount of Government investment in site and plant is approximately \$2,100,000, which includes cost of elevator reconstruction after explosion. In reporting profits, no interest is charged on invested capital, and no reserve is made for depreciation on plant.

Great Lakes Ice Report.

The U.S. Agriculture Department, Weather Bureau, issued the following from its Detroit, Mich., office, March 20:—Reports from regular and display stations of the Weather Bureau and Canadian Meteorological Service furnish the data for the following summary:—

Lake Superior.—No reports from Duluth or Two Harbors; no change in conditions in Chequamegon Bay; at Port Arthur the ice is 32 in. thick, and ranges to 11 in. at Thunder Cape; fields moved out into lake by high winds; extensive fields continue around Keeweenaw Point and eastward to Whitefish Point; Whitefish Bay solid; St. Marys River continues solid; the ice is snow covered.

Lake Michigan.—In Green Bay, the ice is 25 in. thick at Escanaba, and ranges to 10 in. at Green Bay, where it is softening; no change in Sturgeon Bay; in Lake Michigan, some ice fields have appeared along the west shore during the week, but have moved out; along the east shore from the southern portion to above Ludington, the fields move in and out with the winds. At Charlevoix, the ice is breaking up and open water is showing; at the Straits, the ice continues solid and 22 in. thick; it is snow covered.

Lake Huron.—The eastern end of the Straits continue closed and the ice is solid; there are fields of ice off Presque Isle and south to below Thunder Bay Island; no ice reported in the outer portion of Thunder Bay; no ice reported over the southern portion, except along the east shore, where the ice fields extend beyond vision.

Lake St. Clair and Detroit River.—Lake St. Clair is well covered with broken ice fields; the ice has been running freely in the river during the week. A steamship passed up to Algonac Sunday and returned Monday, and reports St. Clair River open to Port Huron.

Lake Erie.—There are no ice fields reported over the western portion of the lake; broken ice fields moving with the winds are reported from Ashtabula eastward to beyond Erie; the high winds moved the ice fields out of sight at Dunkirk. Buffalo reports the gales of March 12, 13 and 16 broke up the ice and large open spaces of water are visible; large fields passing down the Niagara River.

Lake Ontario.—No ice fields reported from Niagara eastward to beyond Oswego; the harbors at Sodus Point and North Fair Haven still closed; Oswego harbor is open; a fringe of ice 2 miles wide reported off Big Sandy; no changes in conditions at Ogdensburg.

Canal Estimates for 1923-4.

The estimates for the year ending March 31, 1924, submitted to the House of Commons recently contain the following items:—

Railways and Canals; chargeable to Capital.	
Welland Ship Canal: construction.....	\$11,800,000
Trent Canal: construction and betterments.....	210,000
St. Anne's Lock: highway bridge at Isle Perrot.....	100,000
St. Lawrence Ship Canal: surveys and investigations.....	50,000
Railways and Canals; chargeable to Income.	
Chambly Canal, improvements.....	\$ 25,000
St. Anne's Lock, improvements.....	20,000
Lachine Canal, improvements.....	56,000
Soulanges Canal, improvements.....	162,000
Trent Canal, improvements.....	255,000
Welland Canal, improvements.....	100,000
Sault Ste. Marie Canal: new steel gate lifter.....	5,000
Canals, surveys and inspection, including salaries and expenses of experts employed temporarily.....	25,000

Dominion Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgment delivered in connection with the following casualties:—

Eleanor-Nereid Collision.

Held at St. John, N.B., Dec. 20, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Mulcahy and W. G. Hurley, as nautical assessors, into the collision between the quarantine motor launch Eleanor, and the steam tug Nereid, in St. John harbor, Oct. 25, in which the former was sunk. At the time of the accident, the Eleanor was being used to place a doctor on board the s.s. Caraquet, which was travelling at about 4 miles an hour, when the tug Nereid, towing a schooner, crossed the Caraquet's bow, from starboard to port. Owing to a strong breeze, the tug drifted on to the Eleanor, crushing her against the Caraquet, after which she sank, the boatman and the doctor both jumping on to the tug. The court found that the master of the tug, J. LeB. Makinney, was solely to blame for the loss, and as it was considered probable that a claim for damages would be made against him, and as he is part owner of the tug, his certificate was not dealt with, but he was reprimanded most severely for his unseamanlike action, in crossing another ship's bows, especially at such close range, and under such weather conditions as existed.

Barge Collision in Nanaimo Harbor.

Held at Victoria, B. C., Jan. 20, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. M. P. Cutler and A. P. W. Williamson, as nautical assessors, into a collision between the barge Rainbow No. 2 in tow of the tug We Two, and another barge in tow of the tug Tepic, in Nanaimo Harbor, Dec. 26, 1922, resulting in the death of one man. After hearing the evidence, which was characterized as convincing and straightforward, the court held that the accident was unavoidable under the conditions existing, and that no blame could be imputed to the master of the tug Tepic, nor to the master of the tug We Two, and both masters were returned their certificates. The court expressed its appreciation of the courage displayed by G. L. Perry, in jumping overboard in the darkness, in an unsuccessful attempt to save the life of the man drowned, and considered that his action should be brought to the Royal Humane Society's notice. It also recommended that the Rainbow No. 2 should be equipped with some kind of emergency lighting system, to be used in the event of her lights being extinguished by accident or otherwise; that the tug We Two should be equipped with a searchlight, and that two tug hands should be employed on the tug instead of one as hitherto. These recommendations were immediately carried out by the Western Transportation Co., Nanaimo, B. C., the owner of both tugs.

Marine public works contracts have been awarded by the Dominion Public Works Department, as follows: Jan. 20, repairs to public wharf at Port Hood, N.S., Sydney Construction Co., Sydney, N.S., at unit prices; Feb. 17, construction of wharf at Millhaven, Ont., M. R. Midmer, Napanee, Ont., at unit prices.

Steamship Service Between Canada, British West Indies and British Guiana.

The Trade and Commerce Department will receive tenders to June 15, for a steamship service between Canada, British West Indies and British Guiana, for one, or more, of the following services: (a) Sailing fortnightly from St. John, N.B., or Halifax, N.S., and calling one week on the outward passage at Bermuda, Barbados, Trinidad and British Guiana, and on the homeward passage at Trinidad, Grenada, St. Vincent, Barbados, St. Lucia, Dominica, Montserrat, Antigua, Nevis, St. Kitts and Bermuda; and on alternate weeks on the outward passage at Bermuda, St. Kitts, Nevis, Antigua, Montserrat, Dominica, St. Lucia, Barbados, St. Vincent, Grenada, Trinidad and British Guiana, and on the homeward passage at Trinidad, Barbados and Bermuda. (b) The same service as specified above, except that sailings be made from St. John and Halifax alternately. (c) Any other frequency of service, or itinerary, or other variation from the terms of this, which tenderers may desire to offer. The service to cover 5 or 10 years, commencing within two weeks after the date of the last sailing from Halifax under the present contract, which expires March 31, 1924.

Steamships to be employed should be from 5,000 to 6,000 tons gross, capable of maintaining an ocean speed of 12 knots, and providing accommodation for 100 first class, 30 second class and 100 steerage, or deck, passengers, and should be provided with 'tween decks. Tenders must state the amount of subsidy required, and the period for which the contract is requested. The contract will provide that there shall be reasonable proportionate allocation of passengers and cargo accommodation between the colonies mentioned, and that there shall be no unfair differentiation in rates of freight against the smaller colonies as compared with the rates of the larger ones situated at a similar distance from St. John or Halifax, and freight and passenger rates will, at all times, be subject to the Trade and Commerce Minister's approval. The steamships to be built so that, as far as traffic warrants, cold storage will be provided, but alternative tenders may be submitted offering the steamships with, or without, cold storage. The steamships employed to at all times, if required, carry such mails as may be offered by the Canadian postal authorities, or the West Indian colonies, the contractor to land and embark all mails at terminal points and ports of call at his own expense.

Harbor Commissioners' Organization, Salaries, Etc.

H. C. Hocken, Toronto West, asked the following questions in the House of Commons recently, in regard to the harbor commissioners at St. John, N.B., Hamilton, Ont., Quebec and Montreal, Que., and Vancouver, B.C.: "What are the names of the harbor commissioners? What salary is paid each commissioner? Are any of the commissioners employed in any other capacity by the Boards? If so, what are the names of those so otherwise employed, and amounts paid each, or any of them for such other services? What is the total amount paid each commissioner for salary and other services or commissioners during year ended Dec. 31, 1921? What dismissals or changes have been made by the present Government in the personnel of the commissions?"

The Minister of Marine, Mr. Lapointe, stated that there are no harbor commissioners for St. John, N.B. The Hamilton commissioners are Wm. Ainslie, Chairman; John Newlands and W. B. Shepherd. They are paid no salaries, and none of them are employed in any other capacity by the commission. None of the commissioners have received any remuneration of any kind in connection with harbor matters. The present personnel of the commission was substituted for the previous one on Oct. 7, 1922.

The Quebec Harbor Commissioners are W. Gerard Power, President; Brig-Gen. T. L. Tremblay and Jules Gauvin. The President's salary is \$6,000, and the other commissioners \$4,000 each, which are paid out of the harbor revenues. Brig-Gen. Tremblay has also been Chief Engineer since July 1, 1922, with a salary of \$4,000 a year. The former three commissioners, Major-General Sir David Watson, A. S. Gravel and Brig-Gen. Tremblay, resigned, effective March 1, 1922, Brig-Gen. Tremblay being reappointed.

The Montreal Harbor Commissioners are W. L. McDougald, President; M. L. Hersey and Emilien Daoust. The President's salary is \$7,000 a year, and the other commissioners \$2,000 each, which are paid out of the harbor revenues. None of the commissioners are employed in any other capacity by the Commission. W. G. Ross, the former President, resigned that position, in Nov., 1921, to contest St. Antoine Division, Montreal, for the House of Commons. The other two former commissioners, Brig-Gen. A. E. Labelle and Farquhar Robertson, resigned in Dec., 1921. The present commissioners were appointed in Feb., 1922.

The Vancouver Commissioners are Lt.-Col. G. H. Kirkpatrick, President; R. E.

Beattie and Samuel Prenter. The President's salary is \$5,000, and that of the other two commissioners \$4,000. The salaries are paid out of the harbor revenues. None of the commissioners are employed in any other capacity by the commission and they are only paid their annual salaries. Major A. R. Mackenzie and S. McClay, two of the former commissioners, resigned, and Messrs. Beattie and Prenter were appointed to replace them, effective Sept. 1, 1922.

Shipping Accommodation in Montreal Harbor.

Docking accommodation in Montreal harbor for 1923 has been arranged, and the different companies are getting the sheds and equipment ready for the re-opening of navigation. It is announced that applications were received for four more sheds than there are, this being accounted for by the fact that several of the older lines will operate an increased number of ships this year. Enlarged grain elevator accommodation will be provided for handling the largely increased quantity of grain capacity in the port from Buffalo to Port Colborne, during the season. Ocean going steamships have been assigned to sheds as follows: Cunard Line, Anchor-Donaldson Line and Thomson Line, Robert Reford Co., Canadian agents, and Rogers and Webb and other lines at sheds 2, 3, 5, 11 and 24; Canadian Pacific Steamships at sheds 7, 8, 9 and 10, for both passengers and freight, and shed 19 for freight only; White Star-Dominion Line at sheds 4 and 6; Canadian Government Merchant Marine at sheds 12, 14 and 25; Furness Withy & Co. at sheds 16 and 17; Intercontinental Transports Ltd. (Canada Steamship Lines) at shed 18; Head Line and Houston Line, McLean, Kennedy Ltd., agents, at sheds 13, 15 and 47; Hudson's Bay Co. at shed 44; Elder, Dempster & Co. at shed 45; New Zealand Shipping Co. at shed 46. Laurier Pier will be reserved by the harbor commissioners for use as required.

Owen Sound Elevator Co., Ltd. has been incorporated under the Dominion Companies Act, with \$750,000 authorized capital, and office at Owen Sound, Ont., to take over from the Owen Sound Elevator Co., and any other person or corporation, the right, title and interest conferred, under an agreement dated Nov. 28, 1922, between the City of Owen Sound and Roland Patterson, and to carry on a general milling and grain elevator business. The incorporators are: J. Jennings, K.C., G. H. Lovatt, H. A. Wilson, D. McKenna and F. B. Marsellus, Toronto.

Drydocks Estimates for 1923-4.

The estimates for the year ending March 31, 1924, submitted in the House of Commons recently, contain the following items:

Public Works, Chargeable to Capital.	
Esquimalt, B.C., drydock under construction	\$1,500,000
Quebec Harbor, Champlain dock, to complete	96,000
Public Works, Chargeable to Income; Authorized by Statute.	
Collingwood drydock no. 1	\$15,000.00
Collingwood drydock no. 2	9,208.96
Montreal floating dock	105,000.00
Port Arthur drydock	37,741.50
Prince Rupert floating dock	76,970.88
Public Works, Chargeable to Collection of Revenue	
Champlain graving dock	\$72,000
Lorne graving dock	51,800
Esquimalt graving dock	22,000

Canadian Government Merchant Marine Operations, Etc.

R. B. Teakle, General Manager, C.G.M.M., Montreal, made a business trip to the Pacific coast during March.

Appointments.—**R. T. Armstrong**, heretofore in Customs and Immigration Department, C.G.M.M., Montreal, has been appointed Travelling Agent, with headquarters there. This is a new position.

A. Davidson, Division Freight Agent, Canadian National Rys., Vancouver, B.C., is reported to have been appointed Assistant Freight Agent, C.G.M.M., there.

C. W. Tourtellotte is reported to have been appointed assistant to Pacific Coast Manager, Vancouver, B.C.

Officers of Steamships.—The following captains of steamships have been appointed, in addition to those mentioned in previous issues:—**Canadian Harvester**, **W. B. Armit**, vice **E. E. Manning**, transferred to **Canadian Spinner**; **Canadian Spinner**, **E. E. Manning**, formerly of **Canadian Harvester**, vice **P. J. Murphy**, on leave.

Unfounded Complaints.—The acting Minister of Railways stated in the House of Commons, recently, that complaints which had been made against **H. Milburn**, Assistant to Manager, C.G.M.M. at Montreal, had been investigated by **H. J. Page**, Chief of the Canadian National Rys. Investigation Department, and it resulted in Mr. Milburn's complete exoneration.

No Abandonment Intended.—During **Sir Henry Thornton's** recent trip to the Pacific Coast, he was reported to have been asked by a press interviewer as to the suggestion that one of the amputations necessary for the Canadian National Rys. would be the Canadian Government Merchant Marine, and to have answered: "The Canadian National will amputate nothing. If the Canadian Government Merchant Marine is not paying, it must be made to pay."

Deficit Provided For.—The Railways and Canals Department's estimates for the year ending March 31, 1924, submitted to the House of Commons recently, contain the following item chargeable to income:—Loan to Canadian Government Merchant Marine Ltd., repayable on demand, with interest at a rate to be fixed by the Governor in council, upon such terms and conditions as the Governor in council may determine, and to be applied in the payment of deficits in operation of the company and the ships under the company's control during the year ending March 31, 1924, \$1,500,000.

Sale of Scrap Metal and Material.—The acting Minister of Railways stated in the House of Commons recently, in answer to **J. Archambault**, **Chambly** and **Vercheres**, Que., that scrap metal and material coming from the fleet and elsewhere, belonging to the C.G.M.M. in 1921, had been sold by tender by the Purchasing Department, the following prices being realized:—Scrap rope, June, 3c. a lb.; September, 3½c.; December, 4¼c. Cast scrap, September, \$18, gross ton; Grate bars, September, \$9, gross ton; December, \$10. Twisted band iron, \$6.50, gross ton. Empty paint barrels, \$1 each. Scrap dunnage, \$2 a load. Column casting, \$15, gross ton. Pipe and retarder, \$6, gross ton. Scrap grain bags (by auction), 1½c. each.

St. John, N.B., Sailings

Liverpool service.—**Canadian Explorer**, April 11.

London service.—**Canadian Leader**, April 7; **Canadian Victor**, April 21.

Cardiff and Swansea service.—**Canadian Navigator**, April 18.

Halifax, N.S., Sailings

Australia and New Zealand service.—**Canadian Miller**, April 20.

Barbados, Trinidad and Demerara service.—**Canadian Logger**, April 7; **Canadian Runner**, April 21.

Hamilton, Nassau, Kingston and Belize service.—**Canadian Fisher**, April 12.

Newfoundland service.—**Canadian Sapper**, April 4.

Vancouver, B.C., Sailings

Australasian service.—**Canadian Inventor**, April 1.

Oriental service.—**Canadian Freighter**, April 15.

Trans-Atlantic Rates on Agricultural Products.

The special committee appointed by the House of Commons to enquire into agricultural conditions, heard a considerable amount of evidence regarding rates on agricultural products by steamship across the Atlantic, during March. Among those who gave evidence were: **P. A. Curry**, General Manager, **White Star-Dominion Line**, Montreal; **J. W. Nichol**, Manager, **Furness, Withy & Co.**, Montreal; **L. A. W. Doherty**, Freight Traffic Manager, **Canada Steamship Lines Ltd.**, which company acts as General Agent and Manager of **Intercontinental Transport Services Ltd.**, and **W. A. Cunningham**, Traffic Manager, **Canadian Government Merchant Marine Ltd.** So far as the evidence obtained from the foregoing was concerned, it appeared to be the committee's object to gather information as to any agreements regarding rates emanating from the **North Atlantic Westbound Freight Conference** and the **North Atlantic Eastbound Freight Conference**. The witnesses explained that representatives of member companies of the conferences met to discuss matters of interest to all steamship companies, and to consider any applications for changes in rates, or consider market conditions and the various factors which go towards the making of rates. There is no conference that has any jurisdiction over cattle rates, which are matters of individual contract between the shipper or broker, and the individual lines. The cattle question had come up at a recent meeting of the members for the discussion of the new regulations, on which the members are not quite clear. The question of shipping **Canadian flour** through **New York** was stressed, as it is claimed that **U.S. flour**, shipped in precisely the same manner as **Canadian flour**, is being carried on **British steamships**, to the same destinations, at from 2c. to 5c. per 100 lb. less. The rates on apples from **Nova Scotia** were also dealt with, it being mentioned that the rate which, prior to the war, was 75c. to 85c., was, in Dec. 1918, \$5 a barrel, and is now \$1, with a possibility of 90c. in the near future. It was suggested, and denied, that the cause of the reduction in the rates was due to shippers forwarding by **Norwegian steamships**, which are not members of the conference.

W. A. Cunningham, Traffic Manager, **Canadian Government Merchant Marine**, was subjected to a searching examination as to the C.G.M.M.'s position in the conference. He explained that he attended the meetings to keep in touch with conditions for the good of business, and

reserved the right in all cases to meet the Canadian exporter, where the information showed that he was entitled to consideration. He had frequently departed from tariff rates. He was instructed by the chairman to forward to the committee his copy of the **North Atlantic Conference tariff**, and the detailed average operating cost of the C.G.M.M., more particularly as it is affected by the tariff rates, i.e., the average cost per ton of freight to the **United Kingdom**, and the average operating cost.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. **Empress of France**, which passed through the **Panama Canal** at the end of January, carried the largest touring party that had then visited there. There were 727 passengers on a round the world tour, and it was the third of the round the world touring parties to pass the canal.

Following the plan adopted in renaming its cabin and third class passenger steamships with words commencing with **M**, the company is now renaming its freight steamships with words commencing with **B**. The following names have been adopted: **Methven** to be **Borden**; **Holbrook** to be **Bredon**; **Montezuma** to be **Bedwyn**; **Sicilian** to be **Bruton**; **Mattawa** to be **Berwyn**; **Dunbridge** to be **Brecon**; **Monteagle** to be **Belton**; and **Mottisfont** to be **Bawtry**. The names of the steamships **Bolingbroke** and **Batsford** are not being changed.

Capt. G. B. Evans, O.B.E., of the s.s. **Metagama**, retired from active service in March, after 48 years of sea life. He commenced his apprenticeship at the age of 16, with the **Brocklebank Line**, trading to India, and from 1885 to 1894 served as chief officer on sailing ships, and later as third officer on steamships. He has served as master of the steamships **Lake Ontario**, **Lake Winnipeg**, **Lake Huron**, **Montreal**, **Lake Champlain** and **Manitoba**. On the outbreak of war he carried troops from **Montreal** to **France**, and was then transferred to the s.s. **Missanabie**, which was sunk by the enemy in 1918. He later holds commands on the steamships **Melita**, **Minnedosa**, **Montcalm**, and **Metagama**.

The company still holds the record for the trans-Pacific service, the s.s. **Empress of Russia's** time from **Vancouver** to **Yokohama** being 8 days, 18 hours, 31 minutes. According to a recent rearrangement of ports of call in the Orient, by omitting **Manila**, between **Shanghai** and **Hong Kong**, the last named port will be brought four days nearer to **Canada**, thus making possible a through service from **London, Eng.**, to **Hong Kong, China**, via **C.P.R.**, in 28 days.

The company, in view of the increasing numbers of travellers and requests for accommodation, has augmented its sailings to 99 for the forthcoming season, an increase of 17 from 1922. There will be 72 sailings from **Montreal** and 27 from **Quebec**. The **St. Lawrence** navigation season will be opened by the s.s. **Metagama**, May 3, from **Montreal**, for **Belfast** and **Glasgow**, starting the company's new service to **Ireland**. The **Belfast** and **Glasgow** service will be maintained by the **Metagama**, **Marburn** and **Marloch**. The **Montlaurier**, which is expected to arrive at **Quebec** May 12, is the largest one class cabin ship using **Canadian ports**, and the largest of her class in trans-Atlantic service.

Mainly About Marine People.

A. A. Auld, Superintendent, Northern Navigation Co., Sarnia, Ont., was presented with three travelling bags and an umbrella, by different departments of the company, March 10, on leaving for Sault Ste. Marie, Ont., where he has been appointed Manager, New Ontario Dock, Canada Steamship Lines Ltd.

Hon. C. C. Ballantyne, of Montreal, ex Minister of Marine and Fisheries, and Mrs. Ballantyne, are spending some time at Augusta, Georgia.

Joseph Ralph Beck, whose appointment as District Passenger Agent, Canada Steamship Lines Ltd., Toronto, was announced in our last issue, was born at Gaspe Cove, Gaspe, Que., Nov. 4, 1892, and entered transportation service in May, 1909, since when he has been, to May, 1912, telegraph operator, Richelieu & Ontario Navigation Co., Montreal; May, 1912, to Nov., 1914, ticket clerk, Canada Steamship Lines Ltd., Montreal; Nov., 1914, to May, 1919, on military service in France; May to Dec., 1919, chief clerk, ticket office, Canada Steamship Lines, Ltd., Montreal; Jan., 1920, to April, 1921, Travelling Passenger Agent, same company, Montreal; April, 1921, to Feb., 1923, City Passenger Agent, same company, Toronto.

F. P. Belcher, grain and shipping broker, Winnipeg, who died from pneumonia, at St. Boniface Hospital, March 4, aged 45, was born at Port Elgin, Ont., where his father was agent, Great Western Ry., now G.T.R., and for several years was in G.T.R. and Northern Pacific Ry. service. He was in business as a grain and shipping broker at Winnipeg for several years, and gave evidence before the commission enquiring into an alleged combine among Great Lakes shipowners, during February.

A. S. Boudreau has been appointed harbor master, Petit de Grat, N.S., vice E. Bois, resigned.

David B. Carswell, who has been appointed Superintendent Engineer, Canadian Government Merchant Marine, Montreal, was born at Paisley, Scotland, Aug. 3, 1884, and from 1899 to 1904, served his apprenticeship with Thos. Reid & Son, engine builders, Paisley, Scotland; 1904 to 1908, marine engineer, coasting in China, and with Alfred Holt & Co., Liverpool; 1908 to 1909, engineer's draftsman, Simons Ltd., Manchester, England; 1909 to 1913, Assistant Manager, same company, Manchester, Eng.; 1913 to 1916, chief engineer, Deloro Mining & Reduction Co., Deloro, Ont.; 1916 to 1919, Superintendent, Detroit Shipbuilding Co., Detroit, Mich.; 1919 to 1921, Assistant General Manager, MacDougall Duluth Shipbuilding Co., Duluth, Minn.; 1921 to Feb., 1923, Assistant Superintendent Engineer, Canadian Government Merchant Marine, Montreal and Halifax, N.S. J. B. Carswell, of the Carswell Construction Co., Toronto, is a brother.

Capt. E. C. Coons, a lake steamship master, died at St. Catharines, Ont., recently, aged 65. He had been sailing the Great Lakes for 46 years, and last year was master of the steamships Mapleton and Simla.

Miss I. S. Cuttle, second daughter of the late J. A. Cuttle, formerly of the Montreal Transportation Co., was married at her mother's home, Hudson Heights, Que., March 24, to H. P. Stephenson, of that place.

A. Melville Dollar has been elected Chairman of the Vancouver Board of

Trade's Shipping Bureau, succeeding Capt. B. L. Johnson.

K. Macdonald, heretofore captain of the Anchor-Donaldson Line's s.s. Gracia, has been appointed second deputy port warden for Montreal. This appointment is stated to have been made necessary by the large increase in the port's grain trade.

Dr. W. L. McDougald, President, Montreal Harbor Commissioners, and Mrs. McDougald, have left Montreal, to spend some months abroad.

Alex. McNiven, for many years Secretary, Association of Marine Engineers of Canada, died at Victoria, B.C., March 6, aged 80.

Lt.-Col. Alex. Montgomerie, C.B.E., Manager, Furness, Wity & Co., Halifax, N.S., has been elected President, Halifax Board of Trade. Prior to coming to Halifax in 1919, he was the company's Manager at St. John's, Nfld.

C. H. Nicholson, who has been appointed Manager, Canada Atlantic Transit Co. and of the Canadian National Ry's Lake Ontario, Detroit River and Lake Michigan car ferries, at Toronto, was the guest of a number of steamship officials on the s.s. Prince George, at Vancouver, B.C., Feb. 26, prior to leaving there, where he had been Manager, Grand Trunk Pacific Coast Steamship Co., since its inception. He was given a silver humidior filled with specially made cigars from Havana, and a wrought silver cake dish for Mrs. Nicholson.

Capt. W. H. Reid, President and General Manager, Reid Wrecking Co., Port Huron, Mich., and Sarnia, Ont., died at Port Huron, March 11, aged 51, after two days illness.

H. T. Wilgress, who died at Paris, France, March 13, was for a number of years in C.P.R. service, and retired as agent, Trans Pacific Steamships, C.P.R., Yokohama, Japan, in 1915. He was born at Lachine, Que., July 29, 1857, and entered C.P.R. service in Oct. 1886, since when he was, to Feb. 1887, cashier Local Treasurer's office, Port Moody, B.C.; Feb. 1887 to May 1899, Paymaster Pacific Division; May 1899 to July 190. Townsite and Right-of-way Agent, Columbia & Western Ry. (C.P.R.), Greenwood, B.C.; July 1900 to Jan. 1901, cashier, Local Treasurer's office, Vancouver, B.C.; Jan. 1901 to Aug. 1905, chief clerk, General Agent's office, Portland and Asiatic Steamship Co., Hong Kong, China; Aug. 23, 1905, returned to C.P.R. service as chief clerk, General Traffic Agent's office, Yokohama, Japan; Aug. 23, 1905, to 1915, Chief Assistant to Manager, and subsequently Agent, Trans Pacific Steamships, C.P.R., at Kobe, and Yokohama, Japan.

Sir Alfred Yarrow of Yarrow & Co., Ltd., Glasgow, Scotland, with which Yarrows Ltd., Victoria, B.C., is associated, has given £100,000 to the Royal Society, to be used as capital or income. Sir Alfred, who retired recently from active business, has frequently made large donations for scientific research in various lines. He is 80 years old, and was married for a second time, only a short time ago.

Vancouver Grain Shipments.—During February, 1,524,285 bush. of wheat were shipped by ocean steamships through the Government elevator at Vancouver, B.C., in 13 ships, of which 8 ships, with 1,131,252 bush., were for United Kingdom ports, and 5 ships, with 393,033 bush., for Japanese ports.

Ocean and River Service Estimates.

The estimates for the year ending March 31, 1924, submitted to the House of Commons recently, contain the following items:—

Maintenance and repairs to Dominion steamships and icebreakers.....	\$1,500,000
Examination of masters and mates.....	20,000
Investigation into wrecks.....	12,300
Navigation schools.....	8,000
Temporary relief of distressed seamen, legal expenses and cost of shipping books and forms.....	5,000
Registration of shipping.....	5,000
Removal of obstructions in navigable waters.....	5,000
Inspection of live stock shipments.....	3,500
Subsidies for wrecking plants, Quebec and British Columbia.....	35,000
Unforeseen expenses.....	5,000
Life saving service, including rewards for saving life.....	90,000
Hydrographic Survey and maintenance and repairs of hydrographic steamboats	364,080
Radiotelegraphic Service and for building and maintenance of wireless stations and general administration of radiotelegraphy throughout the Dominion....	454,900
Tidal and Current Survey.....	35,000
	\$2,542,780

Georgian Bay Grain Trade and French River Improvements.

The Minister of Trade and Commerce stated in the House of Commons recently that Georgian Bay elevators handled the following grain during 1922:—

Canadian: Carry-over from 1921 (including Goderich) 1,942,600 bush.; receipts, 55,976,089; shipments, 56,141,428; in store, 1,777,272.

United States: Carry-over from 1921 (including Goderich), 10,373,322 bush.; receipts, 68,990,212; shipments, 69,348,125; in store, 9,915,291.

Parliament had voted \$1,903,500 for improvements to the French River, in Nipissing, of which \$209,419.34 had not been expended.

Lighthouse and Coast Service Estimates.

The estimates for the year ending March 31, 1924, submitted in the House of Commons recently, contain the following items:—

Agencies, rents and contingencies.....	\$212,000
Salaries and allowances to lightkeepers...	650,000
Maintenance and repairs to lighthouses...	850,000
Construction of lights and aids to navigation, including regulation of traffic in Detroit River and such other places as may be necessary.....	500,000
Marine Signal Service.....	104,000
Administration of pilotage.....	250,000
Maintenance and repairs to wharves.....	10,000
Breaking ice in Thunder Bay, Lake Superior and other points deemed advisable for good of navigation.....	40,000
Pensions for pilots.....	9,475
Amherstburg harbor master, for supervision of lights and buoys on St. Clair and Detroit Rivers, and Lake Erie, and other services in connection with lighthouse service for season of navigation, 1923.....	600
Patrol of northern waters of Canada.....	15,000
	\$2,641,075

Globe Transportation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital, and office at Montreal, to own and operate ships, wharves, docks and other shipping facilities, and to carry on a general navigation business. The incorporators are: F. H. Markey, W. W. Skinner, G. G. Hyde, J. S. Ahern and R. J. Foster, Montreal.

Tide tables for Nelson, Hudson Bay, and tidal data for Hudson Strait and James Bay, for the 1923 season, have been issued by the Marine and Fisheries Department's Tidal and Current Survey.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

Nova Scotia.—A Lunenburg press report states that the building of sailing ships, which languished somewhat after the close of the war, due to over building, has revived, and that all local yards have contracts signed for the building of fishing ships covering the greater part of this year, and additional orders have been placed at other points in the province, in order to be sure of delivery for the fishing season in April.

Ship for Northwest Territories.—The estimates for the year ending March 31, 1924, submitted to the House of Commons recently, provide \$40,000 for the purchase and maintenance of a new ship.

Canadian Vickers Ltd., Montreal.—The steel single screw hopper barge, which is being built for the Dominion Marine Department, is expected to be ready for launching about April 15, and for delivery about May 15. A full description was given in Canadian Railway and Marine World for Dec., 1922.

Collingwood Shipbuilding Co., Collingwood, Ont., expects to launch a ship early in April, which has been built on its own account for sale. She is intended for canal service and will be completed and ready for operation about the end of April. Her dimensions are: length 260 ft., breadth 43 ft., depth 19 ft. The hull is divided into 3 cargo holds, served by 7 large hatches. The propelling machinery consists of triple expansion surface condensing engines, with cylinders 15½, 26 and 44 in. diam. by 26 in. stroke, supplied with steam by a Scotch marine boiler 14 ft. diam. by 10¼ ft. long, at 195 lb.

Halifax Shipyards Ltd., Halifax, N.S., did the following repair work during February: Canadian Government Merchant Marine s.s. Canadian Forester, sea connections overhauled, rudder lifted, propeller repaired, hull scraped and painted; Commercial Cable Co. s.s. John W. Mackay, docked Feb. 6, for survey and draining of tanks, following bottom damage sustained while entering Halifax harbor, undocked Feb. 9, again docked Feb. 21 for repairs, having discharged 450 miles of cable, and fuel oil; repairs included 13 new plates, 8 plates off, faired and replaced, 3 plates faired in place, 60 floors with shell bars treated on the port side, and 30 floors on starboard side, work completed March 14; Dominion Coal Co., s.s. Coban, general repairs, rudder lifted and pintels bushed, hull scraped and painted, undocked Feb. 21; s.s. Turret Cape, hull and boiler repairs, and scraping and painting, undocked Feb. 21.

W. R. Menchions, Vancouver, B.C., has been given an order by the Royal Canadian Mounted Police, for 2 Columbia River sailing boats, each 32 ft. long by 9 ft. beam. They will have oak frames, fir keels, with cedar planking and decks.

Montreal Drydocks Ltd. has been incorporated under the Dominion Companies Act, with \$450,000 authorized capital, and office at Montreal, to carry on a drydock business, and to build, own and operate drydocks, wharves, breakwaters, ships, boilers, etc. The incorporators are: A. A. Magee, K.C., T. B. Heney, W. C. Nicholson, M. T. Darragh and H. M. Bagley, Montreal.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—P. G. Chace, Vice President, wrote the Port Arthur City Council recently, requesting a renewal of the

\$25,000 annual bonus to the company, which he claims is necessary to enable the plant to be kept in operation. On the establishment of the shipyard, the council granted a bonus of \$25,000 a year for 10 years, and the Mayor is reported to have stated that it could not legally be continued beyond that period, which had expired. The matter was referred to the finance committee.

Prince Rupert Drydock and Shipyard, Prince Rupert, B.C., did the following repair work during February: Canadian Fish & Cold Storage Co. s.s. James Carruthers, 233 tons, docked, painted and general overhaul; Canadian Government Merchant Marine s.s. Canadian Rover, 2,422 tons, docked, painted and general overhaul; s.s. Canadian Winner, 5,482 tons, docked, cleaned, painted and general overhaul; Coastwise Steamship & Barge Co. scow Independent, hull repairs; Dominion Public Works Department snagboat Bobolink, extensive hull repairs commenced; Grand Trunk Pacific Coast Steamship Co. s.s. Prince Rupert, 3,379 tons, docked, painted and propeller repairs; Whalen Pulp & Paper Co. steam tug Bermuda, rudder repairs. Fourteen fishing ships were overhauled.

The Strait of Canso Marine Ry. Co.'s property and equipment, at Point Tupper, N.S., was offered for sale by auction, by order of the directors, March 15.

Victoria Machinery Depot Co., Victoria, B.C.—The C.P.R. s.s. Princess Patricia was hauled out Feb. 26, for general overhaul, and was returned to service March 20.

Wallace Shipyards Ltd., North Vancouver, B.C., is reported to have received a contract from the North Vancouver City Council for repairs to ferry boat no. 2, at \$13,750 for the visible work; other work necessary to be done on a time basis.

Yarrows Ltd., Victoria, B.C.—The Lindvig Steamship Co.'s s.s. Baja California arrived at this company's yard early in March for general overhauling, cleaning, painting and drawing tailshaft.

The following repair work was done during February:—Canadian Pacific Ry. s.s. Princess Beatrice, 1,290 tons, condenser, tubes and auxiliary repairs; s.s. Princess Adelaide, 3,061 tons, docked, and propeller blades changed; s.s. Princess Alice, 3,099 tons, docked and under water repairs due to stranding, also engine room repairs; s.s. Princess Charlotte, 3,844 tons, alterations to cargo doors; Dominion Government s.s. Malaspina, 392 tons, docked, cleaned, painted, general refit and overhaul; British Columbia Cement Co.'s s.s. Matsqui, docked, cleaned, painted, alterations and refit; Ocean Motorship Co.'s motorship Coolcha, 2,403 tons, arrived for examination and repairs after grounding at Albert Head, and several scows hauled out for repairs and painting.

Subsidized Steamship Lines.—J. Evans, Saskatoon, Sask., asked in the House of Commons recently: "What steamship lines are subsidized by the Dominion Government, operating between Canada and European ports, and between Canada and the British West Indies?" The Minister of Trade and Commerce replied: "The Royal Mail Steam Packet Co. is paid a subsidy for a steam service between Canada and the West Indies."

Vancouver Grain Elevator Facilities.

Canadian Railway and Marine World for March contained the order in council approving the sale of the Dominion Government grain elevator at Vancouver, B.C., to the Vancouver Harbor Commissioners. We are officially advised that the commissioners expect in the first place to increase the storage capacity from 1,250,000 to 2,000,000 bush, and to be able to increase the rate of handling grain, by 25% over the present layout. They are also considering the construction of an additional elevator of 1,500,000 bush. capacity, in the vicinity of Ballantyne pier. This will not, however, be settled for a month or so. As also mentioned in our last issue, the E. A. Woodward Co., Winnipeg, has let a contract for building a private terminal grain elevator, the preliminary construction covering track approach and elevator foundation work, which was expected to be under way by the end of March. It will have an initial capacity of 750,000 bush.

With the increased capacity of the commissioners' elevator, and the new Woodward elevator, it is expected that the port will be in a position to handle about 37,000,000 bush. of grain during a season, and if the commissioners build a second elevator, an additional 25,000,000 bush. will be added to the season's Ballantyne pier. This will not, however, capacity. The total handling during the current season will be about 15,000,000 bush.

Harbors and Rivers Estimates.

The estimates for the year ending March 31, 1924, submitted to the House of Commons recently, provide as follows:—

Public Works, Chargeable to Capital.

Port Arthur and Fort William, harbor improvements	\$135,000
St. John, harbor improvements	360,000
Toronto harbor, improvements	250,000

Public Works, Chargeable to Income.

Nova Scotia, \$293,100. The largest item is Yarmouth harbor, dredging, \$85,000.
Prince Edward Island, \$33,700.
New Brunswick, \$65,600.
Quebec, \$572,785. The largest items are: Matane, harbor improvements, \$100,000; Grondines, wharf, \$50,000; Chicoutimi, wharf repairs and rebuilding shed, \$29,500; Grand River, wharf extension, \$29,000.

Ontario, \$463,530. The largest items are: Port Colborne, repairs to breakwaters, \$100,000; Little Current, dredging, \$38,000; Toronto Island, breakwater protection, \$30,000; Haileybury, wharf reconstruction, \$26,400; Cobourg, breakwater reconstruction, \$25,000; Blind River, wharf reconstruction, \$21,000.

Manitoba, \$41,265. The principal item is Selkirk, wharf repairs, \$13,665.

Saskatchewan and Alberta, \$21,000.

British Columbia, \$237,235. The principal items are: Fraser River improvements, \$75,000; Lower Fraser River, operation of snag boat, \$30,000.

Yukon River and tributaries, improvements, \$5,000.

Harbors and rivers generally, \$30,000.

Dredging: Maritime provinces, \$600,000; Ontario and Quebec, \$625,000; Manitoba, Saskatchewan and Alberta, \$100,000; British Columbia, \$400,000.

Public Works, Chargeable to Collection of Revenue

Burlington channel bridge	\$7,500
French River dams	8,500
Kingston, wharfs and bridges	12,000
Montreal River, dam at Latchford	3,000
Riviere du Lievre, lock and dam	3,000
St. Andrew's Rapids, lock and dam	27,000
Selkirk, repair slip	5,000

Coast Navigation Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, to own and operate ships and carry on a general navigation business.

Atlantic and Pacific Oceans.

The Canadian Robert Dollar Co.'s s.s. Bessie Dollar, which was adrift in the Pacific for 35 days, is reported to have arrived at Yokohama, Japan, March 6, in tow of the company's s.s. Esther Dollar. The Bessie Dollar was picked up originally by the Admiral Line s.s. Pomona, and later transferred to the Esther Dollar.

The Scandinavian-American Line is arranging for a regular steamship service between Copenhagen, Denmark, and Baltic ports and Montreal, with McLean, Kennedy Ltd., Montreal, as agents. The first sailing from Montreal will be the s.s. Pennsylvania, 8,000 tons, May 10, with a monthly service, or oftener, as occasion requires.

The Norwegian-American Line has arranged to resume its steamship service between Canada and Norway, on the reopening of navigation, with the C.P.R. as traffic agent. It is stated that the steamships Topdalsfjord, Nordefjord, Drammensfjord and Ranenfjord, will be used. The first two were built by Canadian Vickers Ltd., Montreal, for the Norwegian-American Line.

A number of business interests are reported to have combined, to charter a steamship to test the conditions for waterborne traffic from Port Nelson, Hudson Bay, to the ocean. Negotiations have been proceeding with Canadian Pacific Steamships Ltd. for chartering the s.s. Pretorian for the purpose, but no definite arrangement in this respect is expected, until about the middle of April. The statement that the Hudson's Bay Co. is in any way concerned, has been denied by E. Fitzgerald, Deputy Chairman, Canadian Advisory Board.

The s.s. Lancastrian, which is stated to be registered in Montreal, and owned in New York, got into difficulties recently through a collision with a coal ship at Gibraltar, and was attached by the owners of the latter for damages. The Lancastrian's crew, who are stated to be U.S. citizens, applied to the U.S. Consul at Gibraltar for maintenance allowances, but were told that as they were sailing on a British ship, they were not entitled to such. On application to the British authorities, they were told that as they were U.S. citizens, they were not entitled to maintenance allowances from the British.

Maritime Provinces and Newfoundland.

The Newfoundland Marine and Fisheries Department has given notice that on the reopening of navigation, the color of the acetylene lights at Shoe Cove Point, near Greenspond, will be changed from red to white.

With the arrival of the s.s. Sable Island at St. John's, Nfld., Feb. 27, the island received its first mail from the outside in 26 days. The Sable Island had to force a way through the ice into port, and was closely followed by the s.s. Rosalind.

St. John, N.B., harbor revenue for February, was about \$28,000, an increase of about \$2,000 over Feb., 1922. The revenue for January exceeded that of Jan., 1922, by \$5,000. The total increase for 1922, over 1921, was \$35,000.

The Boston & Yarmouth Steamship Co.'s s.s. Prince Arthur was withdrawn from service early in March, and the s.s. Prince George substituted. The

Prince Arthur has been drydocked at Boston, Mass., to be overhauled and fitted for the summer service.

Manchester Liners Ltd. s.s. Manchester Corporation was driven ashore in Halifax harbor, March 7, after breaking her anchor chain. She was forced up well on shore at McNab's Island, but was refloated the following day, without much difficulty and only slightly damaged.

The French s.s. Pro Patria, bound from Halifax, N.S., for St. Pierre, which was caught in the ice floes off St. Pierre Island, at the end of February, was released and towed into St. Pierre, March 5, by the C.G.S. Stanley. The Pro Patria had her propeller and rudder smashed by ice, and was drifting helpless amongst the ice for several days.

The Bras d'Or Steamboat Co., North Sydney, N.S., which, according to a report mentioned in our last issue, had bought the s.s. Princess, in New York, to replace the s.s. Marion, burned in Oct., 1922, has advised us that it has not bought her, but that the purchaser is J. T. Burchell, Sydney, N.S. She has not yet been transferred to the Canadian register, owing to difficulties created by the U.S. Shipping Board's new regulations, by which attempts are made to continue U.S. control of ships which have passed from the U.S. register.

The Anderson Co. of Canada has sold the s.s. Dieuze, which was built by Fraser, Brace & Co., Montreal, for the French Government, to W. N. Macdonald, Sydney, N.S., for operation on the North Atlantic. She has a wooden hull, of the following general dimensions: length over all 204½ ft., length b.p. 195 ft., breadth extreme 40½ ft., breadth moulded 39 ft. 8 in., depth of hold 15 ft.; dead-weight capacity 1,400 to 1,500 tons, bunker capacity 150 tons. She has 3 cargo hatches, and a loaded draft aft of 16 ft. She is equipped with 2 vertical inverted engines, of 275 i.h.p. each at 175 r.p.m., and is supplied with steam by 2 Scotch marine boilers at 180 lb., and her consumption is about 13 tons in 24 hours; speed loaded 8½ knots, light 9½ knots. She has 6 cargo winches, steam and steering engine, steam windlass, independent pumps, electric light, wireless telegraph, and the usual auxiliary engines in use on a cargo steamship.

Province of Quebec.

The name of the tug Macsineo, owned by Sincennes-McNaughton Line, Montreal, has been changed to Yvon Dupre, Jr.

Canada Steamship Lines' s.s. Narragansett, which was bought in the United States, and is being rebuilt at Lauzon, Que., has had her name changed to Richelieu.

The Lachine canal was emptied March 17 for the customary annual inspection and repairs preparatory to the reopening of navigation. The repairs are being done under the direction of L. S. Parizeau, engineer in charge, and it is expected that they will be completed and the canal refilled about April 15.

A press report of March 6 said that attempts were being made to release the Quebec & Levis Ferry Co.'s s.s. John S. Thom, which was caught in the ice, near Sorel, Dec. 10, 1922, and held there all the winter. The Dominion Government icebreaking steamship J. D. Hazen was sent from Quebec, March 5, to break up the ice in the river, so as to lessen possible injury to the ship. Work was commenced about 51 miles above Quebec

and about 53 miles from the John S. Thom.

The Quebec Harbor Commissioners are stated to be making some rearrangement of the docking capacity in the harbor, so that full accommodation may be allowed for a number of ocean steamships at one time. It is stated that the C.P.R. Empress steamships will dock in the St. Charles River basin no. 28, and will possibly also take on cargo there, this having been made possible by recent dredging in the St. Charles River. Changes in the system of loading grain into ships have been made whereby three ships can be loaded simultaneously, instead of two, as heretofore, and increasing the total loading capacity from approximately 80,000 bush. to 300,000. A viaduct has been built, connecting wharf 18 to the immigration quarters. Since 1921, the ship tonnage using the port has increased considerably, and five railway tracks have been laid down, making for the quicker handling of both passengers and freight. Regarding the dredging of the St. Lawrence River, approximately 400,000 cub. yd. of sand was removed from the bed in 1922, and it is stated that this amount will be surpassed during this year. A fuel oil tank, of 80,000 barrels capacity, has been erected by the St. Lawrence Independent Oil Co. The Commission is securing opinions as to the best means to be adopted for co-operating in the shipment of Canadian cattle overseas.

Ontario and the Great Lakes.

Canada Steamship Lines' s.s. Kingston was damaged by fire to the extent of about \$500, while tied to her wharf at Toronto, March 13.

The steam tug Crawford has been sold by Peninsula Tug & Towing Co., Warton, Ont., to Ontario Sand & Gravel Co., Windsor, Ont., for towing scows. She was built at Warton in 1905, and is screw driven, by engine of 31 h.p. Her dimensions are: length 86 ft., breadth 15¼ ft., depth 6 ft. 5 in.

The United States & Dominion Transportation Co. held its annual meeting at Toronto, March 2, when its Canadian sailings were arranged for the ensuing season. The steamships Caribou and Manitou will sail between Collingwood and Sault Ste. Marie, calling both ways at Meaford and Owen Sound, and intermediate ports in the north channel.

The Spanish River Pulp Co. is reported to have bought a steam tug from the United States Shipping Board, to replace the tug Reliance, which was lost on Lake Superior in Nov., 1922. The new tug, which was partially built about four years ago, is being completed and fitted out at Chippawa. The price paid is stated as \$30,000.

J. F. M. Stewart, Toronto, has ordered a full Welland Canal size freight steamship from Smith's Dock Co., Southbank-on-Tees, England. Her dimensions will be: length overall 256¾ ft., breadth over steel plating 42¾ ft., depth moulded 18½ ft.; d.w. carrying capacity on 14 ft. draft, 2,300 tons. Full particulars of her were given in Canadian Railway and Marine World for March, page 146.

The United States Lake Survey reports the levels of the Great Lakes, in feet above mean sea level, for February, as follows:—Superior, 601.60; Michigan and Huron, 578.81; St. Clair, 573.07; Erie, 570.88; Ontario, 244.47. Compared with the average February levels for the past 10 years, Superior was 0.30 ft. below; Michigan and Huron, 1.18 ft. below;

Erie, 0.77 ft. below, and Ontario 1.05 ft. below.

The Walkerville & Detroit Ferry Co. expects to place a new ferry steamship in operation between Walkerville and Detroit, about April 15. She was launched at Ecorse, Mich., during March. Her dimensions are: length 140 ft., breadth moulded 45 ft., breadth over guards 54½ ft. She is equipped with fore and aft compound engine with cylinders 26 and 40 in. diam., by 28 in. stroke, and supplied with steam by 2 Scotch boilers.

The s.s. F. Hanson, which the Abitibi Power & Paper Co. built at Twin Falls, Ont., towards the end of last year, has been turned over to the Abitibi Transportation & Navigation Co., a subsidiary, and will be used for towing logs on a stretch of about 20 miles of the Abitibi River, to the company's paper mill. The boat is screw driven, by engine of 16 n.h.p., and has the following dimensions: length 75 ft., breadth 20.7 ft., depth 9.9 ft.; tonnage, 112 gross, 16 net.

The Peninsula Tug & Towing Co., Warton, Ont., has bought the s.s. Edward Buckley, from C. E. Millard, Sarnia, for the Georgian Bay lumber trade. She is a wooden ship, of the well deck type, built in 1891 and rebuilt in 1912, and has the following dimensions: length 154 ft., breadth 31 ft. 7 in., depth 10 ft. 6 in.; tonnage, 414 gross, cargo capacity 450 tons. She is equipped with a fore and aft compound engine, with cylinders 18 and 36 in. diam. by 30 in. stroke, supplied with steam by a firebox boiler 9 by 14 ft.

The Alaska Steamship Co. has sold its s.s. Juneau to the Rutland-Lake Michigan Transportation Co., and is arranging a cargo for delivery at New York, where the ship will be turned over to her new owner. The Juneau was built at Ecorse, Mich., in 1908, and has the following dimensions: length 244 ft., breadth 43 ft. 2 in., depth 27 ft.; tonnage, 2,382 gross, 1,805 net, 3,682 deadweight. She is equipped with quadruple expansion engines, with cylinders 16½, 24, 35 and 51 in. diam. by 36 in. stroke, and has

A deputation of business men from Kingston, Ont., waited on the Dominion Cabinet at Ottawa, March 15, to urge the claims of Kingston as a trans-shipment point for lake grain traffic. Francis King, K.C., ex-President of the Canadian Board of Trade, and General Counsel, Dominion Marine Association, stated that in order to make good the large investment in the Welland Canal, it is essential that a trans-shipment port be established at the foot of deep lake water. The Welland Ship Canal will permit large lake freighters to enter Lake Ontario and proceed to the St. Lawrence, but they must trans-ship their cargo to similar ships for forwarding grain to Montreal.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

A request has been forwarded to Ottawa for an inspection of a site at Fort Resolution for the construction of a wharf and breakwater. It is pointed out that the existing conditions are unsatisfactory and that shipping at the port is increasing considerably.

The Hudson's Bay Co. is building a gasoline motor boat, to replace the motor boat Liard River, which was wrecked last summer. She will be of the tunnel type, with hull 60 ft. long by 12½ ft.

wide, fully housed in, with good accommodation, and equipped with a 90 h.p. engine. She will have a draft of 10 in., and will push a 60-ton housed barge, which is also under construction. The hull is being built at McMurray, Alta., and will be launched in the Clearwater River and taken to Fitzgerald, where both hull and engine will be taken over the Smith portage on skids, and fitted together on the other side, and again launched at Fort Smith, ready for operation on the Great Slave Lake and Mackenzie and Liard Rivers, by about April 30. She will act as a link between Smith portage and the Arctic. Another gasoline motor boat, with 50 h.p. engine, is also being built at McMurray, with hull 42 ft. long, with 5 berth accommodation, for operation between McMurray and Fitzgerald, and on Lake Athabasca, and will push a new housed barge of 45 tons capacity. Two more gasoline motor boats, to be named Chipewyan and Liard River, are also being built for the company, by George Askew, Vancouver, B.C. The steamboats Athabasca River and Mackenzie River are being overhauled and improved, and some other auxiliary craft will be placed in operation during the ensuing season. It is the intention to give such service that persons may reach any point on the Athabasca River, Slave and Peace Rivers, Mackenzie River, Great Slave Lake, Great Bear Lake, Lake Athabasca, and the Liard, Nelson and Peel Rivers, as far as Liard, Nelson and McPherson, respectively. The whole trip from Edmonton to the Arctic will take a month, and a weekly service will be given on the Athabasca River as far as Fitzgerald, and three through trips, or more, from Fort Smith to the Arctic.

British Columbia and Pacific Coast.

The Grand Trunk Pacific Coast Steamship Co.'s service between Victoria, B.C., and Seattle, Wash., was discontinued, March 4.

Clark and Olmstead, Vancouver, have bought the s.s. King and Winge, from Seattle, Wash., owners, for use in the coasting freight trade. She was formerly a north coast fishing ship, and latterly had been used as a pilot boat out of Seattle.

The Pacific Freighters Co.'s motorship Coolcha, bound from San Francisco, Cal., to NanOOSE, B.C., to load lumber, which was driven ashore in a snow storm at Albert Head, near Victoria, B.C., in February, was refloated by the Pacific Salvage Co.'s s.s. Algerine, Feb. 26, and towed to Yarrows Ltd. yard at Victoria, where she was hauled out on the marine ways for survey.

The C.P.R. s.s. Princess Charlotte resumed her sailings on the Vancouver, Seattle, Victoria route, March 10, relieving the s.s. Princess Victoria, which had been withdrawn from service for her annual overhaul. The s.s. Princess Ena loaded lumber at Vancouver, in March, for the White Pass & Yukon Ry., for shipment to Skagway, Alaska. The s.s. Tees has replaced the s.s. Princess Beatrice on the Prince Rupert route, calling at way ports. The s.s. Princess Alice was undocked, and the s.s. Princess Charlotte was drydocked at Yarrows, Ltd., yards, Victoria, during the month.

The signal pole on the bluff at Prospect Point, Vancouver harbor, in the first narrows of Burrard Inlet, has been replaced by a signal mast 65 ft. high, with a yard arm 45 ft. hoist, all painted white.

Signals for inbound ships will be shown from the south yard arm, and will consist of black balls by day and white lights by night. The signals for outbound ships will be shown from the north yard arm, and will consist of red cones by day and red lights at night. The signals will be visible from all points seaward when inbound, and immediately after rounding Brockton point outbound. Ships may communicate with the signal station by flags or lamps, and a 24 hour watch is kept. A searchlight has been installed at the station.

Toronto Ferry Co.'s Lease, Etc.

The company's recent application to the city council for the cancellation of unpaid taxes, amounting approximately to \$20,000, and a notice served on the company by the harbor commissioners, to vacate the docks at the foot of Bay St., for a site to be provided at the foot of York St., has raised the whole question of the company's lease. On going into the matter, the council found that no lease for the dock property has been signed by the company, which claims that it declined to sign, as it was quite unable to make sufficient profit to pay a rental of \$7,500 a year, and taxes as well. The company has, however, operated as if the lease had been signed, but has paid no taxes, and it is reported that the city has been advised that the unpaid taxes are uncollectible. The company objected to the removal of the terminal to York St., but would have been willing to consider it, if a dock building, etc., were provided either by the city, or the harbor commissioners, and arrangements York St. bridge to the dock property, made to run the street cars across the The York St. bridge has, however, been condemned as unsafe for operating street cars over it.

The city council approved an arrangement for the continuance of the ferry service, whereby the company will pay \$8,500 a year rent for the present accommodation at the foot of Bay St. and on the island, this amount to cover taxes, the company to repair the Bay St. docks, and to vacate the property by Oct. 1. The council suggested that the company negotiate with the harbor commissioners for a new site for docks on the area at the foot of Bay St. to be filled in by the commissioners.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Metal & Thermit Corporation, New York, has appointed C. F. Lederer, General Supervisor of Rail Welding, with entire charge of all technical work in the field. A corps of rail welding supervisors will be organized, in connection with the company's various branches, to instruct rail welding men, and assist them in every way possible. The company's Pittsburgh, Pa., branch has been removed to 1514 Fayette St., where a welding shop is being built, for making thermit welding repairs and relining crucibles.

Canadian Pacific Railway—Forty Second Annual Report.

To the Shareholders:

The accounts of the Company for the year ended December 31st, 1922, show the following results:—

Gross Earnings	\$186,675,035.84
Working Expenses (including all taxes).....	150,373,344.83
Net Earnings	\$36,301,691.01
Deduct Fixed Charges.....	13,348,905.66
Surplus	\$22,952,785.35
Contribution to Pension Fund.....	500,000.00

From this there has been charged a half-yearly dividend on Preference Stock of 2 per cent., paid September 30th, 1922.....	\$1,613,638.42
And three quarterly dividends on Ordinary Stock of 1½ per cent. each, paid June 30th, 1922, September 30th, 1922, and December 30th, 1922.....	13,650,000.00
	15,263,638.42
	\$ 7,189,146.93

From this there has been declared a second half-yearly dividend on Preference Stock of 2 per cent., payable March 31st, 1923.....	\$1,613,638.42
And a fourth quarterly dividend on Ordinary Stock of 1½ per cent., payable March 31st, 1923.....	4,550,000.00
	6,163,638.42

Leaving net surplus for the year.....	\$1,025,508.51
In addition to the above dividends on Ordinary Stock, three per cent. was paid from Special Income.	

SPECIAL INCOME FOR YEAR ENDED DECEMBER 31st, 1922.

Balance at December 31st, 1921.....	\$23,717,491.20
Less: Dividend paid April 1st, 1922.....	1,950,000.00
	\$21,767,491.20
Net Revenue from Investments and Available Resources, Exhibit "C".....	2,694,979.09
Interest on Deposits, and Interest and Dividends on Other Securities.....	1,957,190.26
Net Earnings Ocean and Coastal Steamship Lines.....	3,448,293.48
Net Earnings Commercial Telegraph and News Department, Hotels, Rentals and Miscellaneous.....	2,991,892.30
	\$32,859,846.33
Less: Payments to Shareholders in dividends: June 30th, 1922, September 30th, 1922, and December 30th, 1922.....	5,850,000.00
	\$27,009,846.33
From this a dividend has been declared payable March 31st, 1923.....	\$ 1,950,000.00

2. The working expenses for the year, including all taxes, amount to 80.55 per cent. of the gross earnings, and the net earnings to 19.45 per cent., as compared with 82.28 per cent. and 17.72 per cent. respectively in 1921.

3. The gross earnings of your transportation system during the past fiscal year were less than those of 1921 by \$6,346,818, but the net earnings increased by \$2,099,950. The net surplus over that of 1921 increased by \$270,117, the difference between the increases in net earnings and net surplus being due to the increase in fixed charges owing to the sale of Consolidated Debenture Stock. The decrease in gross earnings, as indicated by the monthly operating results, continued for the first nine months of the year due to general business depression, which reflected itself very markedly in both freight and passenger revenues. Beginning with October and in consequence of the very bountiful crops in Canada, both East and West, and notwithstanding the drastic reduction in rates on grain to Fort William under what is known as the "Crow's Nest Agreement," the revenues improved to such an extent that a decrease in gross earnings on September 30th of \$11,560,856 was reduced during the last three months by \$5,214,000. The working expenses were by economical administration reduced by \$8,446,769 during the year. In view of the conditions which prevailed during the first nine months of the year, your Directors cannot but regard the result of the operations as satisfactory. They feel, too, that short of some calamity or grave economic disturbance which cannot be foreseen the worst of the after-war depression has passed and that more stable and favorable commercial conditions should exist from now on, with the consequent improvement in traffic and revenues.

4. The sales of agricultural land in the year were 107,503 acres for \$1,732,742.43, being an average of \$16.12 per acre. Included in this area were 2,440 acres of irrigated land, which brought \$61.73 per acre, so that the average price for the balance was \$15.06 per acre. The sales of land during the year were disappointingly small due to the depression in Western Canada. The conditions were, however, general and combined with small immigration, resulted in little new settlement and the lowest number of farm-land transactions in any year during the last ten years.

5. The Canadian Pacific Steamships, in common with all other ocean lines, have in 1922 passed through a trying period. The large amount of ocean tonnage which the owners have endeavored to keep in commission has naturally created a situation seriously affecting revenues from transportation, both as to freight and passengers. In addition to the steamship lines of private companies, a large Government-owned tonnage has been in active competition with the old-established lines on all oceans. The competition of the United States lines especially has been of a demoralizing nature; in some cases lower freight rates were established than shippers represented as necessary and were willing to accept. The Atlantic service, however, shows a gratifying comparison with that of the previous year. During 1921 your ships performed 136 round voyages, and in 1922, 188—an increase of 52 voyages. There was a shrinkage in gross earnings of \$2,502,000, but there was a decrease in operating expenses of \$2,736,000, thereby increasing net profits \$234,000. In other words, the average cost of operation per voyage in 1921 was \$143,000, and in 1922, \$89,000, a reduction of \$54,000 per voyage, or 37%, although there were several larger ships in commission during the past year.

Notwithstanding this heavy decrease in operating expenses, the furnishings, equipment and victualling of your passenger steamers have been maintained at the highest possible standard. The efficiency of the service and the discipline and morale of the ships' crews were never better, and their popularity with the travelling public is everything that can be desired.

Your Pacific service during the past year has undergone considerable changes. The fine new steamers "Empress of Canada" and "Empress of Australia" have taken the place of the "Empress of Japan" and the

"Monteagle," and the Company is now operating four of the finest, best equipped and fastest steamers on the Pacific. Unfortunately, however, the Pacific trade during the past year has been of a disappointing character. China has been almost continuously in a state of civil war, and in those sections where actual war conditions have not prevailed, strikes and other disturbing features have paralyzed trade and commerce, materially affecting passenger travel, both business and tourist. The most severe competition ever met on the Pacific has been experienced. The United States Merchant Marine are operating ten passenger and cargo ships from San Francisco and Puget Sound ports which are the largest and most expensive merchant ships built in the United States.

Your Directors feel, however, that you may look forward to the present year showing better results. Special efforts are being made to encourage through travel between the Orient and Europe, and the summer schedules will enable a passenger to travel from Japan to England or France, a distance of about 10,000 miles, in twenty-one days, which should prove advantageous to your line in competition with the Suez route.

6. During the year your Directors sold in London £3,087,007, and in New York \$2,000,000 of Four per Cent. Consolidated Debenture Stock, the issue of which you had previously authorized.

The market for your Company's securities both in New York and London continues active and favorable.

7. During the year your Directors consented to the issue of \$2,500,000 First Refunding Mortgage Six per Cent. Bonds of the Minneapolis, St. Paul and Sault Ste. Marie Railway Company, and also approved the obtaining of a similar amount on Short Term Notes by that Company and an extension of \$3,000,000 One-Year Notes maturing in June, 1922. Your Company assumed no direct responsibility in connection with either of these issues.

The improvement in the revenues of the Minneapolis, St. Paul and Sault Ste. Marie Railway System during the last fiscal year was very marked, its net operating revenues for the year being \$7,178,971.82, as against a loss of \$696,584.13 for the previous year. In the opinion of the Directors of the "Soo" Company, this improvement should continue and its financial position be materially strengthened.

8. In anticipation of your confirmation, your Directors authorized capital appropriations, in addition to those approved at the last annual meeting, aggregating for the year 1922, \$1,512,680. Your approval is asked to expenditures on capital account during the present year, as and when the conditions warrant such expenditures, of \$7,630,100. Of this amount the principal items are:—

Replacement and enlargement of structures in permanent form....	\$ 803,700
Additional stations, round houses, freight sheds and shops, and extensions to existing buildings.....	318,400
Tie plates, rail anchors, ballasting, ditching and miscellaneous roadway betterments	1,250,400
Replacement of rail in main and branch line tracks with heavier section	169,500
Additional terminal and side track accommodation.....	502,500
Extension work on Chateau Frontenac Hotel, Quebec, including new equipment	2,800,000
Bungalows Camps in Ontario.....	90,000
Additional lining, Connaught Tunnel.....	695,000
Mechanical Department, machinery at various points.....	78,700
Improvements in connection with Telegraph service.....	39,100

The balance of the amount is required for miscellaneous works to improve facilities and effect economies over the whole System.

9. Your Directors are of the view that reasonable extensions of your branch line mileage in Alberta and Saskatchewan, in addition to the lines which you have already authorized, are desirable, and your authority will be asked for proceeding with the construction of the following lines and for the issue and sale of a sufficient amount of Four per Cent. Consolidated Debenture Stock to meet the expenditure, namely:

Kipp to Bow River.....	22 miles
Archive-Wymark Branch, Mileage 25 to 50.....	25 miles
Tuffnell-Prince Albert Branch.....	50 miles

10. Your Directors are making provision with your approval for obtaining the following necessary additions to your Company's equipment:—

6 Steel Café-Parlor cars,	
6 Steel Buffet-Parlor cars,	
12 Steel Sleeping cars,	
15 Steel First Class coaches,	
12 Steel Mail and Express cars,	
15 Steel Colonist cars,	
300 75-ton Coal Cars,	
300 41-foot Flat cars,	
1000 Box cars,	
300 Automobile cars,	
50 Oil Tanks,	
36 Locomotives,	
at a total cost of \$12,295,000.	

11. As provision has been made for the retirement of the Note-Certificates of the Company issued in 1914 for \$52,000,000 and maturing on March 2nd, 1924, your Directors are arranging that these Note-Certificates shall be paid off in July of this year, and notice in accordance with the provisions of the agreement establishing the Special Investment Fund will be given by the Trustee.

12. The death occurred on the 17th of September last of Mr. Richard B. Angus in the ninety-second year of his age. The late Mr. Angus was constituted a member of the first Board of Directors by the Parliamentary Act incorporating the Company in the year 1881, and was continuously during the succeeding forty-one years a Director of the Company and a member of the Executive Committee of the Board. His constant devotion to the Company's interests, his sound judgment and wise counsel, which were at all times of the greatest assistance in the determination of the Company's policies and in the administration of its affairs and his close personal relations with the members of the Board made his passing of particularly poignant regret. Your Directors desire to record their sense of the great loss sustained by the Company and by the Country through his decease. The vacancy caused by Mr. Angus' death has not yet been filled.

13. Mr. W. N. Tilley, K.C., of Toronto, Consulting Counsel of the Company, was elected a Director to fill the vacancy caused by the death of Sir John Eaton.

14. The undermentioned Directors will retire from office at the approaching Annual Meeting. They are eligible for re-election:—

Sir Edmund B. Osler,
Sir Herbert S. Holt,

Colonel Frank S. Meighen, C.M.G.

For the Directors,

E. W. BEATTY,

President.

Montreal, March 12th, 1923.

FINANCIAL

The Gross Earnings from operation for the year 1922 were \$2,858,606.76, being an increase over the corresponding period ending December 31st, 1921, of

\$100,770.40

The operating expenses for the year were \$2,010,814.62, being a decrease over the previous year's operating expenses of

\$63,214.39

The Net Earnings from operation for the year were \$847,792.14, or an increase over the previous year of

\$163,984.79.

After deducting fixed charges and tax on earnings due City of Quebec, the net income for the year amounts to \$289,830.51, or an increase of \$202,317.88 over the year 1921; your directors have deemed it wise to make provision for a reserve for depreciation of \$182,545.99, and after setting aside this amount and a further sum of \$21,183.60 for bond discount, there remains a balance of \$86,100.92, which has been carried forward to surplus account; from the surplus of \$87,512.63 carried forward from December 31st, 1921, there has been deducted \$10,364.34 for income tax on the earnings for period ending 31st December, 1921, leaving a balance of \$77,148.29, which, added to the surplus of \$86,100.92 carried forward on this year's account and added to the amount previously at credit of surplus account, there remains a total of \$760,149.45 at credit of surplus account at 31st December, 1922.

From the earnings of the Company and from the sale of Treasury Bonds the Company has provided for construction expenditures of \$192,083.99 during the year 1922, and has made a reduction in Sundry Loans and Current Liabilities of \$333,829.25, and has also added to its current assets the sum of \$135,495.89, thus improving the liquid position of the Company to the extent of

\$469,325.14

In order to more clearly show the capital liabilities of the Company, the outstanding bonds of the Subsidiary Companies are shown in detail against a contra amount of 5% Consolidated Gold Bonds due 1939 held in escrow to redeem the bonds of the Subsidiary Companies.

Authority was obtained from the Federal Government during the year to change the Capital Stock of the Company as it had existed in the past, to shares having no nominal or par value; this matter is still under advisement, but has not yet been dealt with.

GENERAL

During the year the Company constructed 5,719 ft. or 1.08 track miles of new track extensions, which extensions were urgently needed; these extensions included a loop at Parent Square and a curve at Crown and Joseph Streets, which

enabled the Company to materially improve its service, particularly during the Exhibition and Race meeting periods.

Ten additional cars were bought and added to the rolling stock equipment, during the year, which materially assisted the Company in satisfactorily handling traffic.

Considerable construction and maintenance work has been carried out during the year in the Gas Division, including the installation of additional Carburettor Water Gas Set at the Gas Works, and the laying of 9,816 lineal feet of new gas mains and 207 new services.

In August your Company, on account of economies effected in the gas operating department, was enabled to reduce the price of gas to the citizens of Quebec from \$1.75 to \$1.55 per 1,000 cu. ft.

In the Power Department most satisfactory progress has been made and the Company has added 970 electric light and power customers to its system.

During the year extensive repairs have been carried out at the Montmorency and Chaudière plants, as well as to the transmission lines and distribution systems generally.

The accounts of your Company have been duly audited and certified to by Messrs. P. S. Ross & Sons, Chartered Accountants, Montreal.

Your Directors desire to place on record their appreciation of the valuable and faithful services rendered by the Officers and Employees of the Company.

Respectfully submitted on behalf of the Directors.

E. A. ROBERT,
President.

ON OLD WORK OR NEW GTD MAXITAPS

Record Performance

While checking up staybolt tap performance, one mid-western road tried out four GTD Maxitaps on regular boiler repair work, keeping records of the number of holes tapped.

The Result? After working on five engines, it was found that 4711 holes had been tapped by the four taps—an average of nearly 1200 holes per tap on repair work, the hardest test a staybolt tap has to meet; with one tap still serviceable. Even this is not a **Record Performance**—GTD “Maxitaps” have gone as high as 1800 holes per tap in other shops—but it does represent the average service your boilermakers will get from Maxitaps on repair work.

The Reason? Fifty years' experience in manufacture of taps and dies insures correct heat treatment. For example: “Maxitaps” required for repair work are differently heat treated from those required for work on new boilers. This type of service explains why Maxitaps are found in shops where dollars are carefully counted. This “personality” built in when the tap is made guarantees every “Maxitap” long life under all conditions.

Exclusive Maxitap Features

Pilot Point
Sharp Hook
Special Relief
Chip Breaker
Extra Long Taper Section

**Record Performance Is Usual Performance
With GTD Maxitaps.**

Prove this to yourself in your own shops. Write today

G GREENFIELD TAP AND DIE CORPORATION D
OF CANADA, LIMITED GALT, ONTARIO

Do You Make Anything That Canadian Steamships Should Buy?

Investigate the thousands of things that operating steamship companies buy, and remember that these purchases are continuous rather than intermittent.

Even a freighter must be provisioned like an hotel; and, like an hotel, it needs equipment and current supplies for kitchen, dining room, sleeping quarters, laundry, machine shop, paint shop, electric and wireless shop, hospital and many other activities.

All Canadian transportation

activities require a vast aggregate of current supplies.

Every manufacturer in Canada, in the United States or in any country, who feels that he has anything that Canadian ship or railway operators should buy, will find he's telling his story to welcoming eyes through the advertising pages of Canadian Railway and Marine World, the recognized buying guide for both railway and marine interests of the Dominion of Canada.

CANADIAN RAILWAY AND MARINE WORLD

Member of

Canada

*Audit Bureau of Circulations, Associated Business Papers,
Canadian National Newspapers and Periodicals Association,
Canadian Press Association.*

This Paper is a "Member of the A.B.P."

To you, this is a fact of especial significance, for it means that this publication is part of a concerted movement to raise the level of publishing practice, to assure better service to both subscribers and advertisers.

The "A.B.P." is built upon and revolves around the following set of standards—

STANDARDS of PRACTICE

THE publisher of a business paper should dedicate his best efforts to the cause of Business and Social Service, and to this end should pledge himself—

1. To consider, first, the interests of the subscriber.
2. To subscribe to and work for truth and honesty in all departments.
3. To eliminate, in so far as possible, his personal opinions from his news columns, but to be a leader of thought in his editorial columns, and to make his criticisms constructive.
4. To refuse to publish "puffs," free reading notices or paid "write-ups"; to keep his reading columns independent of advertising considerations, and to measure all news by this standard: "Is it real news?"
5. To decline any advertisement which has a tendency to mislead or which does not conform to business integrity.
6. To solicit subscriptions and advertising solely upon the merits of the publication.
7. To supply advertisers with full information regarding character and extent of circulation statements, subject to proper and authentic verification.
8. To co-operate with all organizations and individuals engaged in creative advertising work.
9. To avoid unfair competition.
10. To determine what is the highest and largest function of the field which he serves, and then to strive in every legitimate way to promote that function.

Publications which have subscribed to these standards have earned the preferred consideration accorded them.

Lamp Failures Cause Wrecks!

Signal and long-time-burning oils must be clean and fresh—or signals will fail. To be absolutely sure of continuous service, store your oils in Bowser tanks. Thus, lamp failures—so dangerous in railroad operation—will be averted.

At signal towers, in storehouses, and along the right of way wherever oils are stored, Bowser equipment has for 36 years been recognized and accepted as the best.

Booklet C-14 is of special interest to signal supervisors and storekeepers—write for it today. It tells how the oil is pumped directly into the lamps by Bowser accurate measuring pumps from Bowser all-metal, oil-tight tanks. Waste or spillage are averted and the fire hazard is reduced to a minimum.

PEDLAR'S "PERFECT" TONCAN METAL CULVERTS

From Factory To Fill—A Unit

NOT the least of the advantages of Pedlar's Culverts is the fact that no assembly is required at the fill except when longer lengths than 40 feet are required. They are unloaded from the flat car, re-loaded on wagon or truck, hauled to the job, and rolled right into the trench. This ease of haulage and installation is a great saver of time and labor.

We also manufacture Steelcrete, Metal Lath, Rib Fabric, Floor Tyle, Metal Roofing and Siding, etc.

Those Important First 10 Years

While the normal service life of a locomotive is generally conceded from 20 to 30 years, few locomotives completely wear out. Gradually they are retired to less important service.

For the first ten years of its life a locomotive renders its greatest earning power to its owner. Thus the locomotive should pass through these years

In existing power—ELESCO 'Heaters prolong the profitable lives of locomotives.
IN NEW POWER—A necessary economy.
REMEMBER—the first years of locomotive operation count.

YOU can effect a SAVING in Lubrication costs by using TULC for it will give results not to be obtained by the use of any other Lubricant.

T U L C	Will not splash over commutators.
	Will not cause short circuit or burnt armatures.
	Will not leak or rot fields.
	Will so save in brass and babbitt to pay for itself.
	Will only feed sufficient to lubricate properly.
	Will save dripping losses.
	Will make axles and journals last longer.
	Will cut down a lot of pull-ins.
	Will eliminate hot boxes and cut axles.
	Will be sent for trial on request.

True Varnish Economy

In the long run, length of service
is the real measure of Varnish values.

Berry Brothers' Railway and Marine varnishes and enamels give long service because they are especially adapted to withstand the peculiar wear and exposure involved. They have been standard since 1858.

Contractors', Industrial and Railroad Equipment

STERLING HACK SAWS

The most expensive tool used in a machine-shop is a poor Hack Saw Blade. Some buyers purchase them where they are cheapest, but unconsciously they are paying the highest price. The Hack Saw illustrated on this page represents the "STERLING" Blade, which is the last word in a Hack Saw Blade, the makers being back of their entire product. The material and workmanship that go into the manufacture of this blade are of the very highest quality.

RESULT—A blade that has no superior.

Manufactured by

Diamond Saw & Stamping Works Buffalo, N. Y., U.S. A.

PROGRESS

From the time the first winding path was hewn through a virgin forest, until the present day, the progress of transportation and traffic has marked the progress of civilization itself.

The most notable recent step in this progress is the **STAFFORD ROLLER BEARING FOR CAR JOURNALS**.

Made of solid steel rollers, and so mechanically perfected that it stands up under the severest service tests—the Stafford Roller Bearing reduces journal resistance 90% and eliminates all possibility of hot boxes—marking a tremendous stride forward.

The Stafford Roller Bearing eliminates all purchases of journal box materials—a revolutionary saving. No frozen journals—guaranteed indefinitely against producing any wear on journals.

Car in passenger train equipped with Stafford Roller Bearings, running regularly between Chicago and Detroit.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

Why Dearborn Methods Lead In Water Treatment

A Vital Message to Every Railway Mechanical Department Executive

The Dearborn Chemical Company bases water treatment upon the principle that all the properties in the water supplies that may have detrimental action on the boilers must be destroyed or counteracted: That all waters differ in character: That these properties must be determined accurately by chemical analysis: That the treatment must provide reagents for all the harmful ingredients found: That in the reactions there must be no by-products formed that might in turn injure the boilers.

Straight Line Reasoning—No Guess Work

This plan may seem rather axiomatic, but there is no other house using this method.

Thirty-six years ago the founder of this company developed the idea of scientific analysis and treatment. Up to that time various guess-work expedients had been used. Some failed quickly and others slowly—the main difference was that some were worse than others.

Results Have Told

The Dearborn idea quickly gathered many converts. Boilers opened for inspection

showed clean tubes and sheets. Foaming troubles disappeared. Corrosion stopped.

Over a thousand power plants per year average have come to Dearborn. Railroads the world over are using it. It has been approved and adopted for use as the most economical and efficient treatment obtainable wherever steam is used for power.

Constant Laboratory Control

But Dearborn Treatment does not stop with a single analysis and prescription.

Our methods have progressed far beyond the initial idea. We now maintain constant laboratory control meeting the variations in the water supplies with suitable adjustments in the treatment. Dearborn service men travel the roads constantly, checking results.

To Gain These Advantages

Dearborn Methods do not call for special equipment or installations.—We require gallon samples of the water supplies for analysis from the districts where treatment is to be used. There is no charge for the analytical work and recommendations.

There is no substitute for Dearborn Treatment.

Reliable Insulators For Your Transmission Needs

Widely used Pin-type Insulator shown in part section. This insulator is $10\frac{1}{2}$ " in diameter, weighs about eleven pounds and has a general voltage rating of 45,000.

FOR every transmission need of Railway, Industry or Power Company there is an O-B Insulator that will give a maximum of service at a minimum of cost.

The outstanding characteristics of O-B Insulators are, first, well-balanced designs, in which all essential qualities are given proper consideration, and second, exceptionally high quality and uniformity in the product, made possible by highly refined manufacturing methods.

In both design and manufacture, special attention is given to securing those qualities which will prolong the useful life of the insulator in actual service.

Our new Canadian factory has thoroughly up-to-date equipment, uses the most advanced processes, and is turning out insulators that will uphold the reputation that O-B Insulators have enjoyed for years.

Two suspension units connected, shown with suspension eye for attaching to cross-arm. Lower unit shown in part section.

In addition to high-tension insulators, we are handling a complete line of O-B products, including Trolley Material and Rail Bonds for Electric Railways and Mines, Electric Railway Car Equipment, and Steam Road Electrification Materials.

Eliminating 2414 Pounds on a Pacific Type Locomotive

BY the use of reciprocating and rotating parts of Carbon-Vanadium, an unquenched alloy steel, it is possible to save a total of 2,414 pounds in the weight of a 4-6-2 type locomotive in service on one large road:

Reduction in rotating and reciprocating weights	1014 lbs.
" " counterweight	650 "
" " weight of axles	750 "
Total reduction per engine	2414 "

If built with ordinary carbon steel parts, the dynamic augment of this locomotive at 73 M. P. H. would be 13,850 lbs. Carbon-Vanadium reciprocating parts reduce this to 9,300 lbs. At 50 M. P. H., with ordinary steel parts, the dynamic augment would be 6,500 lbs. With Carbon-Vanadium parts, the dynamic augment at this speed is reduced to 4,370 lbs. In other words, by the use of Carbon-Vanadium parts, the dynamic augment of this locomotive can be reduced 33%.

Carbon-Vanadium Steel presents no difficulties to the railroad. It can be handled with average shop facilities, for it requires no quenching or tempering. It has a higher elastic limit and tensile strength than heat-treated carbon steel, and it makes a lighter, stronger locomotive forging.

Write for information about Carbon-Vanadium Steel, what it is doing on other roads, and how easily it can be obtained from a number of careful steel makers.

Write for Bulletin
LF-1 containing de-
tailed information
about Carbon-Vana-
dium, the tough but
simple alloy steel.

We Are Your Neighbours

Unlike the man who made the better mouse trap and built his house deep in the forest where the world had to find a path to his door, we are not only making oxygen and dissolved acetylene of the highest quality, but have located our plants and warehouses in the busy commercial centers where our products are most easily available to those who need them.

An important part of Dominion Service is the promptness with which you can secure both oxygen and dissolved acetylene in unlimited quantities. Even though your plant or contracting job may be as inaccessible as the "house in the forest" we will find the shortest way to it from one of our ten plants and distributing warehouses.

Other features of Dominion Service are equally important to you—lowest prices, careful attention to shipping instructions, liberal cylinder loans, easily-handled cylinders of the newest types, light in weight to save transportation charges, yet ruggedly constructed.

We shall appreciate an opportunity of telling you how Dominion Service will help your business.

Arc suppressor plates are considered a necessary part of new controllers. Put them in your old equipment

These plates add life to the controller

C-G-E Arc Suppressor Plates are an auxiliary to the controller arc deflector. They are installed opposite the fingers where there is the most arcing, to shorten the time for disrupting the arc. This is accomplished by narrowing the arc passages, which increases the resistance of the arc and the cooling effect of the plates. The result is less burning of the controller fingers, segments, and arcing plates.

Modern controllers are now equipped with arc suppressor plates. They give better, longer service and require fewer repairs and less frequent inspection.

These plates are inexpensive and can be used to advantage on any C-G-E controller having individual-finger blowouts, such as the K-34, K-35, K-36 and K-64. It takes only a few minutes to install them.

Try them and see the difference.

Let the "Meteor" Safety Train Signal Protect Your Trains

"Surest and best rear end train protection ever offered"
(Endorsement of Railway Official)

OFFICIAL TEST

As reported to the Board of Railway Commission for Canada, by Chief Inspector of the Explosive Division, Department of Mines, Dominion of Canada:—

The Detonation was found to be reliable under trials, the conditions of which were more severe than those likely to be encountered in actual service.

The volume of sound is well above the average, sharp and arresting, accompanied by a brighter flash than given by any other torpedo tested, and plainly seen from the cab of the locomotive.

The detonation was not affected after the signals had been subjected to special treatment, for exposure to rain, snow, steam, saturated atmosphere and rough usage. No "dangerous" debris was projected at the trials, and the results were superior to those obtained with any other torpedo tested.

The brass wire swivel spring is of a form which renders the operation of attaching the signal to the rail simple and quick and cannot be knocked off by the wheel of the locomotive.

After tests under service conditions on the Canadian Pacific Railway, from the Atlantic to the Pacific, practical railroaders affirm that no engineman can possibly run over one of these signals and fail to recognize that a signal is intended. This opinion from men who are familiar with the use of track signals fully endorses all that has been said in favor of the "METEOR."

The "METEOR" differs from all other torpedoes. It appeals to three senses—Hearing, Seeing and Smelling—and thereby makes assurance trebly sure. The "METEOR" has been adopted as "Standard" on the Canadian Pacific Railway over the entire 18,000-mile system, also by the Grand Trunk Railway and other Canadian Railways.

First and Last Pages

The first page in the history of journal bearings for railroad cars was written when DeWitt Clinton started a new industry.

The last pages in the history of journal *friction bearings* are being written today, following the many service installations of STAFFORD ROLLER BEARINGS for Car Journals.

*The last word in Operating Economy—
Stafford Roller Bearings — guaranteed
three years.*

HISTORY OF RAILROADING

Following several years severe service tests, Stafford Roller Bearings for car trucks were specified extensively by railroads in 1922 and 1923, in place of the antiquated friction bearing. A reduction of 90% in journal friction was shown by the Stafford Bearing in competitive tests.

"IT ROLLS THE

FRICITION AWAY"

Intensive Cultivation of Specific Fields Is the Secret of Modern Merchandising Successes

The old school of advertising, still fostered by some advertisers, but largely going out of use, was to buy circulation in terms of quantity rather than quality.

The advertising solicitor who could show the greatest number of millions of circulation at the lowest rate per thousand per line was often successful in selling campaigns to the unthinking.

We still see thousands of dollars wasted in advertising technical products to the general public. But present day competition has set men thinking. It has restored the dollar value to the dollar. It is beginning to uncover the good old-fashioned word "thrift" from under the pile of fool's gold that buried it.

Thinking men are once again beginning to take the trouble to segregate their logical audiences and to address their advertising messages to

specific audiences in the trade language of the needs of those audiences.

Take the railway and marine interests of Canada, for instance. They represent the very heart blood of the country. They typify directly and indirectly more than half of all Canada's industrial wealth. Their buying power foots up into hundreds of millions of dollars yearly.

And the responsible executives of both the railway and marine interests —(which also means the Dominion Government)—of Canada are the men who carefully study the advertising pages of every issue of Canadian Railway and Marine World.

These men look to this technical paper as a safe guide in buying.

Can you imagine a specific appeal to a specific audience that gives promise of larger returns than a full page campaign in Canadian Railway and Marine World?

IT IS to your interest to know that goods are *well sold*, as well as well made. You have to pay the cost of selling just as you have to pay for the cost of manufacturing. Think it over.

And the cost of selling is no small item. In some cases it costs more to sell goods than to make them. The seller who clings to antiquated, expensive methods of selling is no more entitled to your patronage than the one who runs an out-of-date factory, because *you have to pay* the additional cost in either case.

If the waste is to be squeezed out of selling, the buyer cannot escape a share of the responsibility in bringing it about.

THIS means recognizing the efforts of those sellers who have adopted modern, economical methods of selling, and one of these beyond any question is good advertising in good Business Papers.

Advertising not only cuts the cost of selling, but it increases production volume and lowers manufacturing costs. It standardizes quality, and is a guarantee of good faith.

THE A.B.C.

*—An Aid to Advertisers
Both Local and National*

THE Audit Bureau of Circulations is an Association of publishers, advertisers and advertising agencies who are co-operating to standardize and verify circulation data, and thus place the buying of space on a basis of "Known Value."

The Bureau was established in 1914 and now numbers among its members the majority of the leaders in the publishing and advertising fields of the United States and Canada.

Twice a year the publisher makes a report to the Bureau showing total circulation and details of distribution by states, cities, towns, suburbs and rural districts; also subscription rates and facts about contests, premiums and club offers. Once a year these statements are audited by one of the Bureau's experts. The publisher-members agree to permit examination by the Auditor of all records considered necessary by the Bureau.

By means of the A. B. C. audit reports, which are issued on all member-publications, the advertiser can analyze the circulation of a publication and determine its value to him as an advertising medium.

By patronizing A. B. C. publications, advertisers guard their own interests and also participate in this nation-wide movement to place advertising on a sound, business-like basis.

*The Canadian Railway and Marine
World is a member of the A. B. C.
and would be pleased to submit a

Specify "Silver Lake A" Cord on your requisitions

For Signal, Bell and Register Cord use "Silver Lake A" braided cord, which has proven most reliable in many years of service.

The first cost is less than leather—it is more pliable and it is not affected by weather conditions.

Where the highest grade cord is not required, we recommend either "Silver Lake" or "Wearwell" grades.

Immediate delivery can always be made from large stock.

Remember That

London Street Railway—Sept., 1922

We not only save you excavation and concrete, but at the same time reinforce your bearing slab of concrete, thus offering you a better and stronger base than you would have with the old expensive method of construction. Also all water absorbing materials are eliminated. Does this mean anything to you?

Sarnia Bridge Co., Ltd.
Sarnia, Ont.

Meeting the Test

THE valve lifters of a well-known truck are tapped in cold rolled steel with a 15/16-20 U.S.F. Pratt & Whitney Con-eccentrically Relieved Tap.

After careful testing, this style and make of tap was selected for its ability to stand up under high production and has proven satisfactory for over two years. The durability of these tools comes from the careful selection and heat treatment of the steel, while their cutting qualities are assured by their construction and the care taken in the manufacturing processes.

The con-eccentric feature insures the retention of original size through a number of regrindings. Instead of relieving the tooth directly back from the cutting edge, the land is made concentric for one-third of its width, the remaining two-thirds being eccentrically relieved.

You make no mistake in specifying P. & W. Taps for ordinary work or for exceptional jobs such as the one illustrated.

Taps, Dies, Reamers, Milling Cutters and many other tools are listed in our small tool catalogue. A copy awaits your request.

Canadian Railway and Marine World

May, 1923

Further Co-ordination of G.T.R. With Canadian National Railways.

Sir Henry Thornton Explains His Work.

The acting Minister of Railways, Mr. Graham, in presenting the annual statement respecting Government railways, in the House of Commons recently, read the following memorandum from the President:—"The present management took charge of the property about Dec. 1, 1922, at a season of the year when inspections, examinations and progress were difficult on account of winter conditions. Obviously, the first effort of the management was to make as complete an inspection of the property as weather conditions would permit, in as short a time as possible, and to become acquainted with the officers and employes on the various constituent parts of the national railway system. In addition to this, traffic conditions and problems had to be examined, as all of these were essential factors in the determination of the organization which would be necessary to operate the consolidated system.

"There were three primary problems which demanded immediate attention: 1. The determination of the kind of organization to be employed in the administration of the property. 2. The determination of the regions into which the property was to be divided for operating purposes, and the location of regional and general headquarters. 3. The selection of officers for the various posts involved in the organization. The study and successful solution of these three questions naturally involved examination of the property itself; the country, its productivity; the movement of traffic and the rates charged thereon; the principal lines of future commercial and agricultural development; coupled with a general study of the Dominion's economic condition.

"Perhaps the most important and difficult problem was to assess the value of officers for prospective posts, with a view to getting the right man in the right place. The organization which had been decided upon is what may be called a strengthened divisional organization, as distinguished from a departmental organization. The executive officers consist of a Chairman and President, assisted by five Vice Presidents as under: 1. Vice President in charge of operation, maintenance and construction. 2. Vice President in charge of financial affairs. 3. Vice President in charge of insurance, immigration, development, lands, express and telegraphs. 4. Vice President in charge of legal affairs. 5. Vice President in charge of traffic. The above executive officers represent the minimum with which, in my judgment, it would be possible to operate such a property as the Canadian National Rys.; indeed, as time goes on and traffic increases, it will probably be necessary to add another Vice President. The list above given, however, represents a considerable economy as compared with the executive officers of the old national system and the G.T.R. Those properties had in the aggregate one Chairman, two Presidents, and 11 Vice Presidents, with a complete staff of officers for each. There is now one Chairman and President, and five Vice

Presidents. The actual saving in salaries of vice presidents and their immediate office forces should be at least \$150,000 a year. It is not possible at the moment to say exactly what the total savings in the salary list will be, as the organization has been barely completed, and the officers have hardly settled into their places, and consequently the exact number of clerks and subordinates in each department has not been finally fixed; but one would be quite safe in saying that a material saving will be accomplished, and a much more efficient administrative machine provided. Most of the announcements made with respect to officers represent either a rearrangement of duties and responsibilities, or the confirmation of positions which already existed. In only one or two cases have entirely new positions been created; and the net result will undoubtedly be the employment of a smaller administrative class.

"The railway has been divided into three regions for operating purposes, and this feature has been so exhaustively discussed before that comment is now unnecessary. Suffice it to say that the principle followed was to give to each operating region as much autonomy and local control in the actual operation of the property as was consistent with efficient principles of administration. Every effort will be made to confine the functions of the vice presidents and the executive officers to policies, leaving to general managers, general superintendents, and superintendents the responsibility of carrying out details. In the administration of such a large property as is represented by the Canadian National Rys. no other theory of organization can be successful.

"Various aspects of the operation of the national system are being studied with a view to reducing expenses as rapidly as possible. For example, it has been found that the railway could advantageously do its own insuring, and this has been decided upon. It is anticipated that from this item alone there will be a saving which will approximate \$500,000 a year.

"It is the intention of the present administration to apply itself as diligently as possible to the creation of new traffics, and the movement of those traffics, and existing traffics, with a constantly increasing economy. A system of statistics is under development, which will, it is hoped, enable the maximum of use to be made of engine power. An examination of timekeeping methods is under way, in order to ensure that every employe is paid all that is coming to him, but no more. New methods of storekeeping, and the custody of materials, are being developed, in order that purchases may be reduced to a minimum; and in various ways the organization is preparing to bring each department and function of the railway to as high a degree of efficiency as modern scientific knowledge will permit.

"In the organization of such a property, where we employ about 100,000 people, scattered over nearly 23,000 miles

of line, the process of consolidating and harmonizing the various forces is one which will necessarily take some time. It is, therefore, earnestly hoped that those who administer the affairs of the nation will be sufficiently patient to give those who are sincerely, honestly and conscientiously working at this problem an opportunity to show what can be accomplished before criticisms are made."

Changes in Districts and Divisions.

Circulars have been issued announcing territorial changes in the Central Region, as follows:—

By J. E. Morazain, General Superintendent, Quebec District: The LaTuque Subdivision, St. Maurice Division, between Viaduc and Fitzpatrick, both points inclusive, 124 miles, heretofore under Superintendent W. J. Atkinson, Quebec, has been added to Saguenay Division, under Superintendent R. Colclough, Quebec. The Manouan, Oskelaneo and Amos Subdivisions, St. Maurice Division, from west yard limit, Fitzpatrick, to O'Brien, 328.4 miles, heretofore under jurisdiction of W. J. Atkinson, Superintendent, Quebec, have been added to Cochrane Division, under Superintendent W. B. Way at Cochrane, Ont. The Assistant Superintendent will be located at Parent.

By C. G. Bowker, General Manager, Central Region: The 31st district, between Ottawa and Madawaska, 263.12 miles, including Ottawa terminal, and between Golden Lake and Pembroke, 21.09 miles, and the 32nd district, between Madawaska and Depot Harbor, 133.51 miles, formerly part of Ottawa Division, Eastern Lines, G.T.R., under R. H. Fish, then General Superintendent, Eastern Lines, Montreal, and F. L. Lamplough, Superintendent Ottawa Division, G.T.R., Ottawa, are transferred to Northern Ontario District, C.N.R., under General Superintendent W. R. Devenish, Toronto.

By W. R. Devenish, General Superintendent, Northern Ontario District: The Ottawa Division, Canadian National Rys., between Ottawa and Toronto, including branch lines, except Pembroke Subdivision between Rideau Jct. and Brent, a total of 601.1 miles, heretofore under W. R. Kelly, Superintendent, Ottawa, are transferred to Superintendent F. L. Lamplough, Ottawa, who has heretofore been Superintendent, Ottawa Division, G.T.R. His present jurisdiction includes the portions of the Ottawa Division, Eastern Lines, G.T.R., from Ottawa to Depot Harbor, 396.23 miles, from Golden Lake to Pembroke, 21.09 miles, and Ottawa Terminal, also the territory formerly in the Canadian National Rys. Ottawa Division, including branch lines, except Pembroke Subdivision, Rideau Jct. to Brent. Mr. Lamplough reports to General Superintendent Devenish, Toronto: The portions of the former Ottawa Division, Eastern Lines, G.T.R., east of Ottawa, have been transferred to Superintendent J. J. Connelly at Montreal.

The Pembroke Subdivision, Ottawa Division, Canadian National Rys., between Rideau Jct. and Brent, Ont., 157.8

miles, heretofore under W. R. Kelly, Superintendent, Ottawa, are added to Nipissing Division, Northern Ontario District, under Superintendent G. N. Goad, Capreol.

Secretarial Appointments.

Sir Henry Thornton issued the following circular, April 14: "On Jan. 30 last, R. P. ORMSBY was appointed Secretary of the Canadian National Ry. Co., and HENRY PHILLIPS was appointed Assistant Secretary. These appointments cover all subsidiary companies, with some few exceptions."

Operation and Construction Department Appointments.

S. J. Hungerford, Vice President, has announced the following:

A. E. CRILLY, heretofore Assistant to General Manager, Eastern Lines, Montreal, to be Chief of Wage Bureau, representing the office of Vice President, Operation and Construction Departments, in matters pertaining to staff and wages or working conditions of employees, and to perform such other duties as may be assigned to him from time to time by the Vice President. He will also co-operate with and assist general managers and other regional officers in connection with these, and related matters. Office, Montreal.

C. J. SMITH, heretofore Manager and Secretary, Montreal Warehousing Co., Montreal, to be General Manager of Elevators and Warehouses, C.N.R., in charge of the management of grain elevators and revenue traffic warehouses, reporting to the Vice President, Operation and Construction Departments, in connection with inter-regional matters, and generally supervising, under the direction of the regional general managers, the operation and maintenance of such facilities under their jurisdiction. He will also perform such other duties as may be assigned to him from time to time by the Vice President, Operation and Construction Departments. Office, Montreal.

Atlantic Region Appointments.

L. S. Brown, General Manager, Atlantic Region, has announced the following:

A. F. STEWART, heretofore Chief Engineer, Canadian Government Rys. and National Transcontinental Ry., east of Armstrong, Ont., Moncton, N.B., to be Chief Engineer, Atlantic Region. Office, Moncton, N.B.

A. F. Stewart, Chief Engineer, Atlantic Region, has announced the following:

F. O. CONDON, heretofore District Engineer, Maritime District, Moncton, to be Engineer, Maintenance of Way, Atlantic Region. Office, Moncton, N.B.

C. S. G. ROGERS, heretofore Assistant Engineer of Bridges, Maritime District, Moncton, to be Bridge Engineer, Atlantic Region. Office, Moncton, N.B.

H. J. CRUDGE, heretofore Assistant Engineer of Bridges, Moncton, to be Building Engineer, Atlantic Region. Office, Moncton, N.B.

W. U. Appleton, General Superintendent, Atlantic Region, has announced the following:

J. W. JOHNSTON, heretofore Superintending Engineer of Ferries, between Mulgrave and Point Tupper, N.S., Mulgrave, N.S., to be Superintendent of Ferries, with jurisdiction over the Tormentine, N.B., and Borden, P.E.I., ferry route, as well as on the Strait of Canso. Office, Mulgrave, N.S.

Atlantic Region officials heretofore termed assistant master mechanics will hereafter be designated as master mechanics. The position of Superintendent

of Car Service is abolished. All matters relating to car service, including tracing and distribution of cars, embargoes, demurrages, heating and refrigeration, speed freight reports, etc., will be handled by the Superintendent of Transportation, Moncton, N.B. All matters relating to car accounting will be handled by the Assistant Superintendent of Transportation, Moncton, N.B., and interchange reports, conductors' journals and similar reports will be addressed to him direct.

W. E. Barnes, Superintendent of Motive Power, Atlantic Region, has announced the following:

G. L. DICKSON, to be Electrical and Signal Engineer, Atlantic Region. Office, Moncton, N.B.

FRANK WILLIAMS, heretofore Mechanical Designer, to be Mechanical Engineer, Atlantic Region. Office, Moncton, N.B.

W. N. Rippey, Superintendent, Moncton Division, Maritime District, Atlantic Region, has announced the following:

L. R. ROSS, heretofore Terminal Superintendent (Station), St. John, N.B., to be Superintendent of Terminals there.

W. P. O'SULLIVAN, to be acting Terminal Agent, St. John, N.B.

Central Region Appointments.

W. R. Devenish, General Superintendent, Northern Ontario District, Central Region, has announced the following:

F. L. LAMPLOUGH, heretofore Superintendent, Ottawa Division, G.T.R., Ottawa, Ont., to be Superintendent, Ottawa Division, Northern Ontario District, Central Region, with territory between Ottawa and Toronto, including branch lines, except Pembroke Subdivision, between Rideau Jct. and Brent, Ont. Office, Ottawa, Ont.

W. R. KELLY, heretofore Superintendent, Ottawa Division, Ontario District, Ottawa, Ont., to be Superintendent of Transportation, Northern Ontario District, Central Region, vice G. A. Hoag, appointed Assistant Superintendent, Ottawa Division, Northern Ontario District, Central Region. Office, Toronto.

G. A. HOAG, heretofore Superintendent of Transportation, Ontario District, Toronto, to be Assistant Superintendent, Ottawa Division, Northern Ontario District, Central Region. Office, Trenton, Ont.

W. H. McAlpine, Superintendent of Motive Power, has issued the following:

J. HAWKINS, heretofore Assistant Master Mechanic, Hornepayne, Ont., to be Master Mechanic there.

W. G. STRACHAN, heretofore Assistant Master Mechanic, Capreol, Ont., to be Master Mechanic there.

W. C. MOORE, heretofore Assistant Master Mechanic, Ottawa, Ont., to be Master Mechanic there.

F. L. Lamplough, Superintendent, Ottawa Division, Northern Ontario District, has announced the following:

S. McILWAIN, heretofore Division Engineer, Ottawa Division, to be Division Engineer, Ottawa Division, Northern Ontario District, Central Region. Office, Ottawa, Ont.

P. H. FOX, heretofore Assistant Superintendent, Ottawa Division, Ontario District, Trenton, Ont., to be Assistant Superintendent, Ottawa Division, Northern Ontario District, Central Region. Office, Ottawa, Ont.

W. C. MOORE, heretofore Assistant Master Mechanic, Ottawa Division, Ottawa, to be Master Mechanic, Ottawa Division, Northern Ontario District, Central Region, his former position being abolished. Office, Ottawa, Ont.

G. N. Goad, Superintendent, Nipissing Division, Northern Ontario District, Central Region, has announced the following:

L. W. BULLER, heretofore Assistant Superintendent, Ottawa and Pembroke Divisions, Ontario District, Toronto, to be Assistant Superintendent, Nipissing Division, Northern Ontario District, Central Region. Office, Toronto.

Western Region Appointments.

H. A. Dixon, Regional Chief Engineer, Western Region, has announced the following:

J. A. HEAMAN, heretofore Assistant Chief Engineer, Western Lines, Winnipeg, to be Regional Assistant Chief Engineer, Western Region. Office, Winnipeg.

J. E. DAVISON, heretofore Assistant to Chief Engineer, Western Lines, Winnipeg, to be Assistant to Regional Chief Engineer, Western Region. Office, Winnipeg.

J. G. LEGRAND, heretofore Bridge Engineer, Western Lines, Winnipeg, to be Bridge Engineer, Western Region. Office, Winnipeg.

W. WALKDEN, heretofore Assistant Bridge Engineer, Western Lines, Winnipeg, to be Assistant Bridge Engineer, Western Region. Office, Winnipeg.

D. R. CAMPBELL, heretofore in charge of Construction Department, Western Lines, Winnipeg, to be General Superintendent, Construction, Western Region. Office, Winnipeg.

W. BURNS, heretofore Engineer of Construction, Western Lines, Winnipeg, to be Construction Engineer, Western Region. Office, Winnipeg.

G. C. BRIGGS, heretofore Architect, Western Lines, Winnipeg, to be Building Engineer, Western Region. Office, Winnipeg.

J. H. CORMICK, heretofore Signal Engineer, Western Lines, Winnipeg, to be Signal Engineer, Western Region. Office, Winnipeg.

H. P. BLAKE, heretofore Engineer of Water Supply, Western Lines, Winnipeg, to be Water Supply Engineer, Western Region. Office, Winnipeg.

J. W. PORTER, heretofore Special Engineer, Western Lines, Winnipeg, to be Special Engineer, Western Region. Office, Winnipeg.

T. TURNBULL, heretofore Engineer, Maintenance of Way, Western Lines, Winnipeg, to be Engineer, Maintenance of Way, Manitoba and Saskatchewan Districts, Western Region. Office, Winnipeg.

F. B. TAPLEY, heretofore Engineer, Maintenance of Way, Eastern Lines, Moncton, N.B., to be Engineer, Maintenance of Way, Alberta and British Columbia Districts, Western Region. Office, Edmonton, Alta.

Finance and Accounting Department Appointments.

J. M. Rosevear, General Comptroller, has announced the following:

EDWARD ARNOLD, heretofore Freight Claim Agent, G.T.R., Montreal, to be General Freight Claim Agent, with jurisdiction over loss and damage claims for entire system, exclusive of Grand Trunk Western Lines. Office, Montreal.

Edward Arnold, General Freight Claim Agent, has announced the following:

O. CAMERON, heretofore Freight Claim Agent, Moncton, to be Freight Claim Agent, with jurisdiction, lines east of Riviere du Loup and Monk, Que. Office, Moncton, N.B.

H. McDONALD, heretofore Freight Claim Agent, Toronto, to be Freight Claim Agent, with jurisdiction, Ontario

lines, Toronto and south and west thereof to Niagara Falls, Buffalo, Windsor and Port Huron, and intermediate branch lines, except from Orillia to Midland and Scotia Jct. to Depot Harbor; Toronto to Washago and North Bay and west to Current, also Cochrane to Superior Jct. Office, Toronto.

A. G. GILMOUR, heretofore Freight Claim Agent, Winnipeg, to be Freight Claim Agent, and J. W. CONNELL, heretofore Assistant Freight Claim Agent, Winnipeg, to be Assistant Freight Claim Agent, with jurisdiction, lines north and west of Port Arthur and Superior Jct. to Lucerne, B.C. Office, Winnipeg.

T. GINNELLY, heretofore Assistant Freight Claim Agent, Vancouver, B.C., to be Assistant Freight Claim Agent, with jurisdiction, lines west of Lucerne, B.C. Office, Vancouver, B.C.

Insurance, Lands, Express, Telegraph, Colonization, etc., Department Appointments.

W. D. Robb, Vice President, has announced the following:

F. A. BOURNE, heretofore Secretary, Pension Department, G.T.R., Montreal, to be Superintendent of Pensions and Relief. Office, Montreal.

W. D. KEESON, to be Director of Insurance. Office, Montreal.

Passenger Department Appointments.

H. H. MELANSON, heretofore Passenger Traffic Manager, Toronto, has been appointed General Passenger Traffic Manager, with office at Montreal. His position was incorrectly mentioned as Passenger Traffic Manager in our last issue.

A. B. CHOWN, heretofore Assistant General Passenger Agent, G.T.R., Chicago, Ill., has been appointed General Passenger and Baggage Agent, G.T.R., Chicago, Ill., vice J. D. McDonald, who has retired on the pension fund, after 54 years service.

W. R. EASTMAN, heretofore General Agent, Passenger Department, G.T.R., Boston, Mass., has been appointed Assistant General Passenger Agent, G.T.R., and General Western Passenger Agent, C.N.R., Chicago, Ill., vice A. B. Chown, appointed General Passenger and Baggage Agent there.

R. Creelman, Passenger Traffic Manager, Western Region, has announced the following:

OSBORNE SCOTT, heretofore General Passenger Agent, Vancouver, B.C., to be General Passenger Agent, east of Jasper, Alta., including Duluth, Winnipeg & Pacific Ry., Western Region, vice W. E. Duperow, appointed Passenger Traffic Manager, Central Region, Toronto. Office, Winnipeg.

Purchases and Stores Department Appointments.

G. H. Jenkins, General Fuel Agent, has announced the following:

A. J. WILMOT, heretofore Fuel Agent, Moncton, to be Fuel Agent, Atlantic Region. Office, Moncton, N.B.

C. E. JONES, heretofore Fuel Agent, Toronto, to be Fuel Agent, Central Region. Office, Toronto.

W. E. EVANS, to be Assistant Fuel Agent, Central Region. Office, Toronto.

W. J. STURGES, formerly Assistant Fuel Agent, Edmonton, Alta., and latterly acting Fuel Agent, Winnipeg, to be Fuel Agent, Western Region. Office, Winnipeg.

Regional fuel agents will report to their respective general managers in matters of discipline, staff, wages and distribution of fuel, and to the Director

of Purchases and Stores, through the General Fuel Agent, in matters of contracts, prices, inspection and accounts.

L. C. Thomson, Chief of Stores, has announced the following:

A. E. COX, heretofore General Storekeeper, Western Lines, Winnipeg, to be General Storekeeper, Western Region. Office, Winnipeg.

D. ROBERTSON, heretofore Assistant General Storekeeper, Western Lines, Winnipeg, to be Assistant General Storekeeper, Western Region. Office, Winnipeg.

E. J. McVEIGH, heretofore General Storekeeper, G.T.R., Montreal, to be General Storekeeper, Central Region, C.N.R. Office, Toronto.

E. D. TOYE, heretofore on special duty in office of Vice President, Purchasing, Supplies and Stores, Toronto, to be Assistant General Storekeeper, Central Region. Office, Toronto.

W. B. LOGAN, heretofore acting District Storekeeper, Moncton, N.B., to be General Storekeeper, Atlantic Region. Office, Moncton, N.B.

General storekeepers report to their respective general managers in matters of service, discipline, staff, wages and facilities, and to the Director of Purchases and Stores, through the Chief of Stores, in matters of policy, standard practices, stocks, etc.

E. J. McVeigh, General Storekeeper, Central Region, has announced the following:

J. C. JACKSON, to be District Storekeeper, Battle Creek, Mich.

J. B. LIVINGSTONE, heretofore Divisional Storekeeper, to be District Storekeeper, London, Ont.

H. B. AIKIN, confirmed as District Storekeeper, Leaside, Ont.

C. J. O'DOHERTY, heretofore Storekeeper, G.T.R., Ottawa, to be District Storekeeper, C.N.R., Ottawa, Ont.

W. B. GORDON, heretofore Storekeeper, G.T.R., Montreal, to be District Storekeeper, C.N.R., Point St. Charles, Montreal.

M. W. STEVENS, to be District Storekeeper, Portland, Me.

J. H. BROWN, heretofore Storekeeper, to be District Storekeeper, St. Malo, Que.

The foregoing storekeepers will continue to handle territory as at present until further advised.

W. H. Grant, General Tie Agent, has announced the following:

J. C. STEWART, to be Tie Agent, Atlantic Region. Office, Moncton, N.B.

A. R. THOMPSON, to be Tie Agent, Central Region. Office, Toronto.

J. B. PARKIN, to be Tie Agent, Western Region. Office, Winnipeg.

Regional tie agents will report to their respective general managers in matters of discipline, staff, wages, and distribution of material, and to the Director of Purchases and Stores, through the General Tie Agent, in matters of contracts, prices, inspection and accounts.

Bureau of Economics Appointments.

R. A. C. Henry, Director, Bureau of Economics, has announced the following:

S. W. FAIRWEATHER, to be Assistant to Director, Bureau of Economics. Office, Montreal.

V. I. SMART, B.A., for some time on the Railways and Canals Department's technical staff at Ottawa, and who, on Sir Henry Thornton assuming office, on Dec. 1, 1922, was transferred to his staff at Ottawa, for special service, is appointed Special Engineer, Bureau of Economics. Office, Montreal.

A. S. GOING, heretofore Engineer of Construction, G.T.R., Montreal, to be Terminal Engineer, Bureau of Economics. Office, Montreal.

E. B. WALKER, heretofore Electrical Engineer, Toronto, to be Electrical Engineer, Bureau of Economics. Office, Montreal.

Daylight Saving and the Railways.

There is no unanimity of opinion among the councils of the larger cities as to daylight saving or summer time, and also considerable diversity of views as to the dates within which, if adopted, it shall be operative. The railway companies have decided that, wherever necessary, owing to the adoption of summer time, for the convenience of the travelling public, suburban trains serving the cities will be run on the daylight time.

Quebec City Council, on April 13, refused to reconsider the adoption of summer time, a resolution favoring it having been defeated by 9 to 4 at a previous meeting. In Montreal, where on March 15 a resolution declining to adopt summer time was defeated by 23 to 13, a number of petitions were presented protesting against this decision, and on April 4, the council reaffirmed its decision by 23 to 11. The Railway Association of Canada's Secretary subsequently made the following statement:—"In view of the demonstration by the business interests and workers in favor of daylight saving hours, it appears evident that the railways, in order to meet the demands of commuters, will have to operate their suburban train service during the coming summer on substantially the same schedules as were in effect last year, the change becoming effective May 13, and continuing until Sept. 30."

In Toronto, daylight time will be in force from May 13 to Sept. 9, and these dates will control the municipalities along the Lake Shore to Port Credit. The C.P.R. and the Canadian National Rys. will alter the time of one train a day each way to suit business people who live out of town. The Toronto Suburban Ry. will only make one alteration in its time table, viz.: the 12.45 car from Keele St. to Guelph, will operate on standard time every week day but Saturday, when it will be run on daylight time.

Ottawa, which originally decided to adopt the Railway Association's suggestion to make the summer time coincide with the change to spring schedules by the railways, on April 17, decided to have summer time from May 13 to Sept. 30. Vancouver will not decide what will be done until June 16, when the council is expected to pass a daylight saving bylaw to run from June 19 to Sept. 9. In Victoria, a daylight saving bylaw went into operation on April 15, and will continue until Sept. 9.

Regulations for Freight Trains Passing Through Tunnels.—The Board of Railway Commissioners' circular of Feb. 2, as published in Canadian Railway and Marine World for March, pg. 114, has been cancelled by circular 200, issued April 4, as follows:—"The Board directs that on trains passing through tunnels, more than 500 ft. in length, open cars loaded with wood, lumber, piles, poles, etc., shall not be placed next to the engine; and, if sufficient box cars are available, at least three of such shall be placed between the engine and such loaded timber cars on such a movement."

Railway Wages and Working Conditions in Canada and the United States.

The Canadian Brotherhood of Railway Employees applied, as stated in Canadian Railway and Marine World for April, for a board of conciliation and investigation, to adjust the dispute between the Canadian National Rys. and certain western lines sleeping car porters, members of the brotherhood. We were officially advised on April 17 that the Labor Department had granted a board, and that the C.N.R. will be represented thereon by C. E. Dafoe, Winnipeg, and the employees by David Campbell, Winnipeg, they to agree upon a chairman. Subsequently, as they could not agree, the Labor Department appointed W. J. Donovan, of Winnipeg, as chairman. The dispute has to do with: 1. Grand Trunk Pacific porters' claims for back wages, disputed by the railway. 2. Claim for reinstatement of all porters re-employed after the Winnipeg strike in 1919. 3. The dismissal of a porter for irregularities in connection with the handling of revenue.

Two local divisions of the Canadian Brotherhood of Railway Employees at London, Ont., nos. 96 and 198, have combined, this giving the London organization a membership of about 350.

A Montreal press dispatch states that employees at the C.P.R. Angus shops, agreed with the management that, instead of a number of the junior employees being laid off, so as to provide full time work for the senior employees, the available work should be distributed among all employees, and that as a result of this arrangement the shops were closed down from March 24 to April 3. At a number of the other shops on the system, the juniors were laid off in sufficient numbers to ensure steady work for the seniors.

A press dispatch states that the funds of the Canadian locals of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers will henceforth be kept in Canada, instead of being sent to the U.S. to be placed under the control of the organization's general officers at Detroit. Under a new arrangement, following the convention at Detroit a few months ago, headquarters of the C.P.R. employees' division of the brotherhood will be located at Ottawa, and of the C.N.R. employees' division at London, Ont. W. Jewkes will be Secretary-Treasurer at Ottawa, and R. H. Hessel at London.

F. McKenna, Vice President, Brotherhood of Railway Carmen, and Vice Chairman, Division 4, American Federation of Labor's Railway Employees' Department, addressed a meeting of shopmen in London, Ont., on April 9, and is reported to have stated, in discussing the possibilities of reopening negotiations with the railways for a higher wage scale, that the present is not an opportune time to try to introduce a new wage schedule. In connection with the "one big union" proposals which have been detailed in these columns, Mr. McKenna said that similar amalgamation plans have been tried several times before and have been found unworkable.

A. R. Mosher, President, Canadian Brotherhood of Railway Employees, in addressing members of the organization in Montreal recently, after stating that the brotherhood's function was to remove injustice, correct glaring inequalities and improve the conditions not only of its members, but of the community as a whole, explained at length the importance of good service to the railways.

He pointed out that employees must put their hearts into their work, if the railway is to be enabled to get the money to enable it to pay good wages, and stated that, as the road has no mysterious powers, but must pay wages out of earnings, employees who are prone to waste time and damage equipment are enemies to all concerned, railway and other employees alike. He urged co-operation with Sir Henry Thornton and his executive officers in the struggle to make the Canadian National Rys. successful.

A vote was taken among dispatchers, operators and commercial wire men to test the sentiment as regards the proposition of breaking away from the international telegraphers' organization. Results demonstrated that sentiment is not favorable to the severance of international affiliation and the formation of a Canadian brotherhood. A large proportion of the membership in Eastern Canada did not vote, and as a result, only 751 ballots were cast, of which 655 were in favor of maintaining the international status, and 96 against.

W. Aspinall, Secretary of the Central Committee of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, is reported to have stated that 60 days notice of an application for an increase in maintenance of way employees' wages on Canadian railways has been given the Railway Association of Canada. This notice is necessary according to the agreement existing between the Association and the Brotherhood. Mr. Aspinall is stated to have claimed that many U.S. roads have recently voluntarily granted substantial increases to their maintenance of way employees, independently of the rates set by the U.S. Labor Board, and that the wages now being received by Canadian maintenance of way employees are lower than are being paid for similar classes of work in outside industries.

A press report states that a conference is being arranged in Detroit between Pere Marquette Ry. officials and officers of the telegraphers' organization on the Canadian division, to discuss wages. It is stated that a move to reduce telegraphers' wages has been made by the company, and that the men have protested to the Labor Department. It is probable that if the conference does not secure a settlement, a conciliation board will be applied for by the employees, under the Industrial Disputes Investigation Act. The number of telegraphers affected is about 40.

United States.—Details of the injunction against the striking shopmen on the U.S. railways secured by the U.S. Attorney-General were given in Canadian Railway and Marine World at the time the strike was in progress, it being stated that the matter of making the injunction permanent was to be argued later. Argument has been set for May 2, in Chicago. Preparatory to the hearing, the Attorney-General has been gathering evidence from various roads on which the strike was effective, and much testimony as to losses occasioned and acts of lawlessness committed by strikers has been gathered.

The Pennsylvania Rd. "full crew law," which required more than the ordinary number of trainmen on freight trains having more than a specified number of cars, was repealed by the Pennsylvania Legislature two years ago. This law,

like similar ones in other states, came in for a lot of criticism from the public generally, on account of accusations to the effect that its only object was to furnish jobs to members of the train service brotherhoods. It is reported that advocates of the former legislation are again trying to introduce it in the Pennsylvania Legislature, while business men of Philadelphia and other cities are advancing reasons as to why such a law should not be re-adopted.

A number of U.S. railways have increased the rates of pay for unskilled labor, and others are preparing to take similar action. The Illinois Central granted its 12,000 shopmen an increase of 2c. hourly, retroactive to April 1, bringing their average wage to 74c. an hour. The C. C. C. & St. L. is reported to have granted increases to shopmen, section foremen and section laborers. These increases have been made necessary by the increases granted recently in the packing and building industries, and by the 11% increase in the steel industry. A Chicago press report states that more than 2,000,000 railway employees are preparing to go before the U.S. Railroad Labor Board, with demands for wage increases, but at the time of writing (April 23) this report lacks confirmation.

Another example of labor organizations breaking into finance and banking is seen in the action of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, which will establish a bank in Cincinnati with capital of \$200,000 and surplus of \$50,000. The Comptroller of the Currency has approved an application for a national charter.

Canadian Railway Club.—E. P. Flintoft, Assistant General Solicitor, C.P.R., read a very exhaustive and interesting paper on, "The Legal Department of the Railway and its Functions" before the club at Montreal, April 10, in which, after defining "law," he described very fully the Grand Trunk, Canadian Northern, Canadian National, Canadian Pacific, New York Central and Pennsylvania railways' law departments, and also dealt with the following questions:—Functions of the law department; consultation, advising and preparation of opinions; freight claims; claims for personal injury or damage to property other than freight; conduct of litigation and expropriation proceedings; conduct of proceedings before Board of Railway Commissioners; parliamentary and departmental work; matters arising in connection with directors' and shareholders' meetings; conveyancing, including preparation of agreements; land and tax matters; conference and negotiations with other carriers; negotiations with municipalities.

Railway Accidents Throughout Canada.—The number of accidents throughout Canada during March, reported to the Board of Railway Commissioners, was 204, in which 3 passengers, 7 employees and 10 others were killed, and 46 passengers, 169 employees, and 18 others were injured. Included in "others" are 5 killed and 14 injured in 12 highway crossing accidents, in which the crossings were unprotected in 8 cases, protected by bells in 2, and by gates and flagman in one each. Automobiles were concerned in 6 of these accidents, other vehicles in 2, and pedestrians in 4.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—The Alberta Railways Department report for 1922, laid before the legislature recently, states that of the \$514,000 appropriated for reconditioning the railway from Carbondale to the present terminus, about 4 miles from McMurray, there remained unexpended \$114,000.

The question of the extension of the line from Waterways, the present terminus of the railway, to McMurray, was debated in the legislature, on a motion calling for the completion of the line at an early date. The Minister of Railways stated that the province's total liability in respect of the railway is \$11,532,411.70; that the carrying charges are \$635,000 a year; that the charter does not call for the terminus at McMurray, but "at or near" there; and that the legislature's vote in 1921 was for putting the line into shape for more economical operation and not for its extension to McMurray. That vote was overexpended, and there was a further vote in 1922. The cost of the extension is estimated at \$210,000, and the government is not in a position to provide the money at present. The late government promised that the railway would be built to McMurray immediately such construction could be justified, and the present government takes the same stand. The motion was defeated. (June, 1922, pg. 286.)

Beaver Coal & Ry. Co. has been incorporated by the New Brunswick Legislature to build and operate a railway in connection with its coal properties at Beersville, N.B. It was stated that G. Burchell, and those associated with him, had completed negotiations with the owners of the North Shore Ry., for the purchase of that line and the coal properties owned and worked formerly by Beersville Coal & Ry. Co., and the new owners would proceed with the development and operation of the property. The North Shore Ry. extends from Adamsville, on the Intercolonial Ry., to Coalville, 15 miles. It has not been operated for several years, owing to the company's failure, and it was proposed at one time to take up the rails and use them on the St. John & Quebec Ry.

Burrard Tunnel & Bridge Co.—The following information was given in the House of Commons recently, by the Minister of Public Works, in answer to questions by G. Black, Yukon: The Burrard Tunnel & Bridge Co. has made application for approval of plans for a bridge spanning the second narrows in Vancouver harbor, and the matter is still under consideration. No representations have been made to the Public Works Department to refuse approval of the plans. The question of the Dominion Government granting a subsidy, to aid in the construction of the bridge, is also under consideration.

The plans submitted by the company provide for a swing span of 150 ft. and for a clearance above high water of 15 ft. It is reported that the Public Works Department asked that the swing span be made 175 ft. and the clearance above high water 25 ft., but that an arrangement has been made for a 150 ft. swing span with a 20 ft. clearance. It has been recommended that a bascule span be provided, instead of a swing span, and this is under construction. In 1913 the Dominion Parliament voted a subsidy in aid of the erection of a bridge, and it is

suggested that this subsidy be renewed in whole or in part, owing to the alteration in the clearance made to meet the views of the Public Works Department having added materially to the cost of erection.

Calgary & Fernie Ry.—A Calgary, Alta., press report states that construction will be resumed on the projected railway from Calgary, Alta., to Fernie, B.C., during the summer. The Calgary & Fernie Ry. Co. was incorporated by the Dominion Parliament in 1906, to build a railway from Calgary through Kananaskis Pass to the headwaters of the Elk River, and along the valley to Fernie, B.C., and had been granted several extensions of time for construction. Some surveys were made in 1914, some route and location plans were approved by the Board of Railway Commissioners in the same year, and some grading is reported to have been done. The promoters claim that \$600,000 had been expended up to the outbreak of war, when operations were suspended. The report states it is proposed to build 50 miles this year from Sparwood northerly to Mount Wilson, where a colliery is to be developed, the promoters stating that about \$3,500,000 will be expended on the railway and the colliery. Sparwood is on the C.P.R. Crowsnest Pass line, and also a station on the Great Northern Ry. line to Michel, B.C. F. Crandall represents the promoters. (Jan., pg. 8.)

Calgary & Southwestern Ry.—The Alberta Legislature has extended the time for starting construction on this projected railway from Calgary to the Sheep Creek coal fields district, and has extended for five years the time within which it is to be completed. P. Burns, Calgary, Alta., is the principal promoter.

The Canadian-American Collieries Ltd. has been authorized by the Alberta Legislature to build a standard gauge railway from its collieries in Sec. 20, Tp. 52, Range 4, west 4th Meridian, to a junction with the Canadian National Rys. at mile 835 from Winnipeg, near Duffield, Alta., construction to be started within a year and completed within two years. The projected line is only a short one. (March, pg. 118.)

Duluth to Fort William and Port Arthur.—The proposal mentioned in press reports last autumn to build a railway from Duluth, Minn., to Fort William and Port Arthur, Ont., the basis of which was to be the old Duluth & Northern Minnesota Rd., is again being referred to. The D. & N. M. Rd. has a main line mileage of 99.25, starting from Knife River, on the Duluth & Iron Range Rd., with about 20 miles of other track. It has been abandoned for some years and its sale was authorized by a court some time ago. Robert Waldron of Duluth, who was reported to have agreed to buy the line, and who is promoting the proposed line to Fort William, states that he is endeavoring to arrange financial matters in New York, and that, if successful, construction will be started. It is suggested that the Duluth, Winnipeg & Pacific Ry., running from West Duluth to Fort Frances, Ont., 167 miles, and owned by the Canadian National Rys., might be acquired and amalgamated with the project mentioned above. (Nov., 1922, pg. 568.)

Edmonton, Dunvegan & British Columbia Ry.—An agreement has been reached between the Alberta Government, the

J. D. McArthur interests and the Union Bank, with respect to the issue of securities for the construction of extensions to the E. D. & B. C. Ry. and its subsidiary the Canada Central Ry. The bank is a party to the agreement under which the Alberta Government took over these two lines from the J. D. McArthur interests, and the matter at issue was that the bank desired to adequately protect its security, in connection with the issue of additional securities authorized to be issued in 1922 for the construction of 39.5 miles of extensions. The railway is being operated by the C.P.R., which has also built for the Alberta Government some extensions which were put in operation at the end of 1921.

The Alberta Legislature, in the estimates passed at its recent session, authorized the provision of funds to proceed with the construction of an extension of 13 miles from Berwyn, on the Canada Central Ry., to the Waterhole district, and for the extension of the Grande Prairie branch of the E. D. & B. C. Ry., from Grande Prairie westerly for 12 miles towards Lake Saskatoon. It is said that the new construction will be done by the Alberta Railways Department, and that the extensions, when completed, will be operated by the C.P.R. under the general agreement. (May, 1922, pg. 236.)

Esquimalt & Nanaimo Ry.—F. M. Preston, City Engineer, Victoria, B.C., is reported to have stated that, after making due allowance for possible delays, the new railway and general traffic bridge at Johnston St. will be completed in July. (March, pg. 118.)

The Fort Alexander Ry. Co. has been incorporated by the Manitoba Legislature, to build a railway from the Canadian National Rys. Grand Beach Branch to the site of a proposed pulp and paper mill on the Fort Alexander reserve. There was some opposition to the bill at all its stages, principally by labor members, who carried their opposition to the third reading, which was passed by 36 votes to 10. The other opposition was withdrawn in committee of the whole, when it was stated that the Canadian National Rys. had no intention of building a branch through the area proposed to be served. Sir William Price of Quebec, is reported to be interested in the project. Promoters named in the act are: J. D. McArthur, B. W. Thompson, B. J. McLeod, W. H. Simpson and E. J. Rankin, Winnipeg.

Hudson Bay Ry.—A delegation from the prairie provinces, headed by J. A. Campbell, Commissioner for Northern Manitoba, waited on the acting Minister of Railways at Ottawa, April 13, to urge the completion of the railway from Pas to Port Nelson. Mr. Graham is reported to have said that he would favor the building of the railway to Hudson Bay even if there was no shipping at the end of it, that the deputation could rest assured that when the money was obtained—and it was intended to insert an item in the supplementary estimates—the work will be gone on with, that the terminus would be at Port Nelson, and that there was no present intention of making any further investigation as to the merits of Fort Churchill. When that question was last looked into 90% of the reports favored Port Nelson.

Lacombe & Northwestern Ry.—The Alberta Railways Department report for

1922, submitted to the legislature recently, states that the 12 mile extension of the line from near Rimbey to Hoadley, was completed at an expenditure of \$265,000. The operating loss for the year was approximately \$20,000, which was partly accounted for by the cost of removing the combined locomotive house and machine shop from Rimbey to La-combe.

A motion was made in the legislature recently that construction on an extension from Hoadley to Edmonton, about 75 miles, should be started this year, or in the alternative the government should enter into negotiations with the C.P.R. for building the extension and the operation of the whole line. After discussion, during which it was stated that the government had the question of the further extension under consideration, the motion was withdrawn. It is reported to have been decided since that no further construction will be done this year. The legislature voted \$56,235 recently for right of way, improvement, and bond interest. (Jan., pg. 8.)

Lake Huron & Northern Ry.—We are officially advised that several proposals have been made to the Ontario Government by the Lake Huron & Northern Ry. Co. to secure a revival of its charter powers to extend its line from the present terminus at Rock Lake, to Hannah Bay on Hudson Bay, which expired in 1922. The government then announced that the existing line ought to be taken over as a provincial undertaking. So far, no proposition has been made by the company which the government considers would justify the regranting of the charter, but negotiations are being proceeded with. The government, we are advised, had under consideration the feasibility of building a line north from Bruce Mines into the Missigua Forest Reserve to increase the value of the timber in that area. (Aug., 1922, pg. 410.)

The Manitoba Water Power & Electrical Co. was incorporated under the Manitoba Joint Stock Companies Act over 20 years ago, and was given an act of incorporation by the Manitoba Legislature in 1903. The authorized capital was \$5,000,000, and the company was empowered to develop water powers, generate electricity, and distribute the same for light, heat and power, and in addition was authorized to build a steam or electric railway from the northern or eastern boundary of Winnipeg to the Winnipeg River, or to Lac du Bonnet or to Alexander on Lake Winnipeg. In 1905 the company was authorized to increase its capital stock from \$5,000,000 to \$8,000,000. Since then nothing in the way of the development of the project has been done. The Manitoba Legislature was asked this year to revive the charter, and to amend the company's railway building powers, by authorizing the construction of a railway from Emerson, on the International Boundary, through Winnipeg, along the eastern shore of Lake Winnipeg, and on to Fort Churchill, Hudson Bay. The bill was read a first time, April 4, and was opposed from the beginning, on account of the financing plans outlined, the various powers asked, and on general grounds. The second reading was passed by 27 votes to 11, on April 10, and the bill was sent to the private bills committee on April 17. The promoters were given leave to withdraw the bill. D. A. Keizer, 272 Sherbrooke St., Winnipeg, is reported to be Secretary of the company.

Michigan Central Rd.—The Board of Railway Commissioners sat in St.

Thomas, Ont., recently, to consider the company's plans for the extension of freight yards there. The main question involved was the company's proposal to close Park Ave., to which residents of Yarmouth Tp., which adjoins the yard, objected, and asked for the construction of an overhead bridge. Another question was in regard to the proposed subway at First Ave., on the boundary line between St. Thomas and Yarmouth Tp., in connection with which Yarmouth Tp. Council asked for the construction of a separate subway for pedestrians. Chief Commissioner Carvell is reported to have intimated that there was a doubt as to whether the Board had power to close Park Ave., and that if the Board did not, it would mean the construction, either of a subway, or an overhead bridge, towards the construction of which Yarmouth Tp. would be called upon to pay a large proportion. He considered further consultation between the parties desirable, and the hearing was adjourned for two weeks. A press dispatch of April 20, states that the Board has made an order authorizing the company to extend its yards through Yarmouth Heights, but that the closing of Park Ave. was not dealt with.

We are officially advised that the company's yard and freight tracks at St. Thomas are too small to accommodate the present trains. To overcome this, and to provide proper facilities, it is proposed to extend the tracks on the south side of the yards from about First Ave. eastward to Council Road, and to make other changes in the tracks leading to turntable and cinder pit. This will provide 7 tracks, the shortest of which will have a capacity of 110 cars, way car and locomotive. The work is estimated to cost \$186,000, and it is expected to have it completed this year. (Jan., pg. 8.)

Pere Marquette Rd.—Appropriations for betterments for this year are reported to amount to \$10,862,000, and to include \$40,000 for building a new station at Sarnia, Ont. A description of this was given in Canadian Railway and Marine World, Nov., 1922, pg. 568.

Timiskaming & Northern Ontario Ry.—A Toronto paper stated recently that G. W. Lee, Chairman, T. & N. O. R. Commission, had informed it that plans for the electrification of the line were in Premier Drury's hands, and that the Commission intended to recommend shortly that the work be gone on with, adding that electrification depended on traffic, and that if business was maintained at its present rate electrification would come shortly. Canadian Railway and Marine World has been unable to secure either a confirmation or denial of the statement attributed to Mr. Lee.

The Premier stated in the Ontario Legislature, April 6, that he purposed conferring with the T. & N. O. Ry. Commission, with respect to the construction of an extension into the Kirkland Lake gold areas. Following this conference, G. W. Lee, Chairman of the Commission, was reported to have stated, on April 13, that it had been decided to build a branch from Swastika to Kirkland Lake, about 25 miles, and that tenders would be invited for its construction immediately. A press report of April 19 stated that engineers had begun the survey at Swastika. We are officially advised that the branch will be built under the charter, granted by the Dominion Parliament, to the Nipissing Central Ry. Co., the entire capital stock of which is held by the Commission. The branch will be about 25 miles long, and will run east-

erly from Swastika, mile 165.8 from North Bay, through the Teck, Lebel, Gauthier, and McVittie Tps., to the shores of Larder Lake, serving practically the entire Kirkland Lake and Larder Lake mining areas. The branch will not, at first at least, be operated by electricity.

A press report of April 17, stated that preparations were being made to resume work on the 70 mile extension northerly from Cochrane, to near New Post, on the Abitibi River, which it is expected to have completed by Oct. 31. We are advised that some work was carried on during the winter, although, of course, some of it, such as ballasting, had to be suspended. (March, pg. 119.)

Transportation of Alberta Coal to Ontario.

The possibilities in connection with the proposed marketing of Alberta coal in Ontario were discussed in Canadian Railway and Marine World for April, since when public interest in this matter has increased, and attention has been drawn to the transportation difficulties involved. A few carloads of the coal were forwarded to Ontario as trial shipments, two going to Toronto, one to Ottawa and one to Cobourg, and the Ottawa Journal, which received one of the cars, stated that the freight bill was \$14.40 a ton, which it said "makes the price in Ottawa prohibitive." The present rate to Toronto on carload lots is \$12.70 a ton.

Interested parties have brought the question of freight rates to the front, and on April 10 a conference was held in Montreal, at which the desirability of a low rate for western coal was presented to Sir Henry Thornton, President, Canadian National Rys. In addition to representatives of coal operators in the Wabamun-Pembina, Saunders, Yellowhead and Drumheller fields in Alberta, the conference was attended by Premier Drury and Minister of Highways Biggs, of Ontario, and H. Stutchbury, an Alberta Government official. Sir Henry Thornton is reported to have said:—"We are in sympathy with the wishes of the operators, and if it is possible to offer a rate in accordance with their desires, it will be done. Meanwhile, the matter will be studied and an answer will be given at the earliest possible moment." Representations were also made to E. W. Beatty, President, C.P.R., and C.P.R. traffic officials.

A Montreal press dispatch of April 18 stated that a conference of C.N.R. and C.P.R. freight traffic officials had been held to discuss the possibility of putting in a rate which would allow Alberta coal to compete in the Ontario market, but that no information as to what, if anything, was decided, was obtainable.

Some of the numerous considerations entering into the traffic movement proposed were specified in our April issue, and a little consideration will make it evident that the matter is one requiring a great deal of study, and collecting of information, before a decision as to rates can be arrived at. In the meantime, tests with the western coal are being gone ahead with in the Ontario cities mentioned above, with results, so far, indicated as satisfactory.

Harvey S. McDougall, St. Clair, Mich., in renewing his subscription, writes: "I value Canadian Railway and Marine World very highly."

Railway Rolling Stock Orders and Deliveries.

The Belgo Paper Co. has ordered 12 forestry cars, 60,000 lb. capacity, from Canadian Car & Foundry Co.

St. Mary Cement Co., St. Mary, Ont., has received two 4-wheel switching locomotives (0-4-0-T) from Montreal Locomotive Works. Details of them were given in Canadian Railway and Marine World for January.

The Sydney & Louisburg Ry. has received 100 steel hopper coal cars, from Eastern Car Co., which will also supply additional cars from time to time, in pursuance of the railway's programme of replacement, which will give it an up to date line of coal carrying equipment.

Railway equipment manufacturers in the United States are still in receipt of large orders and their plants are all busy. The U.S. Department of Commerce states that 282 locomotives were shipped in March, while unfilled orders continued to increase during that month, there being 2,316 at March 31, compared with 2,220 at the end of Feb. 1923, and but 330 at the end of March 1922. During the first three months of 1923, 718 locomotives were shipped, compared with but 157 in the first three months of 1922. U.S. railways ordered 34,514 freight cars and 291 passenger cars in March. For the first three months of the year the number of freight cars ordered totaled 55,805, and passenger cars, 972.

Canadian National Railways.

Canadian Railway and Marine World for March and April gave very full particulars of the large orders given by the Canadian National Rys. this year for rolling stock. The contract prices are now available and are given in the accompanying table, with other particulars:—

No.	Description.	Builder.	Price.	Total.
8	Mikado locomotives	American Loco. Works	\$ 56,625.00	\$ 453,000.00
10	"	Can. Loco. Co.	66,500.00	665,000.00
35	"	Montreal Loco. Works	66,500.00	2,327,500.00
8	4-wheel switching locomotives	Lima Locomotive Works	40,000.00	120,000.00
8	3-wheel transfer locomotives	"	51,700.00	258,500.00
16	Mountain locomotives	Can. Loco. Co.	74,500.00	1,192,000.00
80	Steel standard sleepers	Can. Car & Foundry Co.	49,400.00	1,482,000.00
35	Steel first class cars	"	35,443.81	1,240,533.35
10	Steel mail cars	"	29,650.00	296,500.00
20	Steel baggage cars	"	24,750.00	495,000.00
10	"	National Steel Car Co.	24,750.00	247,500.00
50	Steel underframe express refrigerator cars	"	10,550.00	527,500.00
250	Freight refrigerator cars	American Car & Foundry Co.	3,182.11	783,027.50
1000	40-ton Steel frame box cars	Can. Car & Foundry Co.	2,550.00	2,550,000.00
1000	"	National Steel Car Co.	2,555.84	2,555,840.00
500	"	Eastern Car Co.	2,555.20	1,277,600.00
600	40-ton Steel frame automobile cars	Can. Car & Foundry Co.	2,625.00	1,575,000.00
400	"	National Steel Car Co.	2,625.00	1,050,000.00
100	Hart ballast cars	Can. Car & Foundry Co.	3,264.50	326,450.00
100	General service cars	Eastern Car Co.	2,950.00	295,000.00
100	"	Pressed Steel Car Co.	2,300.00	230,000.00
100	Hopper cars	Eastern Car Co.	2,730.00	273,000.00
5	Depressed centre flat cars	Can. Car & Foundry Co.	5,930.00	29,650.00
				\$20,250,600.85

After the table given above was prepared, the C.N.R. ordered 7 switching, or transfer, locomotives from Canadian Locomotive Co., as mentioned in Canadian Railway and Marine World for April, and have since ordered 5 steel, depressed center, flat cars from Canadian Car & Foundry Co.

The Canadian National Railways seven switching, or transfer, locomotives ordered from Canadian Locomotive Co., as mentioned in Canadian Railway and Marine World for April, will have the following principal details:—

Type	0-8-0
Weight in working order on drivers	242,750 lb.
Weight in working order of tender	167,650 lb.
Weight, total	410,400 lb.
Wheel base of engine, rigid	15 ft. 6 in.
Wheel base, engine and tender	53 ft. 4½ in.

Length over all	71 ft. 3¼ in.
Diam. and length of main driving journals	11 x 13 in.
Diam. and length of other driving journals	10 x 13 in.
Heating surface, fire box	235 sq. ft.
Heating surface, tubes	2497 sq. ft.
Heating surface, total	2732 sq. ft.
Superheating surface	602 sq. ft.
Type of boiler	Radial stayed
Working pressure	170 lb.
Number of tubes	228
Diam. of tubes	2 in.
Length of tubes	15 ft.
Number of flues	32
Diam. of flues	5½ in.
Grate area	56.5 sq. ft.
Diam. of driving wheels	56 in.
Tractive effort	52,329 lb.
Valves, type	Piston
Valves, diam.	14 in.
Cylinders, diam. and stroke	26 x 30 in.
Tender capacity, coal	12 tons
" capacity, water	7,500 imp. gall.
" tank, style	Water bottom
" trucks, style	4-wheel, equalizer
" truck wheels	Solid rolled steel
" truck wheels, diam.	30 in.
" truck wheels, diam. and length of journal	6 x 11 in.

These locomotives will be equipped with Young valve gear, Pyle National headlight, butterfly type fire doors, brick arches, Franklin driving box wedges, M.M.B. front ends, and Robinson superheaters.

The 5 depressed center flat cars which the C. N. Rys. have ordered from Canadian Car & Foundry Co., will be practically identical with those built by the latter company for the C.P.R., which were described and illustrated in Canadian Railway and Marine World for February, pg. 59. The chief dimensions will be as follows:—

Length over striking castings	43 ft.
" end sills	42 ft. 3 in.
Length of depressed platform portion	18 ft. 6 in.
Width over stake pockets	9 ft. 11½ in.
" side sill web	9 ft.
Height, top of rail to top of floor plate at ends	3 ft. 5½ in.
Height, top of rail to top of floor plate at center	2 ft. 4 in.

These cars which will have a capacity of 75 tons, and will be equipped with 4-wheel trucks, are designed for transportation of large machinery, the depressed center permitting a taller load to be carried within clearance limits of bridges, tunnels, etc.

The 8 first class passenger cars which are being built at the G.T.R. shops, Port Huron, Mich., for the Central Vermont Ry., will have the same specifications as the 35 first class cars ordered by Canadian National Rys. from Canadian Car & Foundry Co., which were published in our February issue.

The 20 milk cars, also being built at Port Huron for the Central Vermont Ry., will have the following chief dimensions:—

Length over end sills	41 ft. 7 in.
" striking plates	43 ft.
" inside	40 ft. 9½ in.
Width over side sills	9 ft. 6¾ in.
" inside	8 ft. 9½ in.
Height top of floor racks to ceiling	7 ft. 6½ in.
" rail to running board	13 ft. 11 in.

The milk cars will be of wood construction, with fish belly steel underframe and cross members. The roof will be of the turtle back design. Removable floor racks will be installed, and equipment will include Miner friction draft gear, Gould buffing device, Coleman bolster locking device, and Commonwealth steel trucks with 5 x 9 in. journals.

Canadian Pacific Railway.

The directors' annual report, published in Canadian Railway and Marine World for March, stated that the directors had made provision for additions to rolling stock as follows:—36 locomotives, 6 steel cafe-parlor cars, 6 steel buffet-parlor cars, 12 steel sleeping cars, 15 steel first class cars, 12 steel mail and express cars, 15 steel colonist cars, 300 75-ton coal cars, 300 41 ft. flat cars, 1,000 box cars, 300 automobile cars, 50 oil tanks, at a total cost of \$12,295,000.

Of the above, 16 Pacific type passenger locomotives were ordered from Montreal Locomotive Works, as stated in our February issue, the details of them being given in our March issue. The placing of orders for 6 steel cafe-parlor cars, 6 steel buffet-parlor cars, 15 steel first class cars, 12 steel mail and express cars, 300 75-ton coal cars and 300 41 ft. flat cars was announced in our April issue. We have since been advised officially that 20 mikado type freight locomotives have been ordered from Montreal Locomotive Works, and 50 oil tank cars, 6 single track steel snow ploughs, 1,000 box cars and 300 automobile cars, to be built at the company's Angus shops, Montreal, but up to the date of our latest advice no decision had been arrived at about ordering the 12 steel sleeping cars and 12 steel colonist cars.

The 10 Pacific type locomotives' general dimensions, etc., were given in our March issue. Following are those of the 20 mikado locomotives:—

Weight on drivers	235,000 lb.
" engine truck	28,000 lb.
" trailing truck	57,000 lb.
" total	320,000 lb.
Tender	225,000 lb.
Wheel base, driving	16 ft. 6 in.
" total, engine	35 ft. 8 in.
" engine and tender	68 ft.
Cylinders, diar. and stroke	25½ x 32 in.
Driving wheel, diar.	63 in.
Engine truck wheels, diar.	31 in.
Trailing truck wheel, diar.	45 in.
Journals, main	11½ x 21 in.
" other	10½ x 14 in.
" engine truck	7 x 13 in.
" trailing truck	9 x 14 in.
" tender truck	6½ x 12 in.
Boiler, type	Radial stay
pressure	200 lb.
Firebox, length and width	120½ x 84½ in.
Grate area	70.3 sq. ft.
Tubes, no. and diar.	198—2¼ in.
Flues, no. and diar.	43—5½ in.
Tubes and flues, length	18 ft. 6 in.
Heating surface, tubes	2,122 sq. ft.
" flues	1,140 sq. ft.
" arch tubes	43 sq. ft.
" firebox	274 sq. ft.
" total	3,579 sq. ft.
Tractive power	56,150 lb.
Factor of adhesion	4.18
Reverse gear	Ragonnet
Tender frame and box frame extension	Commonwealth cast steel
Tender truck wheels, diar.	36½ in.
Capacity, water	10,000 imp. gall.
Capacity, coal	14 tons

The 12 30 ft. compartment mail and express cars being built complete by Canadian Car & Foundry Co. will be of all steel construction, with wood and

canvas roof. The trucks will be of the Commonwealth cast steel type, with 5½ x 10 in. journals. The underframe will be of the fishbelly type between trucks, in conjunction with Commonwealth cast steel body bolster and end sills. Clasp brakes will be applied. The 6 buffet-parlor cars, the frames for which are being constructed by the Canadian Car & Foundry Co., and which will be finished at the C.P.R. Angus shops, will be of all steel construction. The journals will be 5 x 9 in. The 6 steel cafe-parlor cars, the 6 steel buffet-parlor cars and the 15 first class cars, the frames for which are being built by Canadian Car & Foundry

Co., and which will be finished at the C.P.R. Angus shops, will be of the same construction as the mail and baggage cars.

The 300 75-ton coal cars being built by Canadian Car & Foundry Co. will be 40½ ft. long inside. They will be of the Hart-Otis drop bottom type, will be of composite steel and wood body construction, and mounted on trucks having Andrews cast steel side frames and cast steel bolsters, with 6 x 11 in. journals. Miner A-18-S draft gear will be applied.

The 300 41 ft. flat cars being built by Eastern Car Co., will be 40½ ft. long. The trucks will be of the arch bar type,

with cast steel bolsters. Cardwell G-25-A draft gear will be applied.

The 50 oil tank cars being built at Angus shops will be of 10,000 imp. gall. capacity, and will be equipped with Commonwealth combination tank cradle body bolster, draft members and end sill casting. The trucks will be of the arch bar type, with cast steel bolsters. Journals will be 5½ x 10 in. Miner A-18-S draft gear will be applied.

The C.P.R., between March 15 and April 11, received 48 steel refrigerator cars from National Steel Car Corporation, and one Industrial self-propelled pile driver from F. H. Hopkins & Co.

Mainly About Railway People Throughout Canada.

Other Mainly About Railway People matter is given further on in this issue commencing on pg. 226.

Frederic William Alexander, who has been appointed District Engineer, British Columbia District, C.P.R., Vancouver, B. C., was born at Fredericton, N.B., Nov. 22, 1878, and entered railway service in June 1897, since when he has been, to May 1898, office boy, Chief Engineer's office, Bangor and Aroostook Ry., Houlton, Me.; May to Oct. 1898, chairman and rodman on maintenance, same road; Oct. 1898 to June 1900, levelman, same road; June 1900 to Sept. 1901, transit man, same road; Sept. 1901 to Feb. 1902, transit man on preliminary and location surveys, Fish River Rd., Maine; Feb. 1902 to Jan. 1903, Resident Engineer on Construction, same road, Eagle Lake, Me.; Jan. to May 1, 1903, levelman and topographer on preliminary and location surveys, Restigouche & Western Ry., in New Brunswick; May 14, 1903, to Dec. 4, 1904, transit man on maintenance, C.P.R., Moose Jaw, Sask.; Dec. 4, 1904, to Dec. 31, 1909, Division Engineer, same road, Calgary, Alta.; Jan. 1 to June 30, 1910, Division Engineer, same road, Cranbrook, B.C.; July 1, 1910, to April 15, 1913, Assistant District Engineer, same road, Calgary, Alta.; April 15, 1913, to March 1, 1923, District Engineer, same road, Calgary, Alta.

Edward Broderick, who has been appointed Right of Way Agent, Western Region, Canadian National Rys., Winnipeg, was born at Dublin, Ireland, April 18, 1884, and entered railway service in May 1898, since when he has been, to 1905, clerk, Great Central Ry. (England), at various points; July 9 to Dec. 1906, clerk, General Manager's office, Canadian Northern Ry., Winnipeg; Dec. 1906 to Dec. 1910, clerk, Right of Way Department, same road, Winnipeg; Jan. 1911 to Oct. 1920, chief clerk, same department; Oct. 1920 to March 1923, Right of Way and Property Agent, Canadian National Rys., Winnipeg.

Alexander Dick, Manager of Coal Sales, British Empire Steel Corporation, died suddenly in New York, April 12, after dancing in a restaurant. The body was removed to Montreal, accompanied by J. E. Dalrymple, Vice President of Traffic, Canadian National Rys., a personal friend, and the service there was attended by a number of transportation officials and others, among whom were: Alex. Johnston, Deputy Minister of Marine; R. M. Wolvin, President, and E. E. Merrill, General Manager of Steel Sales, British Empire Steel Corporation; G. H. Duggan, President, Dominion Bridge Co.; J. W. Norcross, Vice President and Managing Director, and W. E. Burke, Canada Steamship Lines; F. L.

Wanklyn, General Executive Assistant, Thos. Britt, Fuel Agent, C.P.R.; Thos. Robb, Shipping Federation of Canada; D. Campbell, Elder, Dempster & Co., and W. I. Gear, Robert Reford & Co. Interment took place at Springhill, N.S.

Hon. G. P. Graham, M.P. for Essex South, Ont., who has been acting Minister of Railways and Canals, since the late Hon. W. C. Kennedy was taken ill in August, 1922, has been appointed Minister. He has relinquished the Ministry of National Defence, to which Hon. E. M. Macdonald, M.P. for Pictou, N.S., has been appointed in an acting capacity, but continues, in the meantime, to act as Postmaster General, in the absence of Hon. Charles Murphy. Mr. Graham was Minister of Railways in the Laurier cabinet from Aug., 1907, until after the general election of 1911, when he was defeated in his home constituency, Brockville, Ont.

Charles Auguste deLotbiniere Harwood, K.C., who has been appointed Solicitor, Central Region, Canadian National Rys., Montreal, was born at Vaudreuil, Que., Aug. 2, 1869, and is the son of the seigneur of Vaudreuil. He was educated at St. Laurent College and Laval and McGill Universities, graduating with the degree of B.C.L. He was appointed a K.C. in 1911, and from Oct. 1920 to Feb. 1922, was Assistant Solicitor, and from Feb. 1922 to March 1923, Solicitor, G.T. R., Montreal. He is a member of the Antiquarian and Numismatic Society, and Historic Landmarks Association. From 1915 to 1918 he was President of the Canadian Patriotic Fund, Vaudreuil Branch, and in 1917 was Provincial Secretary of Naval Recruiting for Quebec. In 1912 he was a candidate for the Quebec Legislature. He has written several historical papers, including the Fort Garry Convention, 1870.

James W. Kimball, who has been appointed Superintendent of Boarding Cars, Western Region, Canadian National Rys., Winnipeg, was born at La Platte, Nebraska, May 13, 1871, and entered railway service in Sept. 1888, since when he has been, to 1890, telegraph operator, Burlington & Missouri River Rd., Waverly, Creopolis and Dorchester, Neb.; 1890 to 1891, operator and stenographer, in Assistant General Live Stock Agent's office, same road, South Omaha, Neb.; Nov. 1891 to 1893, stenographer and operator to General Manager, Montana Union Ry., Butte, Mont.; 1894, chief clerk to Vice President and General Manager, Butte, Anaconda & Pacific Ry., Anaconda, Mont.; 1895 to March 1896 Local Manager, J. T. Carroll Labor Co., Anaconda, Mont.; 1896, secretary to General Superintendent, Columbia & Western Ry., Rossland, B.C.; 1897 to 1899, Auditor,

same road, Trail, B.C.; March to Nov. 1900, Auditor, Construction Department, C.P.R., Winnipeg; 1901 to 1904, in real estate business, Butte, Mont.; 1905 to 1916, accountant and Assistant Superintendent, Boarding Car Department, Mackenzie, Mann & Co., Winnipeg; 1917 to 1918, accountant and Assistant Superintendent, Boarding Car Department, Canadian Northern Ry., Winnipeg; and from 1919, Superintendent, Boarding Car Department, Canadian National Rys., Winnipeg.

C. Kyle, Supervisor of Apprentices, Angus Shops, C.P.R., Montreal, died suddenly at his home, April 22, shortly after returning from church. He was born at Toronto in 1856, and entered railway service in the Mechanical Department of the Toronto, Grey & Bruce Ry., which was later absorbed by the C.P.R. He subsequently served as Locomotive Foreman at Havelock, Chapleau and North Bay, Ont., and in 1898 as Master Mechanic at Montreal, and was transferred to St. John, N.B., in 1907, returning to Montreal as Supervisor of Apprentices, Angus shops, in 1917.

Sir Augustus Nanton, one of the C.P.R. directors, and President, Winnipeg Electric Ry., returned to Canada by the C.P.R. s.s. Montclare, April 14, after a European trip.

Miss Norma Niblock, aged 15, daughter of D. B. Niblock, Special Ticket Auditor, Canadian National Rys., Toronto, and granddaughter of the late John Niblock, for many years Superintendent, C.P.R., at Medicine Hat and Calgary, was the winner in a beauty contest, held by Rodolph Valentino, in Toronto Arena, recently.

Donald E. Ross, who has been appointed Traffic Agent, Canadian National Rys., Shanghai, China, was born at Winnipeg, Feb. 11, 1895, and entered transportation service in 1911, since when he has been, to 1912, mail clerk, Freight Department, Canadian Northern Ry., Winnipeg; 1914 to 1915, clerk, Freight and Passenger Department, same road, Vancouver, B.C.; 1916 to 1918, on military service overseas; 1919 to 1921, Soliciting Freight Agent, Canadian National Rys., Vancouver, B.C., and from 1922, Traffic Representative, latterly Traffic Agent, C.N.R., Shanghai, China.

J. G. Rutherford, C.M.G., one of the members of the Board of Railway Commissioners, is still at the Pacific coast, convalescing after his recent severe illness, and is not expected to be able to return to Ottawa for several weeks.

Lady Thornton, wife of the President of the Canadian National Rys., and her daughter, have been spending three weeks in Algenciras, before returning to England.

Canadian National Railways Betterments for 1923.

The C.N.R. management proposes to continue this year works which were uncompleted at the end of 1922, and to undertake new works, of which the larger items are given below:—

Halifax & South Western Ry.—Replacement of timber trestle, 257 ft. long, with concrete culvert, to fill at Puddle River, mile 27.4 Chester Subdivision. Ballasting on Liverpool and Chester Subdivision.

Canadian Government Rys., Eastern Lines.—Paving team tracks with granite blocks at deep water terminals, Halifax. Dredge turning basin at Borden, P.E.I., to provide sufficient depth of water for operation of car ferry at all stages of tide. Completion of work on standardization of gauge between Summerside and Tignish, P.E.I. Erect copper wire and provide telephone train dispatching equipment between Campbellton and Mont Joli, to facilitate handling of train movements. Extensions of store building at St. Malo.

Canadian Government Rys., Western Lines, National Transcontinental Ry.—Completion of construction of a boarding house for employes at Sioux Lookout. Extension and rearrangement of trackage at Redditt, and provision of 300-ton mechanical coaling plant, standard sand house, depressed cinder-pit and replacement of turntable with one of greater length. Replacement of machinery at Transcona shops, and also provide additional machinery. Replacement of frame trestle 854 ft. long, with concrete culvert and fill, at mile 46.7 Quibell Subdivision.

Canadian Northern Ry., Eastern Lines.—Provisions of interlocking plant at Harrowsmith. Provision of 5-stall extension to locomotive house at Capreol. Installation of additional equipment at Leaside locomotive and car shops, and provision of heating, lighting and shelving in stores building extension. Provision of scrap reclaim building and plant at Toronto. Reconstruction of telegraph pole lines on various subdivisions. Replacing pile trestle, 222 ft. long, with concrete and steel bridge at Indian River, mile 98.3 Pembroke Subdivision. Replacing timber trestle, 555 ft. long, with concrete culvert and fill, at mile 110.0 Ruel Subdivision. Replacing timber trestle, 180 ft. long, with concrete abutments and steel span, at Midway Creek, mile 147.3 Ruel Subdivision. Replacing timber trestle, 240 ft. long, with steel span, concrete abutments and fill, at Muskego River, mile 0.34 Oba Subdivision. Replacing timber trestle, 283 ft. long, with steel span, concrete abutments and fill at Opishkanogama River, mile 0.72 Oba Subdivision. Continuation of replacement of 1,300 ft. trestle across Kiosk-Koqui Lake, mile 20.4 North Bay Subdivision.

Canadian Northern Ry., Western Lines.—Revision of line between mile 48 and 50, Kashabowie Subdivision. Provision of additional machinery and replacements of machines by those of improved type at Fort Rouge shops. Extension and rearrangement of yard at Brandon. Provision of a reservoir for water supply at Kipling. Construction of a subway at Fairford Street, Moose Jaw. Provision of water supply at Avonlea. Construction of freight shed at Dauphin. Completion of rearrangement of yard and erection of coal dock, sand house, ashpits, and sewer lines at Humboldt, commenced during 1922. Revision of

alignment between Horburg, mile 132, and Saunders, mile 156, Brazeau Subdivision. Filling trestles on various subdivisions. Ballasting on various subdivisions. Provision of telephone train dispatching service between Yorath and Kindersley; North Battleford and Saskatoon; Saskatoon and Yorath Jct.; Humboldt and Saskatoon. Reconstruction of telegraph pole lines on various subdivisions. Extension of stores buildings at various locations. Provision of additional buildings and facilities at Jasper Park summer resort.

Grand Trunk Pacific Ry.—Completion of freight car repair shops at North Edmonton terminals. Provision of snow shed, 600 ft. long, at mile 1075.5 Tete Jaune Subdivision. Filling trestles on various subdivisions. Ballasting on various subdivisions. Provision of stores building and locomotive foreman's office at Rivers. Provision of oil handling equipment at Smithers and Prince George. Acquisition of and improvements to Minaki Inn. Improvements and additions at Fort Garry Hotel, Winnipeg. Provisions of water supply and installation of ventilating system at Macdonald Hotel, Edmonton.

Hudson Bay Ry.—Provisions of 2-stall locomotive house at Pas, and general improvements to roadbed and track.

Co-ordination, Eastern Lines.—Installation of 2 additional signals and low voltage junction switch operating machine, in connection with existing automatic signals at Chaudiere. Provision of track connection at Joffre. Completion of terminal facilities, rearrangement of yard, additional trackage and paving of roadways at Quebec. Provisions of additional yard trackage at Limoilou. Double tracking on St. Charles River bridge and approaches thereto between Limoilou and Parent Square, Quebec. Construction of 6 mile connection between C.G.R., near Dombourg, and C.N.R. at Donnacona, with a view to abandonment of 25.7 miles of Canadian Northern Ry. between Donnacona and Allenby Jct. Completion of connection between the C.N.R. and G.T.P. and improvements of water supply at Hawkesbury. Continuation of work paving team roadways at Cherry St. yard, Toronto. Completion of installation of 75 ft. turntable at Howland. Construction of spur track at Brockville between G.T.R. yard and C.N.R. track. Construction of 60-car capacity storage siding, at Washago. Completion of connection between G.T.R. and C.N.R. and track alterations at Napanee, also construction of a new joint station at Napanee. Provision of new baggage room at North Bay.

Co-ordination, Western Lines.—Completion of initial development of yard and locomotive facilities at Neebing. Completion of double tracking from Port Arthur to Kakabeka Falls. Provision of additional sidings between Kakabeka Falls and Mokomon, and installation of automatic signals. Double tracking on 0.5% grade from Mokomon, mile 32, and mile 35.6, Kashabowie Subdivision. Completion of grade and alignment revision at Rowan, mile 35 to 38, Kashabowie Subdivision. Rearrangement of tracking at Portage la Prairie to provide double track through town and eliminate interlocking plant at east end of town. Construction of 2 Y connections at Yorkton, elimination of interlocking plant at present crossing of C.N.R. and

G.T.P., abandonment of C.N.R. Y at mile 24 Tonkin Subdivision, and removal of C.N.R. locomotive house and water tank to the G.T.P. Completion of connection between G.T.P. and C.N.R. at Lampman, and moving C.N.R. water tank to Junction Point. Provisions of water supply at Lampman, to serve C.N.R. and G.T.P. Completion of connection between C.N.R. and G.T.P. at Regina, and co-ordination of locomotive facilities at G.T.P. terminal, also improvement of local freight facilities there. Construction of connection between G.T.P. and C.P.R. at Saskatoon, and provision of automatic signals. Construction of connection between G.T.P. and C.N.R. at Ryley, and provision of automatic signals. Completion of installation of automatic signals for co-ordination connections built at Alix during 1921 and 1922. Completion of south connection between C.N.R. and G.T.P. at Camrose, also provision of automatic signals, additional siding extension to station and connection to city water supply. Completion of interlocking plant at North Edmonton. Provision of automatic signals for connection between the C.N.R. and G.T.P. at Magnolia. Consolidation of G.T.P. terminal facilities at Jasper, with C.N.R. terminal facilities at Lucerne, involving construction of 7-stall extension to locomotive house, coaling plant and sand house, ashpit, additional yard tracks, cottages and dwellings for employes, car, water and steam lines.

The St. John River Bridge Case.

Mr. Justice Grimmer reserved judgment, at St. John, N.B., recently in the case of the New Brunswick Attorney-General vs. the C. P. Ry. Co., and its subsidiary, which owns two bridges over the St. John River at the reversing falls, the arguments in which were concluded in the Chancery Court at the end of March. The province contends that the Dominion Government has no jurisdiction over the St. John River, it being covered by the Ashburton treaty of Aug. 9, 1842. Provincial control was challenged for the first time in 1885, when an attempt was made to exercise jurisdiction through an amendment to an act; and in the Revised Statutes of Canada for 1886, the St. John River was not mentioned as being among the navigable waters under Dominion jurisdiction. A Privy Council decision of Oct. 12, 1918, held that the Dominion Waterways had no jurisdiction over a question concerning the St. Lawrence River, which with the St. John River, was specifically dealt with by the Ashburton Treaty. If the court decides that the St. John River is under the New Brunswick Government's jurisdiction, the matter of the new bridge at the reversing falls, the erection of which was the precipitating cause of the action, may have to be reconsidered. This bridge was built by the C.P.R. in 1920, with the approval of the Board of Railway Commissioners and the Public Works Department, after a number of hearings, in which some marine interests contended that the bridge would interfere with navigation. The action is brought for the purpose of securing a declaration that the N.B. Government has jurisdiction over the St. John River, and to secure an order for the removal, or the raising of the bridge, that it may not obstruct navigation, which the C.P.R. claims it does not.

British Columbia Rate Equalization Appeal.

British Columbia's appeal from the Board of Railway Commissioners' decision in the equalization of freight rates case came into prominence on April 17, when J. A. Clark, Conservative member for Burrard, B.C., moved in the House of Commons: "That, in the opinion of this House, all unfair and unjust discrimination against British Columbia, as exemplified in the mountain scale of freight rates, should be rescinded, and the special reduction made by the restoration of the Crownsnest rates, on the basic production of the prairie provinces, be extended to the basic production of all other provinces of confederation."

As stated in Canadian Railway and Marine World for April, Mr. Clark had a resolution dealing with rate matters on the order paper for some time, which the Speaker thought might be sub judice on account of the appeal before the Cabinet. On April 17, the Speaker announced that he had concluded that the question was not sub judice, and it was only after that decision that Mr. Clark could move his resolution. The resolution introduced on April 17, as given above, differed materially from that which Mr. Clark had on the order paper previously, which was as follows: "That, in the opinion of this House, railway rates westward from the prairie provinces should be reduced to an equality with railway rates eastward from said provinces, for similar goods and distances."

In support of his resolution, Mr. Clark said he fully admitted it was a strange proceeding to bring up such a motion in the House, in apparent violation of the Board of Railway Commissioners' jurisdiction, but excused himself on the ground that as the Government, in 1922, had undertaken to put the Board to one side in dealing with the Crownsnest agreement, it was only fair to expect that as much would be done for British Columbia as was done for the prairie provinces. He said that if the Government would withdraw the legislation, passed in 1922, with reference to the Crownsnest agreement, he would be quite willing to drop his resolution and have the whole matter dealt with by the Board. He then reviewed the familiar arguments designed to show that the claim that B.C. should pay higher rates, on account of alleged higher railway construction costs, higher operating costs, and lower traffic density, was fallacious, and stated that, as W. B. Lanigan, General Freight Traffic Manager, C.P.R., had quoted one of his predecessors, the late Geo. Olds, to the effect that freight rates are determined by "conditions, circumstances and competition," he did not see why costs and traffic density should have anything to do with rate levels. He argued that if rates were equalized in favor of B.C., it would benefit all Canada. Hon. S. F. Tolmie, Conservative, Victoria City, B.C., former Minister of Agriculture, seconded the resolution, and advanced arguments similar to Mr. Clark's to support it.

The acting Minister of Railways, Mr. Graham, in opposing the resolution, said that the Government's action in dealing with the Crownsnest rates in 1922 was not an interference with the Board of Railway Commissioners, as the circumstances demanded legislation. He said that the resolution was ill-advised, because the appeal was before the Cabinet in a half-argued state, with remaining argument to take place at the end of the session.

The leader of the Opposition, Mr. Meighen, in supporting the resolution, took issue with Mr. Graham as to the Government's action on the Crownsnest matter, and asked how it could expect people or communities to go to the Board with grievances, when it was evident to them that the Board was tied hand and foot by political action. E. M. Macdonald, Pictou, N.S., minister without portfolio, accused Mr. Meighen of inconsistency, and thereafter the debate was more concerned with politics than with rates, it being charged by Government supporters that the resolution was introduced for political advantage only, and, by the Opposition, that the Government was willing to interfere with rates when it saw political advantage to be derived, but unwilling when such potential advantage was not evident. H. Marler, Liberal, St. Lawrence, Que., said that if the resolution were passed, Parliament would simply be making itself a judicial tribunal, to make and unmake rates at will. He claimed that if such resolutions could be passed, the Board of Railway Commissioners had better be done away with, and the railways be thrown at once into the political melting pot, and he said that, outside of Sir Henry Drayton, no one in the House knew anything of consequence about freight rates and the considerations on which they are based, and that the House was not, therefore, competent to discuss them. H. H. Stevens, Conservative, Vancouver Center, spoke at length in favor of the resolution, and the Minister of Public Works, Dr. J. H. King, Kootenay East, B.C., said that Mr. Clark's action in introducing the motion was opposed to his province's best interests. A. W. Neill, Progressive, Comox-Alberni, B.C., endorsed this, pointing out that if the resolution were defeated, the Cabinet would be in a good position to throw out the appeal now before it. The most illuminating part of the proceedings was when Mr. Neill, in support of his claim that the resolution was a purely political move, showed how Mr. Clark's first resolution, which was on the order paper for many weeks, and which, as is evident on reading it, did not provide for lower eastbound rates from B.C., would add immensely to the discrimination claimed against B.C., instead of removing it, and when he read resolutions of protest from Vancouver and other boards of trade pointing this out.

The resolution was supported by most of the Conservatives and opposed by the Government and Progressive members, and was declared lost without a vote being taken.

Contracts, etc., Limiting Carriers' Liability.—The Board of Railway Commissioners issued a circular recently, requesting railways to file, by May 1, copies of all forms, contracts or releases in use which in any way limit the liability of the company, including pass forms and circus contracts, but omitting passenger tickets, baggage checks and bills of lading.

Frank J. Watson, Freight Traffic Manager, Canadian National Rys., Montreal, writes:—"Canadian Railway and Marine World is certainly an up-to-date publication. The only fault I find with it is that it gives too much for the money, and covers such a broad field that it is impossible for the busy railway man to digest all he would like."

American Railway Association Mechanical Division Meeting.

The American Railway Association, Mechanical Division, embracing the former Master Car Builders and Master Mechanics Associations, will hold its annual meeting at Orchestra Hall, 220 South Michigan Ave., Chicago, Ill., on June 20, 21 and 22, when reports from the following committees will be presented and discussed:—General; nominating; arbitration; brakes and brake equipment; car construction; couplers and draft gears; design of shops and engine terminals; electric rolling stock; loading rules; locomotive and car lighting; locomotive design and construction; prices for labor and materials; safety appliances; specifications and tests for materials; tank cars; wheels.

Individual papers will be presented as follows:—The development of the locomotive, by Samuel Vauclain, President, Baldwin Locomotive Works. The development of railway cars, by E. F. Carry, President, Pullman Co. Increasing of locomotive mileage, by C. F. Giles, Superintendent, Machinery, Louisville & Nashville Rd. Training of apprentices and supervising foremen, by John Purcell, Assistant to Vice President, Atchison, Topeka & Santa Fe Ry.

Opportunity will be given for a free discussion of the following general subjects:—Co-operative research; economies from modern shop machinery; handling of material on car repair tracks; modern repair track facilities; possibilities for increased efficiency of modern locomotives; shop management problems of today.

The meeting will be addressed either personally, or by papers, on interesting subjects by the following railway executives:—R. H. Aishton, President, American Railway Association; W. W. Atterbury, Vice President, Pennsylvania System; C. H. Markham, President, Illinois Central Rd.; W. B. Storey, President, Atchison, Topeka & Santa Fe Ry.; Sir Henry Thornton, President, Canadian National Rys.

Toronto-Hamilton Electric Railway Project.

Since the article on page 238 of this issue went to press, a deputation from municipalities between Toronto and Oakville, headed by the Mayor of Oakville, which waited on Premier Drury on April 25, asked authority to build an electric railway between Hamilton and Oakville, and requested that bonds of Mimico, New Toronto and Port Credit Towns and Etobicoke Tp., deposited with the Hydro Electric Commission of Ontario, be retained. It was stated that a new line between Toronto and Port Credit would be built on private right of way. The Premier replied that if the Hydro Electric Power Commission would ask the Government to pass an order in council, to let the work go on, it would be done, but in regard to linking up with the line owned by the City of Toronto between Toronto and Port Credit, legislation would have to be sought next year. He pointed out, in regard to the line from Oakville west, that the municipalities did not want to go on with it, and he considered they should get their bonds back if they asked for them.

The Irony of Fate.—A Windsor, Ont., brakeman, just after being killed by a train, won an automobile in a raffle.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—A. A. AULD, whose appointment as Manager, New Ontario Dock, Sault Ste. Marie, Ont., was announced in our last issue, has also been appointed Agent, Canada Steamship Lines Ltd., there.

E. C. BOLAND, heretofore Soliciting Freight Agent, has been appointed District Freight Agent, Toronto, vice L. J. Burns, appointed General Freight Agent, Montreal.

L. J. BURNS, heretofore District Freight Agent, Toronto, has been appointed General Freight Agent. Office, Montreal.

Canadian Government Merchant Marine Ltd.—JOHN CARRALL, heretofore dock agent, Seattle, Wash., has been appointed dock agent, Grand Trunk Pacific Dock, Victoria, B.C., vice James McArthur, transferred to Vancouver, B.C.

JAMES MCARTHUR, heretofore dock agent, Grand Trunk Pacific Dock, Victoria, B.C., has been appointed dock agent, Grand Trunk Pacific Dock, Vancouver, B.C., vice F. D. Nealon, transferred.

W. S. STETSON has been appointed acting dock agent, Seattle, Wash., vice John Carrall, dock agent, transferred to Victoria, B.C.

A. M. TIDEY, heretofore chief clerk, C.G.M.M. dock, Vancouver, B.C., has been appointed dock agent, C.G.M.M. dock there.

C. G. TOWNSEND, heretofore in charge of the C.G.M.M. dock, Vancouver, B.C., has been appointed Superintendent of Docks, there, with jurisdiction over C.G.M.M. and Grand Trunk Pacific docks.

Canadian National Rys.—R. N. CARD has been appointed Division Freight Agent, Port Arthur, Ont., vice L. A. Fonger, appointed District Freight Agent, Saskatoon, Sask.

L. A. FONGER, heretofore Division Freight Agent, Port Arthur, Ont., has been appointed Division Freight Agent, Saskatoon, Sask., vice W. A. B. Russell, appointed Division Freight Agent, Ottawa.

R. C. GADSBY, heretofore Travelling Passenger Agent, Toronto, has been appointed City Passenger Agent, there, vice W. J. Moffatt, appointed General Agent, Passenger Department, Toronto.

R. JOHNSTON, heretofore Assistant General Purchasing Agent, G.T.R., Montreal, has retired on pension.

J. A. LEGER, heretofore acting Locomotive House Foreman, has been appointed Locomotive House Foreman, Newcastle, N.B.

H. McEWAN has been appointed Division Freight Agent, Prince Rupert, B.C., and deals with freight traffic matters, formerly handled by G. A. McNicholl, heretofore Assistant General Freight and Passenger Agent there, who has been appointed General Passenger Agent, Vancouver, B.C.

R. F. McNAUGHTON, District Passenger Agent, Prince Rupert, B.C., now deals with the passenger traffic matters, formerly handled by G. A. McNicholl, heretofore Assistant General Freight and Passenger Agent there, who has been appointed General Passenger Agent, Vancouver, B.C.

G. A. McNICHOLL, heretofore Assist-

ant General Freight and Passenger Agent, C.N.R. and Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C., has been appointed General Passenger Agent, both companies, Western Region, Jasper, Alta., and west, vice Osborne Scott, appointed General Passenger Agent at Winnipeg. Office, Vancouver, B.C.

J. D. MACNUTT, heretofore Assistant Superintendent, Halifax Division, Maritime District, has been appointed Assistant Superintendent, Campbellton Division, Atlantic Region, vice H. V. Musgrave, appointed Assistant Superintendent, Halifax Division. Office, Campbellton, N.B.

W. J. MOFFATT, heretofore City Passenger Agent, G.T.R., Toronto, has been appointed General Agent, Passenger Department, C.N.R., Toronto.

H. V. MUSGRAVE, heretofore Assistant Superintendent, Campbellton, N.B.,

W. LeB. Ross,

Treasurer, Western Region, Canadian National Railways.

has been appointed Assistant Superintendent, Halifax Division, Maritime District, Atlantic Region, vice J. D. MacNutt, transferred.

C. S. PUSHIE has been appointed Relieving Superintendent, Atlantic Region.

W. A. B. RUSSELL, heretofore Division Freight Agent, Saskatoon, Sask., has been appointed Division Freight Agent, Ottawa, vice E. J. Hilliard, assigned to other duties.

Other appointments made in connection with the co-ordination of the Canadian National Rys., consequent on the amalgamation of the G.T.R., are given on an earlier page of this issue, under "Further Co-ordination of G.T.R. with Canadian National Rys."

Canadian Pacific Ry.—J. E. H. DAVIES, heretofore chief steward, Royal Alexandra Hotel, Winnipeg, has been appointed Manager, Banff Springs Hotel, Banff, Alta.

Major W. M. KIRKPATRICK, M.C.,

heretofore General Foreign Freight Agent (Atlantic Service), Montreal, has been appointed Foreign Freight Traffic Manager. Office, Montreal.

J. U. LEMIEUX, heretofore chief clerk to City Freight Agent, Quebec, Que., is reported to have been appointed Contracting Freight Agent there.

W. T. MARLOW, heretofore Foreign Freight Agent in charge of import and export freight via Atlantic ports, Montreal, has been appointed General Foreign Freight Agent, vice Major W. M. Kirkpatrick, M.C., appointed Foreign Freight Traffic Manager. Office, Montreal.

G. J. O'DOWD, heretofore City Freight Agent, Quebec, Que., has been appointed District Freight Agent there.

Quebec, Montreal & Southern Ry.—F. P. GUTELIUS, whose appointment as Resident Vice President, Delaware & Hudson Co., Montreal, was announced in our last issue, has also been appointed Vice President, Quebec, Montreal & Southern Ry., and Napierville Jct. Ry., vice C. S. Sims, resigned. Office, 286 St. James St., Montreal.

United States Railways' Financial Results.

The Class 1 U.S. railways did not have as good a month in February as in January, the net operating income earned in February being only \$38,903,000, compared with \$60,544,700 in January, and the rate of earning on an annual basis being but 3.73% on tentative valuation, compared with 5.54% in January. Gross revenues in February were \$446,538,000, an increase of 11.3% over Feb. 1922, and operating expenses, \$375,707,600, were 15.8% more than in Feb. 1922.

For the first two months of 1923, operating revenues totalled \$948,494,500, an increase of 19% over the first two months of 1922; and operating expenses, \$784,280,900, increased 18.5% over those for the first two months of 1922. The net operating income for Jan. and Feb. 1923 was \$99,619,900, compared with \$77,346,500 for Jan. and Feb. 1922, the earnings for the first two months this year being at the rate of 4.66% on an annual basis, compared with 3.69% in Jan. and Feb. 1922.

Eastern U.S. railways in February earned a net operating income of \$17,248,300, representative of an annual return of 4.13%, compared with 7.20% in Feb. 1922; operating revenues were 10% more than in Feb. 1922, and operating expenses 18.6% more. In the southern district, the railways earned net operating income of \$10,531,900, or at the annual rate of 6%, compared with 4.16% in Feb. 1922. Operating revenues increased 19.3% and operating expenses 15%. In the western district the net operating income was \$11,122,800, representing an annual earning rate of 2.47%, compared with 2.54% in Feb. 1922. Operating revenues increased 10%, and operating expenses 12.3%. Traffic on all U.S. roads throughout March and April has been heavy, and favorable earnings throughout the spring and summer are anticipated.

W. R. Ingram, Manager, Transportation Department, Swift Canadian Co., Toronto, writes: "Canadian Railway and Marine World always contains a lot of good and valuable information."

Locomotive Stoker Applications on Canadian National Railways.

Canadian Railway and Marine World for January, gave on pg. 29, some details concerning the application of duplex locomotive stokers to Canadian National Rys. locomotives at the Transcona, Man., shops. These stokers are being placed on mikado locomotives 3390-3398, inclusive, and no. 3400, and on 5 heavy consolidation locomotives. As stated in that article, the C.N.R. received from the builders in 1921 one mikado, no. 3402, class S-1-e, equipped with a stoker; and locomotives 3390-3401 were received with the deck castings suitable for stoker application, and with the tender also partially arranged to take the stoker conveyor. This relieved the railway shops of a portion of the work involved in a stoker application, but in spite of the

door sheet alterations, on locomotive 3402 the stoker tubes were very close to the fire door opening, so that trouble developed through the door sheet cracking between the door opening and the tube holes. To overcome this, a departure was made from previous practice by using flanged tube holes, the stoker tubes being set out farther from the fire door opening, to permit of this being done. Details of this design are shown in the accompanying illustration. It is anticipated that the method used will overcome the trouble experienced on no. 3402, although the first application of this style of tube has not been in service sufficiently long to demonstrate whether or not this will be the case. New door sheets were applied, flanged for the tube

operated, and dimensions of the mikados and consolidations being equipped, were given in Canadian Railway and Marine World for Jan., pg. 29, and an illustration showing in detail the arrangement of the duplex stoker and the method of its application to a locomotive was given in Canadian Railway and Marine World for Dec., 1922, pg. 600.

We were officially advised recently that the last of the 10 mikado locomotives to be equipped with stokers was done during February, and that all the 10 are in service; that the first of the N-1-a class consolidations, no. 2404, was turned out equipped with a stoker and went into service Feb. 19; that the second consolidation to be equipped, no. 2400, went into service on March 6; that no. 2402 was being equipped in March, and that nos. 2401 and 2403 would follow very soon thereafter, completing the installation of stokers on the 5 consolidations.

Ticket Thefts on the C.P.R.

In connection with the alleged theft of tickets from the C.P.R. and their alleged illegal sale, for which Max Portugal, a Winnipeg storekeeper, was sentenced to three years imprisonment recently, Ira Gosling, a C.P.R. employe, who was arrested at Vancouver, and taken to Winnipeg for trial, was allowed out on suspended sentence, April 6. It was stated that he was not involved in the conspiracy to steal the tickets in which Portugal was concerned. Philip Greenberg, another Winnipeg storekeeper, was before a Winnipeg court on March 26, and was remanded. A Winnipeg press report of April 4 stated that there had been a very considerable suspension of C.P.R. employes following the investigations, including conductors running out of Winnipeg, Brandon and Saskatoon. C. Murphy, General Manager, Western Lines, is reported to have stated on April 5, that all investigations had been completed, that there were no C.P.R. employes being prosecuted, and that the entire list of dismissals included 19 train conductors, 8 sleeping car conductors and 2 porters. The story that about \$5,000,000 had been stolen annually for the last three or four years was ridiculous.

Details of Stoker Application to Locomotive 3402, Canadian National Rys.

preparatory constructional features, the alterations required in equipping the mikados were of some magnitude.

For the tender application, the water bottom under the coal space was reduced to accommodate the stoker conveyor by a space approximating 300 imperial gall. in capacity, and new deck, sliding plates and angle tracks for the conveyors were installed, with the coal grates set back to suit the stoker arrangement. The diaphragm plates of the vestibule cabs were not changed to the design as used on the original stoker-equipped locomotive, 3402, as it was found that the standard diaphragm arrangement for hand-fired locomotives could be worked in. As stated, the deck castings were provided with lugs and seats for the stokers, when the locomotives were built, and only minor alterations were necessary. In connection with backhead and

holes and fire door opening; the back heads had the tube holes cut out and the tubes were fabricated from 3/8 in. plate, rolled and welded, and belled into the back heads. Some rearrangement of the usual back head fittings was necessary. To better suit the conditions created by the stoker application, the butterfly type, air-operated, fire doors were removed, and replaced by vertical air-operated doors. The vertical grate shaker cylinders were relocated, extensions or wings being applied to the rear expansion plate to carry them, set far enough out to permit the stoker to be installed between them. Only slight changes were required in the ash pan, and were in the nature of extensions at the back corners, to accommodate the grate shaker operating rods in their new locations.

Particulars of the districts in which the stoker equipped locomotives will be

"Canada's Grain Trade.—The diversion of the grain traffic of the prairie provinces to United States seaports for export, and the suggested remedy in the use of the National Transcontinental Ry., for the purposes for which it was built," is the title of a booklet which has been issued containing a reprint of letters written to the Montreal Gazette by J. G. Scott, ex-General Manager, Great Northern Ry. of Canada and Quebec and Lake St. John Ry., and formerly President, Quebec Board of Trade.

American Railway Association.—J. M. Egan has been appointed Chairman of the Chicago Operating Committee of the A.R.A. Car Service Division, and also Manager, Refrigerator Department, vice J. J. Pelley, resigned, on his appointment as General Manager, Illinois Central Rd. He is a nephew of John M. Egan, who was the first General Superintendent of the C.P.R. at Winnipeg, and later President, Central of Georgian Ry.

A Canadian's Peruvian Railway Contract.

By C. Noel Wilde, Assistant Canadian Trade Commissioner.

For some years past the Peruvian Government has been considering the development of the natural resources of the Republic by means of an extensive network of railways, and the construction of port and harbor works at various points on the Pacific coast. This question, which presents certain difficulties on account of the physical nature of the country to be traversed and the cost of the work involved, has taken practical shape through the granting by the Government to R. W. Dunsmuir, formerly of British Columbia, of a concession for the construction of the railways, port and harbor works referred to, and also for their operation for 45 years. The agreement under which this concession is granted has, it is said, at the time of writing, been passed by the Peruvian Chamber of Deputies, subject to minor alterations, and now only awaits confirmation by the Senate before becoming law. It consists of 40 articles, which lay down the route of the railways, the conditions under which they are to be built, and their method of operation; grants franchises, concessions, and preferential rights; regulates questions of tariffs, passes, fares, etc.; and also makes stipulations in regard to transfers of property, guarantees, and arbitration. There are also stipulations in regard to granting free right of way and land concessions, and detailed conditions for the purchase and operation by the concessionaire of the Peruvian Government tobacco monopoly, the revenue from which has hitherto been devoted to public works of the Republic.

The railways to be built are of a total length of 3,539 kilometres, or about 2,200 miles, as follows:—

	Km.
Chuquicara to Cajabamba, Cajamarca and Jaen	532
Canon de Pato to Recuay	125
Recuay to Tambo del Sol, approximately	300
Tambo del Sol to Pucallpa (still to be constructed)	315
Mejorada to Huancavelica and Ayacucho	251
Ayacucho to Abancay and Cuzco	534
Lurin to Pisco	200
Pisco to Huancavelica	280
Huacho to Supe and Tablonas, and Chiarpo to Guadalupe and El Combo	562
Branches to Pachitea and Huallaga, approximately	440
Total	3,539

The estimated cost of these lines is 21,180,000 Peruvian pounds, equal to about \$85,000,000 at present rates of exchange, and the work is to be completed within 15 years from the ratification of the agreement.

The Peruvian tobacco monopoly, the purchase and control of which for 33 years forms an essential feature of the scheme, at present provides a net revenue in excess of 500,000 Peruvian pounds a year, and allowing for an annual increase at the same rate as has taken place in the past, it is estimated that the total net revenue during the period of the concession will amount to over 51,000,000 Peruvian pounds, or an average of 1,560,000 Peruvian pounds a year. This sum is earmarked for the payment of a portion of the cost of construction, the balance to be provided by the concessionaire; it is estimated, however, that the revenue from the tobacco monopoly will at least cover the cost of construction by the time the concession expires, and will also provide for any deficit in operation until the railways become self-supporting. For the control

of the tobacco monopoly for the period stated, the concessionaire is to pay the Government 1,245,000 Peruvian pounds immediately.

The concessionaire receives free a grant, in perpetuity, of alternate blocks of Government land on each side of the railways, together with the exclusive right of prospecting for oil and minerals within such land for 33 years. The blocks referred to are to be 25 kilometres square, or an area of 625 square kilometres of land for each 25 kilometres of railway constructed. This is equivalent to 10,000 acres of land for each mile of line constructed, or 5% of the total area of the Republic.

The Joint Congressional committee which was formed to examine the contract, reported that the scheme embraces almost all of the railways which have hitherto been regarded as necessary for the development of the wealth of Peru, and the railway problem of the country has thus been solved. It is anticipated that their completion will result in an enormous development of mining and agriculture, and the development of the great wealth of the trans-Andine region will thus become a fact. With the object of encouraging this development, the committee recommend that "railways of penetration," that is, lines piercing the mountain regions and extending towards the eastern area of the country, should be given preference over those paralleling the coastline, which would pass through country of a less productive character; it is also recommended that preference be given to such railways as pass through or most closely approach the richest mining and agricultural regions. There appears to be little doubt that these recommendations will be embodied in the final agreement when it becomes law.

The contract provides for a minimum gauge of 3 ft.; minimum weight of rails, 50 lb.; maximum gradient, 3½%, and maximum radius of curvature 80 metres, unless specially authorized. The minimum length of line to be built is 150 kilometres a year, the whole to be completed within 15 years. The concessionaire has the right to operate or lease the lines during the period of the concession, after which provision is made for the purchase of same by the concessionaire, on payment to the Government of the cost of construction. The latter clause, however, will probably be changed, giving the concessionaire instead a preferential right to the leasing of the railways for a further period after the expiry of the concession, should the Government decide not to operate them. Material required in the construction of the railways is to be exempt from customs duties for 33 years. No other railways are to be built within a zone of 25 kilometres on either side of the railways, and the concessionaire is to have preferential rights in connection with the construction of branches. Certain Government officials, employees and troops, also certain materials required for building public works, are to be transported free. The concessionaire is empowered to build wharves and warehouses at ports forming the termini of the railways, Government land being granted for that purpose. The granting of free right of way is provided for, and

arbitration when private lands are required.

Later reports state that the concession granted Mr. Dunsmuir has been approved by both Houses of the Peruvian Congress but that the terms finally allowed, are less liberal to the concessionaire than those in the executive grant, which will render more difficult the financing of the undertaking. The law, as finally approved, authorizes the executive to offer the same terms to other interests should Dunsmuir withdraw, which is reported as probable. In this event it is probable that the concession would be open to the highest bidder. Certain British interests are said to be following the development of the various proposals closely.

Transportation Events of Twenty-Five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for May, 1898.

C. J. Smith elected President, Canadian Freight Association.

C.P.R. lays telegraph cable from Vancouver to Vancouver Island.

C.P.R. starts survey for line from Toronto to Sudbury, under H. D. Lumsden.

C.P.R. building 10 sleeping cars at Hochelaga, Que., to be fitted up in Louis XV. style.

C.P.R. surveying line from Robson to Boundary Creek District, B.C., under W. F. Tye.

C.P.R. completes track laying on Crowsnest line, between Lethbridge and Macleod, Alta.

C.P.R. commences building transcontinental telegraph line between Montreal and Vancouver.

Dominion Atlantic Ry. building steamships, Prince Arthur and Prince George, in England for Yarmouth, N.S.-Boston, Mass., service.

Richelieu & Ontario Navigation Co. meet railway cut rates, by giving a \$4.50 from Toronto to Montreal, including berth and meals.

C.P.R. fitting 1,200 flat cars at Winnipeg, with Westinghouse air brakes, to reduce running time between Winnipeg and Fort William by one-third.

British Columbia Government makes contract with Mackenzie, Mann & Co. for building narrow gauge line from Teslin Lake to ocean port. This was not carried out.

G.T.R. appointments:—T. McHattie, acting Master Mechanic, Eastern Division at Montreal. H. Ferguson, General Roadmaster, transferred from London to Toronto.

Dominion Senate rejects bill to confirm agreement between Dominion Government, Wm. Mackenzie and D. D. Mann, for construction of railway from Glenora, or Telegraph Creek, to Teslin Lake, B.C.

C.P.R. appointments:—H. B. Spence, Superintendent, Chalk River section, of Brockville, Prescott and Eganville branches, and of Ottawa terminals, at Ottawa; J. E. A. Robillard, Superintendent, Ottawa section and St. Lin, Eustache and Labelle branches, at Montreal; J. W. Harkom, Assistant to Mechanical Superintendent, Montreal.

Traffic Orders by Board of Railway Commissioners.

Specifications for Cheese Boxes.

General order 377, April 6.—Re application of Canadian Freight Association, on behalf of railway companies, under the Railway Act, 1919, sec. 322, for approval of a proposed supplement no. 20 to Canadian Freight Classification 16, adding to the specifications for wooden cylindrical cheese boxes, certain regulations as to the fastening of the covers thereof: Whereas notice has been given by the railway companies in The Canada Gazette, as required by the Railway Act, 1919, and to the mercantile organizations enumerated in general order 153, Nov. 4, 1915; and upon consideration of the submissions filed, and the report and recommendation of its Chief Traffic Officer, the Board orders that the proposed supplement be approved.

Self Propelled Cars on Steam Railways.

The Quebec, Montreal & Southern Ry. received on April 4 from Ledoux, Jennings, Ltd., Montreal, car 51, one of two self-propelled gasoline driven passenger cars ordered recently, an illustration of which is given herewith. This car is approximately 32 ft. long, 8½ ft. wide

Self Propelled Car, Quebec, Montreal & Southern Ry.

and 10¼ ft. extreme height. The underframing is of the same type as that of the car previously delivered to the Q. M. & S. Ry. by the same builders, as described in Canadian Railway and Marine World for Oct. 1922, and the truck and drive arrangement are also similar. Illustrations of the latter, as applied to a car built for the Canadian National Rys., were given in Canadian Railway and Marine World for Aug. 1922.

The car is equipped with a small platform at the back, providing easy access to the marker lamps. The car body is of all steel construction, the sheathing being 1/16 in. thick. The windows are of the ordinary drop type, sliding upward about 8 in., and are provided with standard railway curtains. Provision has been made for the application of storm windows for cold weather use. The seating capacity is 34, and the baggage compartment, 14 ft. long, will accommodate additional passengers if necessary. Entrance to, and exit from, the passenger compartment is by the central doors at each side, and there is an emergency door at the rear, for use in case of accident. The baggage compartment doors are of the sliding type. The equipment includes electric lighting, overhead ventilators, 2-compartment water cooler, dry hopper closet, locomotive bell, Stromboss horn, sanding apparatus and locomotive type pilot. The wheels are 30 in. in diam., and side rods are used on the rear or driving truck. The car has a Reo

T-6 motor of 50 h.p. The second car, no. 52, was expected to be delivered about April 12.

Car 51, together with the gasoline car delivered to the Q. M. & S. in 1922 by the same builders, is being operated as train 50, St. Lambert to Fortierville, Que., 109.69 miles; as train 51, Fortierville to St. Lambert, on Mondays, Wednesdays and Fridays, and as train 52, St. Lambert to Nicolet, 76 miles, and train 53, Nicolet to St. Lambert, on Tuesdays, Thursdays and Saturdays. Car 52 will be operated as train 60, Sorel to Noyan Jct., 86.04 miles, daily, except Sunday; train 61, Noyan Jct. to Sorel, daily, except Saturday and Sunday, and train 63, Noyan Jct. to Sorel, Saturdays only.

Maritime Provinces Delegates' Interview Sir Henry Thornton.

A delegation of 16, from the maritime provinces, headed by J. E. Master, President, Maritime Board of Trade, Moncton, N.B., and including Premier Armstrong, of Nova Scotia; Premier Veniot, of New Brunswick; J. E. McLurg, General Manager, Halifax Shipyards, and several mayors and presidents of local boards of trade, interviewed Sir Henry Thornton, President, Canadian National Rys., in Montreal, April 23, in connection with

provinces for this purpose; and that copies of this resolution be furnished the Maritime members of the House of Commons, the governments of the three maritime provinces and the boards of trade of the maritime provinces.

"The situation was fully discussed, all the delegates expressing their views. President Masters outlined the position of the maritime provinces to Sir Henry Thornton, pointing out the very deep interest that this question had aroused in the minds of the maritime people, especially with regard to any change that might involve the breaking up of the Intercolonial Ry. with its western terminal at Montreal. A general discussion followed, the many and varied aspects of the question being set forth. Sir Henry Thornton stated that the decision regarding the creation of the Atlantic Region had been made only after very careful study of the situation. He did not think that the interests of the maritime provinces would be affected adversely. He told the deputation that the whole question would be reviewed, and if it were found that an injustice had arisen, or was likely to arise, he would be prepared to furnish a remedy promptly. With regard to the manner in which the working of the regions as at present constituted was being carried on, the delegation expressed its appreciation."

In connection with the foregoing, it may be mentioned that Mr. Baxter, St. John, N.B., asked in the House of Commons recently: "Is it true, as reported in the press, that J. A. Sinclair, a member of the Canadian National Rys' Board, stated to members of the delegation of the St. John Board of Trade, which attended a conference at Amherst, N.S., that 'it was news to him that Cochrane and Brockville were not to be the western termini of the Atlantic Division as that was the understanding at the last meeting he had attended,' or words to that effect? If Mr. Sinclair has been substantially correctly reported, why was a matter of such importance dealt with in his absence?" The acting Minister of Railways, Mr. Graham, replied: "The Government has no information as to the correctness of the report in question."

Dominion Express Co. Withdraws from Canadian Government Railways, Etc.

T. E. McDonnell, Vice President and General Manager, Dominion Express Co., issued notice, April 27, that, to accommodate the Dominion Government's wishes, the company's service will be withdrawn from government railways at the end of May, and he extended to employees the management's thanks for the efficient service they have rendered, and for the wonderful spirit of loyalty which has reflected so much credit upon themselves and upon the company. The company will also withdraw its service from the following railway lines: Cumberland Ry. & Coal Co.; Maritime Coal, Ry. & Power Co.; Atlantic, Quebec & Western Ry., and Quebec Oriental Ry., but will remain on the Temiscouata Ry.

The Greater Winnipeg Water District Ry. is reported to have been given a contract for carrying mails from Winnipeg to points on its line. Three centers will be served at present, a train leaving Winnipeg on Fridays and returning on Saturdays. Heretofore, a haphazard service by wagon has been given from Elina, on the Canadian National Rys.

the C.N.R.'s Atlantic Region western termini, with a view of having the region extend from the Atlantic coast to Montreal, instead of to Riviere du Loup and Monck, Que., as fixed by the management recently.

Following the interview, which was private, a statement was issued at the C.N.R. general offices, as follows: "Capt. J. E. Master, President of the Maritime Board of Trade, presented to Sir Henry Thornton the position of the maritime delegates in the terms of the resolution passed at the Amherst convention on March 2, as follows: 'Whereas, the decision of the Directors of the Canadian National Rys. to make Riviere du Loup the western terminus of the Atlantic Region is most unsatisfactory to the people of the maritime provinces generally. Be it resolved that this convention of the boards of trade of the maritime provinces here represented, is of the opinion that the City of Montreal, the present terminus of the Intercolonial Ry., should be the western terminus of the Atlantic Region of the Canadian National Rys.; that the Directors of the Canadian National Rys. be invited to meet representatives from the boards of trade of the maritime provinces in Moncton within ten days from this date to discuss the matter fully and if the board is unable to arrange such a meeting in Moncton that it be requested to fix a date and place in which to receive a delegation from the boards of trade of the maritime

The Proposals for an International Railway Commission.

Hon. G. P. Graham, acting Minister of Railways, is advocating the establishment of an international joint railway commission for Canada and the United States. He mentioned it first in a press interview in New York, when he went there some weeks ago to meet Sir Henry Thornton, and has referred to it since on different occasions. His suggestion is that such a commission should be empowered to deal with matters affecting international transportation, in order to facilitate decisions in regard thereto, and to remove any possibility of important matters being subjected to undue delay owing to lack of jurisdiction by the Board of Railway Commissioners for Canada and the U.S. Interstate Commerce Commission; the International Joint Waterways Commission being pointed to as an example that might be followed. Mr. Graham's principal reason appears to be that the proposed body might be able to secure more speedy return of Canadian railway cars from the U.S., and vice versa, though the latter really does not require to be dealt with, as the number of Canadian cars in the U.S. is always in excess of U.S. cars in Canada. It is urged that the proposed commission could be given full power to deal with the car question, and that if it made an order for cars to be returned, the order would have to be carried out or a penalty imposed.

Efforts to have a joint railway commission established were made as far back as 1909, when the Canadian Manufacturers' Association and other bodies took the matter up with the then Chief Commissioner, Board of Railway Commissioners, J. P. Mabey. Due to a change of the Dominion Government shortly after the proposal was made, and the probable desire of the new administration to avoid anything savoring of reciprocity with the U.S., the project was dropped. At present the Canadian Manufacturers' Association and some other bodies are said to be working for the establishment of an international commission for the purpose of dealing with questions respecting rates, and the movement of traffic between Canada and the U.S., and vice versa, the commission to be composed of certain members of the Board of Railway Commissioners for Canada and certain members of the U.S. Interstate Commerce Commission. Our understanding is that it is not proposed to remove from either of the national commissions any of the powers now vested in them, but rather to set up a body which it is claimed would facilitate dealing with transportation questions of an international character, its decisions to be somewhat in the nature of recommendations to the existing regulative authorities.

At first sight the proposal may seem to be a desirable one, but on consideration it does not appear that there is any necessity for an international commission. If, as appears probable, it would be intended to have the commission control international rates, it would be entirely superfluous, as the free and uninterrupted flow of traffic between the two countries, with minimum friction as to rates of carriage and other factors in transportation, has demonstrated the existing machinery for the regulation of international traffic and the rates thereon as being entirely adequate. There are a large number of very special commodity rates in Canada which are made to

provide for strictly Canadian interests, such, for instance, as the transcontinental rates, which are very much lower than similar rates in the United States. It would not be in Canada's interests to have a similar low basis of rates apply on competitive U.S. manufactures to Canadian points, but most likely the appointment of an international railway commission would bring about such an application.

If the proposed commission's function would be to look after the car situation only, it would be superfluous, for the reason that there are now agencies in both countries, the Railway Association of Canada and the American Railway Association's Car Service Division, which have unrestricted opportunity to co-operate in the formation of rules covering car interchange between the two countries, and which have authority to prescribe penalties for non-observance.

An International Railway Commission, as proposed, whether designed to be a regulator of railway rates, or merely an agency to supervise the international car movement, would be an unwarranted additional expense in connection with railways, without giving any adequate service in return. The present Canadian railway regulating machinery is not only efficient, but sufficient, and in regard to the U.S., a reasonable view is that the people of that country are now called upon to support a sufficiently large number of railway regulating bodies and are hardly likely to be desirous of adding to them.

The experience of shippers in both Canada and the U.S. has undoubtedly been that they have obtained more satisfaction by meeting railway officials in round table conferences than by appealing to regulatory bodies, a fact which was testified to in Toronto on Jan. 10 by J. H. Beek, Executive Secretary, U.S. National Industrial Traffic League, in addressing the Canadian Industrial Traffic League and the Toronto Transportation Club.

Toronto's Mayor Reproves Himself.

Mayor Maguire of Toronto, in a statement published in connection with the Kiwanis courtesy week, which was held in various Canadian and United States cities, from April 15 to 21, said:—"It is a regrettable fact that it should be necessary to say anything on behalf of courtesy. In public places where people congregate, and in highways of travel, discourtesy daily obtrudes itself. There is no sort of right on the side of discourtesy, because every person is entitled to receive courtesy at the hands of every other person. All people are entitled to courtesy without regard to their position or wealth. It is a reprehensible thing for any person to act rudely towards any other person. Perhaps some err through want of thought; these should keep the golden rule in shining characters continually before their mind's eye, and act upon it. Those who err through deliberate and intentional arrogance should be subjected to the discipline of censure, and, if necessary, the punishment of ostracism." Mayor Maguire must have experienced a decided change of heart since the municipal election campaign in Dec. 1922, when, following Sir Henry Thornton's announcement that a committee of Canadian National Rys. officials would be

appointed, to report on the possible electrification of railways in Toronto district, he sent a most impertinent telegram asking if Sir Henry had joined forces with the C.P.R. to attempt to wreck the proposed Ontario hydro electric railway projects. Mayor Maguire should repeat, day by day, the last sentence of his remarks quoted above, and should realize that, through his "deliberate and intentional arrogance," he is liable to "the discipline of censure" and "the punishment of ostracism."

Another Millstone for Canadian National Railways.

The Lieutenant-Governor's speech at the recent opening of the New Brunswick Legislature said in part:—"The question of making the St. John & Quebec Ry. a part of the Canadian National Rys. System, and thus relieving the province of a heavy burden, has been placed before the Dominion Government, and my Government has the assurance that it will receive consideration so soon as the Canadian National Railways board can make a report thereon." This railway, which extends from near a junction with the C.P.R. at Westfield Beach, N.B., 14 miles from St. John, to Centerville, is now operated on a percentage basis by the C. N. Rys. Why not let that condition continue? The New Brunswick Government authorized its Lieutenant-Governor to state that the debt incurred in building the road is a heavy burden on the province. The Dominion Government could not carry the debt any cheaper than the province, and the only object of the desired transfer is to let the province escape from paying for a road which it built, and to transfer the debt and the interest on it to the people of the Dominion generally. The old Intercolonial Ry. is already overloaded with other lame duck railways that politicians forced the Dominion Government to buy. The folly should not be continued.

Political Interferers at Ottawa.

The appointment of E. M. Macdonald, M.P. for Pictou, N.S., as a member of the Dominion Government, without portfolio, does not augur well for the prevention of attempts at political interference with the Canadian National Rys.' management, as he may be considered the high priest of the large number of the people in the maritime provinces who wish the railways to be run in the interest of whatever party may be in power at Ottawa. It was charged, and has not been denied, that, shortly after the last Dominion elections, Mr. Macdonald got a section foreman on the Intercolonial Ry. to dismiss two section men who had voted against him, but who were afterwards reinstated, to his infinite disgust, an act which embittered him against the then management. Perhaps, however, Mr. Macdonald's appointment may be considered as set off by the disappearance from the Government of D. D. McKenzie, M.P. for Cape Breton North and Victoria, N.S., who has given up the Solicitor-Generalship to become a judge. Mr. McKenzie was one of the most ardent advocates for political appointments, and is said to have gone so far as to have demanded the appointment of Liberals as gatekeepers on the Intercolonial in Cape Breton.

New Brunswick Legislators Want Joy Rides.

The Railway Act, 1919, provides that railways may give free transportation, or reduced rates, to members of legis-

latures, within their respective provinces. The New Brunswick Legislature resolved recently to ask the Dominion Parliament to have the privilege extended to embrace all railway lines in Canada, instead of being given only within the respective provinces. The granting of the request would mean that all the members of the nine provincial legislatures would have free transportation over all railways throughout the Dominion which are under Dominion jurisdiction, and would place a burden on the railways which should not be imposed. Members of provincial legislatures have to deal with matters confined almost entirely to their respective provinces. There is no public reason why they should be able to roam at will throughout the country, from the Atlantic to the Pacific, and the granting of the New Brunswick request would be an inducement to make unlimited joy rides, largely at the public expense, and would be an unwarranted increase in railway operating expenses.

Encouraging Government Interference.

The Toronto Mail and Empire, which had been prominent, among the leading daily newspapers, in advocating the elimination of political interference with the Canadian National Rys.' management, said recently: "The Dominion Government should insist that the National Railways carry Alberta anthracite to Ontario at cost, in May, June and July." This is a most dangerous suggestion and certainly should not be acted on. The Dominion Government should absolutely refrain from any such insistence, or interference, and should allow Sir Henry Thornton and his officials to manage the lines on strictly business principles. If Alberta coal should be carried at cost, why not wheat, timber, and many other commodities? Is not the Mail and Empire a little astray in talking of "Alberta anthracite"? Our understanding is that what Alberta people desire to send to Ontario, at least principally, is bituminous coal.

Unreliability of St. Thomas Press Dispatches.

Canadian Railway and Marine World has, on several occasions, called attention to the unreliability of press dispatches sent from St. Thomas, Ont., particularly in reference to Michigan Central Rd. and Pere Marquette Ry. matters. The latest example is a special dispatch to the Toronto Globe saying that J. L. McKee, General Superintendent, M.C.R., Detroit, Mich., in visiting the St. Thomas divisional headquarters, had stated that a new train, rivalling the Twentieth Century Limited, would be introduced on the Canadian Division. Mr. McKee advises us that he does not know anything about such a proposition, and that no such statement originated with him.

A Many Track Line.—The amalgamation of railways in Great Britain into four groups has brought to light a number of interesting facts. One is that the Southern Ry. Co., starting from London Bridge terminus, has probably the greatest number of parallel sets of tracks on any railway in the world. There are 12 of these at the start; 11 at 1.5 miles out; a little farther on, these are reduced to 8; a few chains farther on there is a further reduction to 6; and a short distance beyond, to 4. The whole distance from London Bridge to the point where the last separation takes place does not exceed 5 miles.

Canadian Freight Classification Revision.

The revision of Canadian Freight Classification No. 16 which was commenced in Feb., 1921, is rapidly approaching completion. The committee consists of W. B. Lanigan, General Freight Traffic Manager, C.P.R.; George Stephen, Assistant Freight Traffic Manager, Western Lines, C.P.R.; F. J. Watson, Freight Traffic Manager, Canadian National Rys.; T. Marshall, Manager, Traffic Department, Toronto Board of Trade; S. B. Brown, Assistant Manager, Transportation Department, Canadian Manufacturers' Association, and J. K. Smith, Manager, Transportation Bureau, Montreal Board of Trade. G. C. Ransom, Chairman, Canadian Freight Association, Eastern Lines, is Chairman and Secretary.

During the committee's numerous meetings, it has heard about 500 shippers' representatives, and it has revised the complete Classification, the result being considered very satisfactory by both carriers and shippers. The revised Classification is being put in type, and after this is completed, there will be conferences with western shippers and jobbers, probably at Winnipeg, then the Classification will be submitted to the Board of Railway Commissioners for approval, and it is probable only a very few items will have to be decided by the Board.

Chamberlin Trophy Competition.

The annual competition among the first aid teams from the various G.T.R. terminals for the Chamberlin trophy, presented by E. J. Chamberlin, formerly President, G.T.R., was concluded recently. Twenty-three teams competed, and in the finals 6 teams were grouped as follows:—Montreal (2 teams), Belleville, Stratford, Guelph and Lindsay. Each member of the competing teams was required to undergo an individual examination, and the teams were also judged as a whole. The Lindsay team secured the highest number of marks, being closely followed by Montreal no. 2 team, and the Belleville team. The members of the winning team are:—R. W. Groves, Chief Dispatcher, captain; M. S. Mowat, Dispatcher; C. H. Heels, car distributor; C. A. Mulvihill, clerk, and A. Lipsett, weighman, all of Lindsay.

The shield was presented to the winning team by the Governor-General, Lord Byng, at the St. John's Ambulance Association's annual meeting in Ottawa. Subsequently the G.T.R. employees in Lindsay and its vicinity gave a dinner and entertainment in honor of the team, at which J. D. McMillan, Superintendent, Belleville, presided. A. J. Hills, Assistant to Vice President, Operation and Construction, and Col. J. Alex Hutchison, Chief Medical Officer, Canadian National Rys., several local business men and about 200 railway employees attended. Each member of the team was given a club bag by the railway employees. Previously the shield had only been won by Montreal and Stratford teams.

F. E. Whelpley, acting Treasurer, Atlantic Region, Canadian National Rys., Moncton, N.B., writes:—"I have been a subscriber to Canadian Railway and Marine World for some 20 years, and have found it to be of such worth that I am anxious to be of any service to it."

Railway Operating Revenues, Expenses and other Statistics for 1922.

The following comparative table for the calendar years 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways were under one management, and operated as one system, the operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Transcontin-

ental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry., but does not include electric lines.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimalt and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to 1922 they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles was added to both freight and passenger train miles when computing averages. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of the 1922 report.

Railway Operating Revenues, Expenses and Other Statistics for January.

The following comparative table for Jan., 1923 and 1922, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are not in all cases the same as reported in 1922.

For the first time, the column headed "Canadian National" gives the figures for the combined steam railways in

Canada, under the Canadian National Ry. Co.'s directors' management, including the former Canadian Northern System, the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers.

The items under side headings 1 to 6, inclusive, include rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc.

Ontario Station Gardens.—The Ontario Agriculture Department superintends and financially aids a large number of horticultural societies throughout the province. These societies spend some of their money in aiding in beautifying publicly-owned spots. The Welland organization has taken up with the G.T.R., the Niagara, St. Catharines & Toronto Ry.,

and Michigan Central Rd., the question of setting out flower beds, etc., at their stations, and it is reported that this will be done by the railways. The Mitchell Horticultural Society proposes to co-operate with the G.T.R. authorities in laying out the vacant ground at that station prior to the proposed old home week.

G.T.R. First Aid Teams.—W. D. Robb, Vice President in charge of Insurance, etc., Canadian National Rys., presented members of the G.T.R. women's first aid teams recently with silver mesh bags in appreciation of work the members had done during the past season. The no. 1 team took third place in the recent Dominion-wide competition.

Railway Operating Revenues, Expenses and Statistics.

A tabular statement of revenues, expenses and other statistics for all Canadian railways with annual operating revenue over \$500,000, and for the larger railways individually, for the calendar year 1922, is given on pg. 217 of this issue. The monthly statement for January, on pg. 218, shows C.P.R. earnings, expenses and statistics and those for the Canadian National Rys. in their entirety, made up of the lines heretofore designated as Canadian National Railways, in combination with the G.T.R. The monthly earnings for the C.P.R., the G.T.R., and the original Canadian National Rys. system (Canadian Northern Ry., Canadian Government Rys., and Grand Trunk Pacific Ry., and electric lines) for February are given on pg. 220. A study of the tables will give a complete idea of just what progress Canadian railways are making in their uphill fight, and will furnish detailed knowledge of the conditions facing the roads, their earning ability, and their operating status, both as a whole and as individual properties.

An examination of the table of the 1922 operations should be made in full recognition of the fact that the year marked a certain amount of progress by the railways in the reduction of unit revenues and expenses, both of which (the expenses to a greater degree than the revenues, unfortunately) were affected in some degree by the wave of inflation which reached its culmination in 1920, when Canadian roads set a record for gross revenues, due to a combination of heavy traffic and high rates, but, due to heavy expenses, the net earnings were woefully deficient. In 1921, some progress was made in getting expenses down to a more reasonable level, as deflation proceeded, and some improvement over 1920 was secured in operating results. In 1922, the improvement was carried a little further, and, while considerable deflation took place in both unit revenues and expenses, the net result was a more favorable earnings record than in 1921. While in Jan. and Feb. 1922 operating deficits resulted for the roads as a whole, March introduced a period of net earnings which continued to the end of the year. On July 6, freight rates were reduced by about 25%, on grain and grain products, in accordance with the Crowsnest agreement, and by about 6% on various basic commodities, and further by the removal of increases on coal granted in 1920. On the other hand, certain reductions in wage rates were made during the year, and savings were effected by the elimination of overtime, and punitive rate schedules, and by rearrangement of working conditions. Materials as a whole were somewhat cheaper than in 1921, and these factors, combined with an increase in traffic density during the latter part of 1922, enabled the railways to more than counterbalance the effect of the rate reductions.

The increase in traffic density referred to was more or less general, except in coal, while the extraordinarily heavy grain traffic, wherein over 12,750,000 bush. of grain were exported via Vancouver, in addition to the movement east via the regular routes, was the means of providing a large railway revenue. The railway shopmen's strike on the U.S. lines also had the effect of diverting a good deal of traffic to Canadian carriers.

Regarding the 1922 gross revenues as

a whole in conjunction with the traffic which produced them, it will be seen that freight earnings for the year were slightly less than for 1921, despite the fact that the number of tons of revenue freight carried increased by over 5,000,000, and that the ton mileage handled increased by almost 15%. The decrease in freight earnings was 0.73%, and the explanation is to be found, of course, in the rate reductions which were enforced, as indicated by the fact of the average receipt per revenue ton mile being but 1.037c. in 1922, compared with 1.197c. in 1921. To the casual observer this reduction in the unit freight revenue would not appear to be of major importance, but figured in terms of percentage it is found to be indeed so, and when the difference of sixteen-hundredths of a cent is applied to the vast number of ton miles handled, the results produced on total freight earnings are of surprising magnitude. The reduction in gross earnings from passenger service, 11.5%, was large, and was due not only to the reduction of the average rate per revenue passenger mile from 3.030c. to 2.812c., but also to the falling off in passenger traffic, this being evident in both the number of passengers carried and in revenue passenger mileage. The 1922 passenger traffic did not reflect improving economic conditions to the same degree as did freight traffic, but, with a continuation of business and economic betterment, there is reason to hope that the improvement in passenger traffic will be greater in 1923. All other items of gross revenue decreased in 1922, compared with 1921, with the exception of mail service, so that the total gross revenue for the roads as a whole decreased 3.4%.

The most gratifying thing about operating expenses is that for the roads as a whole they showed a larger decrease for 1922, compared with 1921, than did gross earnings. The reduction in operating expenses was 6.3%, reductions being accomplished in every item except traffic expense. Particularly noticeable is the fact that, despite the large increase in freight traffic mentioned, transportation expenses were reduced by 8.4%, the reduction amounting to \$17,465,529. The result of the larger reduction in expenses than in revenues was that the operating ratio showed some improvement over 1921, while a satisfactory increase in net operating income was produced.

Examination of the operating statistics shows that in 1922 the railways took full advantage of the opportunity presented by increasing traffic density to increase their operating efficiency, this fact being made abundantly clear on noting that the 12.2% increase in ton mileage was handled with an increase in freight train mileage of but 6%, and that the total traffic was handled with an increase in total train mileage of but slightly over 3%. The remarkable decrease in transportation expense referred to above (all the more remarkable because train and locomotive employees' wages were not reduced in 1922) was in no small measure due to the success met with in the effort to move the maximum ton mileage with the minimum train mileage, and that success, in turn, was due primarily to better train loading, the increase in the revenue train load for all roads being 34.7 tons over 1921, and 27.6 tons as applied to all freight. This betterment in train loading was not due to improve-

ment in car loading, but was brought about in spite of a falling off in average car loading from 26 to 25.4 tons, and is explained by the fact that the average freight train contained 1.6 more loaded cars in 1922 than in 1921. The payroll for the railways collectively was reduced \$15,455,563, or 6.4%, with less than 1% decrease in the average number of employees.

Regarding the year's operations as concerns the individual roads, the financial results secured have been discussed in preceding numbers of Canadian Railway and Marine World, but some of the operating figures which gave rise to them are of sufficient interest for further reference. On the Canadian National Rys. (the original system) where the operating deficit for 1922 was \$9,996,981, compared with \$16,416,256 in 1921, substantial increases in both the number of tons of revenue freight carried, and the number of ton miles handled, were recorded, and some falling off in passenger traffic was experienced. The fact of there being a decrease in freight train mileage, notwithstanding the increase in freight traffic is notable, while passenger train mileage for the year was cut down below that of 1921, in even greater proportion than passenger traffic decreased. The explanation of the better relationship as between freight train mileage and ton mileage, is to be found in the remarkable improvement made in train loading, this arising from both better car loading and the inclusion of more cars per average train.

On the C.P.R., the favorable results of which road's operations were fully discussed in our April issue, the large increase in revenue freight handled, and in freight ton mileage, was barely sufficient to make the 1922 freight earnings equal those of 1921, due to the application of rate reductions. The falling-off in C.P.R. passenger business was particularly noticeable. The increase in freight train miles operated was not disproportionate to the increase in freight traffic handled. While there was some falling off in the average car loading, the increase in the number of cars per train increased the number of tons of revenue freight per average trainload.

On the G.T.R., where the year's operations were marked by larger gross revenues, and smaller total expenses, than in 1921, the increase in freight traffic was more than sufficient to wipe out the loss of revenue occasioned by rate reductions, although, in this connection, it must be borne in mind that the most severe rate reductions, those on grain and grain products, did not affect the G.T.R. to nearly the same extent as they did the transcontinental carriers. As on the other systems, passenger traffic fell off considerably. The increase in the G.T.R. freight train mileage was not so large proportionately as the increase in freight traffic handled, and the falling off in passenger traffic was accompanied by some decrease in passenger train mileage. Despite a material decrease in the number of tons of freight per car, the increase in the number of loaded freight cars per average freight train was sufficient to increase in large measure the average train load.

An examination of results for Jan. 1923, shows that the railways as a whole got off to a much better start in 1923 than in 1922, Jan. 1923 having net earnings of \$851,979, compared with an oper-

ating deficit of \$861,527 in Jan. 1922. The recovery made in freight traffic within the year is shown both by the figures covering freight handled and freight ton mileage, and by the figures for freight revenue, which exhibit a most substantial increase, despite the reduction of the average receipt per revenue ton mile from 1.080c. in Jan. 1922 to 0.951c. in Jan. 1923. Passenger traffic also shows an increase, which is reflected in the passenger earnings. It is noticeable that the average receipt per revenue passenger mile was higher in Jan. 1923 than in Jan. 1922.

As would logically be expected with the increased traffic movement, practically all departments of operating expense for the railways collectively showed some increase over Jan. 1922, but so long as the increase in total expenses is not greater than that in total revenues, the mere fact of expenses having increased does not constitute an undesirable symptom, but must be regarded as desirable in so far as it is the result of more business, which is the chief need of the industry. In relation to the additional business handled, the increase in operating expenses was most reasonable, the relationship serving to adequately express the efficient operation displayed in Jan. 1923 as indicated by the smaller proportional increase in freight train miles than in ton miles. The opportunity for efficient operation presented by increased traffic density was taken full advantage of.

For the first time, the results of all Government-owned roads are consolidated in one statement, and, as pointed out in a preceding issue, where the original Canadian National Rys. and G.T.R. financial results for January were reviewed separately, the deficit experienced by the combined system in Jan. 1923 was much smaller than in Jan. 1922. The National system as a whole experienced substantial increases in both freight and passenger traffic, and, on the basis of better car and train loading, operating expenses were held down well. On the C.P.R. also, both freight and passenger traffic showed good increases, resulting in the improvement in net returns shown in the table, and commented on in a preceding number.

On looking at the returns secured by the individual railways in February, it is to be seen that the C.P.R., with gross earnings of \$11,159,865, showed a decrease from Feb. 1922 of \$143,828, while operating expenses, \$10,664,371, were \$15,166 greater than in Feb. 1922, resulting in net earnings for the month, \$495,494, being \$158,994 less than in Feb. 1922. The figures for the Canadian National Rys. (exclusive of the G.T.R.) and for the G.T.R., show that in Feb. 1923 these roads also did not secure as favorable results as in Feb. 1922. The reversal of form from January applied alike to all three systems and was most marked.

While February is not commonly regarded as a month liable to be characterized by heavy traffic, and while it would be in keeping with the usual trend of events if traffic fell off during that month, it may nevertheless be noted that the Railway Association of Canada reported heavy car shortages as of both February 1 and March 1, which indicates that, despite the fact that there are a lot of Canadian cars on U.S. lines, traffic on Canadian railways in February must have been good. That being the case, and railway earnings being so much more unfavorable than in January, the

question naturally arises as to the adequacy of the rates on which the railways are doing business, and as to where they would find themselves if they were trying to make ends meet on traffic of the same volume they had in Feb. 1922. An examination of the January table shows that the railways had to handle a vastly greater amount of traffic in Jan. 1923 than they did in Jan. 1922, to earn the increased gross revenues which they got, and a natural conclusion is that any falling off in traffic, which never brings with it an opportunity to reduce operating expenses in proportion to the enforced revenue reduction, would leave the railways in bad shape, so far as net earning ability is concerned. It may be taken for granted that every effort is being made to keep operating expenses down to the minimum, and with conditions as shown it must be evident to all that the railways, faced with a commodity market marked by rising prices rather than falling, and with a wage scale most unlikely to be marked by decreases, are in no position to meet with rate reductions the demands, requests and suggestions for which appear to be always with us.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System (steam and electric lines), Grand Trunk Pacific Ry., and Canadian Government Rys., the last including the Intercolonial Ry., Prince Edward Island Ry., and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue.	Expenses.	Deficit.	Increase or Decrease.
Jan.	\$ 9,652,600	\$10,808,306	\$1,555,706	\$1,076,307
Feb.	7,764,196	10,724,382	2,960,186	*575,596
	\$17,416,796	\$21,532,688	\$4,115,892	\$ 500,711
Inc'se	\$ 1,383,037	\$ 882,325		
Dec'se			\$ 500,711	
	*Increase.			

Grand Trunk Railway.

Following are total operating revenues, total operating expenses, and net operating earnings, or deficits, of the G.T.R. system, for 1923 and 1922:—

	Revenue.	Expenses.	Net.	Increase or Decrease.
Jan.	\$8,623,348	\$7,937,775	\$ 685,573	\$ 89,768
Feb.	7,942,776	7,582,837	359,939	*836,517
	\$16,566,124	\$15,520,612	\$1,045,512	*\$746,749
Inc'se	\$ 1,568,160	\$ 2,314,909		
Dec'se			\$ 746,749	
	*Decrease.			

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross.	Expenses.	Net.	Increase or Decrease.
Jan.	\$13,148,914	\$12,428,888	\$ 720,026	\$ 236,549
Feb.	11,159,865	10,664,371	495,494	*158,994
	\$24,308,779	\$23,093,259	\$1,215,520	\$77,555
Inc'se	\$ 1,667,111	\$ 1,589,556	\$ 77,555	
	*Decrease.			

Lifting of Rails on Canadian National Railways.—The House of Commons adopted a motion recently, by D. M. Kennedy, Edmonton West, Alta., for a copy of all papers, letters, telegrams, orders in council, and all other documents, relating to the lifting of the steel on portions of the Grand Trunk Pacific and the Canadian Northern Rys., between Edmonton and the western boundary of Alberta.

The Bad Order Car Situation.

The Railway Association of Canada's report of the bad order car situation as at April 1, shows that, out of a total of 184,998 freight cars on Canadian lines, there were 12,663 in bad order, or 6.8%. The 7% standard set by the American Railway Association would allow Canadian lines to have 12,950 cars in bad order, without having more than a normal amount of their equipment awaiting repairs; that would be 287 more cars than were actually in bad order. A shortage of 3,614 cars was reported. On March 1 the bad order percentage was 5.9, with a shortage of 4,810 cars. An analysis of the bad order car situation and freight car surplus and shortage was given in Canadian Railway and Marine World for April, pg. 170, which shows that while the number of bad orders increased somewhat during the month, the situation is still comparatively favorable, although the decrease in the shortage of cars must be considerably greater than during the month before a normal condition is attained.

The American Railway Association's Car Service Division reports that on March 15 there were on U.S. class 1 roads, 2,282,626 freight cars of all kinds, of which 212,553, or 9.3%, were in bad order, compared with 9.5% on March 1. Out of 1,049,242 box cars, 88,605, or 8.4%; out of 59,462 refrigerator cars, 6,747, or 11.3%; out of 957,135 gondola cars, 97,787, or 10.2%; out of 80,246 stock cars, 7,915, or 9.9%, and out of 94,403 flat cars, 9,474, or 10%, were in bad order. At a meeting of American Railway Association member roads on April 5, a programme approved by the Association of Railway Executives, designed to give the railways a concerted policy to enable them to meet the growing transportation needs of the U.S., was adopted. It provides that by Oct. 1, 1923, when the peak traffic movement ordinarily begins, cars awaiting repairs shall be reduced to 5% of the total number in the country. From the figure above shown, 9.3%, it is evident a lot of improvement has been effected from a year ago, when the bad order percentage was running about 14. To get the percentage down from 9.3 to 5, approximately 98,152 cars would have to be put into operating condition, which makes it clear that there will have to be a lot of activity on the U.S. railways' rip tracks if the goal set in the railway efficiency programme is to be attained.

Railways and Canals Department's Salaries.—The estimates for the year ending March 31, 1924, submitted to the House of Commons recently, provide for the following salaries for the principal officials of the Railways and Canals Department:—Deputy Minister, \$10,000, an increase from \$6,000; Chief Engineer, \$8,000; Solicitor and Counsel, \$5,000; Comptroller, \$4,800; Secretary, \$4,200; Right-of-Way Agent, \$4,800; Assistant Chief Engineer, \$5,400; Assistant Deputy Minister, \$4,800; Assistant Comptroller, \$3,960; General Assistant Engineer, \$4,800; Senior Electrical Engineer, \$4,800; Senior Hydraulic Engineer, \$4,800; Senior Office Engineer, \$3,840; Bridge and Structural Engineer, \$3,420.

C. H. Heels, Car Distributor, Canadian National Rys., Lindsay, Ont., writes:—"I have been a subscriber to Canadian Railway and Marine World for about 10 years, and consider it a valuable book of information, especially to those interested in railway matters."

Bonuses to Canadian National and Grand Trunk Railway Officials.

The acting Minister of Railways, Mr. Graham, stated in the House of Commons, on March 28, in answer to W. J. Ward, Dauphin, Man., that D. B. Hanna, former President, Canadian National Rys., received on his retirement \$35,000, in addition to his salary to date of retirement, and that A. J. Mitchell, former Vice President Canadian Northern Ry. Co. and Vice President of Finance and Accounts, similarly received \$20,000, in recognition of past services and by authority of the Canadian Northern Ry. Co. directors, given Sept. 14, 1922. In answer to the question:—"Did any other retiring official or director of the Canadian National Rys. receive any such gratuity or bonus on retirement?" Mr. Graham said:—"Yes.

"S. L. Shannon, Comptroller and Treasurer, Canadian National Rys., salary for 6 months, \$3,000, preliminary to superannuation.

"W. H. Biggar, K.C., Vice President and General Counsel, Grand Trunk Ry., died July 7, 1922, and on July 10, the Grand Trunk Canadian board voted Mr. Biggar's estate his salary to Dec. 31, 1922, at the rate of \$20,000 a year.

"Preliminary to superannuation, the following gratuities were voted by the Grand Trunk Canadian board on the dates mentioned: Aug. 25, 1922, Frank Scott, Vice President and Treasurer, salary for 4 months, \$6,000; Sept. 11, 1922, R. S. Logan, Vice President, salary for 3 months, \$3,500; Sept. 11, 1922, A. B. Atwater, Assistant to President, Western Lines, salary for 3 months, \$1,000.

"In addition to the above, H. G. Kelley, President of the Grand Trunk and of the Grand Trunk Pacific, was voted a gratuity of \$40,000 on Grand Trunk account, and \$10,000 on Grand Trunk Pacific account; R. S. Logan, Vice President, \$12,000, and Frank Scott, Vice President and Treasurer, \$25,000, by the English board of directors, under circumstances set out in following extract from minutes of a meeting of the directors of the G.T.R. Co. of Canada, held in London, Eng., Dec. 12, 1919, Sir Alfred W. Smithers, Chairman, in the chair:—"The Chairman explained the position in which many of the chief officers, who had been in the service of the company for a very long period, might be placed when the change of administration of the G.T.R. took effect in consequence of the agreement made with the Canadian Government for acquiring the G.T. system, and then submitted letter from the Vice President and Treasurer to the President, dated Nov. 8, with reference to the satisfactory working of the company's fire insurance fund, which at June 30, 1919, showed a surplus of \$223,957 over the amount of \$1,000,000 which is considered to be ample to cover all liabilities of fund. On the recommendation of the Chairman, it was decided, after consideration, to vote one year's salary as a gratuity to each of the following officers:—H. G. Kelley, President, \$50,000; J. E. Dalrymple, Vice President, \$16,500; W. D. Robb, Vice President, \$16,500; R. S. Logan, Vice President, \$12,000; J. M. Rosevear, Comptroller, \$12,000; D. E. Galloway, Assistant to President, \$9,000; W. P. Hinton, Vice President and General Manager, \$15,000; H. H. Hansard, Solicitor, G. T. Pacific Ry., \$7,200; S. P. Porter, Executive Agent, G.T.P.R., \$4,200; and \$5,000 each to G. T. Bell, Passenger Traffic Manager, and H. C. Martin,

Freight Traffic Manager. It was also decided to grant Frank Scott, Vice President and Treasurer, looking to his successful working of the fire insurance over a number of years, \$25,000; and to H. H. Norman, Secretary, and H. Deer, Assistant Secretary, \$12,500 and \$10,500, respectively; the whole of the above gratuities to be debited to the fire insurance fund."

"Further, the English board of directors, on Feb. 19, 1920, the date of the ratification of the acquisition agreement by the shareholders, voted themselves, as compensation for loss of office, a gratuity of five years' directors' fees, under the circumstances set out in extract from the board minutes of the date in question, copy of which is also attached:—"Extract from minutes of a special general meeting of the company, held in London, Eng., Feb. 19, 1920, Sir Alfred W. Smithers, M.P., Chairman, in the chair: It was moved by A. B. Boshier, seconded by E. Roberts, and unanimously resolved, that the board of directors be granted, as compensation for loss of office, an amount equal to five years' remuneration, to be paid to them out of the contribution to be made by the holders of the debenture and guaranteed stocks, and to be divided as the board may determine." Note: The total remuneration paid to all of the directors per year was \$6,900, or \$33,580, and for five years was equal to \$34,500, or \$167,800. There were nine directors on the board at that date."

Former G.T.R. Officials' Voluntary Offer to Refund.

Sir Henry Thornton, who went from Montreal to Ottawa on April 7, in connection with the matter, issued the following statement:—"The ex-officers of the old G.T.R. who received gratuities from that company, now in the service of the Canadian National Rys., have offered in a letter received by me to return to the Canadian National Rys. the gratuities in question. In justice to these officers, it is but fair to say that at the time they received their several gratuities they were unaware of the details of the transaction and were informed by the then President of the company that the amounts were a donation from the G.T.R. shareholders, acting through their directors, as a reward for long and faithful services. The receipts which were presented to them for signature bore the endorsement, 'Special gift from shareholders,' and tended to corroborate the statement made by the then President of the company. The voluntary action of the officers in question, as outlined in their letter to me, has the complete commendation of the administration of the Canadian National Rys. and should excite the entire approval of the public."

The letter referred to above, which was signed by W. D. Robb and J. E. Dalrymple, Vice Presidents; D. E. Galloway, Chief Assistant to President; G. T. Bell, Executive Assistant to Traffic Vice President; H. C. Martin, General Freight Traffic Manager; J. M. Rosevear, General Comptroller, and H. H. Hansard, Solicitor, was as follows:—"The undersigned officers of the old G.T.R. Co., now in the service of the Canadian National Rys., having read with concern the accounts in the public press of the gratuities voluntarily given them prior to the date of the acquisition of that

company by the Government, under resolution of the board of directors of that company, have determined, with a view to performing their full duty as patriotic citizens of the Dominion, and to preserve that confidence and respect on the part of the public without which no railway officer can efficiently perform his duties, to voluntarily offer the Canadian National Ry. Co. a return of the gratuities given in each case, a reasonable time to be allowed each officer to complete his payment. In taking this action, we wish to make it clear, as a matter of justice, that we admit no wrongdoing on our part, as, at the time, we were informed the gratuities were given by the retiring board of the G.T.R. Co., in recognition of loyal and faithful services covering a period of many years."

Government Announces a Royal Commission.

Following a meeting of the Dominion Cabinet at Ottawa on April 7, the following official statement was issued:—"At a meeting of the cabinet ministers this afternoon the question of gratuities voted to the G.T.R. board of directors in London in Dec., 1919, and also gratuities voted to certain officials of the company in London and Canada, was discussed. In view of the fact that these payments were made just prior to the coming into operation of the agreement between the G.T.R. Co. and the Government, by which that railway system came under the control of the joint committee of management, it is thought, in the public interest, that a full investigation of its circumstances should take place. These payments were made in Dec., 1919, and under the agreement which became operative in March, 1920, it was stipulated that the G.T.R. Co. could not dispose of any of its assets without the approval of the Government. It is stated that, although this agreement was not an accomplished fact until March, its terms had practically been decided upon prior to the date on which these resolutions were passed by the directors. It also appears that the gratuities to the officials were paid out of the fire insurance fund, which amount would have, in its entirety, reverted to the present Canadian National System had the moneys not been so paid. In justice to all concerned, it is thought advisable to appoint a royal commission, with power to investigate all the circumstances surrounding and connected with the granting of these gratuities. The action of the officials at present in the service of the Canadian National System in returning voluntarily the amounts which had been paid them, and which they had been given to understand was a gift from the shareholders, is appreciated, and the decision arrived at to appoint a royal commission is in no way intended as a reflection upon those officials."

On April 20, it was announced at Ottawa that F. T. Congdon, K.C., formerly Commissioner of Yukon Territory, had been appointed a Commissioner to enquire into the whole matter.

The Question in Parliament.

On April 9, the leader of the Opposition, Mr. Meighen, referred to the Government's statement as to the appointment of a royal commission, and the acting Minister of Railways, Mr. Graham, replied in part as follows:—"When the fact became known that cer-

tain grants were made by the London board of directors to their own members, as well as to officials of the G.T.R., it caused considerable uneasiness throughout the country as to just how far these grants went, what authority there was for making them, and if other grants were made the details of which have not yet become known. The suggestion of a royal commission, is no reflection on any person, but the conditions surrounding the making of these grants ought to be made quite clear to the public, who now own the property out of which, at least, a proportion of these grants came, as the assets of the G.T.R. Co. were less when they came into the possession of the Dominion than they would have been had these grants not been made. Without casting a reflection on any person, but merely with a desire to get at the real situation, so that the Canadian National Ry. may be started on its career from now on without any cloud or suspicion hanging over it in regard to any of these transactions, the Government thought it advisable to ask some independent body or person to act as a royal commission, to get the facts as briefly and succinctly as could be done, so that they might be given to the public.

"A letter was written, if I remember correctly, in Oct., 1919, by a legal representative of the Government of that date in reference to a proposed agreement for taking over the G.T.R. That agreement, although its provisions, I believe, were outlined in this letter, was not executed and did not become operative till March, 1920. There was one clause in the agreement, if I am correctly informed, which stated that after the execution of the agreement the G.T.R. could not dispose of any of its assets without the consent of the Government. In Dec., 1919, midway between the letter of October and the bringing into operation of the agreement, the board of directors met and passed a resolution giving gratuities to certain officers. I do not think the resolution was made public at that time, but only a few days ago, as far as I know. The money was taken out of the fund set aside for fire insurance purposes. True, that fire insurance fund belonged to the G.T.R. Co., but it never was set aside for the purpose of giving gratuities, and the public would like to have cleared up the details surrounding the decision, in regard, not so much to the giving of the gratuities, as to taking them out of the fire insurance fund, which had been set apart for other purposes; because to the extent that these gratuities were taken out of the fire insurance fund, that fund was reduced when the G.T.R. system came to the Dominion of Canada.

"Then a resolution was passed by the directors, giving themselves a gratuity of five years' salary on account of the disappearance of the G.T.R., and, consequently, the disappearance of the board of directors. I may say, in justice to the board of directors, first, that I believe that, under the Railway Act of Great Britain, gratuities of that kind are given to directors under similar conditions, and that, while the company may not have been chartered under that act, yet they were living in the shadow of it, and this resolution would be passed under conditions similar to those existing in Great Britain. But in addition to that, it is said in the resolution that these funds payable to the directors came out of another fund, contributed by the holders of the guaranteed securities, debentures and stock of the G.T.R. The holders of

these securities are the men who have value, or to put the matter plainly, who do not lose by the transference of the G.T.R. to the Dominion or to the Canadian National Rys. Just why a resolution of directors ought to be necessary to dispose of privately contributed funds is a question that ought to be cleared up. I want to be fair to every person, and this might be the situation. As I understand the matter, the holders of these securities contributed certain funds for the purpose of protecting their interests or the interests of the shareholders before the board of arbitration, and this fund may have been so contributed that the board of directors had the power to use it even for the purpose of giving themselves the 5-year gratuities. Everything that has taken place may be perfectly explainable; but there are surrounding the payments of these gratuities to officers in Canada, conditions which, to my mind, make it essential, in order that the people of this country who now own these properties may have the utmost confidence in them, that this should be cleared up.

"One thing which has come to my attention is this. These funds were paid out of the fire insurance fund; but when the officials signed the receipts for their gratuities, they found that the receipts stated distinctly that the contributions were gifts from the shareholders to them for long and continued service. There are, as regards the vouchers which were originally presented, details which, I think, require a good deal of investigation, and it would be in the interest of the public that some independent body—the Government suggests a royal commission—should be named to make this investigation and to give to the people, who own this property, a clean slate as to what has occurred, so that we shall all know through what vicissitudes our property has come before it has reached us. I think this is fair to the officials, fair to the British board, as well as fair to the various Canadian boards. Up to the present, the personnel of the commission has been a secondary matter. Our sole purpose is to clear the air of whatever clouds may surround the transference of the G.T.R. to the Dominion, and we believe it is in the public interest that this should be done. The Government had first thought of a Parliamentary committee; but they are unanimously of opinion that owing to the lateness of the session and the peculiar conditions surrounding this transfer, the interests of the public would be better and more speedily served by having a royal commission.

"As regards Mr. Hanna, it is well known that it is the custom of large railway corporations to give gratuities or superannuations to old and tried employees. The situation in Mr. Hanna's case was delicate, and Mr. Hanna coincided and fell in line with what was done, as explained to him by the late Minister of Railways. Let me say this on behalf of Mr. Hanna. He was not retired because he is not an able man. The Government thought, and I am free to confess that as the days and weeks and months have gone on that the judgment was sound, that it would be next to impossible, for reasons that I need not explain, to amalgamate these two great systems with the head of either one at the head of the amalgamated system. I can assure the House that the difficulties that have arisen day by day in welding together these two systems with the official staff of each, have convinced

me that it would have been practically impossible to have done this with the head of either one of the separate systems at the head of the amalgamated system. Mr. Hanna, understanding the situation, sent in his resignation, and, from that day to this, has acted in connection with the Canadian National Rys., as a man who is interested in the success of that system. There was no superannuation in the old Canadian Northern. Had Mr. Hanna and Mr. Mitchell retired without some consideration, they would therefore have had no benefit of any superannuation. For the benefit, however, of the railway men, something of that kind will be established before very long. It will be remembered that the late Minister of Railways, in speaking in this House last year, informed the members of Parliament and the country that when any of these old and tried officials were retired, they would have the benefit of superannuation. I imagine he had in mind at that time, not exactly superannuation, but that they would be treated generously. There is nothing secret about the gratuities handed to Mr. Hanna and Mr. Mitchell. This was done publicly, wide open. The late board of directors did not act in any underhand way in connection with this matter. When they decided to do this, I knew they were going to do it, and I informed the Government. So the circumstances are altogether different, and I am prepared to say that the gratuities given to Mr. Hanna and Mr. Mitchell, under all the circumstances, were not more than those to which they were entitled. The country from a practical standpoint is the gainer instead of the loser by the generous treatment accorded these two officials, as any hon. gentleman would admit had he been in the Railway Department or been associated with the railway amalgamation during the last six months.

"As regards the question asked why the matter of the other gratuities was kept hidden, I do not know that there has been any effort to conceal it. The facts are in the minutes of the old G.T.R. Co., although as a matter of fact they did not come to the notice of the Department until a few weeks ago. They are, however, recorded in the minutes in London, and it may be that the arbitrators took cognizance of these gratuities and other expenditures when making the award. That being the case, it is all the more necessary that we should have an independent commissioner or body of commissioners to place all the facts before us so that the air may be cleared and we may start the new year knowing just where we are at."

Station Location Plans.—The Board of Railway Commissioners has directed that in future, whenever it is the intention of a railway company to build a station, and an application is to be made to the Board of its approval, a copy of the application and plan be served on the municipal authority of the district in which the station is to be erected; or if there is no municipal authority, then on the government or other authority having control over the district.

C.P.R. False Creek Bridge.—The further supplementary estimates for the year ended March 31, 1923, submitted in the House of Commons recently, provide \$8,934.08 to pay balance due the C.P.R. for the removal of the span of the bridge over False Creek, B.C., at different times since 1918, to permit of ship movements.

Canadian Pacific Railway Construction, Betterments, Etc.

Betterments, Branch Lines, etc.—The directors annual report for 1922 to the shareholders, issued recently, contains the following:—"In anticipation of your confirmation, your directors authorized capital appropriations, in addition to those approved at the last annual meeting, aggregating for the year 1922, \$1,512,680. Your approval is asked to expenditures on capital account during this year, as and when the conditions warrant such expenditures, of \$7,630,100. Of this amount the principal items are: Replacement and enlargement of structures in permanent form, \$803,700; additional stations, round houses, freight sheds and shops, and extensions to existing buildings, \$318,400; tie plates, rail anchors, ballasting, ditching and miscellaneous roadway betterments, \$1,250,400; replacement of rail in main and branch line tracks with heavier section; \$169,500; additional terminal and side track accommodation, \$502,500; extension work on Chateau Frontenac Hotel, Quebec,

reported to have had an interview with Grant Hall, Vice President C.P.R., at Montreal recently, in regard to the erection of an improved station. In May, 1922, Mr. Hall, speaking at a dinner in Three Rivers, stated that the C.P.R. had been ready at any time within the previous two years to build a station, provided that St. Maurice St. be closed. Some arrangement in this direction is apparently being made, as Mr. Hall is reported to have promised that the matter would receive prompt consideration.

Windsor St. Station.—An important addition to this Montreal station has been built. As shown in the accompanying illustration, the addition fronts on Osborne St. It is 176 ft. long, with an average width of 75 ft. For the present it will be three stories high. The ground floor is being used for express purposes, and the two upper floors for offices for the express, steamship and other departments, taking care of the overflow from the main and downtown office buildings.

mining area. The terminus of the line will be at the Quinze River, from which point it is expected that a connection will be given to the Rouyn area by steamboat via Lake des Quinze, Lake Expanse, Ottawa River and Kenojewis River. This steamboat service will be operated from Gillis Bay, instead of from the outlet of Quinze Lake, and will be independent of the railway. Some details of this service are given in the Marine Department further on in this issue, under "Province of Quebec."

The C.P.R. has announced that the stations on this extension will be named after Oblate priests, who were active in missionary work there in the early days. The stations from Kipawa to the Des Quinze River will be:—Gendron, Dozois, Tabaret, Beaudry, Fabre, Latulippe, Lorrainville, Laverlochere and Angliers. Latulippe is named after the first bishop of the district, and all the others after Oblate fathers.

Port McNicoll Bridge.—The bridge on the Georgian Bay & Seaboard Ry., just outside Port McNicoll, Ont., is, a press report states, to be rebuilt somewhat nearer to Victoria Harbor than the present one. The work, it is stated, will involve some changes in the line, including the construction of double track overhead bridges at the level crossings.

North Bay Locomotive House.—A press report states that 10 pits are to be added to the locomotive house at North Bay, Ont.

Fort William No. 5 Shed.—Work is reported to have been in progress for some time on the construction of the new no. 5 shed at Fort William, Ont., to replace the one destroyed by fire Dec. 5, 1922. The work was expected to be sufficiently advanced to permit of the shed's use on navigation opening.

Western Branch Lines Construction.—We were officially advised that D. C. Coleman, Vice President, Western Lines, announced in Calgary, Alta., recently that the branch lines construction will include the following:—

Lanigan northerly branch, now in operation to Naicam, Sask., 60 miles, to be extended to Melfort.

Cutknife-Whitford Lake line to be extended to the crossing of the Battle River.

The first two sections of the Mildren, Sask.,-Empress, Alta., line, 59 miles in all; the first two sections of the Leader, Sask., southerly line, 50 miles in all, and the first section of the Wymark-Archive, Sask., line, 25 miles, to be completed.

It is intended to build southerly from Drumheller, Alta., to Bull Pound, 39 miles. This line, which will be built by the C.P.R., will be operated as a joint section in connection with the Canadian National Rys.

Work is proceeding on the first two sections of the Consul-Assiniboia, Sask., line.

There will be no new line construction in Manitoba this year.

It is expected that a further announcement as to new construction work will be made early in May.

We are officially advised that contracts for grading on the first two branches mentioned above have been given as follows:—Naicam to Melfort, 32 miles, Stewart and Cameron, Winnipeg; Cutknife to Battle River, 40 miles, W. A. Dutton, Winnipeg.

Windsor Street Station, Canadian Pacific Railway, Montreal.
The new addition is shown at the lower right.

including new equipment, \$2,800,000; bungalow camps in Ontario, \$90,000; additional lining, Connaught Tunnel, \$695,000; mechanical department, machinery at various points, \$78,700; improvements in connection with telegraph service, \$39,100. The balance of the amount is required for miscellaneous works to improve facilities and effect economies over the whole system.

"Your directors are of the view that reasonable extensions of your branch line mileage in Alberta and Saskatchewan, in addition to the lines which you have already authorized, are desirable, and your authority will be asked for proceeding with the construction of the following lines and for the issue and sale of a sufficient amount of 4% consolidated debenture stock to meet the expenditure, viz.: Kipp to Bow River, 22 miles; Archive-Wymark Branch, mile 25 to 50, 25 miles; Tuffnell-Prince Albert Branch, 50 miles."

Three Rivers Station.—The Mayor and other Three Rivers, Que., public men are

There is a canopy roof on the Osborne St. front, extending around the end, to protect express wagons being loaded. The plans for the extension were prepared in the Chief Engineer's office, and the contract was let to W. S. Downing Cook, Montreal.

Ontario St. Subway, Montreal.—Tenders were reported to be under the consideration of the Montreal City Council's executive committee, for the rebuilding of the subway under the C.P.R. tracks at Ontario St. The existing subway is too small for the increasing highway traffic, and the Board of Railway Commissioners directed its being rebuilt on account of heavier railway traffic moving over it. The estimated cost of the reconstruction is \$225,000.

Interprovincial & James Bay Ry.—We are officially advised that there is no foundation for the press reports that the C.P.R. was making a survey for a branch from some point on the extension of the Interprovincial & James Bay Ry. to the Quinze Falls, into the Rouyn

Saskatchewan District Buildings.—Tenders were received recently for the erection of a no. 4 station building and platform at Congress; no. 4 sections at Caron and Rush Lake, three no. 2 single and two no. 2 double tool houses, to be built at either of the points named above and to be loaded by the contractor on cars for removal to the stations where required.

Saskatchewan Branch Lines.—The Saskatchewan Legislature passed a resolution recently, asking the C.P.R. to lay track on the branch lines in the province upon which grading has been done, north of the Saskatchewan River, and to start as much new construction this summer as financial conditions will warrant.

Hardisty Locomotive House.—Tenders were received recently for a 3-stall extension to the locomotive house at Hardisty, Sask.

Swift Current Subdivision Bridges.—Tenders were received recently for the construction of concrete abutments for a 40 ft. double track bridge at mile 21.4, and for an 8 ft. concrete rail top culvert at mile 105.7, Swift Current Subdivision, Saskatchewan District.

been advised that the Government would do what it could to meet the situation, the deputation went to Montreal to urge upon the C.P.R. management the necessity of proceeding with its projected line through the area. This line is projected to start from the Swift Current-Empress line, and to run westerly about midway between the main line and the branch, to near the Saskatchewan-Alberta boundary, thence northerly to a junction with the Empress branch.

Acme-Empress Extension.—The Board of Railway Commissioners has authorized the opening for traffic of the Acme-Empress line from mile 74.29 to 77.88. This gives the C.P.R. a direct connection with Drumheller coal fields.

Loop Tunnel Relining.—We are officially advised that Nickson Construction Co., Vancouver, B.C., has been given a contract to reline, with standard wooden lining, the tunnel at mile 4.9, Fernie Subdivision. This tunnel is 810 ft. long. The new lining will be placed inside the old, and will be of 10 x 12 in. material, drifted together with $\frac{5}{8}$ in. round iron, with plate dowels of $\frac{1}{4}$ by 5 in. flat iron at each bevel joint. About 500,000 ft.

Vancouver Pier.—The new Pier B.C. at Vancouver, B.C., now under construction, an illustration of which is given herewith, will be 850 ft. long and 331 ft. wide. On it will be erected two double deck sheds, connected at their outer ends to form a U. Each shed will be about 750 x 100 ft., with 4 railway tracks between the sheds, and 2 between each shed and the ship's side. The area within which the pier is being built was dredged and filled in 1921-22.

Canadian and Foreign Eastern Ports.—The suggestion that the British preferential tariff on goods coming into Canada should apply only when they enter through a Canadian seaport, was revived in the House of Commons recently by Hon. J. B. M. Baxter, Conservative, St. John, N.B., who voiced many maritime provinces complaints in connection with Canadian National Ry. matters, the chief one being that maritime port development was being unduly impeded because of the great quantity of Canadian traffic going through U.S. eastern ports. He offered numerous objections to the proposed completion of a Canadian National

Canadian Pacific Railway Piers at Vancouver, B.C.

The new Pier B.C., for the building of which a contract has been let, is shown in the center, between the other two piers.

Consul-Assiniboia Branch.—Construction was started in 1920 on a branch line from Consul, Sask., on the Weyburn-Lethbridge line, southerly and easterly to Assiniboia, and grading on 30 miles was reported completed in 1921, when a contract for grading a further 30-mile section was given. In 1920, track was laid on 1.5 miles out of Consul, when work was suspended. A press report states that track laying has been re-started, and that the rails had been laid April 9 as far as Climax, which is to be the terminus of the branch for the present.

Swift Current—Empress Area.—A deputation of settlers in southwestern Saskatchewan between the main line and the branch from Swift Current to Empress waited upon the Minister of the Interior at Ottawa recently, asking for an extension of time in connection with payments on their pre-empted lands. They stated that they have to haul their grain up to 40 miles to the nearest shipping point on the C.P.R. After having

b.m. fir will be required. The track in the tunnel will be lowered slightly to keep a sufficient height after the relining. Work was expected to be started April 16, and to be completed in 8 or 10 weeks. C. L. Bates is engineer in charge for the contractors, with headquarters at Michel, B.C.

Leancoil Grade Revision.—We are officially advised that a contract has been let to W. A. Dutton, Winnipeg, for grade revision work near Leancoil, Mountain Subdivision, British Columbia District, to reduce the westbound gradient from 1.4% to 0.4%, with a maximum curvature of 10 degrees. The revision will start a few miles east of Leancoil, and end immediately west of that point.

Vancouver Car Repair Shops.—The shops at the foot of Duke St., Vancouver, were burnt April 11, together with 15 cars, the loss being stated in a press report as about \$250,000. F. W. Peters, General Superintendent, British Columbia District, is reported to have stated that they will be rebuilt at once.

Rys. subsidiary line in New England. The Minister of Finance, Mr. Fielding, stated that he wished as much as anyone to see the maritime provinces and ports prosper, but the Dominion owns lines running through U.S. territory to the Atlantic seaboard, over which some traffic must be operated.

Canadian National Rys.' Salaries and Wages.—D. F. Kellner, Edmonton East, Alta., asked in the House of Commons recently: "When wages of Canadian National Rys.' employees were reduced in July 1922, was a proportionate reduction made in the salaries of all officials?" The acting Minister of Railways, Mr. Graham, replied: "The employees' wages were increased from time to time in accordance with the McAdoo and Chicago awards and supplements thereto, but salaries of officers were not increased proportionately, nor have they ever been paid at rates comparable with those enjoyed by officers of competing lines or in other branches of industry; therefore, no reductions were made."

Freight and Passenger Traffic Notes.

The Canadian National Rys. has removed the downtown ticket office in Los Angeles, Cal., to the Hotel Alexandria, 503 South Spring St., from 325 Van Nuys Blvd.

The Pacific Great Eastern Ry. is being asked by West Vancouver, B.C., Council to live up to its agreement with respect to the service of trains on the short line from North Vancouver to Whytecliff.

The C.P.R. dispatched a freight train of 52 cars, with automobiles, from Oshawa, Ont., recently for New York City. The automobiles are being exported to South America, Spain, South Africa and Australia.

The C.P.R., during the present grain exporting season to April 13, hauled 8,233 cars of grain to Vancouver, B.C., against 2,874 cars for the same period of 1921-22. The quantity of grain handled was 12,184,840 bush., against 4,069,384.

The Canadian National Rys. moved 108,139 cars of grain from the prairie provinces during the present season to April 12, against 97,954 cars for the corresponding period of 1921-22. The quantity of grain carried was 142,644,000 bush., against 131,345,000.

A. E. Warren, General Manager, Western Region, Canadian National Rys., is reported to have advised the Yorkton, Sask., Board of Trade on April 10, that a daily train service was under consideration for the Regina-Swan River line, which has only a three-times-a-week service.

The Canadian Passenger Association meeting at Montreal, April 4, arranged for fares, on the basis of fare and a third, for conventions, agricultural exhibitions and tourists for the season. The granting of return tickets at single fares for pilgrimages to Ste. Anne de Beaupre, will not be considered this year.

The Canadian Retail Coal Association decided, April 13, to memorialize the Dominion Government to establish such freight rates as would make Alberta coal available for the Ontario market. The consensus of opinion of the dealers present was that it is not feasible to bring Alberta coal to Ontario under existing rates.

The Mexican Government is reported to have entered into an arrangement with the Munson Steamship Co., New York, under which through bills of lading will be issued for the transfer of freight to all Mexican railways. This service, it is stated, will reduce the water distance between Montreal and Vancouver by about 2,000 miles, and will relieve traffic from the heavy Panama Canal traffic dues. The new service is intended to encourage traffic between Atlantic and Pacific ports.

The Canadian National Rys. gives a train service on the Hudson Bay Ry. from Pas to Pitquetenay, Man., mile 214, on the second and fourth Wednesdays of each month, leaving Pas at 7 a.m., arriving at Pitquetenay at 8 a.m. on the following day, and returning at 8 a.m. on the second and fourth Fridays, reaching Pas at noon on the following day. An additional train was put in operation recently, leaving Pas at 6 a.m. on the first, third, and if there is one, the fifth Wednesday of the month, to mile 82, returning the same day so as to reach Pas about 5 p.m.

The C.P.R. will on June 15 start a gasoline bus service between Peterbor-

ough and McCracken's Landing, Ont., for summer tourist traffic between the railway and Stony Lake district. One bus will be operated, to accommodate passengers on trains 35 and 601 westbound, and 36 and 602 eastbound, and will make two round trips daily. Lakefield is the terminus of the Port Hope and Lakefield Subdivision, Belleville Division, Canadian National Rys., 9.24 miles north of Peterborough. McCracken's Landing, some 10 miles northeast of Lakefield by road, is without railway connection.

The Canadian Pacific Ry. and the Canadian National Rys. arranged recently, in co-operation with the Manitoba Department of Agriculture, for the operation of better farming trains over their lines. The railways each provide a train of 14 cars, which operate over the lines of each company in the province, starting out from Winnipeg, April 30, and completing the tour May 31. The Department of Agriculture provides the live stock and other exhibits, also the lecturers. Stops are to be made twice a day at scheduled points, where lectures and demonstrations will be given.

By schedules filed to become effective during May and June, 1922, the C.P.R. and the Maine Central Rd. proposed to increase carload rates on newsprint paper and certain kindred articles, via the Ohio River gateways from various producing points on their lines to Nashville, Tenn. Upon protest by the Nashville Traffic Bureau and various paper manufacturing companies, the schedules were suspended and the Interstate Commerce Commission ordered a hearing, but as the schedules were withdrawn voluntarily, the hearing was not gone ahead with. By other schedules filed to become effective Jan. 15 and 24, 1923, the same carriers again proposed to increase the rates, and the G.T.R. and Canadian National Rys. proposed corresponding increases. These various schedules were likewise protested, and were suspended by the Interstate Commerce Commission until May 15. A hearing was held before Commissioners Meyer, Eastman and Potter, and in a decision dated March 29, it was found that the rates proposed would be unduly prejudicial to Nashville, unduly preferential to other points, and otherwise unlawful. An order was therefore issued requiring cancellation of the schedules on or before May 14.

The C.P.R. will put on two new daily trains between Toronto and Montreal, both ways, on May 13. It will be operated as no. 41 westbound and 42 eastbound, between the union station, Toronto, and Windsor station, Montreal. Equipment will include compartment car, buffet observation compartment car, standard sleepers and first class car. At present, the C.P.R. has five trains between Toronto and Montreal, as follows: nos. 19 and 20; 35 and 36; 21 and 22; 23 and 24; and 41 and 42. The present 41 and 42, handling the theatrical business largely, operate Saturday, only, no. 42 leaving Toronto 12.30 Sunday morning for Montreal. When the new nos. 41 and 42 go into operation on May 13, the present nos. 41 and 42 will be discontinued. Nos. 19 and 20, 35 and 36, and 21 and 22 are daily trains, all of which use the union station at Toronto. Nos. 23 and 24 are daily except Saturday, and use North Toronto station. Beginning May 13, train no. 23 will leave Montreal

9.30 p.m. instead of 10.30 p.m., and will arrive at North Toronto at 7 a.m. instead of 8 a.m. No. 24 will retain the present schedule, as will all other Montreal-Toronto trains except as stated above. Beginning May 13, train no. 22 will carry sleeping cars with Ottawa passengers, to be set off at Smiths Falls, and picked up by no. 34, Toronto to Ottawa. It has not been decided whether the new nos. 41 and 42 will be permanent, or will be taken off at the end of the summer, and the present 41 and 42 restored. Train 34, Toronto-Ottawa, will, on and after May 13, leave Toronto at 10.30 p.m. instead of 11.15 p.m., and arrive at Ottawa at 7.15 a.m. instead of 7.55 a.m., and train 33, Ottawa-Toronto, will leave Ottawa at 10.15 p.m. instead of 11 p.m., and arrive at Toronto at 7 a.m. instead of 7.45 a.m.

Canadian Railway and Marine World for April, stated that the C.P.R. would cut one hour from the 1922 running time of the Trans-Canada train, which resumes operation May 20, the Montreal and Toronto westbound leaving times to be the same as formerly, with the arriving time at Vancouver one hour earlier, and the eastbound Vancouver leaving time one hour later than formerly, with the Montreal and Toronto arriving times the same as formerly. It was also stated that an additional 20 minutes might be taken off the running time of the eastbound train terminating at Toronto, and the C.P.R.'s new time-table shows that this has been done. During the 1923 season, westbound train 7, originating at Montreal, will gain 5 mins. between Montreal and Ottawa, and 5 mins. between Ottawa and Chalk River, and no. 9, originating at Toronto, will gain 10 mins. between Toronto and MacTier. The consolidated train, no. 7, will leave Sudbury with 10 mins. gained, and the remaining 50 mins. will be picked up as follows: Cartier-Chapleau, 5; Chapleau-White River, 5; Kenora-Winnipeg, 10; Winnipeg-Brandon, 5; Broadview-Moose Jaw, 5; Moose Jaw-Swift Current, 5; Medicine Hat-Calgary, 10; Calgary-Field, 5. Eastbound train 8 will gain the hour as follows: Calgary-Medicine Hat, 15 mins.; Medicine Hat-Swift Current, 5; Swift Current-Moose Jaw, 10; Moose Jaw-Broadview, 5; Broadview-Brandon, 5; Brandon-Winnipeg, 5; Winnipeg-Kenora, 15. The train terminating at Montreal will use the same running time between Sudbury and Montreal as in 1922. The section operating from Sudbury to Toronto as no. 10 will leave Sudbury 5 mins. earlier than in 1922, and will pick up 10 mins. between Sudbury and MacTier and 5 mins. between MacTier and Toronto, thus gaining 20 mins. in addition to the hour saved on the transcontinental trip by both sections of the train.

Canadian National Rys. Bank Accounts.—Acting Minister of Railways and Canals G. P. Graham, stated in the House of Commons recently, in answer to questions by J. H. Harris, East York, Ont., that the Canadian National Express Co., and the Canadian National Telegraph Co.'s bank accounts had been transferred from the Canadian Bank of Commerce to the Royal Bank of Canada, on Dec. 1 and Dec. 30, 1922, respectively. Notification had not been given, up to Feb. 12, of the intended transfer of other accounts.

Mainly About Railway People Throughout Canada.

W. T. Huggan, ex-District Passenger Agent, Island Division, Canadian National Rys., Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

J. Irwin, Superintendent, Edmonton Division, Alberta District, Western Region, Canadian National Rys., Edmonton, Alta., born at Clinton, Ont., May 28, 1866.

H. E. Kane, ex-Port Agent, Canadian Government Merchant Marine, St. John, N.B., born there, May 20, 1895.

S. McIlwain, Division Engineer, Ottawa Division, Northern Ontario District, Central Region, Canadian National Rys., Ottawa, Ont., born at Goderich, Ont., May 24, 1885.

J. N. Murphy, Roadmaster, C.P.R., Bull River, B.C., born at Mooretown, Ont., May 10, 1879.

Sir Augustus M. Nanton, President, Winnipeg Electric Ry., and director, C.P.R., Winnipeg, born at Toronto, May 7, 1860.

A. C. Shaw, Passenger Department, C.P.R., Montreal, born at Detroit, Mich., May 12, 1865.

W. H. Snell, General Passenger Agent, C.P.R., Vancouver, B.C., born at Palmyra, Neb., May 23, 1872.

W. Stapleton, District Passenger Agent, Canadian National Rys., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

R. B. Teakle, General Manager, Canadian Government Merchant Marine, Montreal, born at Quebec, Que., May 19, 1877.

E. E. Tedford, General Superintendent, Canadian Government Merchant Marine, Montreal, born at Yarmouth, N.S., May 21, 1870.

J. M. Walker, District Agent, Canadian National Rys., Glasgow, Scotland, born there, May 14, 1880.

J. H. Walsh, General Manager, Quebec

Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., C.E., ex-Chief Engineer of Location, Canadian National Rys., Toronto, born at Quebec, May 25, 1855.

A. O. Wolff, Resident Engineer, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Copenhagen, Denmark, May 14, 1887.

J. M. Woodman, General Superintendent, New Brunswick District, C.P.R., St. John, N.B., born at St. Marys, Ont., May 15, 1866.

C. H. Worby, Superintendent, Sleeping, Dining and Parlor Cars, Canadian National Rys., Winnipeg, born at London, Ont., May 18, 1883.

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report on location of freight cars on Canadian railways, on April 1, based on returns from the following lines: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada; Central Vermont, in Canada; Michigan Central, in Canada; Pere Marquette, in Canada, as follows: Number of cars owned, 219,975; home cars on Canadian foreign lines, 20,992; home cars on U.S. lines, 65,569; home cars on home lines, 133,414; Canadian-owned foreign cars on home lines, 19,025; U.S.-owned foreign cars on home lines, 32,559; total cars on lines, 184,998; percent on lines to total owned, 84.1; deficiency on lines to total owned, 34,977; home cars in bad order, 12,181; foreign cars in bad order, 482; total cars in bad order, 12,663; percent in bad order, 6.8; privately-owned U.S. cars on lines, 2,300; privately-owned Canadian cars on lines, 956.

Maritime Provinces Freight Rates.—The Nova Scotia House of Assembly passed a resolution recently moved by J. W. Macdonald, Pictou County, for the appointment of a freight rate expert, in co-operation with Prince Edward Island and New Brunswick, to watch the maritime provinces' interests in regard to freight rates. Mr. Macdonald explained that he made the motion in order to secure concerted action by the three maritime provinces to place the demand for lower freight rates before the Board of Railway Commissioners.

Checking of Track Scales.—The Railway Association of Canada has issued the following circular:—"As railways are called upon, from time to time, to check the physical conditions of privately-owned track scales, it is recommended to member lines that when such inspection is made a uniform charge of \$20 per scale be made, plus actual expenses of inspector, with a minimum of \$10 a day for such expenses."

A. Wilcox, General Superintendent, Manitoba District, Western Region, Canadian National Rys., writes:—"I find Canadian Railway and Marine World a very valuable and up-to-date publication."

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General Order 375. March 17.—Approving Exchange and Toll Line Form Agreement (650), and Service Station Agreement Form (651) to be entered into between Bell Telephone Co. and any other company, municipality, or corporation having authority to build or operate a telephone system or line; also rescinding general order 114, Nov. 12, 1913.

General order 376. March 27.—Amending general order 275, March 17, re general forms of contract to be entered into between Bell Telephone Co. and any other company, municipality, etc., having authority to construct or operate a telephone system or line, by striking out the word "Company" after the words "Canadian Independent Telephone" in 4th line of the recital, and substituting the word "Association."

General order 377. April 6.—Approving proposed supplement 20 to Canadian Freight Classification 16.

33,408. Feb. 28.—Approving agreement between Bell Telephone Co. and North Wellington Telephone Co., Wellington and Dufferin Counties, Ont.

33,409. Mar. 3.—Authorizing Canadian National Rys. to close station at Hydro, Ont.

33,410. Mar. 3.—Authorizing G.T.R. to install automatic crossing signals at Pages, Ont., where it crosses C.P.R. Teeswater Branch.

33,411. March 6.—Authorizing Michigan Central Rd. to build spur for Hagersville Crushed Stone Co., Hagersville, Ont.

33,412. March 5.—Authorizing Canadian National Rys. to rebuild bridge over Mattawan River, at mile 51.1 Kashabowie Subdivision, Ont.

33,413. March 6.—Suspending as from March 2, Supplement 12 to Canadian National (Grand Trunk) Tariff C.R.C. no. E-4411, with leave to company to make formal application to Board to cancel milling in transit arrangement on peas.

33,414. March 6.—Approving location of Canadian National Rys. freight and passenger shelter at Sevik, Man.

33,415. March 6.—Authorizing Canadian National Rys. to build across highway between Secs. 26 and 27, at milepost 65, Athabasca, Alta.

33,416. Feb. 17.—Dismissing C.P.R. application for exemption from requirement as to approval of Governor in Council in connection with agreement of June 1, 1921, between Grand Trunk Pacific, Canadian Northern, Edmonton, Dunvegan & British Columbia, and Canadian Pacific Rys.

33,417. March 6.—Authorizing Canadian National Rys. to build spur for J. S. Miller, Winnipeg.

33,418. March 6.—Ordering Canadian National Rys., where cars are stored on most easterly of two tracks crossing Orillia St., Washago, Ont., to keep same 350 ft. from street line.

33,419. March 3.—Declaring that for the present, the Pere Marquette Rd. crossing at Iona, Ont., is protected to Board's satisfaction.

33,420. March 8.—Authorizing C.P.R. to put on an attachment prepared by Buda Foundry & Mfg. Co. to jack-knife gates at crossing of Talbot Ave., Winnipeg.

33,421. March 8.—Authorizing Canadian National Rys. to build spur for Sheffield Collieries, Ltd., near Wayne, Alta.

33,422. March 6.—Ordering Canadian National Rys. to build farm crossing on Emile Raquepas' property, Cadastral, Lot 555, Laprairie Parish, Que.

33,423. March 7.—Ordering C.P.R. to keep its cars back 20 ft. from street line at Coldstream Road, Vernon, B.C., when standing on Vernon Fruit Union tracks.

33,424. March 6.—Authorizing use of bridge carrying Westminster Road, between Lots 18 and 19, Con. 1, London Tp., Ont., over Canadian National Rys.

33,425. March 8.—Authorizing Canadian National Rys. to build spur for Massey-Harris Co., Brantford, Ont.

33,426. March 8.—Authorizing Canadian National Rys. to divert public road between Lots 30 and 31, Rama Tp., Ont., near Longford station, and carry it under G.T.R. by existing underpass.

33,427, 33,428. March 6, 9.—Authorizing Canadian National Rys. to rebuild bridges over Shebdowan River, mile 55.2, Kashabowie Subdivision, and between Lots 28 and 29, Range 3, Pickering Tp., Ont., across its tracks, at milepost 314.78.

33,429, 33,430. March 9.—Authorizing Saskatchewan Highways Department to make highway crossings at grade over Canadian National Rys. at north end of Antar station grounds, Sask.; and over C.P.R. near Leipzig, Sask.

33,431. March 9.—Approving Canadian National Rys. plan for installation of automatic electric bell and wigwag signal at crossing of 11th Ave., Saskatoon, Sask.

33,432. March 12.—Approving C.P.R. revised location, mile 14 to 17, Mountain Subdivision, near Leachhoil, B.C.

33,433. March 8.—Authorizing Dufferin rural municipality, Man., to make highway across Canadian National Rys. at Rose Isle, Man.

33,434. March 12.—Declaring that for the present the Midland Ry. of Manitoba crossing at Main St., Morden, Man., is protected to Board's satisfaction.

33,435. March 12.—Approving changes and alterations in location of Canadian National Rys. through Sec. 11, Tp. 11, Range 6, east principal meridian, Man.

33,436. March 16.—Approving C.P.R. plan of proposed relining of tunnel 4.9, Fernie Subdivision, B.C.

33,437. March 15.—Declaring that for the present, Canadian National Rys. crossing at Kingsbury Ave., New Toronto, is protected to Board's satisfaction.

33,438. March 15.—Declaring that for the present C.P.R. crossing at Needham St., Lindsay, Ont., is protected to Board's satisfaction.

33,439. March 16.—Authorizing Saskatchewan Highways Department to make highway across Canadian National Rys. in n.e. ¼ Sec. 21, Tp. 54, Range 7, west 3rd meridian, Sask.

33,440. March 15.—Declaring that for the present the Canadian National Rys. crossing near Sudbury Jct., Ont., is protected to Board's satisfaction.

33,441. March 15.—Authorizing London & Port Stanley Ry. to enter Charles Wilson's lands in Yarmouth Tp., Ont., to remove trees obstructing view of crossing of Gravel Road, near St. Thomas, Ont.

33,442. March 16.—Approving C.P.R. clearances at freight shed 5, Fort William, Ont.

33,443. March 16.—Declaring that for the present, C.P.R. crossing at Innerkip, Ont., is protected to Board's satisfaction.

33,444 to 33,447. March 17.—Authorizing C.P.R. to rebuild bridges 60.1, over Calumet River; 64.3, over Riviere au Chene; 67.2, over Salmon Creek, and 68.8, over Kingey Brook, Lachute Subdivision, Que.

33,448. March 19.—Approving Canadian National Rys. layout of interlocking plant for protection of lift bridge at Bear's Pass, Ont.

33,449. March 17.—Authorizing Lake Erie & Northern Ry. to build spur for Johnson Bros., Brantford, Ont.

33,450. March 17.—Ordering Canadian National Rys. to install wigwag signal with an extra flashing red signal light at crossing of McGill St., Hawkesbury, Ont.

33,451. March 21.—Authorizing Kettle Valley Ry. to open for traffic, portion of its Penticton South Branch from mile 10.18 to 26.8, B.C.

33,452. March 20.—Declaring that for the present, Milan's crossing by Maine Central Rd. in Dudswell Tp., Que., is protected to Board's satisfaction.

33,453. March 20.—Dismissing application of farmers of St. Andrews East Parish, Que., for order directing Canadian National Rys. to move station for loading milk farther east; provided free access to the platform be provided by C.N.R.

33,454, 33,455. March 21.—Authorizing Esquimalt & Nanaimo Ry. to build its Courtenay to Campbell River and Duncan Bay extension across highways at mile 46.2 and 47.2, Comox District, B.C.

33,456, 33,457. March 21.—Authorizing C.P.R. to replace pile abutments at bridges 97.91 and 101.87, Mountain Subdivision, crossing Illicillewaet River, B.C.

33,458. March 21.—Authorizing Esquimalt & Nanaimo Ry. to build its Courtenay to Campbell River and Duncan Bay Extension across highway at mile 49.62, Comox District, Vancouver Island, B.C.

33,459. March 20.—Approving Canadian National Rys. layout of interlocking plant for protection of lift bridge 226A, Rainy Lake, Ont.

33,460. March 21.—Declaring that for the present, Canadian National Rys. crossing at St. Hilaire, Que., is protected to Board's satisfaction.

33,461.—March 19.—Authorizing C.P.R. to use bridge 3.4, Elora Subdivision, Ontario District.

33,462 to 33,465. March 21.—Authorizing Esquimalt & Nanaimo Ry. to build its Courtenay to Campbell River and Duncan Bay Extension across highways at mile 51.76, 48.1, 51.0 and 73.54, Comox District, Vancouver Island, B.C.

33,466. March 21.—Approving Canadian National Rys. plan showing automatic block signal layout from West Jct. switch to Union Jct., near Bissell, Alta.

33,467. March 21.—Authorizing G.T.R. and Peterborough Radial Ry. to operate over crossing at Lock St., Peterborough, Ont., when signals are clear.

33,468. March 22.—Ordering Canadian Northern Ontario Ry. to file with Board by May 1, detail plans of proposed interlocking plant near Harrowsmith, Ont.

33,469. March 23.—Authorizing Canadian National Rys. to discontinue service of trains 29 and 30 between Kingston and Belleville, Ont.

33,470. March 23.—Authorizing C.P.R. to replace existing crib abutments at bridge 6.1, Sussex St. Subdivision, Ottawa, with concrete abutments.

33,471. March 23.—Dismissing complaint of P. Burns & Co., Prince Albert, Sask., against Canadian National Express Co., with respect to claims for goods lost or damaged at flag stations.

33,472. March 22.—Approving agreement between Bell Telephone Co., J. R. Reid and Mrs. I. S. Bell, Durham County, Ont.

33,473. March 23.—Approving plan showing proposed installation of interlocking signal protection at crossing of Maine Central Rd. and C.P.R. at Cookshire, Que.

33,474. March 26.—Ordering Canadian National Rys. to appoint caretaker at Beaufield station, Sask.

33,475. March 27.—Authorizing C.P.R. to open for traffic, portion of its Langdon North Branch from mile 75.5 to 79.191.

33,476. March 28.—Suspending for 1923, or until further order, the provisions of general order 362 (clause 8 re fireguards), except during August, September and October, in so far as they apply to portions of Canadian National Rys. western lines operating through non-forested territory in the prairie provinces; provided that such suspension shall not be construed as permitting the use of lignite coal as fuel on locomotives, steam shovels, ditching machines and pile drivers.

33,477. March 26.—Authorizing Interprovincial & James Bay Ry. to divert road allowance in Lot 4 and 5, Laverlochere Tp., Que.

33,478. March 26.—Declaring that for the present, Canadian National Rys. crossing at Renton, Ont., is protected to Board's satisfaction.

33,479, 33,480. March 27.—Approving Bell Telephone Co. agreements with Lotbiniere and Nicolet Telephone Co., Lotbiniere and Nicolet Counties, Que., and Norfolk County Telephone Co., Norfolk, Oxford and Brant Counties, Ont.

33,481. March 27.—Ordering Canadian National Rys. to erect fourth-class station at Runnymede, Sask., by Oct. 1.

33,482. March 27.—Approving agreement between Bell Telephone Co. and G. E. Wheeler, operating a telephone system in Terrebonne County, Que.

33,483. March 27.—Authorizing Canadian National Rys. and C.P.R. to operate through interlocking plant at junction cut, near Hamilton, Ont.

33,484. March 26.—Authorizing issue of free transportation to Sir George Fuller, Premier of New South Wales, and his secretary.

33,485. March 28.—Approving agreement between Bell Telephone Co. and East Grey Telephone Co., Grey County, Ont.

33,486, 33,487. March 28.—Approving supplement 1, Dec. 27, 1921, and supplement 2, March 6, 1923, to Bell Telephone Co.'s agreement with Schomberg Telephone Co., Simcoe and York counties, Ont., and supplement 1, Feb. 28, 1921, supplement 2, March 8, 1921, and supplement 3, March 20, 1923, to Bell Telephone Co. agreement with South Leeds & Pittsburgh Rural Telephone Co., Leeds and Frontenac counties, Ont.

33,488. March 28.—Ordering that 25% of cost of installing gates at crossing by Canadian National Rys. of Beauport Road, Limouliou, Que., be paid out of railway grade crossing fund.

33,489. March 28.—Authorizing Town of Victoriaville, Que., to remove crossing over Canadian National Rys., between Market and Mill Sts., at Octave St.

33,490. March 28.—Authorizing Canadian National Rys. to build spur for Dewey-Gardner Lumber Co., Moose Jaw, Sask.

33,491. March 27.—Approving Canadian National Rys. plan showing automatic block signal protection at crossing between St. Albert and Evansburg siding, B.C.

33,492. March 31.—Rescinding order 17,215, Aug. 8, 1912, authorizing G.T.R. to build spur for Canada Iron Corporation, north of Longford station, Ont.

33,493. March 31.—Declaring that for the present, C.P.R. crossing at Lake Shore Jct., Windsor, Ont., mile 109.7, Windsor Subdivision, is protected to Board's satisfaction.

33,494. March 28.—Authorizing Kettle Valley Ry., Penticton to International Boundary Line, to cross a number of highways between mile 10.28 and 39.33.

33,495. March 31.—Declaring that for the present, Michigan Central Rd. crossing of King St., Hagersville, Ont., is protected to Board's satisfaction.

33,496. March 27.—Approving revised location of Esquimalt & Nanaimo Ry. Courtenay to Campbell River and Duncan Bay Extension from present terminus at Courtenay to near Duncan Bay, mile 45 to 76.7.

33,497. March 31.—Approving Supplement 1, March 28, 1921, and Supplement 2, March 5, 1923, to connecting agreement between Bell Telephone Co. and Conn Telephone Co., Wellington, Grey and Dufferin Counties, Ont.

33,498. Apr. 3.—Authorizing Hamilton Radial Electric Ry. to build spur for Appleford Counter Check Book Co., Hamilton, Ont.

33,499. Apr. 4.—Approving Canadian National Rys. location from connection with British Columbia Electric Ry. at Queensboro, to a connection with same railway at Steveston, B.C., mile 3.74A to 15.39.

35,500. March 31.—Declaring that for the present, Canadian National Rys. crossing of Main

St., Caledonia, Ont., is protected to Board's satisfaction.

33,501. Apr. 3.—Directing that, until further order, a speed limitation of six miles an hour be put into effect at crossing of Aymer Road by Hull Electric Co.'s railway, Hull, Que., between Rock Out and C.P.R. station at Hull West, Que.

33,502. March 31.—Authorizing C.P.R. to close highway crossing at mile 41.01, in the St. Jean Baptiste de Belisle Municipality, Que.

33,503. Apr. 7.—Authorizing Canadian National Rys. to build a spur connection for Quaker Oats Co., Peterborough, Ont.

33,504. April 6.—Authorizing C.P.R. to rebuild bridge 86.3, St. Agathe Subdivision, Que.

33,505. April 9.—Authorizing Michigan Central Rd. to build 7 additional tracks across Park Ave., Yarmouth Tp., Ont.

33,506 to 33,509. April 11.—Approving Bell Telephone Co.'s agreements with Falls Line Telephone Co., Durham County, Ont.; Gatineau Valley Telephone Co., Ottawa County, Que.; North Cavan Telephone Co., Durham County, Ont., and Ontario Lands, Forests and Mines Department, operating from Kearney to several points in Algonquin Provincial Park.

33,510. April 11.—Approving section 7 of American Railway Express Co.'s bylaw, March 31, authorizing the Vice President, Traffic Department, to issue tariffs of tolls.

33,511 to 33,513. April 11.—Approving Bell Telephone Co.'s agreements with Northcote Farmers' Telephone Co., Renfrew County, Ont.; Plummer, Aberdeen and Galbraith Rural Telephone Association, Algoma District, Ont., and Cavan Rural Telephone Co., Durham County, Ont.

33,514. April 7.—Approving Pere Marquette Ry. plan showing installation of track circuit locking, removal of detector bars, and rearrangement of levers, for changes in signal operation.

33,515. April 6.—Authorizing C.P.R. to divert and close road allowance, within right of way limits, and to carry diversion across right of way, at grade, at mile 52.4, Colonsay Subdivision, Sask.

33,516. April 11.—Approving agreement between Bell Telephone Co. and Warwick Telephone Co., Drummond and Arthabaska Counties, Que.

33,517. April 9.—Authorizing C.P.R. to replace timber trestle and wooden box culvert at bridge 28.63, Mountain Subdivision, B.C., by a 20 ft. I-beam on concrete abutments.

33,518, 33,519. April 11.—Approving Bell Telephone Co. agreements with Bowman Telephone System, Bruce and Grey Counties, Ont., and A. C. Beatty, Durham and Northumberland Counties, Ont.

33,520. April 9.—Authorizing C.P.R. to replace pile trestle at bridge 21.4, Swift Current Subdivision, by standard double track 40 ft. half deck plate girder span on concrete abutments.

33,521. April 11.—Approving agreement between Bell Telephone Co. and Millbrook Rural Telephone Co., Durham and Northumberland Counties, Ont.

33,522. April 11.—Ordering Canadian National Rys. to erect 4th class standard station building at Browning, Sask., by Aug. 31.

33,523 to 33,526. April 11.—Approving Bell Telephone Co. agreements with The People's Mutual Telephone Co., Prince Edward County, Ont.; Marysburg Telephone Co., Prince Edward County, Ont.; Megantic People's Telephone Co., Megantic County, Que.; and Dunnville Consolidated Telephone Co., Haldimand, Lincoln, Welland and Brant Counties, Ont.

33,527. April 11.—Authorizing C.P.R. to build spur for J. H. McKnight Construction Co., across Union St., Toronto.

33,528. April 12.—Declaring that for the present, the C.P.R. crossing of Plympton Town Line, Ont., is protected to Board's satisfaction.

33,529. April 12.—Approving agreement between Bell Telephone Co. and Came Telephone Line, Rouville County, Que.

33,530 to 33,535. April 13.—Declaring that for the present the Canadian National Rys. crossings of Hale St., London, Ont.; first public crossing east of Mallorytown, Ont.; just west of station platform at St. Hubert, Que.; at Elgin St., St. Marys, Ont.; east of Rockfield, Que., and just east of Parkhill Station, Ont., are protected to Board's satisfaction.

33,536. April 14.—Approving clearances for C.P.R. standard coaling plant, 280 tons capacity.

Radio Experiments on Moving Trains.—The C.P.R. is reported to have completed a successful long distance test of radiotelegraphy on a moving train recently. The test was made on the transcontinental express, and covered the run from Winnipeg to Vancouver. It is reported to have been very successful, although there were times when the train's vibration made it somewhat difficult to hear.

C.P.R. Scholarships.—A press report states the C.P.R. has decided to offer some scholarships at the University of Montreal, and that R. Paradis, K.C., and E. Montpetit, Secretary of the University, are arranging the details.

Telegraph and Cable Matters.

The Western Union Telegraph Co. has re-established its cable station at Canso, N.S.

Canadian National Telegraphs have reopened their office at Point St. Peter, Que., and closed offices at Agate, Hydro and Pass Lake, Ont.

John Kerr, heretofore Inspector, Canadian National Telegraphs, Truro, N.S., has been appointed Inspector at Fredericton, N.B., vice T. A. Costello, appointed Inspector at Truro.

J. V. Duncan, traffic chief, Canadian Pacific Telegraph, Winnipeg, died at Denver, Col., April 7, aged 51, after a long illness, due to diabetes. He had been in C.P.R. service for over 30 years, at different points on the western lines.

The American Publishers' Committee on Cable and Radio Communications has applied to the Dominion Government for a license for a wireless telegraph station near St. Margarets Bay, N.S., for dealing entirely with press matter, which will be relayed to New York, Chicago, etc.

The Western Union Telegraph Co.'s report for 1922 shows a net income of \$13,158,180, compared with \$9,633,808 for 1921. The gross operating revenue was \$105,447,748, an increase of \$1,292,635 over 1921. The report states that there was a decline in ocean cable revenues, owing to the condition of foreign commerce, and the effect of wireless competition at low rates.

Canadian National Telegraphs and Canadian Pacific Telegraphs, April 20, announced reduced cable rates to European countries, as follows: Austria 30c, Belgium 23c, France 22c, Germany 25c, Great Britain and Ireland 20c, Greece 35c, Hungary 33c, Italy 33c, Switzerland 27c, with corresponding reductions to other countries reached by means of Atlantic cables. To those countries where the half rate for deferred service is in force, the new deferred rate will be half the new ordinary rate, but where the deferred rate is less than half the ordinary rate, it will not be increased. The rate for week-end letters is 5c a word, with a minimum of 20 words, to points in Great Britain. This is 1c a word lower than the rate on cable letters. To points in Africa, Asia and Australasia, on messages routed through London, there is a reduction of 5c a word, with a corresponding reduction on deferred messages.

Among the Express Companies.

T. J. Hackett has been appointed agent Dominion Ex. Co., Chapleau, Ont., vice J. Harris, resigned.

F. McCaffrey has been appointed acting agent, Dominion Ex. Co., Sturgeon Falls, Ont., vice J. N. Bauer, deceased.

The Canadian National Rys. Express Department has opened offices at Duncan, Que., and Ardley, Alta., and has closed its office at Rosborough, N.B.

Fred Stevens, who has been over 40 years in Dominion Ex. Co.'s service, left Winnipeg recently for Victoria, B.C., on leave of absence for two months, on account of illness.

It was stated in Canadian Railway and Marine World for March that the notice which was given the Dominion Express Co., by the Railways Department, that the arrangements it had for operation over the Canadian National Rys. lines south of the St. Lawrence

River, formerly the Intercolonial & Prince Edward Island Rys., would be terminated on March 31, had been extended for at least another month. We were officially advised, April 28, that the company would cease operation over these lines on May 31, after which express business on them would be handled exclusively by the Canadian National Rys. Express Department.

Taxation of Express Companies.

The Citizens' Research Institute of Canada has issued a report on the provincial taxation of public utility corporations, in which the following refers to express companies:—

Prince Edward Island: \$500 for each company operating in the province and having head office outside the province.

Nova Scotia: \$1,250 a mile for each 100 miles or fraction thereof over which company operates in N.S.

New Brunswick: \$100 for each city in which company does business; \$50 for each such town of 3,000 population or more; \$25 for each such town 2,000-3,000; \$10 for each place in which there is an agent, if population 200 or over.

Quebec: On every company foreign to the province 5/10 of 1% on gross earnings within the province, with minimum of \$800. An additional tax of \$50 for each place of business in Montreal or Quebec, and \$20 for each place of business elsewhere. On every company foreign to Canada, carrying on other than an express business exclusively, an additional tax of ½ of 1% on the gross earnings of such other business, with a minimum of \$400.

Ontario: \$800 for each 100 miles of railway or fraction thereof over which company operates.

Manitoba: \$45 for each incorporated town in which company has an office; \$160 for each such city, other than Winnipeg. In Winnipeg—\$750 for chief office and \$100 for each of the second and third offices.

Saskatchewan: \$150 for each city in which it transacts business; \$50 for each such town, and \$10 for each such other place over 200 population.

Alberta: \$500 in Edmonton and Calgary; \$200 in all incorporated cities over 5,000 population, other than the two mentioned, in which the company has an office; \$100 in each such city under 5,000 population, and such town over 1,500 population; \$50 in each such town under 1,500 population, and \$10 in each such other place with population over 100.

British Columbia: 2% upon gross income.

E. W. Beatty and Shawbridge Boys' Home.—The Montreal Rotary Club is taking a practical interest in the Boys' Home at Shawbridge, Que., of which E. W. Beatty, K.C., President C.P.R., is President. At a recent meeting of the club in Montreal, Mr. Beatty described the home's work, and said that looking after the underprivileged city boys is not a work that could be initiated by Parliament, or made effective by legislation; it is one requiring the personal interest and the friendly contact of the man who can compel the boys' respect and regard.

British Farmer Girls to Tour Canada.—Four girl members of the Daily Mail's Young Farmers' Clubs have been invited by Sir Henry Thornton, President Canadian National Rys., to make a tour through Canada, and to take a course in one of the agricultural colleges of the prairie provinces. The tour will last from May to October.

Electric Railway Department

Report on Toronto Transportation Commission's Operations.

H. H. Couzens, General Manager, presented the following report to the Toronto Transportation Commission on April 17:—

Financial Statement.—I beg to submit the accounts showing the result of the first 16 months of the Commission's operations from Sept. 1, 1921, to Dec. 31, 1922. These accounts have been audited by S. C. Scott, City Auditor, whose certificate is appended. In considering these accounts, it must be borne in mind, that the figures are of necessity in some particulars approximate only, due to the following:—1. Provision has been made for the amount of the award as issued by the majority of the arbitration board which was formed to determine the price to be paid by the city for the Toronto Ry. Co.'s property. There is also included interest on the amount of the award as from Sept. 1, 1921. The city has lodged an appeal, the final outcome of which has not been determined. 2. The figures included in the cost of electrical energy are tentative, as the accounts are subject to review, based on the cost of power supplied by the Hydro-Electric Power Commission of Ontario, through the Toronto Niagara Power Co. and the Toronto Hydro-Electric System. 3. The figures are not yet available covering the operation of the city section of the Toronto & York Radials, Metropolitan Division, from the date on which the clean-up deal became effective, to the time when the T. T. C. commenced to operate from Farnham Ave. to the north city limits on Yonge St. 4. The provision for depreciation cannot be finally determined, pending the settlement of the appeal in connection with the arbitrators' award referred to above. After the amount of the award is finally settled, it must be divided into subtotals, covering the various groups of assets, which have different years of useful life. 5. There are other items yet to be adjusted, which are correlated and cannot yet be finally determined. In the interest of sound finance, adequate provision has been made in the accounts to cover all reasonable contingencies in respect of the foregoing.

From the Revenue Account it will be seen that the gross revenue for the 16 months of operation amounts to \$15,723,482.22, or slightly less than \$1,000,000 a month. The expenses of operation, including the cost of electrical energy, total \$10,968,614.88, leaving net income of \$4,754,867.34. Interest on and redemption of debt, together with depreciation, absorb \$3,493,610.27; reserve for unredeemed tickets, workmen's compensation and public liability, \$575,000.00; reserve for contingencies, \$437,569.89; and organization expenses, \$139,218.19, leaving a surplus of \$109,468.99 for the period.

Dealing with these deductions from net income:—Interest on and redemption of debt are statutory obligations, covered by the bylaws under which the funds are raised to finance the enterprise. The statute under which the Commission operates provides for a depreciation fund. The provision in the accounts is based on providing what is necessary to replace the assets at the end of their useful lifetime, less the amount set aside for the redemption of

the debenture debt. In other words, provision is made so that at the end of the useful lifetime of the assets, the debt on the same will be extinguished. The reserve for unredeemed tickets, as is implied in the designation, provides funds to cover the Commission's liability for tickets sold and not yet used. The reserve for workmen's compensation and public liability fund is adequate to cover outstanding claims. It is essential that an adequate fund be provided to cover all possible contingencies under this heading, and provision has been made with this object in view. The reserve for contingencies is necessary to cover various contingent items at present unsettled, and in order to ensure that proper provision is made for all possible

H. H. Couzens,
General Manager, Toronto Transportation
Commission.

charges which may arise. Organization expenses cover the expenses of organization and investigation, which are written off out of current revenue, in the interest of sound finance, rather than capitalizing the same.

The balance sheet is self explanatory, and needs no special comment.

General.—This is not intended to be a comprehensive report, covering the work of the Commission since its inception, but it may be of some interest to the city council, and the general public, to briefly supplement the financial statement in a few particulars.

Passengers Carried and Fares.—During the period under review, the passengers carried by the system totalled 249,015,476, and the average rate of fare, based on the tickets sold and cash fares, equalled 6.165c. As was to be expected, traffic was adversely affected until the autumn of 1922 by the rehabilitation

work under way, and the consequent disorganization of the service.

Since then there has been a marked increase in the number of revenue passengers carried, as will be seen from the following figures for the 4 months ended Dec. 31, 1921, and 1922:—

1921	1922	Increase (1922 over 1921)
61,870,213	65,447,506	3,577,293

It may also be stated that this improvement has been maintained to date.

Analysis of Cost.—An analysis of the component items of the cost, expressed as fractions of the average fare, are as follows:—

Maintenance of track-work, including overhead and buildings290c per passenger =	4.62%
Maintenance of equipment628c per passenger =	10.01%
Cost of power602c per passenger =	9.61%
Conducting transportation, i.e., the expenses of operating the cars—excluding maintenance	2.499c per passenger =	39.85%
General and miscellaneous expenses ..	.386c per passenger =	6.15%
Interest on, and redemption of capital, and depreciation	1.403c per passenger =	22.38%
Reserves406c per passenger =	6.49%
Organization expenses056c per passenger =	.89%

Total: 6.270c per passenger = 100%

The difference between the total cost as above, 6.27c., and the average fare paid per revenue passenger, 6.165c., represents the sundry revenue from sources other than passenger receipts.

Service.—From time to time there has been some criticism of the service given. The fact is overlooked, however, that owing to the condition of the property when transferred to the Commission, it requires considerable time before the service can be brought up to the state that the Commission aims at. Before the work of rehabilitation was commenced, it was estimated that at least three years would be required in order to rehabilitate the property and bring the service to standard. To date, little more than one-half of this period has gone, and the progress has been such that, provided no unforeseen circumstances arise, it is now hoped that the work will be substantially completed this year. It can be fairly claimed, however, that considerable improvements have already been made. This can best be illustrated by stating that the accommodation now given by the Commission is 40% more than the total accommodations given by the combined systems of the civic lines and the Toronto Ry. Co., though the total passengers carried do not yet exceed the total carried by the old systems. The tracks have, in the main, been rehabilitated and extensions made, new rolling stock purchased and the service consequently speeded up, all of which directly and materially contribute to the comfort and convenience of passengers.

The principal work done to the end of 1922 includes the following:—

Trackwork.—Extensions, 40 miles; total rehabilitation, 49 miles; repaired and welded, 31 miles. The standard type of track construction is by no means the lowest in first cost, but it is confidently believed to be the best and cheapest in the long run. That the work

was well done and with great expedition is so generally admitted that further comment seems superfluous. I would, however, like to take this opportunity of again emphasizing the special interest of the late Fred. R. Miller in connection with the execution of this branch of the work. At considerable personal sacrifice, he loaned to the Commission, members of his staff, who were specialists in concrete work, to organize and supervise a special department for carrying out this work. He personally displayed the greatest possible interest in this branch of the work and followed it out in all its details, devoting a very great deal of time and energy to it.

New Rolling Stock.—The following were delivered as at the end of 1922:—Cars, 262; buses, gasoline, 8 double deck, 3 single deck; trolley buses, 4 single deck. The cars purchased are of the latest type, embodying all the improvements to date. These are an excellent example of the Commission's policy of buying wherever possible in Canada, for this type and size of car had never been previously constructed in Canada. It was designed by the staff, in conjunction with the makers, and was purchased at prices which compared favorably with those quoted by foreign manufacturers. The gasoline and trolley bus services were inaugurated, partly as an experiment, in order to see what the result would be under our climatic conditions, and in order to give service in districts which could not be properly served by street cars at present. The results have justified expectations, and, while not in our opinion the most economical and suitable for mass transportation purposes, buses will, we are confident, fill a useful place in the general plan of transportation.

Car House and Yards.—There have been constructed one complete car house and yard at Eglinton, two large extensions of car houses and yards, one at St. Clair and the other at Danforth, and one yard extension at Russell. These new car houses are built of reinforced concrete, with brick facing, present a neat appearance, and are to all intents and purposes fireproof. They are equipped with sprinklers, for the security of the rolling stock. The design is the most economical for the purpose, permitting of very low insurance and maintenance costs. Buildings are only provided for from 20 to 25% of the total capacity of the cars on the site. There yet remains to be done the Roncesvalles car house and yards, without which the new cars cannot be operated on the King and Queen routes.

Work to be Completed.—The repair shops and stores are in hand at Hillcrest, the contract for which was placed early this year. Trackwork yet to be rehabilitated totals approximately nine miles. Additional new cars will be required, which are included in this year's programme. This excludes the Toronto Suburban Ry. within the city.

Toronto Railway Property.—Pending the conclusion of the hearing of the appeal against the decision of the majority of the arbitrators, it is perhaps not desirable to go into details of the award, but it may be stated that the amount of the award is very greatly in excess of the value of the assets transferred to the Commission, for incorporation in the unified system. As an illustration, of the rolling stock operated by the Toronto Ry. Co., 413 out of 830 cars have to be scrapped, due to their dilapidated condition, added to their unsuitability and

inefficiency for the work to be done. Considerable alterations also are required in the cars retained in service, some of which have already been made, and others are yet to be made. Of 137.3 miles of track previously operated by the company, 49.1 miles have been entirely renewed; 9 miles are worn out and will have to be renewed. Of the five car barns, one at Yorkville has been scrapped, due to inadequacy and unsuitable location for incorporation in the unified system; one at Roncesvalles is now being scrapped, due to inadequacy, defective building and layout; one at Russell requires to be reconstructed, the buildings in connection with which are moving due to defective foundations (the yard has already been extended and rearranged); one at Dundas, in bad physical condition and without space for extensions, the final outcome of which depends on grade separation and service requirements in the northwest section of the city, following the settlement of the Toronto Suburban Ry. This leaves one car house only, on Lansdowne Avenue, which is in reasonably good condition. Even in this case alterations were necessary to obtain adequate fire protection, though the savings in fire insurance premiums will be sufficient to cover the cost of such alterations in three years.

The Question of Fares.—The figures show that the results do not justify a fare reduction. The average fare on the system is 6.165c. per passenger. When considering the question of fares and comparing them with those previously in force, the following obvious facts are often overlooked:—The area served by the Commission, with one fare, is practically 35 square miles, against 17 in the case of the Toronto Ry. Co., i.e., more than double the area. Prior to the date when the service was unified there were four systems operating in the city, each with a separate fare, as follows:—Toronto Ry. Co.; Toronto & York Radials, 3 separate divisions, each charging a separate fare; Toronto Civic Rys., 4 divisions, each charging a separate fare; Toronto Suburban Ry. Thus a passenger, other than those riding in the central section of the city, required to pay more than one fare, with the inconvenience of transferring from one system to the other added. In the case of all of the foregoing, excepting the Toronto Suburban, service is now given at a single fare, over the whole of these lines, as well as over the extensions laid by the Commission. In the case of the Toronto Suburban Ry., however, service in most of the area is given to a great extent by the Commission's buses in West Toronto, and in most of the remaining area by street car lines operated by the Commission. It is therefore clear that many passengers today are carried at practically the same rate of fare as formerly, and have a service already substantially improved which will be still further improved when rehabilitation is completed and the new system operating at maximum efficiency.

A point generally overlooked in these discussions, though one of the most emphasized arguments of those advocating the universal fare, such as exists in Toronto, as against the zone fare, that is, a graded fare based on the distance travelled, is that a universal fare allows the worker to obtain the advantage of cheaper land and better living conditions in the outskirts. Following this a step further, it will be seen that in many of such cases the worker has actually benefited by the unified fare as such. With a uni-

versal fare, every extension added to the system increases the cost, without a corresponding increase in the revenue, as it means carrying the passengers a greater distance for the same fare. The extensions made were, however, necessary, in order to give the service to which car users were already entitled. The mileage of track operated by the Commission is 24.5% greater than the combined mileage of the Toronto Ry. Co. and the civic lines.

Labor costs and the price of all materials have advanced greatly since the date when the 5c fare was adopted as a standard on this continent. A well known authority gives the average wage increase in the industry at over 90%, and the material increase at over 100%, compared with pre-war days.

An analysis of fares in 607 cities on this continent shows that fares range from 5 to 10c. Of this total over 40% are higher than in Toronto at present, and over 30% are the same as in Toronto. It will therefore be seen that more than 70% of all these cities are paying as high or a higher rate than Toronto, yet in all cases they have the advantage of systems constructed in pre-war days, the majority having the benefit of the much lower cost of materials which obtain at any time in the United States, and at the same time the vast majority paying lower wages than in Toronto. In some cases, with systems constructed at low pre-war prices, and paying lower wages the 5c fare is in force. In Toronto, with a large arbitration award, a rebuilding programme which had of necessity to be carried out at times when prices are high, a system that cannot be efficiently and economically operated until rehabilitation is completed, it is obvious that a higher fare is necessary. Take a concrete example, the Montreal Tramways Co., with a long established and well organized enterprise, operated efficiently, the fare is the same as in Toronto, while the trainmen's rate of wage in Toronto is 25% higher than in Montreal, and in other grades the difference is even more marked.

It would not be fitting to let this opportunity go by without expressing the grateful thanks of the staff and myself to those who have assisted our work: To the public who, when they realised the advantage to be gained by the speeding up of the work of rehabilitation, cheerfully put up with the consequent inconvenience. To the members of the Ontario Railway and Municipal Board, having jurisdiction over much of our work, whose advice and co-operation has been a great help. To the city officials and the police, who, by their help, enabled the Commission's work to be pushed ahead, often at considerable inconvenience to their own plans and work. I would also like to express my sincere appreciation of the work of those engaged in administration and operation of the system. The staff have worked, at all hours, unceasingly, to expedite the work and give the best that was in them. The spirit of co-operation also displayed by the men has been most encouraging. The vast majority, realising that the car users are the shareholders in the enterprise, are anxious to give the best possible service, without which the best results cannot be obtained.

Revenue Account for 16 Months ended
Dec. 31, 1922.

Double End Safety Cars, Hydro Electric Railways, Essex District.

The Hydro Electric Power Commission of Ontario Railways Department has ordered for the Hydro Electric Railways, Essex District, 4 double end, double truck, one-man, two-man safety cars, of steel construction, an elevation of one of which is given herewith. They will have the following general dimensions:

Length over all.....	43 ft. 7½ in.
" " end vestibules.....	42 ft. 6 in.
" " end of car body.....	28 ft. 9 in.

plate, will have the top and bottom cover plates securely riveted to the diaphragms and malleable iron bolster center braces. The bumpers, of 5 in. 6.5 lb. channels, will be bent to shape, and will extend the full width of the car, and around the sides, so as to form protection for the corner posts, and diagonal braces, extending from the side sills and platform side sills to the bumpers, will be connected with bent angles, and gussets, to

form a floor mat. Between the 2 floor courses will be 2 layers of waterproof paper. The floor will be framed to provide trap doors over the motors. In the aisle, at each end of the car, the floor will be ramped 1 in. and on the platform it will be ramped 1 in. to both sides of the car. The top floor will be fastened in place with screws.

The vestibules and door arrangement will be a notable feature. Each vestibule

Double End, Double Truck Safety Car, Hydro Electric Railways, Essex District.

Width over all.....	8 ft. 5 in.
" " sheathing	8 ft. 3 in.
Height from top of rail to top of roof	10 ft. ¾ in.
Height from rail to top of floor in body	2 ft. 7 1/16 in.
Seat spacing	2 ft. 6 in.
Post spacing	2 ft. 6 in.
Truck centers	20 ft.
Approximate weight, car body.....	20,000 lb.
" " control equipment.....	1,200 lb.
" " air brake equipment.....	1,060 lb.
" " motors, gears and cases.....	4,000 lb.
" " trucks	10,000 lb.
" " total	36,260 lb.

The car underframing will include side sills of 3 x 3 x 5/16 in. angles, extending in one piece from body corner post to vestibule corner post, and the platform side sills, 6 in. 15.5 lb. channels, will be connected to form an extension of the side sills, the connection being proportioned so as to develop the full strength of the side and platform sills. The cross sills will be 3 in. 6 lb. channels, rolled steel, and will be connected to the side sills with angle connections and gussets. The bolsters, of built up type, with 12 x ½ in. top plate, and 12 x 5/8 in. bottom

bumpers and sills, and bolted to the crown.

The side framing will include posts, 1½ x 1½ x 3/16 in., rolled steel T section members, extending from side sill to side sill, bent to form carlines, and riveted to the side sills, side sheets, belt rail and letter board. The belt rail, of 3 x ¾ in. material, will extend in one continuous piece from the body corner post to the vestibule corner post, and the letter board, of 3/32 in. sheet steel, will have its lower edge set off to form a drip. The letter board will be spliced on the posts, the splices being soldered and filed, so as to present a smooth even surface. The vestibule corner posts will be of ash.

The roof, to be built in place on the car, will have t. and g. grooved poplar roof boards, 7/16 in. thick, covered with no. 8, 18 oz. canvas.

The floor will be laid in 2 courses, the bottom one to be of 7/16 in. t. and g. white pine, nailed and screwed to the floor supports. The top floor will be of 13/16 in. maple, grooved in the aisle to

will be fitted with 2 pair of folding doors, this new arrangement, with its wide door opening area, providing for quick loading and unloading of passengers. Each pair of doors will be hung on ball bearing shafts, and joined with ball bearing hinges, and will be arranged to operate independently, from door operating engines supplied in connection with the air brake equipment, and located in a pocket over the doors. The steps will be arranged to operate in conjunction with the doors and the door and step engines will be operated from the door selector valve, a portion of the brake valve. The steps will be of 1¼ in. ash, supported on ball bearing hinges and provided with counterbalance springs. The edge of each door will have a rubber strip, extending in a loop, 2 in. wide, and screwed securely to each side of the door. The front dash of the vestibules will be in 3 pieces, one piece extending from corner post to center post, one from center post to center post and the third from center post to corner post. The inside lining of

the vestibules will be steel plate, in 3 pieces, similar to the outside dash. The vestibule interiors will be finished in cherry, the steel wainscoting to be grained and stained to match. The doors will have 32 oz. plain glass in the upper panel; 32 oz. wired glass in the center panel, and the lower panel will be finished in cherry.

The interior of the car will be finished in birch. The headlining will be ¼ in. Agasote screwed in place, the joints to be covered with birch mouldings. The cars will be fitted with advertising racks, with curves in the moulding to take the standard 11 in. cards. The wainscoting below the seat rest will be of birch, and above the seat rest will be of ¼ in. Agasote, the whole finished to correspond with the general interior finish. Curtains throughout will be of Pantasote, and all car trimmings will be of bronze.

Seating.—Each side of the car will be fitted with 9 reversible transverse seats and 2 longitudinal seats, seating capacity being thus provided for 44 passengers. The seats will be spring upholstered and covered with rattan.

The car trucks will be of the Taylor equalized type, and will be of 5 ft. 4 in. wheelbase, and equipped with 26 in. diam. steel wheels, with 3¾ x 7 in. journals.

The electrical equipment will consist of General Electric, type K, control apparatus and four G.E. no. 264 motors, of 25 h.p. each. The air brake installation will include the complete safety car equipment with General Electric safety devices and door operating mechanism.

Other equipment will include a high voltage buzzer system, with a push button at each side post, and a buzzer at each end of car, the buttons to be 5 ft. 5 in. above floor level; car lighting system to use 36 watt lamps, to be equipped with reflectors; two marker lamps to be installed at each end of car, and an incandescent headlight to be placed at each end of car and wired in series on the lighting circuit; six Railway Utility Co. double exhaust ventilators on each side of car; four sand boxes per car for the O. W. Meissenger system of sanding; two Keystone bell ringers, with 10 in. foot gongs, and 2 Keystone foot valves on each car; a portable drawbar, made from 3 x 1 in. flat steel, with hole for 1½ in. coupling at each end of car; two H.B. life guards; 12 sanitary hand straps per car, hung on individual brackets; a Keystone type J illuminated destination sign over right hand vestibule window at each end of car; a double side window cleaner for each vestibule; window guards for the side windows, arranged to drop, to provide access for cleaning the windows; pneumatically operated snow scraper for each end of car; 6 in. metal treads on each step and at edge of platforms; economy meter; trolley rope guard at each end of car; route number sign holders over each headlight, and National staffless hand brake, with 20 in. wheel on each platform.

As the cars were designed primarily for either one or two-man operation, they will be operated as both one-man and two-man cars, it being the management's intention to use two men on them during rush hour periods, and but one man at other times. They will be operated in local service in Walkerville, Windsor and Sandwich, Ont. They are being built by the St. Louis Car Co., St. Louis, Mo., and delivery is expected early in May.

Canadian National Railways Electrification Plans for Toronto District.

Alderman Risk, chairman of the special committee appointed by Toronto City Council to negotiate for the purchase of the Toronto Suburban Ry. lines within the city, received the following letter from Sir Henry Thornton, President Canadian National Rys., on April 19:—"The investigation by a special committee, of the transportation requirements of the Toronto district, which has been under way since last January, has been completed in respect to the Toronto Suburban and Toronto Eastern Rys., to a point where, owing to the urgency of the problem connected with the Toronto Suburban Ry. lines within the city limits,

west of Yonge St., and passing through the proposed York City. This system will provide connections with the lines of the Toronto Transportation Commission at Queen St. and the Don, Bloor St. viaduct, Yonge St. and Weston Road.

"We are prepared to sell to the City of Toronto the Toronto Suburban Ry. lines within the city limits, including the line to Lambton, upon the basis of valuation already agreed upon, and with the understanding that these lines have been operated by the Toronto Suburban Ry. on behalf of the city since Sept., 1921. I desire to point out, however, that the remaining portion of the Weston line is located upon the highway, in a district which is rapidly developing, and which will, within a short time, become a part of your city. It would appear to me that, in order to obviate the necessity of the city negotiating for a further section of this line in the near future, it would be the part of wisdom for it to take the whole of this line to Woodbridge at present, inasmuch as your Transportation Commission is in a better position than we are to provide what is practically a street railway service. We are prepared to turn this line over to the city on the basis of a physical valuation to be agreed upon.

"In order that there may be no misunderstanding, I wish to reiterate that the Canadian National Rys. System does not regard itself under any moral or legal obligation to sell to the City of Toronto or to any other interests what is known as the Toronto Suburban Ry., Guelph Division, extending from Lambton to Guelph, or any other properties, excepting as mentioned above. Nor is it the intention of the Canadian National Rys. to even consider the disposal of any of its properties, excepting again as above set forth.

"I trust that the proposal embodied herein will meet with public approval, and have the support of your council. In order to expedite the work to be done by the Transportation Commission and the Canadian National Rys., I trust that negotiations along the lines above suggested may result in this matter being closed at an early date."

The Toronto City Council's special committee met on April 20 and decided unanimously to recommend to the council that Sir Henry Thornton's offer be accepted, the city to take over all the Toronto Suburban Ry.'s tracks and equipment within the city, for not more than \$190,078, and to pay the deficits incurred by the Canadian National Rys. in operating the lines since Sept. 1, 1921, approximately \$70,000; that a special meeting of council be held forthwith, to deal with the matter, and that application be made to the Ontario Government to pass such validating legislation as may be required to enable the city to complete the purchase. No action was taken in regard to the Weston-Woodbridge line, except to suggest that another special committee be appointed to deal with it.

The city council, at a special meeting on April 24, decided unanimously to buy the T.S.R. Co.'s property, etc., within the city, including its electric railway lines, its rights and franchise, and its poles, wires and equipment, for power and light distribution, at a cost not to exceed \$200,000, plus the deficits incurred by the Canadian National Rys., in operating the lines within the city since Sept. 1, 1921. The question of negotiation for the purchase of the Weston-Woodbridge line was left over for further consideration.

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council: Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee: The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

it is felt that some announcement should be made.

"The problems affecting the situation between Toronto and Niagara Falls are more involved and will require further time for consideration. The investigation, however, is progressing satisfactorily and it is expected that announcement can be made with respect to this district within a short time.

"It is our intention to proceed with the construction of the Toronto Eastern Ry. immediately and to connect it with the Toronto Suburban Ry.'s Guelph Division by the electrification of the Belt Line Ry., thereby providing a rapid radial service from Guelph to and through Toronto and over the Toronto Eastern territory. This will provide a suburban service for that part of Scarborough Township adjacent to the city, for that part of York Township lying north of East Toronto, and that portion of York Township lying north of St. Clair Ave. and

The Toronto Railway Arbitration Appeal.

In connection with the City of Toronto's appeal against the award of the arbitrators fixing the value of the Toronto Ry. Co.'s property taken over by the city on Sept. 1, 1921, the Divisional Court, on April 6, directed the arbitrators to furnish to the court's Registrar a statement showing as far as they possessed that information the detailed valuations (according to each basis discussed in the award) placed on the various items of undisputed property set out in schedule A to the award and the properties mentioned in schedule B, which the arbitrators held the city were required to take, and the head office building, King and St. Lawrence yard, and Scarborough Beach property, giving the values of land, buildings, plant, tools, equipment, furniture, etc., separately, so far as practicable, and the values of rolling stock in groups, and further showing, as far as practicable, the amount of depreciation allowed in each item. The arbitrators were also directed to state the basis on which the engineer's remuneration, and interest during construction, were compiled, specifying the percentages, if any, applied. This direction was in no way to prejudice the rights of the parties, especially if it should be determined that there was not a right to appeal from the award.

The arbitrators filed an answer, which, it is stated, did not give the information asked for, but intimated that the information was not in their possession in the form asked for. Hume Cronyn, K.C., the chairman of the arbitration board, has since sailed for England.

Mainly About Electric Railway People.

F. A. Huntress, Vice President, in executive charge of Rio de Janeiro Tramway, Light & Power Co., in Brazil, and formerly connected with the Halifax, N.S., Electric Tramway Co., visited Toronto recently.

Charles Gordon Loop, who has been appointed Superintendent, Ways and Structures, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., was born there Feb. 9, 1885, and entered railway service in April 1901, since when he has been, to Nov. 16, 1906, section man, Pere Marquette Rd., Kingsville, Ont.; Nov. 1906 to Dec. 26, 1913, section man and extra gang foreman, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont.; Dec. 26, 1913, to Nov. 30, 1917, Roadmaster, same road, Kingsville, Ont.; Nov. 30, 1917, to April 1, 1918, Construction Foreman, Canadian Steel Corporation, Ojibway, Ont.; April 1, 1918, to March 1, 1923, Roadmaster, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont.

T. Nadeau has been appointed Car House Foreman, Sherbrooke Ry. & Power Co., Sherbrooke, Que., succeeding J. E. Guay, resigned.

A. O'Grady, Inspector, Montreal Tramways Co., died in the Royal Victoria Hospital, Montreal, April 2, from pneumonia, aged 49. He had been in the company's service, and that of its predecessor, for 26 years.

M. W. Wales, who has been appointed Engineer of Maintenance of Way and Structures, Winnipeg Electric Ry., Winnipeg, is a technical graduate in naval

architecture, marine and civil engineering. From June 1907 to Sept. 1909, he was instrument man on construction of East River tunnels and Sunnyside Yard, Pennsylvania Tunnel & Terminal Ry., New York. During 1909, he was in private practice in New York, and in June 1910, was appointed Engineer Inspector, New York City Board of Water Supply, on the construction of the Kensico dam. From April 1917 to Aug. 1918, he was engaged in naval architecture for Continental Shipbuilding Corporation, New York, and from Aug. 1918, to entering the Winnipeg Electric Ry. service, he was in Fraser, Brace Ltd. employ, on hydro electric development work at Chicoutimi, Que., and later as construction engineer on Manitoba Power Co.'s Great Falls plant, in charge of layout and construction of the transmission line, the form and concrete work, reinforcing steel, etc., for the power house and dam.

Electric Railway Employees' Wages, Working Conditions, Etc.

Brantford Municipal Ry.—As already stated in Canadian Railway and Marine World, the employees applied to the Labor Department for the appointment of a board of conciliation in regard to wages and other matters which had been the subject of negotiations since Jan. 1, when the agreement expired. The Department expressed its willingness to appoint a board, but the Brantford Municipal Ry. Commission declined to take any steps. The Minister of Labor was appealed to, and telegraphed the Commission, urging consent. The men met on April 12, and decided to cease work if the Commission held out. As a result of a conference on April 13, the Commission withdrew its opposition to the appointment of a board.

Calgary Municipal Ry.—A board of arbitration began sitting at Calgary, Alta., April 13, to fix rates of wages for the civic employees in all departments. Col. G. E. Sanders, D.S.O., chairman, stated at the outset that both parties had signed an agreement to accept the board's findings as final and binding. The city commissioners had drawn up a schedule providing for reductions in wages varying from 6 to 20%, and proposed a general revision of working conditions. The reductions proposed for municipal railway employees varied from 6 to 10%.

Ottawa Electric Ry.—We are officially advised that the employees filed a draft agreement recently, asking for a 25% increase in wages, and an 8-hour day. The proposed agreement is practically the same as that presented last year, so far as the 8-hour day and some other matters are concerned. The board of conciliation, which sat last year, pointed out in the majority report that the institution of an 8-hour day would mean an increase in operating expenses of \$120,000 a year, and that any increase in the cost of operating the line was impossible unless it was accompanied by an increase in fares. Major F. D. Burpee, Manager, in reply to the recent letter endorsing the draft agreement, pointed out that the volume of business done during the previous six months had been disappointing, and that any increase in operating costs was impossible; in fact it was unlikely that the present scale of wages could be continued after May 1. The employees, at a meeting on April 10, decided to apply to the Labor Depart-

ment for the appointment of a board of conciliation.

Toronto Transportation Commission.—The wage agreement between the Commission and its employees, continuing the wage schedule paid to March 31, 1923, until March 31, 1924, has been signed. The rates were given in Canadian Railway and Marine World for April.

Roller Bearings for Street Cars.

A St. Paul, Minn., press dispatch of March 16 stated that the Twin City Rapid Transit Co., which had been conducting experiments with roller bearings for street railway rolling stock, would equip some cars with roller bearing trucks in April. The dispatch stated that the cars would be "noiseless," due to the introduction of roller bearings, but did not state in what way the replacement of ordinary bearings by roller bearings would do away with noise. H. H. Couzens, General Manager, Toronto Transportation Commission, is reported to have stated in an interview that the noise incidental to street car operation is caused by the wheels on the rails, and by the cars' gears, and that while roller bearings might effect a small saving in power, they would not produce noiseless cars.

T. Julian McGill, Vice President Twin City Rapid Transit Co., has, in response to Canadian Railway and Marine World's enquiry, written as follows:—"For several years we have had in operation trucks with standard sleeve bearings, on our new light weight cars. These trucks are equipped with band brakes, similar to the standard automobile brakes, and rubber cushions over the spiral roller which supports the weight of the truck. Journal box covers have been one of the causes of noise on our cars, and we therefore determined to experiment with the roller bearing. We expect to gain some slight saving in power, and to benefit from several advantages in truck design. We are experimenting with the Hyatt roller bearing, and if our experiments prove successful, we contemplate buying the bearings rather than make them in our own shops. In our endeavor to produce a noiseless car, we have placed roller bearings on a car which weighs 25,000 lb., as against our present standard cars which weigh 42,000 lb. We do not expect to eliminate all track noises, but hope that the ease in starting and stopping, the entire elimination of brake shoe squealing, and the rattling of brake shoe rigging; the elimination of noise from journal box covers, and the rubber cushions supporting the truck, will make the car itself practically noiseless."

Electrical Power Distribution in St. John.—The New Brunswick Power Co., which owns the electric railway in St. John, N.B., has entered an action against the city in the New Brunswick Superior Court, to secure an injunction to prevent the city distributing electric power in the city from the New Brunswick Government's power development at Musquash Falls. The company alleges that it holds an exclusive franchise for the sale of electric power within the city. There were lengthened negotiations between the city and the company with respect to the distribution of the provincial power, during which the company offered to sell its entire undertaking to the city. The city, however, refused to consider the proposition and authorized the construction of a municipal distribution system.

Electric Railway Projects, Construction, Betterments, Etc. Toronto-Hamilton Electric Railway Project.

British Columbia Electric Ry.—Vancouver City Council's board of works has approved of plans for the routing of the company's interurban (Vancouver & Lulu Island Ry.) cars over Granville St. bridge to the corner of Davey and Seymour Sts., thus enabling the company to do away with the station at the south end of the bridge. The agreement between the city and the company came before the city council April 10, when the company objected to the proposal to limit the speed of the interurban cars going across the bridge to 10 miles an hour, and asked that they be allowed to travel at the same rate as the city cars. Some other clauses in the agreement were objected to, and its further consideration was adjourned. The B.C. Government and the Board of Railway Commissioners have to approve of the cars being operated over the bridge, before the agreement becomes operative.

The company proposes to erect an automatic substation in South Vancouver, on the south side of Bodwell Road, near Main St., at a cost of \$39,000. The work is expected to be completed during the summer. (April, pg. 181.)

Hamilton St. Ry.—We are officially advised that the Dominion Power & Transmission Co. is about to build about 2,000 ft. of double track line on King St. West, Hamilton, Ont. (April, pg. 181.)

Hydro Electric Railways—Essex District.—Ford City, Ont., Council is reported to have passed a bylaw providing for raising \$83,218, the proportion of the municipality's share of \$966,000 proposed to be expended on the renewal of tracks and other betterments on the lines in Windsor, Walkerville, Sandwich, Amherstburg and other municipalities. Details of the work proposed were given in Canadian Railway and Marine World for July, 1922, pg. 375. (April, pg. 181.)

Hydro Electric Railways—Toronto and York District.—The dispatching of trains on the Metropolitan Division has been transferred to the old store building at Bond Lake, and will be retained there until a new station and dispatching office is built at Schomberg Jct., where a new freight shed and store building are also to be erected. It is expected that the work will be completed during the summer. When the staff has been removed to Schomberg Jct., the line will be operated in three divisions, viz.: Toronto to Schomberg Jct., Schomberg Jct. to Sutton West, and Schomberg Jct. to Schomberg. (Press report.)

Kingston, Portsmouth & Cataraqui Electric Ry.—We are officially advised that the company proposes to relay about a quarter of a mile of double track in Kingston, Ont. (Oct., 1922, pg. 534.)

Kitchener & Waterloo St. Ry.—A press report states that Kitchener Light Commissioners have let contracts to the Hamilton Bridge Co. for steel work to cost \$12,775, and to Ball Bros. for the other work, to cost \$40,965, on a new car house in Kitchener, Ont. (April, pg. 181.)

London St. Ry.—A press report states that the company contemplates relaying a portion of its tracks, at an estimated cost of \$15,000. The work will, it is stated, be done on portions of Oxford, Wellington and Horton Streets, and will be started as soon as weather conditions permit. It is expected that some other track relaying will be done, but this has

not yet been announced. (Nov., 1922, pg. 581.)

Montreal Tramways Co.—The betterments for this year as arranged between the Montreal Tramways Commission, the Montreal City Council's executive committee and the Montreal Tramways Co., are stated to include the renewal of tracks on Notre Dame St. West, between Fulford St. and Atwater Ave., and from Atwater Ave. to St. Henri city limits; renewal of tracks on Notre Dame St. East, from Frontenac St. to Bourbonniere St.; renewal of tracks on De Fleurimont Ave., from St. Denis St. to de Normanville; and renewal of track on St. Dominique St., from Bellechasse St. to Isabeau St. These renewals are to be undertaken in connection with general street improvement works to be done by the city, and a start will be made thereon as soon as possible. The Notre Dame St. West line from Fulford St., through Ste. Cunegonde, to Atwater Ave., is a single track one, and because of the widening of the street it will be possible to make it a double track one. Other replacements and reconstruction work is said to have been arranged for, and the order in which it will be undertaken will be decided upon after a conference between the engineers of the Commission, the city and the company.

Moncton Tramways, Electricity & Gas Co.—An enquiry was made at the Moncton, N.B., City Council meeting April 9, as to whether the company proposed to extend its electric railway to Sunny Brae and Lewisville. The Mayor stated that he had advised the company's management that the council would like to discuss the matter with them. He felt sure that an opportunity for the discussion of the extension would occur before long. (Nov., 1922, pg. 581.)

Regina Municipal Ry.—The Regina, Sask., ratepayers voted April 18, on a bylaw to provide funds for betterments in connection with the railway. It is proposed to replace the steam-driven generating units at no. 1 power house with motors, and to do other work there at a total cost of \$19,156, which would effect a considerable saving in power costs. The proposed works include a half-interlocking plant over the C.P.R. Bulyea line, two electric switches and an extension and loop at the west end of Thirteenth Ave. (April, pg. 181.)

St. Thomas Municipal Ry.—The St. Thomas, Ont., City Council is considering a proposal to extend the line from the terminus at Ross and Hemlock Sts. to the entrance of Pinafore Park, at an estimated cost of \$15,000. This extension has been advocated for several years, but the city council has, up to the present, declined to find the necessary money. (Sept., 1922, pg. 479.)

Sherbrooke Ry. & Power Co.—We are officially advised that it is proposed to build a siding, 1,200 ft. long, on Frontenac St., Sherbrooke, Que. (Sept., 1922, pg. 479.)

Windsor, Essex & Lake Shore Rapid Ry.—A press report states that paving on 1.5 miles of track, 84 in. wide, is contemplated by the company in Leamington, Ont. (Nov., 1922, pg. 581.)

The Toronto Trades and Labor Council has written the Mayor, alleging overcrowding on Toronto street cars, and suggesting that the city council pass a bylaw prohibiting it.

Representatives of Etobicoke Tp., Mimico Town, New Toronto Village, Toronto Tp., Port Credit Village, Trafalgar Tp., and Oakville Town, and a member of Hamilton's Hydro Electric Commission, met in Oakville, Ont., April 16, to consider the proposed hydro electric railway situation. The following resolution was passed:—"That the municipalities represented, having all voted upon and carried by large majorities bylaws in favor of the construction of a hydro radial railway, request that its construction be commenced at the earliest possible date. That a committee consisting of the mayors of towns and Reeves of all municipalities between Oakville and Toronto wait on Toronto City Council, asking it to co-operate with us in getting a radial built between Oakville and the center of Toronto, and if the right of way be granted, then the committee arrange a deputation to the Government and the Hydro-Electric Power Commission. That the Ontario Government pass an order in council authorizing construction of a hydro radial line through the municipalities from the center of Toronto into Oakville, as provided in the Ontario Hydro Radial Act, 1914. That the Ontario Hydro Commission be authorized to carry out the construction, and to operate the railway after its construction. That this conference takes the above action, firmly believing that the further growth, progress and development of this populous, industrial and agricultural portion of Ontario is dependent in the largest measure upon the construction of this radial railway; and we further believe the railway will be of invaluable advantage to Toronto as well." Another resolution was passed urging the Ontario Government to retain the bonds deposited in connection with the construction of the proposed railway.

The object of the meeting was to take steps for the immediate construction of a line from Toronto to Oakville, from which place there is an electric railway owned by the Dominion Power & Transmission Co. into Hamilton. The Hydro Electric Power Commission of Ontario now operates the old Toronto & York Radial Ry.'s Mimico division along the Lake Shore Road from the Humber River to Port Credit, so that there would only be a section from Port Credit to Oakville, about 8 miles, to be built. It was suggested that the City of Toronto should be asked to co-operate in order to secure an entrance into the center of the city.

A Hamilton press report states that it has been suggested that the Oakville-Hamilton line be acquired from the Dominion Power & Transmission Co., as a part of the undertaking, or if that is not possible, that running powers over it be secured, so that a service be given between Toronto and Hamilton.

A municipal deputation from Hamilton, headed by the Mayor, and accompanied by Hon. W. Rollo, M.L.A. for West Hamilton, waited on Premier Drury and Hon. D. Carmichael, Vice Chairman Hydro Electric Power Commission of Ontario, in Toronto, April 20, and asked for the return to the city of its bonds for \$5,869,286 which are held by the Commission for hydro electric railway construction. The Premier is reported to have stated that if the city passes a resolution asking for the bonds to be returned, the Government will take steps to have them delivered.

The Toronto Transportation Commission's Activities.

The Commission has ordered 210 tons of 85 lb. rail, 22 tons of track bolts, 120 tons track spikes, 2 reels phono-electric trolley wire, and a quantity of miscellaneous materials for construction work.

A sub-contract for electric wiring and the installation of power lines at the repair shops and stores building being erected by the Commission has been awarded by the general contractors, the John V. Gray Construction Co., to J. Everard Myers, Toronto.

The Commission has invited tenders up to May 12 for the purchase from it of 65 single truck cars, 1 Brill M.T. truck car, 2 single truck trailer cars, 11 single truck motor car bodies, 7 double truck closed motor car bodies, 10 single trucks, G.E. 1,000 motors, and 6 pairs of wheels.

Delivery of the 50 motor cars, and all but a few of the 100 trailers, ordered by the Commission from Canadian Car & Foundry Co. was completed April 20. These cars were described and illustrated in Canadian Railway and Marine World for April, pg. 182. Delivery of the 50 motor cars ordered from Ottawa Car Mfg. Co., of the same type as those from Canadian Car & Foundry Co., is expected to commence May 1.

Early in March the Toronto Board of Control recommended to the city council that Lt.-Col. W. G. MacKendrick be appointed a member of the Commission for the balance of the late Fred R. Miller's term. This recommendation precipitated a warm debate, with the result that it was referred back for more information. Early in April, Lt.-Col. MacKendrick wrote the Mayor, stating that he had neither sought nor desired the appointment, and that as he did not believe it would be wise to accept the position unless with the almost unanimous support of the council, he wished his name withdrawn. No further action towards filling the vacancy has been taken at the time of writing (April 18).

The Commission, as stated in our April issue, applied to the city council recently for an appropriation of \$5,000,000 for work to be done this year, this amount not including what would be needed for rehabilitation of the Toronto Suburban Ry. within the city limits, approximately \$2,500,000. The board of control considered the matter on April 11, and although the appropriation sought had not been passed at the time of writing (April 18), it is felt that it will be in the near future. The appropriation will provide for the construction of the car house at Queen St. and Roncesvalles Ave., completion of track rehabilitation and the acquisition of more new equipment.

The Commission installed, on the night of April 18, a grand union intersection at the intersection of Queen St., Roncesvalles Ave., King St. and Lake Shore Road, which is said to be the largest manganese track layout manufactured in Canada or installed on a Canadian electric railway, being considerably larger than that installed last year at the intersection of Bloor and Bathurst Sts., which was described and illustrated in Canadian Railway and Marine World for Sept., 1922. The latest intersection was fabricated by Canadian Steel Foundries, Montreal, its shipping weight was about 150 tons, and its cost about \$70,000. Its installation was under the direction of A. T. Spencer, the Commission's Engineer of Way.

The Commission was asked by the city Board of Control recently to participate in a conference with city officials, the Toronto Hydro Electric Commission, the Toronto Harbor Commission and the Canadian National Exhibition authorities, in reference to radial railway entrances into the city. The Transportation Commission took the stand that it could not engage in such a conference until some definite understanding was reached as to just what radial lines and what entrances were at issue, and pointed out that, as such a conference, and the investigations it would likely originate, would require funds, an effort would likely be made to make the Transportation Commission undertake a large proportion of the expense. The Commission feels that it cannot spend revenues from city street car fares to pay for investigations into radial railway matters.

The Commission's plans for a new car house and yard, to replace the present house and yard at the intersection of Queen and King Sts. and Roncesvalles Ave., were described in Canadian Railway and Marine World for April, and mention was made of the amount of land to be expropriated. On March 28, I. S. Fairty, K.C., the Commission's Counsel, applied to one of the county judges for an order to permit the Commission to enter at once on the property which the city council had expropriated by bylaw. Owners and tenants appeared, asking that the Commission be barred from the lands in question for about 4 months. The application was argued on April 7, shortly after which judgment was given permitting the Commission to take possession May 15. As there is a lot of preliminary work to be done in addition to the demolition of the old car house, this decision, we are officially advised, will not hold up the Commission's plans. A contract for the demolition of the old building has been given to J. Bagshaw, who undertook to do the work for the material, except the plumbing fixtures, and \$3,000. The contract called for demolition of the westerly 96 ft. of the old house, and clearing of the site by April 21, and the completion of the job by June 1. Tenders for the construction of the new house will be called about May 1. The new yard will be graded and track laid by the Commission's own forces. The new house will be similar to that built by the Commission at Eglinton Ave. and Yonge St. in 1922, and described in a preceding number of Canadian Railway and Marine World.

London City Council Asks a Price for the Street Railway.

The London St. Ry. Co.'s franchise for the operation of an electric railway in London, Ont., expires in March, 1925, and is renewable for 5 years, or perhaps more, unless the city gives notice by March 25, 1924, of its intention not to renew. For several years the city council and the company have been at odds about the service given, the condition of the tracks, and track extensions. Plans for the purchase of the line were under consideration in 1919, and a valuation was made by Hydro Electric Power Commission of Ontario engineers, who estimated the value of the property at \$1,356,000, and pointed out that the city

could not pay what the property was worth and operate it as cheaply as the company could. The city council decided Dec. 6, 1919, not to submit a bylaw for the purchase of the property to a vote of the ratepayers. Since then, the controversy has been mainly about fares, and propositions have been made to operate bus lines in opposition to the company's cars. Some consideration was given to a proposal to ask for a legal declaration that the company had forfeited its franchise on several grounds, but there was no following up of this, and after consideration by the council's finance committee, the council decided March 8 to ask the company to fix a price for which it would be willing to sell the entire property. A press report states that the company is willing to sell for about \$1,700,000. At the end of 1919 it was reported that the company was willing to accept something over \$1,200,000. About \$900,000 is mentioned as the price which the city would be prepared to pay. Nothing definite has come out of the negotiations at the time of writing, April 20, except that it is stated that the company must name the price it will take for the line before the city will consider its purchase.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

	8 mos. to Feb. 28, 1923	8 mos. to Feb. 28, 1922
Gross	\$836,794	\$821,828
Expenses ...	582,285	573,119
Net	254,509	248,709

	Jan. 1923	Jan. 1922
Gross	\$60,588	\$53,804
Expenses	58,247	62,819
Net	2,341	Def. 9,015
Interest	5,877	5,862
Deficit	3,536	14,877

Winnipeg Electric Railway.—

	2 mons. to Feb. 28, 1923	2 mons. to Feb. 28, 1922
Gross	\$460,137	\$472,857
Expenses	319,908	152,359
Net	140,229	320,498
Fixed charges.	80,620	251,531
Surplus	59,609	68,967

The net surplus for February decreased \$9,358 from Feb. 1922, due to a drop in the railway utility's gross revenue on account of Feb. 1922 including earnings from abnormal traffic due to the winter carnival, a general decrease in normal traffic on account of business conditions and a general change in the class of fares, there being a greater number of passengers availing themselves of tickets and special rates during Feb. 1923, than during Feb. 1922. There was also a decrease in the gas utility's gross earnings attributed to business conditions.

The Winnipeg Electric Ry. Co.'s annual meeting was held in Winnipeg, April 2, W. R. Bawlf, one of the directors, presiding, in the absence of Sir Augustus Nanton, President, and A. W. McLimont, Vice President. The annual report, statements, etc., as summarized for April, were adopted. The directors, all of whom were re-elected, are as follows:—Sir Augustus Nanton, President; A. W. McLimont, Vice President and General Manager; F. Morton Morse, Secretary; W. R. Bawlf, W. J. Bulman, D. N. Finnie, G. V. Hastings, A. J. Nesbitt and Hugh Sutherland. The other officers are J. S. Mackenzie, Treasurer; L. Palk, Assistant Secretary.

Electric Railway Notes.

Sherbrooke Ry. & Power Co. is thinking of ordering 2 one-man safety cars.

The new rule of the road, "Keep to the right," was put into effect in Nova Scotia, April 15.

The Dominion Power & Transmission Co., Hamilton, Ont., advised, April 12, that it was in the market for about 120 tons of girder rails.

Moncton Tramways, Electricity & Gas Co., Moncton, N.B., has received 2 standard light weight Birney safety cars from Ottawa Car Manufacturing Co.

Winnipeg Electric Ry. is reported to have begun the operation of one-man cars on April 9 on the Euclid Ave. line. The city council has granted permission for the operation of these cars on stub lines only.

Winnipeg Electric Ry. will put its spring schedule of cars in operation on May 1. The change in schedule is in consequence of falling off in passenger traffic consequent upon increase in use of automobiles.

Cape Breton Electric Co., in addition to having under consideration the purchase of 8 single truck Birney type

company is reported to have engaged an engineer to report upon the condition of all bridges.

Sandwich, Ont., Town Councillors have been complaining of the car service given by the Hydro Electric Rys., Essex Division, in that town, and have stated that cars are bunched. The railway officials say that the allegations are ridiculous, and in order to find out what is the exact state of affairs, the town council is reported to have decided to instal an electric recording device in the town hall, on which every car going through the town will automatically register the time of its passing.

The Montreal Tramways Co., the Montreal Tramways Commission and the Montreal City Council's executive committee have had under consideration for some time plans for the improvement of the service on the company's lines. Officials of each of the three bodies have their own ideas as to what might be done, and conferences are being held with a view to evolving plans which will be satisfactory to all parties. The various proposals were referred to the engi-

ported:—Bleury and St. Catherine intersection: northbound, 139 cars, carrying 8,200 passengers; southbound, 111 cars, 2,216 passengers; eastbound, 61 cars, 3,445 passengers; total, 366 cars, 16,096 passengers. St. Denis-St. Catherine St. intersection: northbound, 82 cars, 5,012 passengers; southbound, 114 cars, 1,396 passengers; eastbound, 53 cars, 3,075 passengers; westbound, 41 cars, 1,627 passengers; total, 290 cars, 11,110 passengers.

The Montreal City Council's special committee, which was appointed at the beginning of the year to study the city's present and future transportation needs, has held a number of sittings and has discussed a variety of suggestions made by interested parties. The question of the construction of underground lines has not been seriously discussed, the position taken by the committee being that while such may be the final solution of the problem, what is desired is a plan for the immediate relief of existing conditions. It is stated that suggestions have been made for the building of some 25 new lines, which are being considered. The introduction of autobuses on a number of routes has also been advocated, and the committee has the matter under consideration. It is not expected that the committee will have its report ready for some time.

The Canadian Electric Railway Association's annual meeting will be held in Toronto on June 27 to 30. Several papers on important subjects will be read and discussed. The associate members are planning a thorough exhibit of equipment and supplies, the arrangements in connection with which are being made by the committee whose names were given in Canadian Railway and Marine World for April, pg. 184, and of which C. L. Wilson, Assistant Manager, Hydro Electric Rys., Toronto and York District, is chairman. W. R. McRae, Superintendent of Rolling Stock and Shops, Toronto Transportation Commission, is chairman of the entertainment committee, the other members of which are: I. S. Fairty, K.C., Solicitor, Toronto Transportation Commission; E. W. Oliver, General Superintendent, Niagara, St. Catharines & Toronto Ry.; F. S. Livingstone, Traffic Manager, Hydro Electric Rys., Toronto and York District; F. J. Neale, Vice President, Dominion Wheel & Foundries, Ltd.; H. A. Moore, Toronto District Manager, English Electric Co. of Canada; W. R. Carr, Editor, Electrical News; and Aubrey A. Burrows, Business Manager, Canadian Railway and Marine World.

Electric Heating of Buildings.—G. Gordon Gale, Vice President and General Manager, Hull Electric Co., read a paper before the Engineering Institute of Canada's Ottawa branch recently, on the use of electricity for heating buildings. The technical and economic aspects of the matter were fully dealt with, and the impracticability of using electricity for heating buildings was clearly demonstrated, the conclusions arrived at being summarized as follows:—"The direct use of hydro-electricity for heating is not desirable to the individual, because the cost is too high; it is not possible to the community, because there is not enough to supply everyone; and it is not in the interest of the country, because electric power has another and more useful sphere."

British Columbia Electric Ry. Motorbus.

safety cars, and 2 snow ploughs, as mentioned in our last issue, has commenced construction, in its own shops, of a closed trailer express car.

The International Transit Co., Sault Ste. Marie, Ont., has suffered severely this year from heavy snowfalls, traffic having been suspended for days on several occasions, the last being April 2, when there was a very heavy fall, the tracks being finally cleared for operation by April 9.

The British Columbia Electric Ry. Co. was the defendant in an action for damages in the B.C. Supreme Court, April 6, when the court awarded Mrs. Rose McLaren \$1,250 for injuries received while alighting from one of the company's cars. The damages included \$300 for loss of earning power as a spiritualist or psychic reader, Mrs. McLaren claiming that, as a result of the accident, she was unable to "concentrate."

London St. Ry. had two accidents on April 11 and 14. The first was the sagging of the Ridout St. bridge as a street car was passing over it, and the second was the derailment of a car on the Springbank line. No one was injured. Following the first accident, the city council ordered an inspection of all bridges crossed by the railway, and the

neers of the three bodies recently for examination and report to a joint meeting, which it was expected to hold about the end of April.

The British Columbia Electric Ry. started operating its first bus in Vancouver recently, to serve the Grandview-Hastings townsite area over a route of about two miles. A half-hour service is being given, and a more frequent service will be given if the traffic develops. The regular city car fare is charged and transfers are given to and from the electric cars, the buses making connection with both Broadway East and Grandview cars at Commercial Drive and Broadway. A description of the buses was given in Canadian Railway and Marine World for March, pg. 135, also details of the co-operative arrangement under which this bus line was established, and how others may be added.

The Montreal Tramways Commission had a survey made recently of the density of traffic on the Montreal Tramways at the various intersections, during a one-hour period at the evening rush hour. It showed that the intersection of Bleury St. and St. Catherine St. is the most congested point by a considerable margin over that at St. Denis St. and St. Catherine St. The following details are re-

Marine Department

Twenty-Seven Canadian Government Merchant Marine Ships To Be Sold.

The following was approved by the Governor-General on March 29, and passed as order in council 530:—"The committee of the Privy Council have had before them a report, dated March 23, 1923, from the acting Minister of Railways and Canals, submitting that the President of the Canadian Government Merchant Marine Ltd., has recommended that 27 of the smaller vessels of the company be disposed of, for the following, among other, reasons, as reported to him by the General Manager of the Merchant Marine:—That ships of the 2,800, 3,400 and 3,750-ton type are so small that they cannot successfully compete in overseas trade with vessels of the larger type, and are thus confined to the coasting business; that owing to their construction they are not suitable for Canadian inland trade, being too deep in draft and of the wrong type; that the Canadian coasting trade is limited, and the Canadian Government Merchant Marine have more vessels of the smaller type than they can utilize to advantage; that to try and operate these small ships in foreign trade would result in serious losses, voyage by voyage. The General Manager further reports that included in the 27 vessels recommended for disposal are six of 5,100 tons, which are much too expensive to operate for their earning powers, and that while they are capable of overseas trade in competition with ships of the same tonnage, they are at a disadvantage, and that it is impossible to operate them without loss. The General Manager further reports that the disposal of these 27 vessels will best serve the interests of the Canadian Government Merchant Marine and the country, and, in consequence, the President of the Canadian Government Merchant Marine has requested approval of the sale, by public tender, if satisfactory offers can be obtained, but otherwise by private sale, of the 27 vessels enumerated in schedule hereto attached. The Minister, therefore, upon the advice of the Assistant Deputy Minister of Railways and Canals, recommends that approval be granted accordingly, it being understood that, upon any sale being effected, any notes that have been given to the Government to cover the original purchase price from the Crown of the vessel sold shall be cancelled, and all outstanding liability thereunder be considered as discharged, and the mortgage securing the same also discharged by the Government; the price received from any such sale being paid over by the selling company to the Crown, less all costs incidental to such sale. The committee concur in the foregoing recommendation and submit the same for approval."

Following is a list of the ships mentioned in the schedule to the order in council, giving length, breadth and depth, d.w. tonnage, name of builder, year launched, cost of each ship according to the last advices received by Canadian Railway and Marine World from the Marine Department up to the end of 1921, and the port at which each ship is laid up, if not running:—

Canadian Adventurer: 251 ft. x 43½ ft. x 23; 3,408 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.; 1919; \$715,680; at Port McNicoll, Ont.

Canadian Aviator: 331 ft. x 46½ x 25½; 5,166 d.w. tons; Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.; 1919; \$1,071,000; at Montreal.

Canadian Beaver: 251 ft. x 43½ x 26; 3,973 d.w. tons; Collingwood Shipbuilding Co., Kingston, Ont.; 1920; \$855,348.54; West Indies route.

Canadian Coaster: 251 ft. x 43½ x 26; 3,939 d.w. tons; Collingwood Shipbuilding Co., Kingston, Ont.; 1921; \$709,925; West Indies route.

Canadian Engineer: 251 ft. x 43½ x 24¼; 3,679 d.w. tons; Dominion Shipbuilding & Repair Co., Toronto; 1921; \$630,000; at Tiffin, Ont.

Canadian Farmer: 251 ft. x 43½ x 26; 3,964 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; 1920; \$711,720; at Pacific coast.

building & Repair Co., Toronto; 1921; \$630,000; at Goderich, Ont.

Canadian Raider: 331 ft. x 46½ x 25½; 5,181 d.w. tons; Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.; 1920; \$1,071,000.

Canadian Rancher: 331 ft. x 46 ft. 8 in. x 25 ft. 8 in.; 4,892 d.w. tons; Tidewater Shipbuilders Ltd., Three Rivers, Que.; 1920; \$967,000.

Canadian Rover: 251 ft. x 43½ x 26; 3,920 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; 1920; \$709,925; at Pacific coast.

Canadian Sailor: 251 ft. x 43½ x 26; 3,357 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.; 1919; \$688,185; at Goderich, Ont.

Canadian Sealer: 270 ft. x 38 x 20½; 2,777 d.w. tons; Nova Scotia Steel & Coal Co., New Glasgow, N.S.; 1919; \$583,065; at Halifax, N.S.

Canadian Settler: 331 ft. x 46½ x 25½; 4,918 d.w. tons; Tidewater Shipbuilders Ltd., Three Rivers, Que.; 1919; \$1,020,000.

Canadian Signaller: 251 ft. x 43½ x 26; 3,975 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; 1919; \$814,926.25; at Goderich, Ont.

Canadian Sower: 251 ft. x 43½ x 23; 3,406 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.; 1919; \$715,207.50; at Port McNicoll, Ont.

Canadian Trader: 251 ft. x 43½ x 23; 3,341 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.; 1919; \$684,905; at Midland, Ont.

Canadian Trapper: 331 ft. x 46½ x 25½; 5,054 d.w. tons; Davie Shipbuilding & Repairing Co., Lauzon, Que.; 1920; \$998,400.

Canadian Warrior: 251 ft. x 43½ x 26; 3,995 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; 1919; \$818,975; at Goderich, Ont.

J. A. McKee: 248 ft. x 43 x 25; 3,575 d.w. tons; Swan, Hunter & Wigham Richardson Ltd., Newcastle-upon-Tyne, Eng., 1908; bought from Algoma Steel Corporation, in 1917, for \$500,000, and \$342,600 was spent on repairs and refitting; laid up at Midland, Ont.

Sheba: 290 ft. x 40½ x 20; 3,400 d.w. tons; J. Brown & Sons, Sunderland, Eng.; 1912; on charter.

Thomas J. Drummond: 247 ft. x 43½ ft. x 22 ft. 8 in.; 3,501 d.w. tons; A. McMillan & Sons, Dumbarton, Scotland; 1910; at Midland, Ont.

United Steamships Co. Ltd. has been incorporated under the Dominion Companies Act, with a capital stock of 1,500 shares, without nominal or par value, provided that it shall carry on business with \$7,500, and office at Ottawa, Ont., to own and operate ships and to carry on a general navigation and transportation business. The incorporators are: A. Haydon, J. P. Ebbs, B. Fraser, M. C. Liston and L. Brennan, Ottawa, Ont.

Vancouver Grain Shipments.—During March, 1,418,823 bush. of wheat were shipped by ocean steamships through the Dominion Government elevator at Vancouver, B.C., in 14 ships, of which three, with 529,016 bush., were for United Kingdom ports, one, with 369,600 bush., for Colon for orders, and 10, with 520,207 bush., for Japanese ports.

International Waterways Navigation, Ltd. Bond Issue.

International Waterways Navigation Ltd., which was incorporated recently, with office at Montreal, has authorized capital as follows: preferred stock, \$66,000; common stock, 1,200 shares of no par value, all of which have been issued. It is offering \$50,000 of 7% first mortgage sinking fund bonds, in denominations of \$500 and \$1,000, due March 1, 1933. An annual sinking fund has been provided, beginning one year from the date of issue, of \$5,000, or one-tenth of the issue. The company will purchase its bonds in the open market if obtainable at or below the call prices, otherwise they will be called as follows: from 1924 to 1926, inclusive, at 103 and interest; from 1927 to 1929, inclusive, at 102 and interest, and from 1930 to maturity, at 101 and interest, and they are callable for sinking fund purposes, or as a whole, at prices mentioned. They are offered at 99.

The company owns the s.s. Aragon, which was built at Wyandotte, Mich., in 1896, and is of the well deck type, with steel hull, steam pump wells, electric light, 2 watertight bulkheads and steel boiler house. Her dimensions are: length b.p. 247 ft. 7 in., breadth moulded 42½ ft., depth moulded 17 ft.; tonnage, 1,450 gross, 1,072 net, 2,200 d.w.; capacity, about 75,000 bush. of grain. She is equipped with triple expansion engines, with cylinders 17, 27½ and 46 in. diam. by 36 in. stroke, 650 i.h.p. at 91 r.p.m., and supplied with steam by a Scotch marine boiler, 12½ ft. diam. by 12 ft. long, at 160 lb. under forced draft. The company will operate her between Port Colborne and Montreal, and will also conduct a general brokerage business. The Aragon, while under operation by previous owners, ran ashore at Salmon Point, near Kingston, Ont., Nov. 17, 1921, and was abandoned to the underwriters, from whom she was bought by John E. Russell, Toronto, who salvaged and repaired her. She has been appraised by Walter Lambert, naval and marine surveyor, Montreal, at \$92,000, after allowing for depreciation, and by W. N.

McMaster, marine surveyor, Montreal, at \$103,275. She is insured for \$165,000, payable to the bondholders, in case of total loss, and is also insured against loss of earnings up to \$500 a day, for time lost in case of accident. The company started operations Aug. 28, 1922, and for the 105 days of the 1922 navigation season, its net earnings were \$26,022.04.

The directors are: Capt. C. D. Secord, Toronto, President; John E. Russell, Toronto, Vice President; R. A. Campbell, Montreal, Managing Director; Louis Wolfe, Kendall Morton, Montreal; W. J. Saurin, T. F. White, Port Colborne, Ont.

The Icebreaker Mikula's Mishap.

The following questions were asked in the House of Commons recently, by R. B. Hanson, York-Sunbury, N.B., the answers being given by the Minister of Marine, Mr. Lapointe.

Q. "Is it a fact that the icebreaker Mikula, formerly known as the J. D. Hazen, went ashore at Cap a la Roche, near Quebec, during March?" A. "The s.s. Mikula while proceeding to Quebec on March 13, was overtaken in the narrow channel at Cap a la Roche by a heavy snow squall and grounded."

Q. "Has any investigation been held by the Wreck Commissioners, or anyone else, as to the cause of the stranding of this ship?" A. "No investigation has been held, but the Engineer of the River St. Lawrence ship channel, who was on board the ship at the time, has submitted a full report."

Q. "Who was the captain in charge at the time of the stranding, and when was he appointed?" A. "Capt. John Hearn, appointed master C.G.S. Montcalm, March 25, 1919; on April 15, 1922, he was appointed master to bring the Mikula out to Canada. He took charge of the Mikula again Dec. 16, 1922."

Q. "Has the officer in charge at the time of the stranding been suspended?" A. "No."

Q. "What is the estimated cost of the repairs of the ship now in drydock at Lauzon?" A. "The ship is not in drydock, and as the extent of the damage

is as yet unknown, no estimate of the cost of repairs has been made."

Q. "Did the Government have, during the present season, a supply of coal at Three Rivers for this ship?" A. "A supply of coal for the ship was available at Three Rivers."

Q. "Is it not a fact that if a supply of coal had been on hand at Three Rivers at the time of the stranding, there would have been no necessity for the ship to travel to Quebec for coal and return, a distance of 180 miles, and thereby have avoided the possibility of stranding?" A. "The ship was returning to Quebec, not for the purpose of obtaining a supply of coal, but to make an examination of difficulties that had arisen with the port propeller. Inasmuch as the ship had to return to Quebec for this purpose, it was deemed more advantageous to obtain the necessary coal requirements there, the price per ton being \$8.50, as against a price of \$9.50 per ton by the Dominion Coal Co. at Three Rivers, and a price of \$12 per ton offered by J. H. Giroux. Investigation in the meantime reveals the port propeller as having two broken blades."

Vancouver Terminal Grain Elevator.

The Minister of Trade and Commerce gave the following information in the House of Commons recently, in answer to questions by G. G. Coote, Macleod, Alta.

The following number of bushels of grain were handled by the elevator in 1922:

	Stock on hand Dec. 31, 1921	Receipts	Total handlings
Wheat	822,930	12,085,158	12,908,088
Oats	410	33,004	33,414
Barley	nil	1,823	1,823
Flax	nil	nil	nil
Rye	nil	155,335	155,335
Total	823,340	12,275,320	13,098,660

The total receipts in connection with the elevator in 1922 were \$171,273.02. The total expenditure was \$73,868.59. The elevator total storage capacity is 1,250,000 bush. It was completed Nov. 30, 1916. Its capital cost to Jan. 1, 1923, was \$837,351.71.

Ships Registered in Canada in January and February, 1923.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons.

Canadian Government Merchant Marine Operations, Etc.

Additional Appropriation.—The further supplementary estimates for the year ended March 31, 1923, submitted in the House of Commons recently, contain the following item:—"To increase the amount of loan authorized by vote 139, main estimates, 1922-23. Additional amount required (including Governor-General's warrant Nov. 30, 1922, \$1,000,000), \$1,700,000." Vote 139, main estimates, 1922-23, provided for a loan of \$4,360,720 to Canadian Government Merchant Marine, to be applied in the payment of deficits in operation, and capital expenditure in connection with ships under the company's control.

Sale of Ships.—Full particulars of the 27 ships of the fleet which are to be sold are given on an earlier page of this issue. The following discussion occurred in the House of Commons on April 18:—**MURRAY MacLAREN**, St. John, N.B.: "I wish to refer to an item which appears in the press to the effect that the Government is negotiating with a syndicate of ship owners for the sale of its entire mercantile fleet, and that a condition of these negotiations is that special arrangements should be made on behalf of the syndicate whereby it should carry on especially the business of the transportation of Canadian grain. I therefore wish to ask the acting Minister of Railways if he can state whether negotiations are going on for the sale of the Canadian mercantile fleet; if so, what the conditions of the sale are, and if it is correct that the arrangement will contain a special provision whereby Canadian grain will be accorded special treatment?" **HON. G. P. GRAHAM**: "As the House well knows, the Canadian National Ry. board, with the Government's consent, is offering for sale 27 of the smaller ships. So far as I know, there are no negotiations for the sale of the larger seagoing vessels." **MR. MacLAREN**: "Can the minister state whether arrangements are being made between the Government and the syndicate for the handling of Canadian grain?" **MR. GRAHAM**: "What syndicate? I understood my hon. friend to say that he based that part of his question on the answer to the other part; that is to say, the reply to the question whether arrangements were being made for the sale of the merchant marine. My reply is that so far as I know, there are no negotiations taking place for the sale of the larger ships." **MR. MacLAREN**: "As regards the 27 ships which the minister spoke of, are special arrangements being made for the handling of Canadian grain?" **MR. GRAHAM**: "I cannot say. Up to date, I think, no offer has been made for these ships, and those of smaller tonnage, possibly, would not be suitable for the purpose to which my hon. friend refers."

European Services.—The C.G.M.M. has decided to discontinue its services from Canada to Liverpool and Glasgow. In the meantime, London will be made a port of call for a service to Antwerp, which will be established on the opening of navigation. The service to Cardiff and Swansea will be made fortnightly, with 8,500-ton ships.

Mediterranean Service Urged.—**D. Spence**, Parkdale, Toronto, asked the following question in the House of Commons recently:—"Canada, being dependent for a large quantity of citrous fruits, olive oils, dates, figs, raisins, and similar products shipped from Mediterranean

ports, has the Government considered the establishment of a regular boat service between the Mediterranean ports and Canada, and if so, when will such service commence, and at what intervals will they sail?"

The acting Minister of Railways, **Mr. Graham**, replied: "The Canadian Government Merchant Marine management states that the question of establishing a regular service between the Mediterranean ports and Canada has been very thoroughly considered, and it has been decided that the present is not an opportune time to inaugurate such a service."

A few days later, **Mr. Spence** brought the matter up again, referring to his question, and saying: "I am afraid that questions of this kind do not receive the consideration that they deserve; the answer given in this case simply makes a perfect farce of the whole situation. I did not put the question on the order paper for the purpose of embarrassing the Government. I was not criticizing the Government, nor do I propose to do so now. But knowing something of transportation by land and by water, I feel that a service should be established between Mediterranean and Canadian ports. I believe that Mediterranean ports are anxious to ship to Canadian ports, and importers are desirous of receiving goods from that part of the world through Canadian ports. It is said that we have a great merchant marine today that is doing no business. The answer to my question states that this is not the opportune time to establish such a service. I say that this is the time and this is the opportunity. The spring season is coming on. On account of frosts in California last year, 90% of the lemons imported into Canada this year will come from Mediterranean ports, particularly from Italy. These lemons will have to be brought to Montreal, and shipped inland as far as Calgary and Edmonton, and probably to Vancouver. If a steamship service between Mediterranean and Canadian ports was established, the result would be a benefit to our own Canadian transportation lines and the keeping of the transport business within our country. In the past we have lost a great deal, through breakages and otherwise, in the carriage through United States ports. The congestion at New York is so bad that sometimes cargoes have to wait two weeks before getting a ship to take them to their destinations; or there may be a lapse of a week or two before cars can be got to transport the goods to inland points throughout this Dominion. I feel that some consideration should be given to this question, and I hope the Minister of Railways will consider it with the Canadian Government Merchant Marine management, and if possible establish a service between Mediterranean ports and this country. It is very necessary that we should have such a service. The loss in breakages alone at New York is very considerable, owing to the very heavy traffic and congestion. There is no reason why such a service cannot be established. It would not only help to make the Government merchant marine a better paying proposition than it is today, but help to build up our national railway lines by keeping the money in our own country."

The Minister of Trade and Commerce, **Mr. Robb**, said: "I understand that my

hon. friend's objection is that Canada has done nothing to put on a service or subsidize a service between Mediterranean ports and Canada, and his argument largely is that this service should be established because Canada imports from countries along the Mediterranean. I submit that Canada does all that it is possible to do to encourage and subsidize services from Canada to countries that buy Canadian products. If there are countries desiring to sell their products to Canada, I think it should be up to them to see that they establish a service to carry those products to this country. We have a subsidized service between the West India Islands and Canada carrying fruits such as come from the Mediterranean. We have also a subsidized service between Australia and Canada, and Australia also produces products similar in a very large degree to the products of the Mediterranean region. We have a service between South Africa and Canada, and South Africa, one of the sister dominions, also produces commodities similar to those coming from the countries along the Mediterranean. I realize the importance of doing all that we can to establish connections that will give as cheaply as possible to our own people the products that we require and do not produce in this country, but we in Canada are more interested in encouraging services from Canada to countries that buy our products than encouraging services from countries exporting to Canada. It seems to me it would be good business upon the part of those countries themselves to establish better trade communications with Canada if they desire to put their products into this country."

Officers of Steamships.—The following chief engineers of steamships have been appointed in addition to those mentioned in previous issues:—Canadian Adventurer, **W. Morrison**; Canadian Coaster, **J. Still**; Canadian Engineer, **E. Pattinson**; Canadian Pathfinder, **C. B. Scott**; Canadian Sailor, **S. Stanley**; Canadian Sower, **G. Stephen**; Canadian Trader, **J. A. Burgess**.

The s.s. **Canadian Pioneer**, which was damaged by fire at Auckland, New Zealand, in March, has been repaired there. The cargo, which consisted chiefly of wool for Montreal, was unloaded and sold by auction.

Information Wanted.—The House of Commons passed an order recently, on motion of **H. H. Stevens**, Vancouver Center, B.C., for a return showing the earnings and expenditures of the following ships on the trips set forth below:—Canadian Winner, leaving Vancouver Aug. 8, 1922, for the Orient, returning Oct. 12, 1922; Canadian Inventor, leaving Vancouver Sept. 28, 1922, for the Orient, returning Nov. 20, 1922; Canadian Britisher, leaving Vancouver May 13, 1922, for Australia, returning Oct. 4, 1922; Canadian Traveller, leaving Vancouver July 13, 1922, for Australia, returning Dec. 1, 1922; Canadian Farmer, leaving Vancouver July 18, 1922, for California points, returning Aug. 12, 1922; also from Vancouver, Aug. 14, for California points, returning Sept. 13, 1922. Canadian Observer, leaving Vancouver July 7, 1922, for California, returning Aug. 23, 1922; also Aug. 8, 1922, for California points, returning Sept. 24, 1922.

Tank Cars Transportation.—**J. Archambault**, Chambly and Vercheres, asked

in the House of Commons recently:—"What ships were used to transport tank cars to Russia during the war? Were any ships of Canadian Government Merchant Marine, Ltd., chartered to Eaton & Nelligan Co., shipping agents, for that purpose? Was a contract signed between that company and the Canadian Government Merchant Marine? If not, why? If so, by whom was the contract signed, and on what authority? What was the total loss suffered by Canadian Government Merchant Marine through that transaction?" The Minister of Trade and Commerce replied: "No information."

Montreal Sailings.

London and Antwerp service:—Canadian Victor, May 9; Canadian Commander, May 23; Canadian Planter, June 6; Canadian Conqueror, June 20; Canadian Victor, July 4.

Cardiff and Swansea service:—Canadian Challenger, May 4; Canadian Mariner, May 18; Canadian Explorer, June 1; Canadian Leader, June 15; Canadian Challenger, June 29.

New Zealand and Australia service:—Canadian Pioneer, May 26; Canadian Cruiser, June 26; Canadian Constructor, July 28.

St. Kitts, Antigua, Barbados, Trinidad and Demerara service:—Canadian Squatter, May 5; Canadian Carrier, May 16; Canadian Otter, May 30; Canadian Runner, June 13; Canadian Squatter, June 27.

Hamilton, Nassau, Kingston, Belize, Bermuda, Bahamas, Jamaica, Br. Honduras service:—Canadian Forester, May 3; Canadian Fisher, May 24; Canadian Forester, June 14; Canadian Fisher, July 5.

St. John's, Nfld., via Charlottetown:—Canadian Sapper, May 5; Canadian Sapper, May 26; Canadian Sapper, June 16; Canadian Sapper, July 7.

Vancouver, B.C., Sailings.

Australasian service:—Canadian Inventor, April 15; Auckland, Sydney, Melbourne, Adelaide: Canadian Skirmisher, April 25; Sydney, Melbourne, Adelaide: Canadian Traveller, May 25; Auckland, Sydney, Melbourne, Adelaide: Canadian Scottish, June 20; Sydney, Melbourne, Adelaide.

Oriental service to Yokohama, Kobe, Shanghai:—Canadian Freighter, April 30; Canadian Prospector, May 30; Canadian Transporter, June 30.

Indian service to Bombay:—Canadian Winner, June 20.

The Detroit & Cleveland Navigation Co., as stated in previous issues, is having two steamships built at Cleveland, Ohio, and Detroit, Mich., for express service on its Detroit and Buffalo Division. They will have 625 staterooms for passengers, and accommodation for 300 officers and crew. The ship's dimensions will be: length 535 ft., breadth of hull 58 ft., breadth over all 98½ ft., draft, loaded, 15 ft.; cargo capacity 1,000 tons; speed 21 miles an hour. The hull, including topside, main and orlop decks, and all deck houses, will be of steel, and the double bottom will be divided into 16 watertight divisions. The hold will be divided into 11 compartments, by watertight bulkheads. Electric service elevators, refrigerating plant, electric ventilating, air washing and cooling machines, and ducts extending throughout the hull, will be provided, as well as electric lighting plant. The sleeping accommodation will be provided on three decks, each stateroom having two berths, and will be equipped with water pressure service, electric lights and telephones. All parlor rooms will have twin beds, private bathroom, etc., and those on C deck will have private balconies. The propelling machinery will consist of 3-cylinder compound engines of 10,000 h.p., supplied with steam by 6 single ended fire tube boilers under induced draft. The ships were designed by Frank Kirby, Naval Architect.

Canadian Shipments Through Panama Canal.—The tonnage of cargo passing through the Panama Canal from the Pacific coast to the Atlantic coast, during February, included 61,322 originating in Canada, compared with 40,400 in Feb., 1922, and 3,509 in Feb., 1921.

Wreck of the Steamship Alaskan.

A. W. Neill, Comox-Alberni, said in the House of Commons, April 9:—"I would like to ask the Minister of Marine if he can give us any information as to when the report on the investigation into the wreck of the s.s. Alaskan is likely to be brought down. The investigation took place more than two months ago, and the report is not likely to be voluminous. Apart from this investigation, sufficient has been brought out in connection with the wreck of the Alaskan, and three other wrecks which have unfortunately occurred since then, two of them with loss of life, to show that the representations made by myself and by many public bodies in the west are well founded, namely, that the life saving appliances or provisions out there are not adequate. I would like to ask the minister what steps he is taking or contemplates taking to deal with this matter? Time is slipping away; the session will soon be over, and this is a very important matter to the people on the coast of British Columbia."

The Minister of Marine, Mr. Lapointe, replied:—"The report of the Wreck Commissioner who investigated the wreck of the Alaskan has not been received. My information is that the stenographer who took the evidence had been ill, and was unable to transcribe his notes; then, the Commissioner has been ill. But we are informed that the report will be submitted in the course of a few days. Meanwhile, this matter has been brought to my attention on several occasions by my hon. friend and by various bodies in British Columbia, and I think that something should be done to improve the conditions there. I have decided that something should be done this year, first, by establishing small wireless telephone stations in the various lighthouses, so that communication may be had at any time with the life saving stations at Bamfield and Tofino. It has also been decided that the Department shall have a station at Bamfield during the winter and a ship suitable for the work which shall be equipped with all the necessary life saving appliances and be in communication with all the lighthouses. We have in the Fisheries Department two or three boats, any one of which I think would serve the purpose. It is also intended to place notice boards alongside the telegraph lines running along the shore, to indicate the nearest place where survivors from a wreck can find food and shelter. My hon. friend has suggested to me at various times that boats over 100 tons register should be subject to the same inspection as boats of 150 tons and over, and that the Shipping Act be amended accordingly. That matter is engaging the Department's attention."

The following questions were asked in the House of Commons, on April 12, by L. J. Ladner, Vancouver, B.C., and answered by the Minister of Marine, Mr. Lapointe:—

Q. "Has the Government received a report regarding the wreck of the s.s. Alaskan, with the loss of all its crew, near Pachena Point, on the Pacific coast, in January last?" A. "Yes."

Q. "Has the Government, on account of economy or otherwise, reduced by 50% or any other amount, the strength of the unwatched lights on that coast or any part of it and thereby reduced the visibility of the said lights? If such or any other reduction has been made, were the changes published to master

mariners, so that they would not be fooled by the changed lights?"

A. "No."

Q. "Does the Government pay the Pacific Salvage Co. \$30,000 a year or any other amount to keep up steam on board the s.s. Algerine?" A. "The Government pays the Pacific Salvage Co. \$10,000 a year to maintain a wrecking plant at Victoria, for service on the B.C. coast."

Q. "Is the s.s. Algerine a seaworthy vessel, suitable for the purpose for which it is employed by the Government?" A. "Yes."

Q. "Did the United States s.s. Snohomish rescue the crew of the s.s. Tuscan Prince, which ran on to the coast of British Columbia?" A. "No. The Tuscan Prince's crew were rescued by the crew of the Government life boat stationed at Bamfield Creek."

Q. "Is it the Government's intention to provide proper and efficient coast protection for British Columbia, by having an ocean going tug similar to the s.s. Snohomish, or by having any other suitable class of tug, for assisting the mercantile marine in storms or times of peril on the sea?" A. "See statement of Minister of Marine on April 9." This is given above.

Canadian Railway and Marine World received, on April 19, from Dominion Wreck Commissioner Capt. L. A. Demers, a copy of the judgment given on Feb. 12, as follows:—In the investigation held at Vancouver, B.C., Feb. 1 and 2, and at Victoria, B.C., Feb. 8 and 9, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. A. P. W. Williamson and J. T. Edmund, as nautical assessors, into the loss, with all hands, of the British s.s. Alaskan, near Pachena Point, on the west coast of Vancouver Island, Jan. 2, the court finds that, for the reasons stated in an annex to its report, the total loss of the Alaskan was, without doubt, due to the violence of the southwest gale then raging. There was, however, not sufficient evidence to enable the court to arrive at a conclusion as to the particular manner in which the ship was lost, or the specific cause, if any, apart from the weather conditions, which led to her loss.

Marine and Fisheries Department Salaries.—Estimates for the year ending March 31, 1924, submitted to the House of Commons recently provide for the following salaries to the principal officials of the Department:—Deputy Minister, \$6,000; Assistant Deputy Ministers at \$4,500, \$9,000; Chief Naval Architect, \$5,400; Chief Engineer, \$5,400; Commissioner of Lights, \$5,100; Chairman, Steamship Inspection Board, \$5,100; Chief Hydrographer, \$4,800; Director, Radio Service, \$4,500; Dominion Wreck Commissioner, \$4,200; Chief Tidal and Current Surveyor, \$4,200; Director, Pilotage, \$4,155; Accountant, grade 5, \$4,020; Purchasing Agent, \$4,000; Superintendent of Agencies, \$3,960; Principal Steamship Inspectors, 2 at \$3,960, \$7,920; Assistant Commissioner of Lights, \$3,840; Hydrographers, 1 at \$3,800, 1 at \$3,360, \$7,160; Superintendent, Masters and Seamen, \$3,650; Assistant Chief Engineer, \$3,480; Superintendent, Harbor Commission, \$3,400; Division Superintendent, Radio Service, \$3,240; Assistant Naval Architect, \$3,180; Senior Inspector, Fog Alarms, \$3,180.

Cattle Shipments to Great Britain.

Owing to the removal of the embargo on the shipment of Canadian store cattle to Great Britain, a heavy demand has arisen for space. While the embargo has been in force, shipping companies have not had their ships fitted for the transportation of cattle, the trade having become practically non-existent. Though considerable preparation has been made for a resumption of the trade, no extensive refit of ships has taken place, only such as has been necessary to handle shipments which had been booked in advance. Many shippers, apparently, have not realized the necessity for installation of special fittings for handling cattle, and the heavy expense involved; therefore, cattle are awaiting shipment, for which no space is available, and shipping companies are averse to incurring the expense of fitting their ships for the cattle trade, until they are convinced that it is likely to be reasonably continuous, and not spasmodic. In response to a deputation on April 16, the Minister of Agriculture stated that the resumption of a shipping trade after a suspension of practically 30 years, was naturally attended by some little difficulty, but he had been assured that though there might be a slight shortage of shipping space for a time, this would be remedied after May, when shipping companies would have had time to arrange ample space for, possibly, a larger number of cattle than might be offered for shipment.

The Anchor-Donaldson Line is reported to have ordered from Vickers Ltd., Barrow-in-Furness, Eng., a large cargo and cattle ship, equipped with internal combustion engines, for the Canadian cattle trade. It is said that the propelling machinery will be of the 4-cycle solid injection type, developing about 3,000 h.p. on a single shaft, and that the ship will be 400 ft. long, with a carrying capacity of about 8,000 tons of cargo, as well as several hundred cattle.

R. FORKE, Brandon, Man., leader of the Progressive party, said in the House of Commons April 16:—"I should like to ask the Minister of Agriculture a question. I notice an interview in the Manitoba Free Press, given by W. H. Forster, of England, who came to Canada from England to purchase cattle. He intended purchasing about 2,000; he found when he came that all available space for ocean shipments had been contracted for. It had been broadcast in England that Canada would have for sale this spring about 25,000 or 30,000 cattle suitable for the British trade, and that the ocean freight would be about \$15 each. Now when a purchaser comes here, he finds all, or nearly all, space contracted for, and the ocean rate is \$22.50 or \$25. In view of the fact that the Department has been urging farmers during the winter to have cattle ready for the market, had the Department any knowledge that a condition such as exists might occur?"

The Minister of Agriculture, Mr. MOTHERWELL, replied:—"My Deputy is preparing a statement for the press that covers the whole question; it gives the sailings of all the steamships for the next four weeks from Montreal and St. John and shows that there will be a shortage of space for the first two weeks in May, that on the third week space will be equal to the demand, and that on the fourth week it will be greater than the demand. At present the space available

is less than the demand. In a general way we had some information with regard to the number of cattle that would be shipped, but it was very difficult to get any exact figures. With the information furnished to us we have kept the shippers in Montreal acquainted with the requirements of this movement. That is all I can say in a verbal statement."

MR. FORKE: "Is the minister aware of the fact that, by the end of May, the proper time for the shipment of this class of cattle is nearly past and space will be of little benefit to the shippers after that date?"

Mr. MOTHERWELL: "Does my hon. friend think we should carry shipping space in our vest pocket ready for immediate requirements? There were two schools of thought apparent in Canada in connection with cattle shipments to Great Britain after the removal of the embargo: One was to deprecate the removal, and to point out that there would be nothing much going over anyhow; the other was to exaggerate the movement. Between the two it was pretty difficult for us to size up the situation. We kept the cattlemen fully supplied with information we gathered in regard to the situation. You cannot restore a trade that has been suspended for 30 years and expect to find everything ready for its resumption without some disturbance. Therefore, it is quite natural that there should be a shortage of space for a brief period, but, as I have already indicated, in a few weeks there will be more than sufficient accommodation to meet the demand."

Bay Line Steamships Ltd. Vessels.

The 10 steamships which interests allied with the Ogilvie Flour Mills Co., Montreal, bought from the French Government, through the Anderson Co. of Canada, recently, as mentioned in a previous issue, are each owned by a separate company bearing the same name as the ship, and they will be operated by Bay Line Steamships Ltd., of which Capt. H. N. McMaster is General Manager, J. D. Colvin Assistant Manager and R. W. Shepherd, chief clerk, Montreal. In addition to the 10 ships bought from the French Government, the Webster Steamship Co.'s three steamships, Eric W., Richard W., and Stuart W., have been acquired, and have been renamed in accordance with the company's practice, and are also separately owned in the same way as the others. Following is a list of the ships, with such details as are available:—

Ashbay, formerly Tourneur, built at St. Nazaire, France, in 1919, of steel; length 216.5 ft., breadth 34.1 ft., depth 15.5 ft.; tonnage 1,240 gross, 570 net; equipped with 4-cylinder engines, 16, 16, 30 and 30 in. diar. by 19 in. stroke, driving twin screws.

Beechbay, formerly Riveur, built at St. Nazaire, France, in 1919; length 216.4 ft., breadth 34.1 ft., depth 15.6 ft.; tonnage, 1,129 gross, 627 net; equipped with 4-cylinder engines, 16, 16, 30 and 30 in. diar. by 19 in. stroke, 47 n.h.p.

Birchbay, formerly Eric W. and Harry E. Packer, built at Cleveland, Ohio, in 1882; length 224.7 ft., breadth 35.4 ft., depth 17.1 ft.; tonnage, 1,183 gross, 810 net; equipped with fore and aft compound engines, 26 and 48 in. diar. by 42 in. stroke, 550 i.h.p.; M. Cossette, master; D. Vezina, chief engineer.

Cedarbay, formerly Vernon.

Elmbay, formerly Nantes, built at Alloa, Scotland, in 1917, and owned formerly by La Cie. des Chemins de Fer Paris-Orleans Societe Maritime aux Transports, Nantes, France; length 305.3 ft., breadth 42.7 ft., depth 21.5 ft.; tonnage, 2,510 gross, 550 net; equipped with triple expansion engines, 21, 34 and 56 in. diar. by 36 in. stroke, 226 n.h.p.

Maplebay, formerly Sotteville.

Oakbay, formerly Marineur.

Palmabay, formerly Richard W., and Pueblo, built at Milwaukee, Wis., in 1891, and rebuilt there in 1913; length 228 ft., breadth 36¼ ft., depth 19 ft.; equipped with fore and aft compound engines, 23 and 46 in. diar. by 42 in. stroke, 500 i.h.p.; tonnage, 1,493 gross, 905 net; J. Toupin, master; P. Brunelle, chief engineer.

Pinebay, formerly Rouvray.

Poplarbay, formerly Dressard.

Sprucebay, formerly Sottier.

Willowbay, formerly L'Oissel.

Yewbay, formerly Stuart W. and Collinge, built at Cleveland, Ohio, in 1881; length 251 ft., breadth 38 ft., depth 21¼ ft.; equipped with fore and aft compound engines, 21 and 44 in. diar. by 48 in. stroke, 700 i.h.p.; tonnage, 1,601 gross, 1,280 net; E. Tremblay, master; A. Gagne, chief engineer.

The following captains and chief engineers have been engaged for the 10 steamships, acquired from France, but at the time of writing had not been allocated to their respective ships:—Captains, E. Legault, C. Martin, L. Marchand, E. A. Laundry, J. Cochrane, J. Mullin, G. Duguay, C. H. Casselman, J. R. Montgomery and R. Houde; chief engineers, G. Verrier, H. Fugere, S. Gruzelier, B. Lappin, J. B. Anderson, J. H. Bennett, J. B. McLaren, L. Black, A. H. Ashton and H. Johnston:

Increased Elevator Capacity at Montreal.—A press report states that a Dominion order in council has been passed approving the erection of a grain elevator with an initial capacity of 2,500,000 bush. on the Tarte pier, by the Montreal Harbor Commissioners; that the elevator is being designed with an ultimate capacity of 10,000,000 bush.; that the plans provide for 4 travelling marine towers, for unloading from lake ships, and 4 unloading points for railway cars; that 5 berths will be provided for loading ocean ships, each berth having facilities for loading 30,000 bush. an hour, and that grain will be received from 24 cars at the rate of 48,000 bush. an hour, from 4 tracks, and from lake ships at the rate of 60,000 bush. an hour. It is stated that plans are under consideration for increasing the capacity of the G.T.R. elevator at Windmill Point, which is being taken over by the commissioners, to 1,125,000 bush.

Lumber Importations for Welland Canal.—E. J. Garland, Bow River, Alta., who had evidently been loaded up with wrong information, asked in the House of Commons recently: "Did the Montreal Harbor Board order 5,000,000 ft. of lumber, from the United States, during 1922 for use on construction work in connection with the Welland Canal, and if so, why was not this lumber ordered from British Columbia?" The Minister of Marine, Mr. Lapointe, answered "No," and the acting Minister of Railways, Mr. Graham, also said "No," adding, "No lumber for use on construction work in connection with the Welland Canal was purchased by the Montreal Harbor Board."

Enquiry Into Alleged Combine Among Great Lakes Steamship Owners.

At the conclusion of the Toronto sittings, March 23, the commission, consisting of S. J. McLean, Assistant Chief Commissioner, Board of Railway Commissioners, chairman; Brig.-Gen. T. L. Tremblay, and Levi Thomson, adjourned to Ottawa, where sittings were resumed, to hear arguments of counsel representing the various parties concerned. H. J. Symington, counsel for the commission, outlined the importance of transportation in the economic life of the country, and pointed out that as the evidence was only given under compulsion of a subpoena, it was of high value. He submitted that the ten charges made by the Government for investigation, had been practically admitted, except that the rates fixed were high and unjustifiable. He contended that it was shown that a combine existed, as meetings were held to establish rates, either on account of then existing conditions, or on account of U.S. railway rates, either reason being sufficient to establish the existence of a combine. The part played by shipping brokers was also reviewed, both concerning the chartering of space and the alleged compulsory insurance. The Standard Shipping Co.'s position was especially emphasized, counsel stating that it could grant space, or refuse it, divert cargo to a particular port, hold it for a shipper, and create congestion, though he would not say that this had been done; in fact, he held that the company had all the machinery necessary for a combine. He pointed out that remedial measures rested with the commission, and suggested for consideration, whether brokers should be permitted to participate in cargo or alternate insurance, whether steamship companies should have one agent in Winnipeg, so that chartering could be done directly between the shipper and the carrier, and the advisability of vesting in the Governor in council the power to suspend the coasting laws, with the view of bringing about lower rates.

Aime Geoffrion, K.C., for Canada Steamship Lines Ltd., admitted that there was an agreement to fix grain freight rates between May and Sept. 1922, but held that this was merely temporary, from week to week, or day to day, and ended in September. There was no intention, in such agreement, of creating a monopoly, and the parties to it were keen competitors. He claimed that there was no prejudice to the shippers from the rate agreement, and as proof of this, he mentioned that the Maple Leaf Milling Co.'s complaint was raised in the autumn, when there was no rate agreement. G. A. Towers, K.C., Britton Osler, K.C., and Isaac Pitblado, K.C., argued on behalf of Canada Steamship Lines Ltd., Mathews Steamship Co., and Standard Shipping Co., respectively, more or less along the same lines, with special emphasis on the points in which their clients were more immediately concerned, according to the evidence. For the Standard Shipping Co., it was argued that the exclusive contract with Canada Steamship Lines was in the interest of both shipper and steamship owner, and that the remuneration of the broker, by a commission on insurance, was the only practicable method of paying him, and that brokers had, during the war, given evidence of their willingness to accept another method of payment, but the

alternative broke down. By allowing a fifth of a cent a bushel as remuneration for the ship broker, the total saving possible by the abolition of the method of payment by commission on insurance, was estimated, on all shipments of grain through Canadian channels, to amount to \$30,000 in 1922, or 1c. on every 37 bushel. G. A. Towers, K.C., representing Canada Steamship Lines, suggested that agreements between steamship companies, as to rates, be filed with the Board of Railway Commissioners, or some similar body, instead of providing for a rate control by a commission, as had been suggested by F. W. Grant, representing the Great Lakes Transportation Co.

Arguments were closed April 12, and the sittings were adjourned for the commission's consideration of its report.

Shortage in Grain Shipments to England.

G. G. Coote, Macleod, Alta., said in the House of Commons recently:—"I wish to draw the Government's attention to a report which has appeared in the press to the effect that complaints have been made in England, by importers of grain shipped from Montreal, that the shipments were short in weight, and that a commission is likely to be appointed by the Government here to enquire into this matter, and to ask the Government whether they have received this complaint, and if so, will a commissioner be appointed to conduct an enquiry?"

The Minister of Marine, Mr. Lapointe, replied:—"The Department's attention was called, in December last, to a complaint made by the Liverpool Corn Trade Association directors respecting a shortage of grain shipped from Montreal. The matter was taken up with the Montreal Harbor Commission, and an officer of the Department was entrusted with the task of making an investigation. We are convinced that if there is any shortage, no blame can be laid on the port of Montreal. We sent the report of the investigation to the High Commissioner of Canada in London, who transmitted it to the Liverpool Corn Trade Association. The latter is not quite satisfied because that investigation was made by a Government Department. They want a more impartial investigation, so to speak, and that is what the High Commissioner has stated in a letter written to the Department. We have answered that we regret that this investigation has not satisfied them; but as the matter is very important, we are going to see that another is made under the Inquiries Act. I am considering this question in conjunction with the Minister of Trade and Commerce. Let me add that the Montreal harbor commissioners invite the investigation; they will be only too pleased that it should be made, and, indeed, they were prepared to carry it out themselves. They contend that if anything is wrong, it is not on their end of the transportation process. An announcement will be made shortly."

The C.P.R.'s Oriental Silk Traffic.—The amount of raw silk imported into Canada and the U.S.A., from Yokohama, Japan, during the latter half of 1922, was 180,388 bales, of which C.P.R. steamships carried 40,154.

New Steamships for the Great Lakes.

The steamships Glenbuckie, Glencassie and Glengeldie were launched at Wallsend-upon-Tyne, Eng., by Swan, Hunter & Wigham Richardson Ltd., March 20, March 29 and April 3, respectively, and the s.s. Glenburnie at Glasgow, Scotland, April 6, for the Playfair interests. They have the following dimensions: length b.p. 252 ft., breadth 42½ ft., depth moulded 20½ ft. They are built to the highest class of the British Corporation Registry, and have raised quarter deck 100 ft. long by 4 ft. deep, and fore-castle 35½ ft. long. Water ballast will be carried in the fore-peak and in the double bottom fore and aft. There will be 7 cargo hatches, electric lighting throughout, and steam heating in all living accommodation. The engines, of the inverted marine triple expansion type, are placed at the after end, and supplied with steam by single-ended boilers at 180 lb. These ships are the first three of an order for 10 placed by the Playfair interests, details of which were given in Canadian Railway and Marine World for February, page 91.

The Eastern Steamship Co.'s s.s. Robert W. Pomeroy, the launching of which, by Earle's Shipbuilding & Engineering Co., Hull, Eng., was announced in our last issue, loaded coal at Swansea, Wales, in the early part of April, and is expected to arrive at Montreal about May 1. The s.s. Edwin T. Douglass was launched by Napier & Miller Co., Glasgow, Scotland, April 7, and was expected to sail for Montreal about the middle of the month. The construction of the remaining 8 ships is proceeding satisfactorily, and all are expected to arrive at Montreal during May. The names of the ships, and the plants at which they are being built, are as follows:—Edwin T. Douglass, Frank B. Baird, Napier & Miller Co., Glasgow, Scotland; William H. Daniels, Albert C. Field, Furness Shipbuilding Co., Haverton-on-Tees, Eng.; Nisbet Grammer, Watkins F. Nisbet, Cammell, Laird & Co., Birkenhead, Eng.; Judge Hart, Norman P. Clement, J. Samuel White & Co., Cowes, Isle of Wight, Eng.; Robert W. Pomeroy, John J. Rammacher, Earle's Shipbuilding & Engineering Co., Hull, Eng.

Keystone Transports Ltd. s.s. Keybar was launched by Smith's Dock Co., South Bank, Eng., at the end of March. She is classed to Lloyd's register and has the following dimensions: length 250 ft., breadth 42½ ft., depth 19¼ ft.; d.w. capacity 2,300 tons, on Welland Canal draft. She is equipped with triple expansion engines, with cylinders 16, 26 and 44 in. diam. by 33 in. stroke, and supplied with steam by two boilers.

Hudson Bay Trip.—The C.P.R. s.s. Montreal has been chartered to the Hudson Bay Tourist Syndicate, Winnipeg, of which J. L. Thomas is Secretary, to convey a party of about 350 persons from Canadian and U.S. points to Hudson Bay, sailing from Montreal Aug. 1, calling at St. John's, Nfld.; Indian Harbor, Labrador; and Port Nelson and Fort Churchill, Hudson Bay. The trip will last 30 days.

Naval Changes at Esquimalt, B.C.—Lieut. C. T. Beard, naval chief of the Esquimalt dockyard, has been promoted to Lieut.-Commander. Lieut. A. R. Pressey, of H.M.C.S. Patrician, has been transferred to H.M.C.S. Naden. Lieut. V. S. Godfrey has been appointed to H.M.C.S. Patrician.

Ocean, Coast, Lake and River Steamship Officers for 1923.

The following appointments made by Canadian navigation companies for their steamships and tugs, have been reported to Canadian Railway and Marine World, in addition to those mentioned in our last issue. The first column shows the names of the ships, the second those of the captains, and the third those of the chief engineers.

Aube	Aube Steamship Co., Montreal.	E. St. Germain

Canada Steamship Lines Ltd. was defendant in an action at Quebec, Que., recently, brought by the Corporation des Obligations Municipales Ltée., Quebec, for \$101,000, in connection with the placing of Canada Steamship Lines' bonds for about \$3,000,000 last year. The plaintiff claimed that it was given exclusive privilege in handling an issue of \$3,609,200 bonds, which were to be disposed of by June 1, 1922. In April of that year it was notified that the company had decided not to proceed with the sale under the conditions of the agreement, and plaintiff claimed that in the meantime the financing had been done in New York. At that time, some \$300,000 had been disposed of, and plaintiff anticipated no difficulty in carrying out the agreement. It was claimed that Canada Steamship Lines was to receive 95 for the bonds, 5% being for handling the issue, and in addition plaintiff was to receive \$10,000. Evidence for the defendant showed that there were other agreements apart from those mentioned by plaintiff, for which, the company had been quite satisfied to accept \$6,000 in settlement. Further time was allowed plaintiff to enter pleas and for defendant to answer, and it is not expected that judgment will be delivered until some time in April.

Tax on Immigrants.—Quebec Harbor Commission proposes to impose a tax of \$1 on adults and 50c. on children, landing at the port. It is stated that the object is to help defray growing expenditures, that the imposition of such a tax is following the example of other ports in different parts of the world, and will have no effect on intending immigrants. It is claimed that the charge may act as a discrimination against the port, but it is believed that such a small tax will have no appreciable effect. A bylaw putting the tax into force has not at the time of writing, April 17, been approved by the Dominion Government.

Coal Carrying for Canadian National Rys.—Senator Bennett enquired in the Senate on April 17:—"What contracts had been let, if any, for carriage of coal by water for Canadian National Rys.? If any contracts have been let, to whom, and the rates agreed to be paid per ton for carriage of coal?" Senator Dandurand replied: "The Canadian National Rys. have no contracts at present for carriage of coal by water."

Loss of Italian Steamships.—The Italian s.s. Giulia, which was abandoned at sea about March 20, and left derelict, has been sunk by the U.S. coastguard cutter Seneca, as a menace to navigation. She is the fourth Italian steamship to have been lost at sea recently under similar circumstances, the others being the Montegrappa, Montello and Montenesio. Three of the four were loaded with grain.

Toronto Harbor Commission Membership.—As stated in Canadian Railway and Marine World for April, R. S. Gourlay, who was appointed several years ago by the Dominion Government as one of the commissioners, on the Toronto Board of Trade's recommendation, has been anxious for some time to retire, and wrote his resignation to the Chairman of the Commission, who forwarded it to the Board of Trade, the council of which passed a resolution unanimously recently, saying that Mr. Gourlay had filled the position to the Board's satisfaction; extending the Board's thanks to him; recording the council's utmost confidence in his ability and integrity, and urging him to reconsider his decision, withdraw his resignation in the interests of the harbor improvement work, and continue to serve, as a public spirited citizen, in the carrying on of the undertaking. Mr. Gourlay has acceded to the request.

The World's Shipbuilding.—Lloyd's report on shipbuilding for the first quarter of 1923, shows that 2,860,072 tons were under construction throughout the world on April 1, of which 1,492,138 tons, or 52.2%, were in Great Britain and Ireland; 173,762 tons, or 6.1%, in the U.S., and 1,194,172 tons, or 42.7%, in other countries. There was a slight increase in tonnage under construction in Great Britain and the U.S., over the previous quarter, but a decrease in the world's total, of about 100,000 tons. Germany had 343,027 tons under construction on April 1, or 12% of the world's total, a decrease of about 70,000 tons from the previous quarter.

Lake Superior Navigation Safeguards.—The Minister of Marine stated in the House of Commons recently, in answer to an enquiry, that the C.G.S. Lambton was lost last spring, with all on board, while attempting to place the lightkeepers in their stations on the north shore of Lake Superior for the season's operations. The tug Reliance was not wrecked last autumn while attempting to remove these lightkeepers from their stations, at the close of the season's operations. Resolutions had been received from public bodies at Sault Ste. Marie, recommending certain safeguards to navigation on Lake Superior, and were receiving consideration.

Closing Date for U.S. Locks at Sault Ste. Marie.—Under U.S. War Department authority, the U.S. locks in the Sault Ste. Marie canals will be closed to shipping for the season on Dec. 14 in each year, at 6 p.m. eastern standard time. Thereafter, dismantling for repair purposes will be begun immediately and no further lockages will be possible. Owners and masters are warned that final trips each year, between upper and lower lake ports, must be so timed that their ships will reach the locks prior to the limiting date and hour specified.

Proposed Canadian Customs Officer at New York.

L. J. Ladner, Vancouver South, said in the House of Commons recently:—"A dispatch has come from British Columbia dealing with the question of a customs officer at New York. It quotes Mr. Oliver, the Premier of British Columbia, as saying that 'when he drew the attention of Premier King and the Minister of Finance, to the fact that duty was being collected on goods going from eastern Canada to British Columbia, they were astounded. The existing customs regulations laid it down that Canadian goods trans-shipped in a foreign port, unless under supervision of a Canadian customs officer, had to pay duty on entry into Canada. Yet, when British Columbia asked for the establishment in New York of a customs officer, the application was refused.' I want to ask if, in fact, the Government have refused the application for a customs officer at New York, because I should like to say, this is a question in which public bodies, boards of trade and so on, at the coast, are greatly interested, and I understood the Government had the matter still under consideration, and perhaps favorable consideration. This is a statement by the Premier of British Columbia."

The Minister of Customs, Mr. Bureau, replied:—"An application has been made to place a customs officer at New York, to look after the traffic that goes via the ocean and the Panama Canal. This matter has been under the consideration of the Department, and while the Department has not decided definitely, it feels inclined to refuse the application, because this would divert traffic towards the United States, and all the Canada railways would get out of it would be the haul from the point of departure to the boundary, the whole of the railway haul to the sea and the whole of the ocean freight would go to the United States."

A Vancouver press dispatch of April 18 stated that Gosse-Millerd Packing Co. there had received a telegram from the Minister of Customs, at Ottawa, as follows:—"Under present regulations and conditions, canned salmon shipped from British Columbia to Halifax via New York and Panama Canal, would not be admitted to Halifax without payment of duty."

Public Works Marine Contracts.—The Dominion Public Works Department has awarded contracts as follows:—Feb. 6, construction of shed and searchlight platform in Naval barracks, Esquimalt, B.C., to Williams, Trerise & Williams, Victoria, B.C., for \$6,480; Feb. 23, docking, renewals, repairs, painting, etc., to dredge P.W.D. 117, to Toronto Drydock Co., Toronto, for \$10,675; March 5, construction of complete hopper dump scow, 135 cub. yd. capacity, to be known as P.W.D. No. 311, to be completed and launched in the west arm of Kootenay Lake, near Nelson, B.C., to D. C. Fraser, Nelson, B.C., for \$4,892.

Burrard Elevator Co. Ltd. has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital and office at Vancouver, B.C., to own and operate grain elevators in Saskatchewan, Alberta or British Columbia, also ships and rolling stock of all kinds. The incorporators are: A. A. Gray, North Vancouver, B.C., W. E. Brewster, T. H. Roedde, A. Bull, and R. H. Tupper, Vancouver, B.C.

Welland Ship Canal Construction.

T. H. Thompson, Hastings East, Ont., asked the following questions in the House of Commons recently, the answers being given by the acting Minister of Railways and Canals, Mr. Graham:

Q. "Have all the sections of the Welland Ship Canal been placed under contract?" A. "No."

Q. "During the fiscal year 1922-3, have the contractors operated their respective contracts at a rate that will ensure the completion of the project within the various contracts' stipulations? If not, why not?" A. "Yes; contractors made such progress as will permit them to complete their contracts within times stipulated in their respective contracts."

Q. "Has the engineer in charge a pre-arranged schedule of operation for the contractors? If so, why does he not compel the contractors to fulfil it?" A. "Engineers' schedules are limited in their application by the terms of contracts, which terms contractors are compelled to fulfil."

Q. "What will the interest charges be on the Welland Ship Canal on borrowed capital for the ensuing year?" A. "The amounts expended by the Dominion in the construction of the canal were not provided by specific borrowing and no interest has been charged."

Q. "Why is the work not operated more vigorously, and why should the Government pay unnecessary interest on uncompleted work?" A. "The vigor of operations is determined by consideration of all factors affecting ultimate maximum economy. Undue expedition in the conduct of such construction work would result in losses, from inefficiency of operations, greatly in excess of the saving effected on interest account."

Q. "How many men were employed on each of the contracts during January?" A. "Daily average for January, 1923: sections 1 and 2, 284; sections 3 and 4, 336; section 5, 154; construction railway, 72, not allocated between sections 1 and 2 and 3 and 4."

Lake Freight Rates.—Cleveland, Ohio, press dispatch, April 20:—Bids of 5½c. on grain for opening shipment from the head of Lake Superior to Buffalo did not bring out much tonnage today, and only two charters were reported at the advance. Grain is being offered at Lake Michigan ports. Some of the big carriers that are at this end of the route will go light for ore at the start, and at the rate that coal is coming in, there will be a steady increase in stocks.

Lists of Lights and Fog Signals have been issued by the Marine Department, Ottawa, as follows:—Atlantic Coast, including Gulf of St. Lawrence, to head of ocean navigation; Inland Waters, west of Montreal and east of British Columbia; Pacific Coast and British Columbia Rivers and Lakes.

Bay Line Steamships Ltd.—The 10 steamships, which interests allied with Ogilvie Flour Mills Co., Montreal, bought from the French Government recently, through the Anderson Company of Canada, as mentioned in previous issues, will be renamed Ashbay, Beechbay, Cedarbay, Elmbay, Maplebay, Oakbay, Pinebay, Poplarbay, Sprucebay and Willowbay, and will each be owned by a separate company, and operated by Bay Line Steamships Ltd. Capt. H. N. McMaster is General Manager, and J. D. Calvin, Assistant Manager, Montreal.

Prince Rupert Drydock.

L. J. Ladner, Vancouver South, asked the following questions in the House of Commons recently, the answers being given by the acting Minister of Railways, Mr. Graham:—

Q. "What is the tonnage capacity of the Grand Trunk Pacific Ry.'s or the Canadian National Rys., drydock at Prince Rupert, B.C., for ships?" A. "20,000 tons."

Q. "What is the total investment in the drydock?" A. "\$2,940,000."

Q. "How many main sections comprise the complete drydock?" A. "Three."

Q. "How many of such sections are used, and what class of ships, and how many of them, were repaired in the drydock during 1922, and up to March 31, 1923?" A. "All sections have been used from time to time, and all classes of ships up to 17,600 tons displacement. During 1922 the dockings totalled 182, and from Jan. 1, up to March 31, 1923, the total dockings were 37, mostly small ships."

Q. "What is the tonnage of the largest ship repaired in the drydock between June 1, 1922, and Feb. 28, 1923?" A. "8,500 d.w. tons."

Q. "Would the Government or the Canadian National Rys. be willing to move a portion of the drydock to Vancouver, under reasonable terms and conditions? Is the Government or the Canadian National Rys., or the Grand Trunk Pacific Ry., or whoever has the legal authority in that behalf, willing, under reasonable terms, to lease such sections of the drydock as are capable of being moved to Vancouver, in order to provide drydock facilities for ships entering and leaving Vancouver?" A. "So far as the Government is aware, the question of leasing any part of the Prince Rupert drydock has not been considered."

Ship Channel and Ship Building Estimates.

The estimates for the year ending March 31, 1924, submitted to the House of Commons recently, contain the following items, under Public Works, chargeable to capital, Marine Department:—

River St. Lawrence ship channel: maintenance and operating dredging fleet.	\$613,000
Maintenance and operating of Sorel shipyard	125,000
Construction of self-propelling hopper barge (revote)	54,800
	\$792,800

Newfoundland Seal Fishery.—A. E. MacEachren, Canadian Junior Trade Commissioner, writes:—"Only 8 steamships, the smallest number since the inception of the industry, are engaged in seal fishing off the Newfoundland coast this year. Last year the total catch of seals was 126,031, an increase of 24,579 over 1921. The seals taken are known as hair seal, and the skins are shipped principally to Scotland, where they are dressed into a fine quality of leather. Seal oil has a medicinal and edible value, and is also used as an illuminant in mines. Oil is extracted from the fat by a special process at factories in St. John's. A novel development this year in the prosecution of the seal fishery is the use of an aeroplane, which is carried on a platform built on one of the ships, for the purpose of endeavoring to more readily locate the main patch of seals."

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

Ships for Export.—We are officially advised that no ships were built in Canada during 1922, and exported without being registered.

Cholberg Shipyard Ltd., Victoria, B.C., will, it is reported, probably be taken over by W. H. Drewitt and associates, to build scows and small craft. The yard, which was operated originally by Cameron-Genoa Mills Shipbuilders, Ltd., and later by the Foundation Co., has been involved in litigation with the Dominion Government in connection with the arrangements for the building of four wooden sailing ships by Victoria (B.C.) Shipowners, Ltd., under special aid from the Government, and which company went into bankruptcy.

Collingwood Shipbuilding Co., Collingwood, Ont.—The annual meeting of shareholders was held at Collingwood, March 29. The directors who were re-elected, are as follows:—H. B. Smith, President; R. M. Wolvin, Vice President; J. S. Leitch, Vice President and Managing Director; S. H. Lindsay, Secretary, and S. Dymont, J. F. M. Stewart and W. H. Smith. At a subsequent directors' meeting, a fourth quarterly dividend of 1½%, making 5% for the year 1922, was declared, payable April 3.

Although the company had to draw on surplus to pay dividends, it is possibly in the strongest liquid position in its history, after a year of exceptional dullness in the shipbuilding trade generally. Cash alone exceeds current liabilities, being \$89,261 against \$87,963. Assets receivable total \$474,275, and stores, etc., \$322,783. Plant and equipment is placed at \$4,402,588, and the total of assets stands at \$5,206,373. On the liability side, in addition to the current total given above, are reserves of \$1,265,863, capital stock \$2,600,000, and profit and loss credit of \$558,443. The latter is down approximately \$100,000, comparing with \$657,158 in 1921. Dividends, however, amounting to \$97,500 were paid and depreciation allowance of \$251,405 made.

Davie Shipbuilding & Repairing Co., Lauzon, Que.—The s.s. Cairndhu, which was wrecked in the St. Lawrence River, between Quebec and Montreal, just before the close of the St. Lawrence navigation season in 1922, has been undergoing overhaul and repair at the Champlain drydock, and was expected to be ready for operation again by the end of April, when she was to proceed to Montreal to load cargo for the United Kingdom. The Quebec Salvage & Wrecking Co.'s wrecking and salvage steamship Lord Strathcona and schooner G.T.D. have been scraped, caulked, painted and generally overhauled. Canada Steamship Lines' s.s. Narragansett, which is being renamed Richelieu, and which has been remodelled and overhauled, was completed, ready for operation during April, and will run between Montreal and Saguenay ports. Among other changes made to her, is her conversion from a coal to an oil burner. The cost of the changes and repairs will approximate \$500,000. Other work carried out during the winter includes the overhauling of lightship 20; and the conversion of the s.s. Polana to an oil burner for the Dominion Government.

Dominion Shipbuilding & Repair Co., Toronto.—The further supplementary estimates for the year ended March 31, 1923, submitted in the House of Commons

recently, provide \$18,017.76 to pay the City of Toronto taxes on this company's shipyard, which was used by the Marine Department to complete two single screw cargo steamships under the shipbuilding programme.

Fraser, Brace Ltd., Three Rivers, Que.—It was expected that the s.s. John C. Howard, the fourth steamship built at this yard for the George Hall Coal & Shipping Corporation, Montreal, would be launched at the end of April or early in May. Her dimensions are: length b.p. 230 ft., beam 43½ ft., draft loaded 16½ ft.; d.w. tonnage 3,270. The propelling machinery consists of triple expansion engines, with cylinders 19, 32 and 56 in. diam., by 36 in. stroke, supplied with steam by 2 Scotch boilers, each 14 ft. 7 in. x 10 ft. 8 in., burning coal.

D. C. Fraser, Nelson, B.C., has received an order from the Dominion Public Works Department for a hopper dump scow, 135 cub. yd. capacity, to be known as P.W.D. No. 311, to be completed and launched in the west arm of Kootenay Lake, near Nelson, for \$4,892.

Halifax Shipyards Ltd., Halifax, N.S., did the following repair work during March:—Commercial Cable Co.'s s.s. J. W. Mackay, repairs, details of which were given in our March issue, undocked March 17; Canadian Government Merchant Marine s.s. Canadian Mariner, scraped and painted, hull and rudder repairs, sea connection opened up for examination, and electric welding, undocked March 23; Dominion Coal Co.'s s.s. Corunna, hull repairs, tail shaft drawn for examination, scraped and painted, sea valves opened, undocked April 2; La Morue Francaise et Secheries de Fecamp, St. Pierre, s.s. Pro Patria, docked for survey, hull and machinery repairs, drawing tail shaft for examination, new rudder stock, and overhauling steering chains, undocked April 2.

Midland Shipbuilding Co., Midland, Ont., did the following repair work during the winter:—Glen Steamships Ltd. steamships: Glengarnoch, old boilers removed and new ones installed, new smoke stack and smoke box, general engine repairs and fender strakes renewed; Glendochart, considerable repairs to port bow, fender strakes renewed, general engine repairs, and new electric wiring throughout; Glenealy, port bow repairs, fender strakes renewed, new smoke stack and new electric wiring throughout; Glendowan, port bow repairs, fenders renewed, general engine and boiler repairs and new electric wiring throughout; Glenarm, repairs to port center and starboard bow, new hawse pipe and general engine and boiler repairs; Glenfarn, general engine and boiler repairs. Great Lakes Transportation Co.'s steamships: Glenshee, port bow repairs; Glenbrae, repairs to starboard side aft, and to starboard bow, and general overhauling engines and boilers; Glenfinnan, new elevator installed and general overhaul engines and boilers; Glenmavis, port bow repairs and general overhaul engines and boilers; Glenorchy, repairs to fore-castle side and starboard side abreast of no. 10 hatch, and general boiler repairs; Glenlyon, repairs to port and starboard bow and general engine and boiler repairs; Glencairn, new pipe masts and repairs to port side aft; Glenisla, new bottoms in combustion chamber, new winch founda-

tions, and general repairs to engines and boilers; Glenclova, general engine and boiler repairs; Glenlivet, new bulkheads, general engine and boiler repairs. Algoma Central Steamship Line's steamships: Agawa, new smoke stack; W. C. Franz, general engine and boiler repairs. Canada Steamship Lines s.s. Midland Prince, repairs to port bow; Georgian Bay Lumber Co.'s steam tug Waubausene, new smoke stack.

The s.s. George E. Hartnell, which was bought from the Valley Camp Coal Co., Cleveland, Ohio, towards the end of 1922, for the Great Lakes Transportation Co., has been remodelled and refitted and will be ready for operation on the reopening of lake navigation. Her dimensions are: length 352 ft., breadth 42 ft., depth 27 ft. Complete new propelling machinery of the triple expansion type have been installed, with cylinders 19, 32 and 56 in. diam. by 36 in. stroke, 1,400 h.p., and supplied with steam by 2 new boilers, each 14 ft. 7 in. diam. by 10 ft. 8 in. long, at 185 lb., built at St. Catharines, Ont. The overhaul work below the water line was done by the Port Arthur Shipbuilding Co., after which the ship was moved to Midland, where the work was completed.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The Royal Securities Corporation offered recently \$250,000 Western Dry Dock & Shipbuilding Co. 6% first mortgage serial gold bonds, redeemable at 103 and accrued interest on any interest date, at 60 days notice. The Port Arthur Shipbuilding Co. was incorporated in 1916 under the Ontario Companies Act, to take over the Western Dry Dock & Shipbuilding Co. and has authorized capitalization as follows:—\$1,000,000 Western Dry Dock & Shipbuilding Co. 6% first mortgage serial gold bonds, of which \$480,000 have been redeemed, leaving \$520,000 outstanding; \$1,000,000 7% cumulative preferred shares, of which \$428,000 have been redeemed, leaving \$572,000 outstanding; and \$1,500,000 common shares. The company owns and operates a drydock and shipbuilding and ship repairing plant at Port Arthur. The drydock is of concrete, with steel gates and high power pumping station, and is equipped with all essential modern appliances, including gantry crane, heavy shear legs, etc., and will accommodate ships up to 650 ft. long. The plant is located on about 90 acres of dock property, with 3,075 ft. of water frontage within Port Arthur harbor limits, and inside of the permanent government breakwater. The plant is also equipped for making pulp and paper machinery, heavy castings and forgings, boilers, and general engineering. It is located at the head of Canadian inland navigation at the lake terminals of the Canadian transcontinental railways, and the point of transshipment of the greater portion of western Canada's grain crops. The Dominion Government pays a subsidy of \$37,741.50 a year for 20 years, on the basis of 3% on \$1,258,050, the estimated cost of the dock plant. The company is still entitled to receive 10 of these annual payments, which will extend beyond the maturity of outstanding bonds, and each annual payment is greater than the amount of bond interest payable in any year. The balance sheet at June 30, 1922, showed fixed assets of \$1,948,687.99, after deducting depreciation of \$750,334.80, and is exclusive of goodwill, patents, trade

marks and investments. An appraisal made by the Canadian Appraisal Co. Jan. 1, 1922, valued the fixed assets at \$3,628,000. A balance sheet at Jan. 31, 1923, showed net current assets after deducting all current liabilities and including the proceeds of the present bond issue, of \$454,289.14; investments carried at \$125,080 not being included, nor were taxes payable by installments, amounting to \$179,534.99. The net earnings, after all charges, including bond interest, taxes, etc., for the 5 years 1918 to 1922, inclusive, averaged \$220,166.

Prince Rupert Drydock & Shipyard, Prince Rupert, B.C., did the following repair work during March:—Canadian Government Merchant Marine s.s. Canadian Skirmisher, 5,378 tons, docked, cleaned, painted and generally overhauled; Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George, 3,372 tons, annual overhaul; s.s. Prince John, 955 tons, docked, cleaned and painted, hull repairs and generally overhauled; s.s. Prince Rupert, 3,379 tons, docked, new tail shaft, and propeller repairs; car ferry barge, 445 tons, docked and extensive hull repairs; Dominion Government s.s. Bobolink, docked for hull repairs; also 21 fishing ships overhauled.

St. John Drydock & Shipbuilding Co., St. John, N.B., announces that its drydock and marine shipyard, at Courtenay Bay, will be ready for operation by Oct. 1. The drydock will be 1,150 ft. long, with 42 ft. draft over sill, and will be usable as one dock, or two separate ones, 650 and 500 ft. long, respectively. The marine slipway, which is being built of steel, will be capable of hauling out ships up to 1,800 tons. Both the drydock and marine slipway will be fully equipped for temporary and permanent repairs, of all kinds, to ships' hulls and machinery, the equipment including a large dock crane, locomotive cranes, and machine, plate, boiler, pattern and joiners' shops. The company will undertake towing and marine salvage work of all kinds, from both St. John and Quebec, with its tugs, Gopher, Margaret A. Hackett, J. H. Hackett, Florence and Katharine K.

Union Shipbuilding Co., Port Union, Nfld., launched four 60-ton schooners during 1922, and is planning to build about the same number during this year. H. A. Russell is Assistant Manager.

Vancouver Shipyards Ltd., Vancouver, B.C., is building a tugboat for Young & Gore, logging operators, at an approximate cost of \$50,000. Her dimensions are: length 85 ft., breadth 19 ft., draft 9.9 ft. She is equipped with a 4-cylinder, 4-cycle full Diesel engine of 200 h.p., working at 225 r.p.m., for a speed of about 10 m.p.h. She has a storage tank for about 5,000 gall. of fuel oil, estimated to drive her at full speed for 20 days without refuelling.

Victoria Machinery Depot Co., Victoria, B.C., did the following repair work during February and March:—C.P.R. s.s. Princess Patricia, 1,158 tons, docked, cleaned, painted, general repairs at stern, new stern frame, A frame, stern tail shafts and propellers, rudder, and engine and boiler repairs; new vertical boiler for C.P.R. motor-car ferry ship Motor Princess; Dominion Government s.s. Restless, docked and painted, hull, deck and engine repairs; s.s. Armentieres, docked and painted, hull, deck and engine repairs; Canadian Puget Sound Lumber Co.'s steam tug Olive M., boiler repairs; Consolidated Whaling Corporation's s.s. Gray, 707 tons, docked, cleaned and painted, new stem, and bottom repairs due to stranding; Genoa

Bay Lumber Co.'s steam tug Des Brisay, rudder repairs; A. O. Rusco's steam tug Nora, boiler repairs; Union Steamship Co. of British Columbia's s.s. Chilliwack, 557 tons, boiler and engine repairs; steam tug Chehalis, rudder repairs; scow C. J. V. Spratt, docked for general repairs.

Yarrows Ltd., Victoria, B.C., did the following repair work during March:—Canadian Government Merchant Marine s.s. Canadian Britisher, 5,370 tons, docked, cleaned and painted, repairs to rudder and steering gear, sea connections and engine room; s.s. Canadian Inventor, 5,497 tons, drydocked, cleaned and painted, and opened up for survey, extensive refit deck and engine room and auxiliaries, renewed zincs and uptakes and overhauled boilers, tail shaft drawn, rudder lifted and pintles and bushings overhauled; Canadian Pacific Ry. s.s. Princess Charlotte, 3,844 tons, docked, cleaned and painted, tail shaft drawn and engine room and propeller repairs; s.s. Princess Alice, 3,099 tons, topsides painted; s.s. Princess Victoria, 1,943 tons, repairs to condenser; Canadian National Rys. car ferry Canora, 2,383 tons, 3 new propeller blades fitted; Dominion Government s.s. Armentieres, canvas renewed; s.s. Lillooet, 574 tons, docked, cleaned and painted, extensive refit and overhaul; British Columbia Cement Co., s.s. Matsqui, docked, sheathing renewed underwater; s.s. Baja California, 1,649 tons, docked, cleaned and painted and boiler repairs; also several scows hauled out for repair. The C.P.R. motor-car ferry, for operation between Sidney, B.C., and Bellingham, Wash., was launched March 31, and named Motor Princess by Mrs. Norman Yarrow. The work on this boat was commenced early in 1923, so that progress has been rapid. The installation of the engines and auxiliaries was pushed ahead during April, so that delivery might be made ready for operation by May 15, according to contract.

Advances to Montreal Harbor Commission.—The Minister of Marine, Mr. Lapointe, stated in the House of Commons recently, in answer to J. H. Harris, York East, Ont., that the total amount of advances made by the Dominion Government to the Montreal Harbor Commission, by way of loan or otherwise, up to Feb. 22, 1923, was \$32,435,000. The total interest received from 1867 to Jan. 31, 1923, was \$12,419,053.60. The rate of interest is 3% on \$9,250,000; 3½% on \$17,235,000 and 5% on \$5,950,000. Advances having been made from the consolidated revenue fund, they are not, strictly speaking, applicable to particular borrowings. Of late, Government borrowings have been made at 5½% interest per year.

Montreal Harbor Masters.—H. Deslauriers, St. Mary, Montreal, asked in the House of Commons recently: "Are the Montreal harbor masters appointed by the Montreal Board of Trade paid by the Government, and if so, what are their salaries?" The Minister of Marine, Mr. Lapointe, replied: "The harbor masters for Montreal harbor are not appointed by the Board of Trade, or paid by the Government."

Dominion Stevedoring Corporation Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Montreal, to carry on a general wharfinger, stevedoring, shipowning and transportation business. The incorporators are: J. A. Major, L. J. Marchand, S. A. and G. Labrosse, Montreal.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. Marvale is scheduled to sail from Montreal June 23, with a large party, on a historical and religious pilgrimage to France, Italy, Switzerland, Belgium and England.

The s.s. Montcalm, which sailed from St. John, N.B., April 6, arrived at Liverpool, Eng., April 14, completing the voyage in 7½ days at an average speed of 17 knots, which is considered an exceptional trip for a ship of this class. She arrived at Montreal April 28 and was the first of the C.P.R. steamships to arrive there this season.

Commencing April 10, Manila was omitted as a port of call, by the steamships Empress of Asia and Empress of Russia, they sailing direct from Shanghai to Hong Kong, taking two days for the trip, instead of six days as when going via Manila. It is announced that these ships will call at Honolulu on west-bound trips, commencing Nov. 29.

The C.P.R. steamship general passenger staff transferred its offices from the Dominion Express Building, St. James St., to the Windsor St. station, Montreal, April 14, where it now occupies offices above the Dominion Express Co.'s depot on Osborne St. The steamship booking office remains at 141 St. James Street, occupying the Dominion Express Building's ground floor.

The s.s. Montlaurier, which is scheduled to arrive at Quebec May 12, on her maiden trip, will be commanded by Capt. J. Turnbull, O.B.E., formerly of the s.s. Melita. He has served on several of the company's steamships, including the Montcalm, Mount Royal, Grampian, Metagama, Empress of Britain and Melita. During the war he was in charge of the Empress of Britain, which was requisitioned as a troop ship.

Before the last sailing of the s.s. Montrose from Liverpool, Eng., for St. John, N.B., recently, the company entertained about 50 of its female shipping agents, from different parts of the United Kingdom, on board the ship, to inspect the accommodation, etc., so as to be in a better position to advise prospective passengers as to the facilities offered. H. G. Dring, European Passenger Manager, London, presided over the gathering.

Commander A. J. Hosken, R.N.R., master of the s.s. Empress of Russia, has been awarded the French Marine Department's first class medal for the rescue of 6 Europeans and 60 Chinese, as well as the crew of the French ship Hsi Tien, which sank near Lammock, on the Chinese coast, April 8, 1922, when he was in command of the C.P.R. s.s. Monteaule. He had previously been presented with the silver medal of France, and the Royal Life Society medal.

Capt. E. Landy, formerly of the s.s. Bolingbroke, has been appointed to the s.s. Melita, vice Capt. J. Turnbull, O.B.E., transferred to the s.s. Montlaurier. He has served on the steamships Montfort, Lake Michigan, Lake Champlain, Lake Manitoba, Methven, Pretorian, Empress of Britain, Metagama, Monmouth and Bolingbroke. While in command of the s.s. Monmouth, during the war, he performed a conspicuous act of gallantry in taking his ship safely into a French port, where he was bound, after having been torpedoed and severely damaged by the Germans.

Atlantic and Pacific Oceans.

British Canadian Steamships' s.s. *City of Victoria*, owned in Vancouver, B.C., and bound from England to the Pacific coast, was reported to be on fire about 600 miles off the Irish coast, April 3, and making for the Azores.

The White Star Line's s.s. *Pittsburgh*, which arrived at Halifax, N.S., April 2, reported a peculiar experience during very heavy weather, March 30, when, as nearly as can be ascertained, she was caught between two very high waves, one on either bow, both of which broke with full force on deck, and wrecked the bridge and deck officers' quarters.

The Anchor-Donaldson Line's s.s. *Athenia*, completed by the Fairfield Shipbuilding & Engineering Co., Glasgow, Scotland, for the company's Glasgow-Canadian service, underwent her trials in the Clyde, March 27, maintaining a speed of 17 knots over the measured mile. Her dimensions are: length 540 ft., beam 66 ft., draft 27 ft. 8 ins. She is equipped with Brown-Curtis turbines, 8,700 shaft h.p., driving twin screws, with oil as fuel. With complete fuel supply, she can steam for 22 days at 15 knots without replenishing.

Maritime Provinces and Newfoundland.

The Dominion Government has approved of regulations for Sydney, N.S., pilotage district, and of the pilotage dues to be paid there.

Newfoundland's mercantile marine is reported as being rapidly depleted. It is said to consist of 70 foreign going ships, the previous total never having been less than 100. It is stated that the sailing ship will probably become obsolete as a fish carrier, its place being taken by foreign-owned steamships. As an explanation of the disappearance of the Newfoundland type of fishing ship, it is stated that very high insurance rates are asked on the hulls and cargoes, the insurance premium on cargoes on steamships being about $\frac{1}{2}\%$, against 8% for cargo in sailing ships and 16% on hulls.

The s.s. *Princess*, which, as stated in previous issues, was bought in New York by J. T. Burchell, President, North Shore Steamship Co., Sydney, N.S., is owned by him and J. A. Young of Sydney. She was built in New York, under special Lloyd's inspection, and was launched there under the British flag for a Bermuda party. She is built of steel and is equipped with cylinders 12, 20 and 32 in. diam. by 18 in. stroke, built in England, and supplied with steam by boilers at 250 lb. working pressure. The engines are being overhauled at Yarmouth, N.S., and certain changes are being made in the deck room and passenger accommodation to make her suitable for operation from Sydney, N.S., to Baddeck and Whycocomagh, by the New Bras d'Or Steamship Co. Her name is to be changed to *Nyanza*. She was built for the excursion business in Bermuda, but during the war was bought by the U.S. Government and used for transporting troops in New York harbor, and it is stated that at one time she carried as many as 1,800 on a single trip. During the summer of 1922, she was operated in the excursion passenger trade between New York and Rockaway Beach, and was certified to carry 650 passengers. Her dimensions are: length 113 ft., beam 30 ft., depth 12 ft.; tonnage, 251. The s.s. *Marion*,

owned by the Bras d'Or Steamship Co., and which was wrecked last year, was bought by J. T. Burchell, on the understanding that he was to take over the company's charter and goodwill, but as some difficulty has arisen in connection with the winding up of that company's affairs, it has been deemed advisable to obtain a new charter, under the name of New Bras d'Or Steamship Co. Ltd., which is being organized, with J. T. Burchell, President, and J. A. Young, Manager, these two being, respectively, President, and Manager and Secretary, Sydney Foundry & Machine Works Ltd., which owns and operates a marine railway drydock and ship repairing plant at Sydney, N.S.

Province of Quebec.

Repairs on the Lachine canal were reported to be practically completed April 23, and it was stated that traffic would be resumed shortly thereafter.

The old wooden Red Islet lightship, which has been lying at Quebec, Que., for some time, has been sold by the Marine Department, to Capt. J. Couette and Albert, Quebec, Que. Her dimensions are: length 102 ft., breadth 22 ft., depth 10.6 ft.; registered tonnage, 152.

A dispute is in progress between the cities of Quebec and Levis as to the terms of a new ferry contract for 15 years from May 1, 1925, for which tenders will be called for shortly. A tentative contract has been drawn up, which Levis representatives favor strongly.

The Quebec & Levis Ferry Co.'s s.s. *John S. Thom*, which was caught in the ice at the commencement of the winter, between Quebec and Montreal, has been refloated by cutting the ice all round her, and work proceeded during April on cutting a channel from mid stream to shore, so that she may be brought in out of danger of being crushed by floating ice.

Work was commenced on the addition to the Grand Trunk elevator at Windmill Point, Montreal, April 16, by the Montreal Harbor Commissioners. The addition will increase the capacity by 1,250,000 bush. and is expected to be ready for operation about Sept. 1. The present capacity is 2,150,000. The commissioners' new elevator at Tarte Pier, will be built by the commissioners' own forces, at an approximate cost of \$2,347,000. It will have a capacity of 2,000,000 bush. and is the first unit of a plant which is expected to have 14,000,000 bush. capacity, the largest single grain elevator plant in the world.

Ontario and the Great Lakes.

The Northern Navigation Co.'s s.s. *Hamonic* sailed from Sarnia during the last week of April, for Collingwood, where she docked for certain hull repairs before taking up her summer schedule.

The Niagara, St. Catharines & Toronto Navigation Co.'s s.s. *Port Dalhousie* reopened navigation on Lake Ontario, between Port Dalhousie and Toronto, March 29, when the master, Capt. F. J. Marogold, was presented with the harbor master's hat for bringing in the first ship of the season from an outside point.

The Western Reserve Navigation Co., Cleveland, Ohio, wrote the London, Ont., Chamber of Commerce, recently, that it will probably arrange for a steamship to call at Port Stanley every other day from about the middle of May until Dec.

1, and that, if conditions warrant, and sufficient business can be guaranteed, a second ship will probably be added.

The United States Lake Survey reports the mean stages of the Great Lakes in feet above mean sea level, for March, as follows:—Superior, 601.45; Michigan and Huron, 578.98; St. Clair, 573.62; Erie, 570.98; Ontario, 244.74. Compared with the average March levels for the past ten years, Superior was 0.29 ft. below; Michigan and Huron, 1.10 ft. below; Erie, 0.81 ft. below, and Ontario, 0.94 ft. below.

The motor tugboat *F. H. Anson*, which was built at Twin Falls, Ont., recently by Abitibi Power & Paper Co., for use on the Abitibi River, towing booms of pulpwood for its own mills, and which has been transferred to Abitibi Transportation & Navigation Co., has the following dimensions: length 75 ft., breadth 20.7 ft., depth 9.9 ft.; tonnage, 112 gross, 16 net. The propelling machinery consists of a 6-cylinder 350 h.p. direct reversible Winton-Diesel oil engine and an auxiliary 3-cylinder air compressor. It is stated that the boat can do the work formerly done by four smaller steam tugs. Her fuel capacity is equal to a 10 days supply of oil.

In connection with the visit of a deputation of Kingston business men to the Dominion Government, recently, urging the city's claims as a transshipment point for lake grain traffic, we are advised that plans with this object in view were arranged tentatively before the war, but that the Government is not at present committed to them. The facts are well understood and the Government is apparently concerned on only one point, viz., as to the length of time necessary for the work, in order that the harbor may be ready when the new Welland Ship Canal is opened for traffic. The object of the deputation was to obtain a specific promise that the work would be carried out according to the plans.

A deputation of Hamilton citizens waited on the Minister of Marine, at Ottawa, recently, about harbor dues. The deputation stated that if the harbor were kept free of dues, the city would be willing to continue its yearly grant of \$4,000. The Minister pointed out that the bylaw under which the commission proposed to collect charges, was passed in 1913, but had not been acted upon, because the commission had suspended it each year, and it appeared to be necessary either to suspend it again, or repeal it altogether, and make a new bylaw, which would be satisfactory to all parties. Consideration of the deputation's arguments was promised.

British Columbia and Pacific Coast.

The Dominion Public Works Department has given to Williams, Trerise & Williams, Victoria, B.C., a contract for the construction of a shed and searchlight platform in the Naval Barracks at Esquimalt, for \$6,480.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince John* resumed service on the Queen Charlotte Islands route, out of Prince Rupert, April 14. The s.s. *Prince Albert*, which arrived at Prince Rupert April 12, has been laid up.

The motor-car ferry *City of Angeles*, operated by the Victoria-Anacortes Ferry Co., will be placed in operation between Anacortes, Wash., and Sidney, B.C., about May 10. She is 138 ft. long, 34 ft. beam, and has capacity for 38 motor

cars. She will call at San Juan and Orcas Islands.

Bellingham, Wash., City Council is reported to have ordered the immediate starting of the work to provide a landing place for the C.P.R. motor-car ferry between Sidney, Vancouver Island and Bellingham, which will start running early in May. It is stated that about \$20,000 will be spent on repairing the approaches, and providing a 2-deck pontoon.

The German s.s. Hans Hemsoth, which arrived at Victoria, B.C., toward the end of March, was the first German merchant ship to enter the port since July 12, 1914. Indicative of the anomalous condition created by the fall of the value of the German mark, it is stated that the pay of the master of the ship, is equivalent to \$10 a month at the present rate of exchange, while several U.S. seamen working on the ship are receiving \$50 a month, U.S. currency.

The Union Steamship Co. of British Columbia's s.s. Cardena was launched at Glasgow, Scotland, March 23, and is expected to be completed and ready to sail for the British Columbia coast, by the end of May. She will voyage via the Panama Canal, and will be placed on the route from Vancouver to Ocean Falls, Swanson Bay and Prince Rupert, replacing the s.s. Chelohsin, which is to be placed on the logging route out of Vancouver. The s.s. Cardena is a modern combined passenger and freight steamship, 220 ft. long by 34 ft. beam, equipped for burning oil as fuel. There will be accommodation for about 100 passengers.

Wreck of Steamship Trader.

The following questions were asked in the House of Commons on April 12 by L. J. Ladner, Vancouver South, and answered by the Minister of Marine, Mr. Lapointe:—

Q. "Has the Government received a report with respect to the wreck of the s.s. Trader in March, on the rocks dumped off the end of the jetty, on the north arm of the Fraser River, B.C., built by the Government?" A. "Yes."

Q. "If so, was the wreck due to the Department's failure to provide a proper light at the end of the jetty, and is the ship a total loss?" A. "The ship was stranded 300 yards west of the jetty, at noon on March 16, during what the captain in charge described as a furious w.s.w. gale. Consequently the wreck was not due to the absence of a light."

Q. "Is it a fact that the jetty has been without any light for three months, or any other lesser period, and that there is no mark or communication at the end of the jetty to show the entrance to the channel to the north arm of the Fraser River?" A. "The edge of the channel is 400 ft. from the jetty. The Department has maintained, since 1905, range lights to mark this channel. The outer light was carried away on Jan. 21 last by the tug Gleeful, the report of which did not reach the Department until Jan. 31. Instructions to rebuild were wired Feb. 2."

Q. "Has the Government a report on the wrecking, or grounding, on or about March 15, of three tugs, with booms of logs, at a point on Sea Island about a mile east of the jetty?" A. "No."

Q. "Has the Government taken steps to provide a proper and sufficient light at the end of the jetty and to otherwise protect the entrance to the channel for navigation?" A. "Yes."

Mainly About Marine People.

J. Ernest Adams, who has been appointed Chief of Commissary, Northern Navigation Co., Sarnia, Ont., was born there May 9, 1882, and entered the company's service March 1, 1901, since when he has been, to Dec. 15, 1902, waiter, s.s. Monarch; March 1 to Sept. 1, 1903, head waiter, s.s. Hamonic; Sept. 1 to Dec. 15, 1903, steward, s.s. Majestic; March 1, 1904, to Dec. 15, 1905, assistant steward, s.s. Saronic; March 1 to Sept. 1, 1915, assistant steward, s.s. Hamonic; Sept. 1 to Dec. 15, 1915, chief steward, s.s. Huronic; 1916 to March 1, 1923, chief steward, s.s. Hamonic.

Joseph Boscowitz, who died at Victoria, B.C., recently, aged 88, was a native of Bavaria, and went to Esquimalt, B.C., from San Francisco, Cal., in 1862. He was interested in the fur trade, and took an active part in the transfer of Alaska from Russia to the U.S. He later formed the Victoria Sealing Co., operating several schooners in the sealing trade, and was afterwards interested in the Boscowitz Steamship Co., which was absorbed by the Union Steamship Co. of British Columbia.

W. E. Burke, heretofore General Traffic Manager, Canada Steamship Lines Ltd., Montreal, has been appointed Vice President, Century Coal Co., Ltd., which is owned by Canada Steamship Lines.

A. E. Cook, Assistant Manager, Elder, Dempster & Co., Montreal, died at Westmount, Que., April 14. He was born at Birkenhead, Eng., in 1870, and came to Montreal in 1891, when he entered Harling, Ronald & Co.'s service, which company was absorbed by Elder, Dempster & Co. in 1895. In 1899, on the acquisition of the Beaver Line by Elder, Dempster & Co., he was made Assistant Manager, and when the C.P.R. acquired the Beaver Line, he was appointed Export Freight Agent, C.P.R. In 1905, when Elder, Dempster & Co. inaugurated their Canada-Cuba-Mexico service, he resigned from C.P.R. service, and resumed his position as Assistant Manager, Elder, Dempster & Co.

Maurice FitzGerald, who has been appointed Special Representative, C.P.R., and Canadian Pacific Steamships Ltd., Yokohama, Japan, was born there, of British parents, June 7, 1879, and speaks Japanese fluently. He entered transportation service in Oct. 1894, as stenographer with Frazar & Co., then agents for the C.P.R. trans-Pacific Steamship Service, Kobe, Japan, and in Jan. 1896, was transferred to Yokohama, when the C.P.R. opened its own Japanese agency. He has served continuously in the C.P.R. steamship service, as stenographer, freight clerk, General Assistant, Assistant to Manager at Yokohama, Japan, and until his present appointment, Assistant to Oriental Manager, Hong Kong, China.

Sir George B. Hunter, of Swan, Hunter & Wigham Richardson, Ltd., shipbuilders, Wallsend-on-Tyne, Eng., made a short business visit to Canada recently.

Gordon K. McNab, who has been appointed port agent, Canadian Government Merchant Marine, St. John, N.B., was born at Montreal, June 8, 1896, and entered transportation service Dec. 1, 1913, since when he has been, to April 30, 1915, assistant surveyor, G.T.R. lines west of Detroit and St. Clair Rivers; Jan. 1, 1916, to April 30, 1917, clerk, City Freight Agent's Office, Canadian Northern Ry., Montreal; April 30, 1917, to May 5, 1919, on active service with Canadian Expeditionary Force; June 1

to Dec. 30, 1919, clerk, Manager's office, Canadian Government Merchant Marine, Montreal; Jan. 1, 1920, to Nov. 15, 1922, chief clerk, Manager's office, C.G.M.M., Montreal.

James Rankin, whose appointment as General Agent, Canadian Pacific Steamships Ltd., Yokohama, Japan, was announced in a recent issue, was born at Liverpool, Eng., of Scottish parentage, and entered C.P.R. service May 1, 1887, since when he has been, to 1892, at Montreal, and from 1892, in the Orient, at Hong Kong and Shanghai, China, and Kobe and Yokohama, Japan.

Floating Drydock for Vancouver.

We are officially advised that the Burrard Drydock Co. Ltd. has been informed that it may proceed with the building of a sectional floating self-docking drydock, under the terms of the agreement entered into with the Dominion Government in Dec., 1921, which provides for a subsidy payment by the Government, at the rate of 4½% on \$2,500,000 for 35 years, for the construction of the dock, with a lifting capacity of 15,000 tons, of the following dimensions: length over keel blocks 500 ft., length over walls 435 ft., width over all 132 ft., width between side walls 100 ft., draft of drydock afloat and fully loaded 15 ft. The work is to be done under the general supervision of the Dominion Public Works Department's District Engineer at New Westminster. W. T. Donnelly, New York, prepared the plans, and A. D. Swan, C.E., Montreal, was retained by the company as engineer for the work and for the preparation of contract plans and specifications. A full description of the projected drydock was published in Canadian Railway and Marine World for February, 1922, pg. 106.

Following the general elections, and the subsequent change of government, the company was notified Dec. 30, 1921, not to proceed with the work, or incur any liability in connection with the dock. Nothing, therefore, has been done since, but the drydock requirements have been consistently kept before the Government, with the result mentioned above.

The Burrard Drydock Co. Ltd. was incorporated under the Dominion Companies Act in Oct., 1920, with \$1,000,000 authorized capital, and office at North Vancouver, B.C., to build a drydock, and to enter into an agreement with the Dominion Government under the Drydocks Subsidies Act. C. Wallace, Wallace Drydock & Engineering Co., J. J. Coughlan, J. Coughlan & Sons, Vancouver, and R. S. Lennie, were among the directors.

River St. Lawrence tide tables and information connected with the ship channel from Father Point to Montreal; the port of Montreal; also Montreal to Lake Ontario and Ottawa River, have been issued by the Marine Department's River St. Lawrence Ship Channel Branch, of which V. W. Forneret is Superintending Engineer.

Czar Towing Co. Ltd. has been incorporated under British Columbia Companies Act, with \$75,000 authorized capital, and office at Vancouver, B.C., to carry on a general towing and shipping business.

The Ontario Transportation & Pulp Co. Ltd. has been granted supplementary letters patent changing its name to Chicago Tribune Transportation Co. Ltd. Its office is at 137 McGill St., Montreal.

Canada Steamship Lines Ltd. Annual Meeting.

At the annual meeting in Montreal, W. H. Coverdale, President, said:—"Those who were present at the last annual meeting will recall that, in moving the adoption of the annual report and financial statement for 1921, I offered for your consideration a survey in some detail of the company's financial and operating record leading to the credit position with which it was then confronted. Starting from that point, which may be taken as representing the conditions upon which the new financing was based, and which financing was authorized by you at that time, I now report as follows:—All of the details of the financing have been carried out by your officers and directors in exact conformity with your enabling resolutions, and upon the credit thus established, the operations of 1922 have been conducted with the result as shown by the annual report which has been in your hands for several weeks.

"The conditions of social and business unrest which existed during a substantial portion of the season of navigation and which were evidenced by strikes of workers in coal mining, transportation and other industries, and were entirely extraneous to this company's working, affected our gross revenues adversely by \$1,171,809; the gross revenue declining from \$12,786,680 in 1921 to \$11,614,871 in 1922. Expenses were reduced to meet this situation, by \$958,978, with the result that net earnings for the year were \$2,040,748, or \$311,831 less than in 1921. It is only fair to say that on account of the involved situation which existed in Dec. 1921, many items of expenses properly chargeable to 1921 operations were carried over into 1922, such items aggregating about \$160,000; while at the end of 1922 no similar items which had been ascertained were carried over. By making the adjustment occasioned in this manner, you will see that the net earnings for 1922 are about the same as those for 1921. Reserves for depreciation, for taxes, and for doubtful accounts, have been set up in adequate amounts; the item for depreciation being \$808,524, which was \$21,397 more than for 1921. As to the total amount of interest on debenture stock and bonds, etc., which amounted to \$719,819 for the year, it should be borne in mind that under the terms of its indenture the company pays interest on securities kept alive in the sinking fund, and uses such accruals of interest for the redemption of its bonds. About \$80,000 of the above amount is thus available for company purposes. The company earned \$429,910 applicable to dividends on its cumulative preference stock, and to other corporate purposes, as against \$875,000 required for such dividend. As no dividend was disbursed, the company is now in arrears in that amount.

"Dwelling for a moment on the service which was profitable during 1922, it may be stated that all upper lake, lower lake and canal package freighters, and all fresh water passenger steamships operated at a profit, while the gulf and coastwise, and ocean services operated at a loss. Before overhead and depreciation, the lake and river ships earned an operating profit of \$3,744,090; the gulf and coastwise boats lost \$151,184; and the ocean boats lost \$258,769. The aggregate loss of the last two services was \$409,953 for 1922, as compared with

a loss of \$600,499 for the previous year. Substantial progress is being made toward the elimination of this item of loss, and the management feel that these services should be continued until a more favorable opportunity presents for making a final disposition of the matter.

"Of the net earnings of \$2,040,748 there was devoted to payment of all interest charges, \$719,818, thus leaving for depreciation and for other corporate purposes \$1,320,930, which has been utilized about as follows:—Paid to date for balance of Century Coal Co. stocks and bonds, \$200,000; advances to Century Coal Co. to take up bank loans, \$500,000; rehabilitation of s.s. Richelieu, \$300,000; cash value of debenture stock and bonds retired through operation of sinking fund, thereby reducing funded debt by \$376,210, \$300,000. The balance sheet of Dec. 31, 1922, resulting from the above operations, discloses an improved credit position by reason of a reduction of \$3,890,272 in current liabilities by means of a corresponding increase in funded debt. At that date the company had outstanding no bank loans whatever, and no impending maturities. All assets and liabilities of subsidiary companies are included in the consolidated balance sheet furnished to stockholders; the contingent liability of \$1,000,000 appearing in the 1921 statement no longer exists, and all underlying bonds, with exception of \$59,460, had been retired, and cash deposited with trustees against the balance.

"In connection with the capital expenditure of \$300,000 made during the year 1922 on s.s. Richelieu, there was \$221,506 cash in hands of trustees, which is repayable to this company upon completion of work of rebuilding.

"During the year, 1,500 shares second preference stock and 625 shares of ordinary stock of British Empire Steel Corporation, Ltd., were sold for \$63,911, and cost to this company realized therefrom. During the year your company, acting through trustees, purchased \$220,000 first mortgage of Davie Shipbuilding & Repairing Co., Ltd., also \$21,700 second mortgage of the same company, with the result that the third mortgage of the Davie Co. for \$2,500,000 owned by this company, becomes a first lien on that property.

"Since the date of the last annual general meeting three new members of the London advisory committee have been elected by your board of directors, viz., Sir Walter R. Lawrence, Sir Reginald MacLeod, and R. B. Phillpotts. Your directors request the re-election of these gentlemen, together with Sir A. Trevor Dawson, Sir Vincent Caillard and Viscount Long, as members of that committee for the ensuing year.

"As the expenditures made during 1922 on s.s. Richelieu, Century Coal Co. and bond retirements, although large, do not represent the company's total commitments, and as we must find during the year 1923 about \$500,000 more to complete the Richelieu and Century Coal Co. purchase, and as the sinking fund will require another \$300,000 for retirement of additional bonds, and as we have miscellaneous requirements of at least \$100,000, it will be apparent that we must devote \$1,000,000 out of the net earnings of this year to the above purposes before we can hope to arrive at a credit position, which would warrant the

directors' consideration of the resumption of preferred stock dividends.

"Under these circumstances, you will be gratified to learn that the prospects for the season's business are excellent. There has been a good recovery in general business in the United States, our passenger bookings are already much in advance of last year, new C. S. L. offices have been opened in Pittsburgh, St. Louis, Cincinnati, Brooklyn and Los Angeles, and reports indicate increased tourist travel, to meet which we shall have the new Richelieu on the river, and an extra steamship on Lake Ontario. We are gradually improving our general cargo business and have been successful in closing many large contracts for west-bound tonnage in connection with our ocean service. Ocean rates are still very low, but when the upward trend comes we will be in a position to benefit therefrom."

The annual report and statements, a summary of which was published in Canadian Railway and Marine World for April, were adopted, and the retiring directors, who were re-elected, are as follows:—W. H. Coverdale, President; Robert Hobson, Vice President; J. W. Norcross, Vice President and Managing Director; A. J. Brown, K.C., Senator J. P. B. Casgrain, Geo. Caverhill, D. B. Hanna, F. J. Humphrey, F. W. Molson, H. B. Smith, G. H. Smithers, C. E. Taschereau, Senator Smeaton White. The other officers are: R. Brock Thomson, Secretary; J. I. Hobson, Treasurer. The executive committee is W. H. Coverdale, Robert Hobson, J. W. Norcross, A. J. Brown, K.C., F. J. Humphrey and F. W. Molson.

United States Merchant Marine.—After a conference between the President of the U.S. and the U.S. Shipping Board recently, it was announced that a decision had been reached to consolidate the board's foreign steamship lines into 18 or 25 trade lines, and then offer the ships of these lines for sale under a guarantee of maintained service for a period of years. If no justifiable offers are received for the ships under these terms, the board will enter upon an aggressive plan of operation on its own account. The suggested plan of government operation concerns cargo routes primarily, and not passenger routes. It was also stated that the board is willing to sell any of its ships at market price without maintenance of service guarantee, on a similar basis on which a number of oil tankers have been sold recently, but any ships sold at less than market prices, must be on a maintenance of service guarantee. Congress has voted \$50,000,000 for the operation of the ships for this fiscal year, and should the Board fail to make the sales as outlined, operation of the ships will be carried on by the Board, under the provisions of the Jones Act.

Kellum Maritime Affairs, Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Yarmouth, N.S., to own and operate ships for transportation of passengers, mail and freight; and to carry on a general towing, salvaging and wrecking business etc. The incorporators are: C. L. Sanderson, A. L. Chipman, Yarmouth, N.S.; N. Soderberg, K. M. Knudsen, L. Christensen, New York, and J. E. Kellum, Miami, Florida.

Dominion Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held, and judgments delivered in connection with the following casualties:—

Loss of s.s. Alaskan.

This matter is dealt with on another page of this issue.

Loss of s.s. Tuscan Prince.

Held at Vancouver, March 1 and 2, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by H. Mowatt and W. Wright, as nautical assessors, into the stranding and loss of the Prince Line's s.s. Tuscan Prince, on Austin Island in Barkley Sound, while bound from Antwerp, Belgium, to Puget Sound ports, Feb. 15. After hearing the evidence, and considering a list of eight questions submitted by Alex. Morris, on behalf of the Marine Department, the court gave the following judgment, in the form of answers to the Department's questions:—The ship had 3 compasses, in good order and sufficient for the safe navigation of the ship. They were last adjusted in New York, about a year ago. The master ascertained the deviation from time to time, when possible, and the errors seem to have been ascertained properly and proper corrections to the course applied. The ship was supplied with sufficient charts and sailing directions, and her stock was replenished at San Francisco, the last port she left, before her loss. A good and proper course was set, and appears to have been carefully steered. She could make no leeway, having a gale of wind and a following sea right astern, to make allowance for which, the speed was reduced about 7½ hours before she stranded. Since her last dependable position from the radio direction finding station at the Columbia River, the weather conditions were such as to render it impossible to see or hear anything to verify or check the ship's position. Soundings were taken frequently, as they should have been. The ship was navigated in a proper and seamanlike manner. An abnormally strong current setting to the northward at a rate of at least 2½ knots an hour, combined with a blinding snow-storm, obliterating from view any object outside a few feet from the ship, was the cause of the stranding and subsequent loss, which were not caused by the default or wrongful act of the captain or any of the deck or engine room officers, or any other members of her crew.

Ship Building in Great Britain.—On March 31, there were under construction in the United Kingdom 1,492,000 tons of shipping, an increase of 23,000 tons over Dec. 31, 1922.

Transportation Conventions in 1923.

Canadian Car & Foundry Co. and Canadian Steel Foundries Ltd., have removed their head offices in Montreal to 307 Craig St. West, from the Transportation Building.

Montreal Locomotive Works. Sir Charles E. Gordon has been elected a

director. He is President of Dominion Textile Co., Vice President of the Bank of Montreal and a director of several other financial and industrial companies.

Portland Cement Association.—During the American Railway Engineering Association's annual meeting in Chicago recently, a number of the members visited two laboratories there which are testing construction materials and methods, viz., the Lewis Institute, Structural Materials Research Laboratory, and the Underwriters' Laboratories. At the Lewis Institute, a film, showing the manufacture of Portland cement, was displayed. Prof. D. A. Abrams, in charge of the laboratory, described the work it is doing, following which the party divided into small groups, each of which was escorted through the laboratory by an attendant, who explained the making of test pieces, methods of storing, operation of testing machines, and other processes going on continually. At the Underwriters' Laboratories, a fire test on a concrete block wall was witnessed. Among those making the trip were the following:—S. B. Clement, Chief Engineer, Timiskaming & Northern Ontario Ry.; H. T. Hazen, Assistant Chief Engineer, Central Region, Canadian National Rys.; C. P. Disney, Assistant Bridge Engineer, Central Region, Canadian National Rys., and D. MacKenzie, of the Grand Trunk Western Ry.

FOR SALE

Street Cars and Parts

The Commission offers for sale the following complete street cars, car bodies, trucks, motors, etc. Sealed Tenders addressed to the Chairman, endorsed "Tender for Street Cars and Parts," will be received until noon of

May 12th, 1923

at the offices of the Commission, Public Utilities Building, 35 Yonge St., Toronto, Ontario. A cheque for 5% of the amount of the offer, payable to "The Toronto Transportation Commission," drawn on and accepted by a Canadian chartered bank, must accompany each Tender. Tenders for the whole or part of the lot offered will be received. The cars and materials offered are now on the Commission's property in Toronto, and Tenders must be based on acceptance as and where the cars and materials are located.

59 Single-truck cars complete with G.E.-67 motors;

6 Single-truck cars complete with G.E.-1000 motors.

1 Brill M.T. truck car complete with G.E.-67 motors.

2 Single truck trailer cars complete.

Also 11 single-truck motor car bodies and trucks (no motors).

7 Double-truck closed motor car bodies (no motors or trucks).

10 Single-trucks (no bodies), with G.E.-1000 motors; 6 G.E.-1000 motors and 6 pairs of wheels (no trucks nor bodies).

A condition of the acceptance of any Tender is that the cars or materials must be removed by the tenderer from the property of the Commission within one calendar month from date of notification of acceptance from the Commission to the Tenderer by registered mail.

Copies of a detailed inventory may be secured and appointments to inspect may be arranged through the Executive Department, Public Utilities Building, 35 Yonge St., or the Rolling Stock Department, 4 Sherbourne St.

The highest or any tender not necessarily accepted.

H. H. COUZENS,
General Manager,

TORONTO TRANSPORTATION
COMMISSION.

Here's Real News

The Hydro Electric Power Commissioners of Ontario
have appointed a Sales Syndicate
to advantageously liquidate all the

Equipment and Supplies

which can be released from the

Queenston-Chippawa Development

The majority of this Equipment—recently released—
was purchased new and used only on the above under-
taking. This is a splendid opportunity to secure really
high grade, modern Machinery-Accessories and
Supplies at prices that are right.

Our amended Stock List is now being prepared and we
will be very glad to forward your copy, upon request.
Time spent consulting this list will be time well spent.
Someone will profit handsomely as those who purchase
any of this "special offering" which is available are going
to make one of the best purchases in their career.

We give below a general idea of what class of equipment is
available.

Steam and Electric Shovels—Steam and Electric Locomotives—
Air Dump Cars—Air Compressors—Channellers—Conveyors—
Drills—Motors—Concrete Mixers—Concrete Cars and Auxiliary
Equipment—Electric and Steam Hoists. In fact—almost every-
thing you might require.

Inspection can be made at
Niagara Falls - Ontario

Brass Wearing Parts for Locomotives. Journal Bearings for Freight and Passenger Service. BABBITTS. Miscellaneous Brass Castings for Railroads.

Works and Office: 69 Delorimier Avenue, MONTREAL, QUE.

Saving \$10,000 in Sixty Days—

with their Brownhoist locomotive crane. That is what the Shartle Machine Co. did with a big Brownhoist No. 6 crane while wrecking a power plant at Nitro.

This crane had had several years service when purchased by the above company. With a few minor repairs they consider this crane as good as new and say of it, "the crane is of such construction that if we had to buy a half dozen more cranes this type would be given the preference."

The Shartle Company are ready at any time to show their crane to prospective Brownhoist customers and to give them information on the kind of work it is doing. Or, if you will write us we will gladly tell you where Brownhoist cranes are being used on work similar to your own and the size and type best suited to your needs.

Brownhoist builds both big and small cranes. Write us your handling conditions and let us help you select the crane best suited to your needs.

The Brown Hoisting Machinery Co., Cleveland, Ohio

Branch Offices: New York, Chicago, Pittsburgh, San Francisco, New Orleans

Products: Locomotive Cranes, Buckets, Belt and Chain Conveyors, Contractor's Bunkers, Etc.

Type AT-R Arc Weld Bond

Round steel bar terminals, Easy welding, High conductivity

Rail Bonding satisfaction easily achieved

ERICO Rail Bonds satisfy every desirable rail bonding requirement. The many types, lengths and capacities enable you to choose a bond just suited to your conditions.

For extended bonding the ERICO Brazed Bond cannot be surpassed. Cheap installed cost, long life and the highest conductivity possible make this bond

the standard among big electric railways. Brazed Bonds can be applied on head of rail, or web of rail, with ease and certainty of results.

For "pickup" bonding, where the distance between bond applications is long, the ERICO Arc Weld Bonds will render efficient service at a very moderate installed cost.

Type ET Brazed Bond

For application to the head of rail of 60 lbs. to the yard or over.

Type AT-F Arc Welded Bond

With heavy forged terminals electrically brazed to the copper.

*Take advantage of our 18 years' experience
in solving your rail bonding problems.*

Do you know how much the Manual Operation of your important Passing Track Switches is costing?

A careful check of delays during heavy traffic will reveal the fact that the manual operation by trainmen of certain switches is acting to choke the capacity of your whole railroad system. It is robbing you of the use of locomotives, cars and rail facilities.

In no other way can you secure such great operating benefits for such a small expenditure than by installing R-S Remotely Controlled Electrically Operated Switch Machine Layouts at such switches. These switches can then be operated from the nearest telegraph office or block station and a great waste in fuel, labor and other items will be eliminated.

Through information secured by the signal division of the American Railroad Association from a large Eastern Railroad the cost of freight train delays is placed at 40 cents per minute and a delay of at least 10 minutes is required for the manual operation of a switch by the train crew. In many cases the cost is much more than 40 cents per minute.

A large western railroad recently estimated the savings for one remotely controlled electrically operated switch machine installation as follows:

1. Location—Passing Track Switch Block Signal Territory approached on an 0.8% grade.
2. Approximate Cost of Installation—\$3000.00.
3. Average number of train stops per 24 hours for heading in—6.
4. Average train stops per year for heading in—2190.
5. Average time loss per train per stop for heading in—10 minutes.
6. Train Crew wages per stop—\$.56.
7. Cost per year for train crew wages, account time lost heading in—\$1226.40.
8. Extra coal required per train per stop—1800 lbs.
9. Cost per year for extra coal account train stops at \$.403 per ton—\$7980.00.
10. Adding items 7 and 9 shows a saving of \$9206.40 by eliminating train stops for heading in to siding.
11. Allowing \$500.00 per year for interest on investment depreciation and repairs leaves a net saving of \$8706.40 per year.

Although the cost of this particular installation was low due to its location in block signal territory and the item of coal required for a stop appears high due to the stop being made on an 0.8% grade the figures show conclusively that without considering perhaps the most important items—the resultant increase in the use of locomotives cars and rail facilities—the installation pays for itself in less than a year.

There are no doubt, passing track switches on your road where large savings can be effected. The matter is of such importance as to warrant your most careful consideration.

THERMIC SYPHON *Increases Locomotive Capacity*

THE cry for more ton-miles is heard more frequently to-day than ever.

New locomotives are being rushed by the locomotive builders.

Existing power is strained beyond its limit.

A quick source of increased capacity is ready at hand. Ready to add 10 to 20 per cent. to the steaming power of every locomotive.

It can be quickly applied as locomotives go through the shop.

It is the Thermic Syphon.

STERLING HACK SAWS

The most expensive tool used in a machine-shop is a poor Hack Saw Blade. Some buyers purchase them where they are cheapest, but unconsciously they are paying the highest price. The Hack Saw illustrated on this page represents the "STERLING" Blade, which is the last word in a Hack Saw Blade, the makers being back of their entire product. The material and workmanship that go into the manufacture of this blade are of the very highest quality.

RESULT—A blade that has no superior.

Manufactured by

Diamond Saw & Stamping Works Buffalo, N. Y., U.S. A.

PEDLAR'S "PERFECT" CULVERTS

THE slogan, "No hill too steep or fill too deep for Pedlar's 'Perfect' Culverts," is well shown by the accompanying illustration which is reproduced from a photograph.

This Pedlar Culvert—like all other Pedlar Culverts—successfully resists the most enormous pressures and withstands the internal stresses caused by frost and ice.

Write for Culvert
Booklet "R. M."

We also manufacture Steel-crete, Metal Lath, Rib Fabric, Floor Tyle, Metal Roofing and Siding, etc.

Bungalow

Camps!

LAST AD.

Eleven New Bungalow Camps in Canada's Forests and Mountains

Do you want adventure this summer? Do you want to explore the wilds? Do you want to fish, swim, canoe, ride on horseback along mountain and forest trails?

Ask Dad to take you to one of the Bungalow Camps reached by the Canadian Pacific Railway in the Rockies or midst Ontario's lakes, rivers and forests. Better still, take in several of these camps. Those in the Rockies are within easy hiking distance of each other.

Any Canadian Pacific Agent will be glad to furnish full particulars. Ask the nearest one.

CANADIAN PACIFIC

IT PAYS TO USE

Woolery Ball Bearing Engines and Railway Motor Cars

They stay in service the year round, have big reserve power, are light to handle and require fewer repairs than any other engines on the market.

MONCRIEFF'S

Moncrieff's "Unific" is not a cheap glass. But because it outlasts many ordinary glasses, the "Unific" is economical. British made.

"UNIFIC" WATER GAUGE

GLASSES

The "Unific" does not readily corrode. It resists extreme changes of temperature and withstands the highest working steam pressure.

JOHN MONCRIEFF LIMITED, PERTH, SCOTLAND.

Canadian Representative: W. J. WALL, 134-136 Bleury St., MONTREAL, Canada.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

Operating Efficiency: Talk No. 1

The Right Foundation

All of the modern devices for saving in fuel that you could crowd into a locomotive could not compensate the operating loss due to a layer of boiler scale.

Clean boilers are the foundation. Scaling, foaming, pitting and corrosion are the enemy forces. Manufacturers of devices for increasing efficiency assume that the water is "right."

The Greatest Saving Is Without Initial Investment

Dearborn Scientific Treatment represents no initial investment on the part of a railroad. Its cost is only a tiny portion of its constant saving. It is used in connection with either raw or softened waters. Its results are sure.

Backed up by scientific understanding and prescription, by laboratory control of feed water variation, Dearborn and Dearborn alone offers a comprehensive service that is the key to locomotive efficiency. Dearborn Service men travel the lines constantly checking results.

If You Are Not Now Using Dearborn

Railroads not now using Dearborn are invited to send us samples of water supplies from their troublesome districts.

We will make analyses and recommendations at our own expense and guarantee to clean up and keep clean, scaled boilers, and to prevent foaming, pitting and corrosion.

There is no obligation. If you buy Dearborn Treatment it is because you will believe that it is going to save money for you. There is no substitute for Dearborn Treatment.

When You Turn to Electrification

The problems of your project can soon be brought down to consideration of materials, with the aid of our Specialists. They are trained and experienced in dealing with all the phases of transmission, distribution and collection of power from generator to motor—for electrification.

Established practice, or the improvements suggested from experience, are reflected in, or result from the development of O-B Materials.

Tunnels, Terminals, Mountain Grades, Mining Traffic, Suburban Traffic or any circumstance calling for electrification come within the scope of our Service.

Niagara Falls - - - Ontario

Vanadium Instead of Quenching and Tempering

IT is no longer necessary to use a quenched and tempered steel to secure the strength and toughness demanded of present-day locomotive forgings.

Higher physical qualities than those specified for heat-treated carbon steel can be had, without quenching or tempering, in Carbon-Vanadium, the Normalized* Forging Steel.

Carbon-Vanadium is a simple alloy steel of great natural strength and toughness. Its high physical properties are obtained solely by the use of Vanadium, the most powerful alloying element. Carbon-Vanadium is not quenched or tempered.

By adopting Carbon-Vanadium for reciprocating and revolving parts, railroads and locomotive builders are securing all the advantages of higher-strength forgings without the dangers, difficulties and expense of quenching and tempering.

Write for data and names of careful steel-makers from whom you can get Carbon-Vanadium, the Non-quenched Forging Steel.

Write for Bulletin
LF-1 containing de-
tailed information
about Carbon-Vana-
dium, the tough but
simple alloy steel.

* Normalized: heated and allowed to cool slowly, in still air.

VANADIUM STEELS

for Strength, Toughness and Durability

It Must

Be Pure

The purity of the oxygen and dissolved acetylene used in welding and cutting operations has an important bearing on the result.

Only gases of extreme high purity will do a clean, satisfactory job, economically. That is why tests made by chemists and engineers show that both Dominion Oxygen and Prest-O-Lite Dissolved Acetylene have the highest rating of purity.

Both of these products are invariably maintained at a higher

mark of purity than is usual for commercial use — an elaborate series of tests in our plants assures this uniform quality.

It is certainly more economical for you to buy the purest products when the price you pay is the lowest obtainable compared with other commercial oxygen and dissolved acetylene price lists.

So why not take full advantage of the saving offered to you by Dominion Service?

You save \$120 monthly if it is necessary for you to cover the entire transportation field in Canada with your advertising by being able to use one paper, Canadian Railway and Marine World.

The reason of this is that the paper is devoted to both land and water transportation and is subscribed to and read by officials and executives of steam railways, electric railways, ship owners and operators and ship builders. And this is only part of the field, as railway, canal and harbor contractors, harbor commissioners and government officials interested in railways and public works also look to the paper as

the real authority in the transportation field in Canada.

If separate papers were published by us to cover the three primary fields, it would be necessary for you to advertise in each at a cost of \$60 a page, a total of \$180, but we feel that we serve not only our advertisers best by publishing one strong paper covering the entire field, but also our subscribers, on account of the close inter-relation of land and water transportation in this country.

The transportation interests are truly the million dollar customers. What more paying investment can you make than a full page campaign in Canada's transportation paper, Canadian Railway and Marine World?

Perfection Signal Oil

A Galena product that is known throughout the world. Used by representative railroads in every country. Meets every requirement of railroad specifications. The burning oil that truly exemplifies the principles of "Safety First."

Perfection Signal Oil is made specially for use in railroad hand lanterns. Manufactured by Galena process from the highest grade materials possible to secure, it is tenacious of flame, long-burning, safe and reliable under all conditions of weather or operating service.

Perfection Signal Oil is purely a quality product, the development of many years of test and experience. It not only carries the unqualified guarantee of this company to render uniformly reliable and satisfactory service, but the personal co-operation of our service engineering staff to make such results certain. While not built to meet price considerations, Perfection Signal Oil costs but very little more than the inferior grades of compounded signal oils now offered for railway use.

The work required of oils used for motion signalling precludes the use of makeshifts. Its functions are among the most important in railroad operation, as they deal almost entirely in the safeguarding of lives and property.

The known fire hazard and instability of volatile oils places them outside the zone of safety for this use, while improperly compounded admixtures of animal and mineral oils are unsatisfactory through inability to produce a clear and dependable service light.

Perfection Signal Oil is manufactured
and marketed only by this company.

"Brownhoist Cranes are Unsurpassed"

**KILL
LAST AD.**

Brownhoist builds cranes, buckets, chain and belt conveyors, bins and other handling equipment. The cranes are mounted on creepers or 8 or 4 wheel railroad trucks and are powered by gas engine, steam or electricity.

"Our company has used several makes of locomotive cranes and we know by comparison that the Brownhoist is not surpassed by any other," says the Franc Slag Company. This company operates many slag and stone crushing plants in Ohio and Michigan and have used Brownhoist cranes for years.

The Brownhoist at their Toledo plant handles an average of 500 tons of slag a day at a cost of 4 cents per ton. Besides its regular work of handling crushed slag this Brownhoist does all kinds of odd jobs around the plant.

With the increasing cost and difficulty in getting labor the money-saving possibilities of a Brownhoist are worthy of your careful study. Write for a copy of catalog K and let us go into your problem with you.

WITHEROW

WITH-A-ROLL

Rolled Tie Rods

Witherow Tie Rods used between girder or Tee rails in track construction are rolled from billet to finished form in one heat.

There is no forging, welding or upsetting to cause weak spots by unequal heating and working.

The transition from terminals to flats is made gradually through a solid frog and there are no laps or pockets in which

moisture may collect and corrosion start.

The flats are designed with cross sectional area approximately equal to that at the root of the terminal threads, thereby eliminating all excess weight.

Rods are furnished in $\frac{3}{4}$ ", $\frac{7}{8}$ " and 1" sizes for any track gauge with cut threads and four hot pressed square nuts assembled on the terminals.

WITHEROW STEEL COMPANY

PITTSBURGH, PA.

The Canadian National Railways Believe in Concrete Culvert Pipe

THE constantly increasing use of Concrete Culvert Pipe by the Canadian National Railways is a most significant tribute to the desirability of this type of structure.

In the construction of Railway Culverts, permanence should be a leading consideration. When economy and permanence are desired, Culvert Pipe made of Concrete is the logical material.

In addition to its permanence and economy, Pre-Cast Concrete Pipe has these advantages. It is ready for immediate use. Its maximum practicable size is limited only by the weight which can be economically shipped and lowered into place.

Use This Service—

Authoritative Information on Railroad Uses of Concrete Now Available

Every railway official, construction engineer or employe interested in obtaining the best results in permanent construction should have this free bulletin and information service covering railway uses of Concrete.

Many new improvements and modern practices in the use of Concrete, as particularly applied to railroads, are included.

The service consists of a series of bulletins and a fund of special information obtained from thousands of experiments made by the Portland Cement Association in its laboratories and in the field. It also contains the contributed experiences of various railroads that have been extensive users of Concrete during recent years.

Because this service is prepared and written by experienced railway construction engineers, it is particularly valuable to men of their profession and those associated with them.

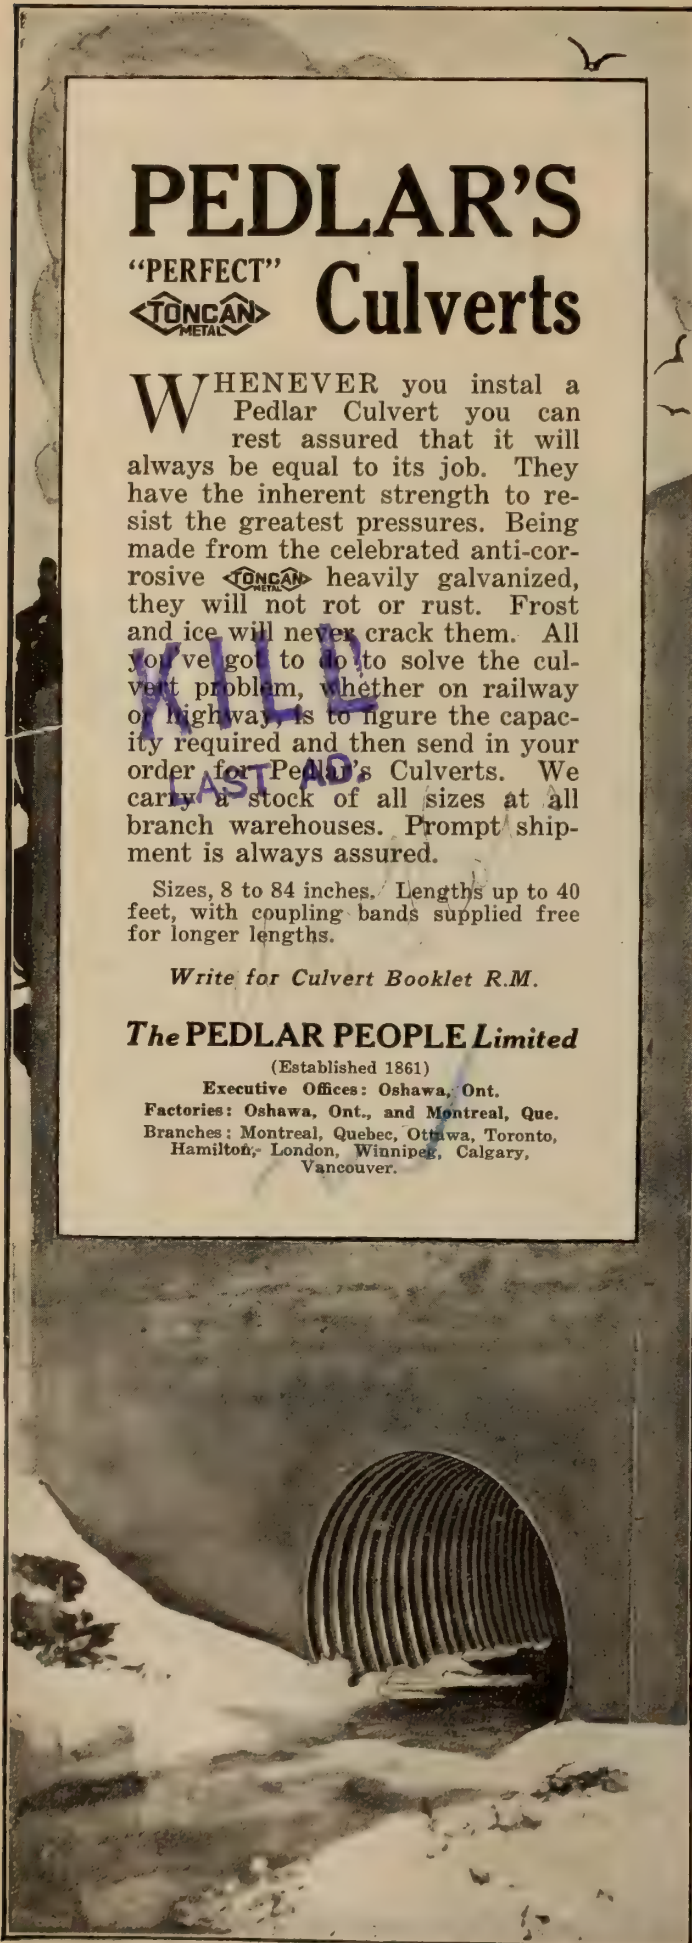

Write and ask for our series of bulletins if you haven't been receiving them, or for any special information you may want on Concrete.

THE BOOSTER ROUNDS OUT THE LOCOMOTIVE

A locomotive can always haul a heavier train than it can start.

Therefore, the ideal locomotive is one with reserve power to overcome starting inertia.

To carry around an extra pair of drivers that are useless after the train is started involves a great waste.

Many a Mikado hauls a bigger load than a Pacific simply because the extra pair of drivers help start more train.

But give the Pacific the Locomotive Booster, that auxiliary power plant attached to the trailer axle, and it can pull the load of many a Mikado.

So effective is the reserve power of the Booster that locomotives which are Booster-equipped are returning the Booster-cost every two weeks.

Ask for operating records.

A Pump for Every Purpose

Pumps for Municipal Water Supply, Marine Service, High Pressure Irrigation, Hydraulic Elevator Service, water supply for mills, office buildings and apartment houses, etc.

These renowned pumps have a long record of continuous satisfactory service. They are of extra rugged construction, and all bearings are renewable bronze, while they may be opened quickly for inspection without disturbing pipe connections.

We supply practically every type of pump, be it Air, Boiler Feed, Centrifugal, Fire, Marine, Gasoline, Heavy Oil, Irrigation, Rotary, Hydraulic or Typhoon, etc., and our engineers will gladly recommend the proper type for your conditions, without charge or obligation. Write our nearest office for Pump data.

More than Safety

The money spent in equipping your single track with Absolute Permissive Block Signaling buys more than safety.

It buys the equivalent of more rails and roadway.
It buys the equivalent of more cars and locomotives.
It buys the equivalent of more labor.

A number of railroads have postponed double tracking of single track lines indefinitely because of the increased capacity which A. P. B. Signaling enabled them to secure.

The running time of freight trains between engine terminals has been reduced from 1 to 3 hours on several railroads where the A. P. B. System is in use. This means a greater use of existing cars and locomotives and reduces the quantity of new equipment necessary. In many cases it means a substantial saving in labor due to the elimination of overtime.

The total saving in operating expenses through the use of A. P. B. Signaling on single track depends upon conditions. In cases it is as high as 20%.

Don't delay the signaling of your single track lines—it means more than safety. Money invested in signals may bring a greater return than money invested in other equipment and improvements. The problem should receive your serious consideration.

The A. P. B. System, conceded to be one of the greatest improvements in single track signaling, was introduced 11 years ago by the General Railway Signal Company and is now in use on more than 5000 miles of railroad.

Its remarkable performance record and low maintenance cost are convincing reasons why you should install the Absolute Permissive Block System.

Our engineers are at your command.

LACHINE

QUEBEC

P. & W. Double-Die Screw Plates

Moderately priced sets of taps and dies for the small machine shop, garage, service station and general tool room—

ONE or two of these sets will come in handy almost anywhere. At comparatively low cost they provide a ready means for doing accurately those threading and tapping jobs that come up every day.

Conveniently packed in nicely-finished boxes that keep the tools in place, the sets are made up in U. S., S. A. E. and Whitworth standard threads and in combinations to suit all usual requirements.

Notice the dies furnished with these sets. The die segments being double-ended and reversible, they can be turned over in the collet to present a new set of cutting edges to the work. This practically doubles the life of the die. The double-end feature also permits the upper surface of the die to be used to thread very short pieces and to thread close to a shoulder when necessary. These dies are also interchangeable with similar dies of other makes.

Steel-Car Construction at Angus Shops, Canadian Pacific Railway.

By H. R. Naylor, Assistant Works Manager, Angus Shops.

In 1909 the C.P.R., to meet the increasing severity of modern traffic requirements, originated a box car having its entire frame built of steel. The production of such equipment in quantity, necessitated the erection of an additional shop for the fabrication of the steel work, and the structure built embodied in its arrangement many novel features for the rapid handling of material to and from the machines and also during the various stages of assembly. The following paper describes this shop very completely, gives particulars regarding its layout, crane facilities, machine equipment, etc. The various machining operations and the jig method of car assembly, first put into practice at the Angus shops, are presented in detail, and the methods used in the final erection and finishing of cars are dealt with at some length.

In reviewing the improvements that have been effected in railway engineering in recent years, reference is usually made to the heavier and more powerful locomotives employed, grade elimination, heavier rails, improved train control and terminal facilities; but while great advances have been made in all these directions, it is a question whether the relative advance in any one of them has equalled that in car construction. The locomotive of higher capacity has been built without material change in the shops or their equipment, grades are removed today in practically the same manner as when the lines were originally built, and the same remarks hold good in regard to rails, train control, and terminal facilities, but in car construction the situation is substantially different. To particularize, a comparison of the modern 60-ton steel-frame box car with the 30-ton wood-frame box car commonly built 15 years ago brings out two points: the complete change in design, and the effect this change in design must have had on the car shops. It is obvious that the facilities for building the wood-frame car would be quite inadequate for the steel car and must have created new problems with which the car builder had to contend; and it is the author's intention to deal with this phase of steel-car construction, especially as the C.P.R. was responsible for many of the important developments.

Development of Steel-Frame Box Car.—The gradual increase in locomotive capacity, making possible the hauling of longer and heavier trains, subjected the wooden car to severe service conditions, which were in turn met by steel underframes and other steel reinforcements; and at each stage of advancement wood framing was gradually replaced by steel, until in 1909 the C.P.R. originated a box car having the entire frame built of steel. Within six years (1909-1914) this road added 30,841 steel-frame box cars to its equipment, and others soon adopted the same design, in some cases with slight modifications. After 10 years of extensive service these cars had evidently proved their utility, for the United States Railroad Administration, in one order

alone, included no less than 50,000 of this type.

The earlier type of steel-frame box car, shown in fig. 1, was built with center sills of 15 in. channels, side sills of 8 in. channels, side and end posts of 4 in. Z-bars, and corner posts of 5 in. angles. The longitudinal sheathing was bolted to the inside of the framing, in which elongated holes were punched, to allow of the boards being retightened without removing the bolts. This feature, however, has since been discontinued, as there is a possibility of the joints be-

machines, and also during the various stages of assembly. At the time of its erection it probably represented the best practice on this continent, being a combination of the good features observed in other shops with the original ideas developed at the time the layout was being planned. The freight section of the shop was designed to construct steel-frame box cars in the most economical manner, and although some minor modifications have been made in the machinery layout and erecting equipment to meet subsequent developments, the shop

Earlier type of steel frame box car built by the C.P.R.

tween the boards reopening if they are not effectively checked.

Necessity for Building a New Shop.—The Angus shops were already well equipped for building passenger and freight cars on an extensive scale, the large passenger and freight shops having supplementary planing mills, gray-iron and wheel foundries, and blacksmith, machine, and truck shops capable of supplying the greater proportion of all the materials required. The output of wood-frame box cars at these shops had reached as high as 40 cars a day. This remarkable organization, however, was rendered obsolete to a large extent when the C.P.R. introduced the steel-frame box car, to meet the increasing severity of modern traffic requirements, necessitating the erection of an additional shop. This shop was designed for building the steelwork of both passenger and freight equipment, and embodied in its arrangement many novel features for the rapid handling of material to and from the

has well served the purpose for which it was intended, and has furthermore proved equally satisfactory for building large orders of automobile, refrigerator, coal, and flat cars, in addition to steel snow ploughs and other snow-fighting equipment. At intervals between new car construction, the shop is used extensively for repairing and rebuilding steel freight and passenger cars.

Description of Shop.—The new shop (fig. 2) was located adjoining the wood-freight-car shop, facing a midway, upon either side of which were also located the supplementary shops, the midway being served with overhead travelling cranes. It is a steel-frame structure, with steel columns carried on concrete piers, the lower foundations walls being of concrete, 24 in. thick to the ground level, and 20 in. thick to a height of 2 3/4 ft., above which the walls are of red brick and 16 in. thick. The sash frames are of steel, the total sash area being approximately 40% of the total wall space. The

roof is carried on steel trusses, with ample skylight area. The floors are of 4 in. concrete, with a top surface of $\frac{3}{4}$ in. mastic.

There are three main divisions to the shop. The front one, facing the midway, and occupying the entire front, is the machine section, consisting of two 100-ft. bays, running parallel to the midway the one adjoining the midway being 209½ ft. long, while the inner bay is 182 ft. long. Each bay is served by a 10-ton electrically operated crane of the open-lattice-work type, having a span of 96¼ ft., and a height to base of rail of 28½ ft.

The freight-car erecting section, in the rear of the machine section, is 72 ft. wide and 415 ft. long, and was originally equipped with one 10-ton travelling crane, having a span of 67½ ft., and a height to base of rail of 27 ft. An additional crane of similar capacity has since been installed in this section. Situated also to the rear of the machine shop is the passenger-car erecting section, consisting of four bays, having a total width of 110 ft. These four bays, with the 72-ft. freight-car bay, complete the full width of the back of the machine shop. Each

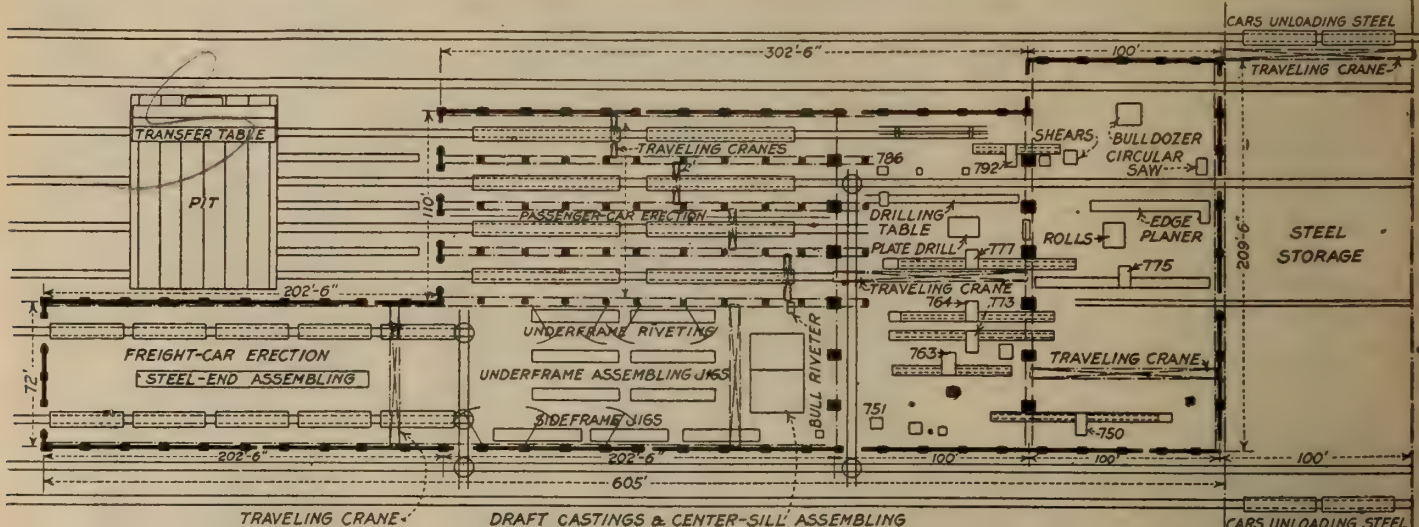

standard-gauge track connecting by turntables with three tracks running into the machine shop.

The crane facilities are unique, in that the whole area of the shop is traversed by electrically operated travelling cranes, so arranged that it is possible to install an unusual number, and yet maintain for each crane complete freedom of operation at all times. In this instance the crane arrangement was the deciding factor in the shop layout. It was decided that the machine section of the shop should be independent of the erecting sections, so far as crane service was concerned, and for this reason the crane runways in this section were installed in a direction transverse to those in the erecting shop. This arrangement made it possible to equip the two machine bays with separate cranes, each having a wide range of action with no interference. The machine layout is arranged with the view of relieving the overhead cranes to the greatest possible extent. This applies particularly to the handling of the larger members, such as center and side sills, which are required to pass over two punching machines situated in the different bays. As the first operation is com-

forward in the direction of the erecting shops, backward movement being carefully avoided, thereby reducing material handling to a minimum.

The high-speed punches are belt-driven, direct from motor to flywheel, gears being dispensed with. Clutches are of the 6-point type. The heads are equipped with two punches, which are controlled by gag levers. These machines are well adapted for punching the smaller plates, for which metal templets are made up and into which holes are drilled. By inserting a pin or gauge in each successive hole, and butting the plate against the pin, the desired spacing is obtained. In certain classes of work the operator can move the material fast enough to catch every hole with the punch running at the rate of 60 strokes a minute.

An unusual plan was followed as regards the installation of machines for heavy punching. The usual practice had been to install a small number of high-capacity machines, for the punching and slotting of the sills, side plates, and similar members, necessitating frequent changing of dies and templets, with further limitations in the event of break-

Steel car shop, Angus shops, C.P.R., Montreal.

bay of the passenger-car section is provided with a separate 2-ton travelling crane having a span of 24 ft. 10 in., and a height to base of crane rail of 21 ft.

Along the entire front of the shop, between it and the midway, there is ample provision for storing material. This storage yard, shown in fig. 3, is 100 ft. wide, and is served by a 10-ton crane, whose span and height are identical with those in the machine section, in anticipation of future shop extension. This crane runway extends beyond the shop limits and spans several tracks where cars of material can be readily switched and unloaded.

Through the freight-car erecting shop, entering from the rear end, are two standard-gauge tracks, 18 ft. center to center, which extend the full length, but do not enter the machine shop. Outside the shop, and parallel to the south wall, a standard-gauge track connects with a track on the midway, through turntables. This track is used for delivering the car trucks from the truck shop to the final assembly tracks. Through each of the passenger-car erecting bays there is a standard-gauge track leading in from the rear of the shop, also a transfer table for moving the cars during the various stages of completion. Through the center of the material storage yard, there is a

pleted the sills are transferred to the second machine, by special devices, independently of the overhead cranes. On completion of the machining operations, the sills are skidded over to the assembling trestles in the erecting shop, without assistance from the overhead cranes. The two cranes in the freight-car erecting shop, operating on the same runway, are entirely free from machine-shop handling, and as the first one is assigned to the preliminary assembly positions and the second to the final assembly positions, there is no overlapping or interference. The crane facilities in the machine and freight-car erecting shops will be better appreciated if one will endeavor to imagine four cranes on a single runway attempting to handle an equivalent amount of work.

The machine shop is equipped with the following machinery: 4 automatic spacing punches, 5 coping punches, 5 high-speed punches, 2 horizontal punches, one 7½ ft. gate shear, one angle shear, one 36-ft. plate-edge planer, one 30-in. circular saw, one 30-in. metal band saw, one 7-ft. plate roll, one 10-ft. brake, 1 bulldozer, 2 special plate-drilling machines, and miscellaneous drill presses, all driven by independent motors. The arrangement of the machines is such that the material after each operation moves

downs. It was therefore decided to overcome these handicaps, by installing four automatic spacing punches of moderate capacity, to obviate the expense and delay of die changing and double handling, and as the five additional coping punches are duplicates of those used in the automatic spacing tables, replacement can be made with but short delay should they become disabled.

Machining Operations.—The storage yard in front of the shop is used for storing the larger members, such as sills, cover plates, side plates, etc. The smaller parts such as the posts and braces, bolster and cross-bearer diaphragms, etc., are made by bulldozers and hydraulic presses in the blacksmith shop. The machines are served by narrow-gauge service tracks, running from the material storage yard, special care being taken to unload the material close to the track by which it will enter the shop. The progress of material through the machine shop is as follows: Center sills and side-sill channels are loaded by overhead cranes, and brought into the shop on service lorries, and deposited on trestles opposite the traveller at rear of center- and side-sill web-spacing punch, no. 775. Two air-operated traversing jacks lift the sills in pairs, and place them on the traveller rollers, ready to pass through

the machine. On the far side of this punch, as shown in fig. 4, is an elevated runway, carrying the traveller head which grips the sills with its projecting jaws and automatically spaces the punching. Along the traveller runway, steel templates, with projecting pins, engage a trip lever suspended on the head of the traveller, close the electric circuit, arrest the travel of the head, and close the circuit of the punch control; the punch then com-

pletes the operation. After passing through this machine, the sills are released from the jaws of the traveller, lifted by jib cranes as shown in fig. 4, and deposited back to back on the rollers of sill-flange spacing punch no. 777, the first and second operations in pairs. In all of these operations the passage through the machines is rapid, and the accuracy of the spacing mechanism is such that the punching error is slight, and far less than it would be were each

dies shown in fig. 5 are used to shear the ends to shape and punch the group of holes in one operation. The bolster cover plates and diaphragms are machined in a similar manner, the cover plates being passed over the spacing punch and the diaphragm flanges punched in one of the coping punches, equipped with special dies as in fig. 6, for punching the flange holes in one operation. During these operations the machine is relieved

Fig. 3. Storage yard, along front of steel car shop.

Fig. 4. Center and side sill web spacing punch.

pletes the operation. After passing through this machine, the sills are released from the jaws of the traveller, lifted by jib cranes as shown in fig. 4, and deposited back to back on the rollers of sill-flange spacing punch no. 777,

the first and second operations in pairs. In all of these operations the passage through the machines is rapid, and the accuracy of the spacing mechanism is such that the punching error is slight, and far less than it would be were each

of excessive load, by varying the length of the punches, resulting in the holes being punched consecutively. The usual practice for freight-car work is to punch rivet holes to a diameter not exceeding that of the rivet, and, when the parts

Fig. 5. Machine for shearing and punching ends of side posts and braces.

Fig. 6. Coping punch for machine bolster, cover plates and diaphragms.

which are placed directly opposite the delivery end of the web punch. On completion of the first operation, the sills are disengaged from the head clamp, and pushed back over the rollers to the starting point, where they are again turned over by a special device attached to the jib cranes, and passed through the machine for the second operation on the opposite flanges. The sills are then lifted by the travelling

hole marked off and punched independently.

There are certain parts which cannot be handled satisfactorily on the spacing punches, yet the punching must be equally accurate, or otherwise much of the benefit obtained from the spacing punches is lost when the parts are assembled. The machining of the ends of the side posts and braces is an example of this kind. In this case the special combination

are bolted together, to ream the holes to a size not exceeding that of the rivet by more than 1-16 in.

Jig method of assembly.—The erecting of steel-frame box cars by the jig method was originated at Angus shops. By this method the underframe, side frames, and end frames are assembled on jigs, as complete units ready for the final assembly of the car. The jigs consist of stands or cradles, by means of which the

various members are accurately placed, and held in proper relation to each other until they are riveted together. The advantages of this method are manifold. As each member lies flat in the jig, the drawing together of the parts is reduced to a minimum, wedge bolts being used extensively for this purpose, as they can be rapidly applied. A complete unit being assembled in one operation, the possibility of a cumulative error is avoided.

and the draft castings are riveted on by a compression riveter, as shown in fig. 7. The individual sills are then moved across to a position on the left, where the two center sills are assembled and riveted with bolster center castings and separators in position. The sills are placed on stands, on which are 4 fixed pins, corresponding to 4 rivet holes in the sills at the center line of bolsters. By placing the sills flange down on these pins, per-

crane then places the center sill in position, to which are attached the bolster and cross-bearer diaphragms with their cover plates and center-sill cover plate complete, after which the assembly is bolted together and the holes reamed ready for riveting. The underframes are then swung over by the overhead cranes to the riveting jigs on the right, which are constructed similar to those used for assembling, thereby maintaining the pro-

Fig. 7. Compression riveter, for riveting draft castings to center sills.

Fig. 8. Jigs used in assembling underframes

The jigs dispense entirely with checking for squareness, alignment, and location of connection holes, thereby simplifying the final assembly to a considerable extent.

Before any of the parts are assembled,

fect alignment of the two sills is assured, which simplifies the application of cover plates later on. The draft gear is also applied in this position.

The next step is the assembling of the underframes, and as this a lengthy op-

per alignment. Each riveting position is equipped with two 50-ton compression riveters suspended from swinging jib cranes, the posts of which are in line with columns to the right. The crane jibs are 21 ft. long with runways for air

Fig. 9. Jigs used in assembling side frames.

Fig. 10. Placing side frames in position.

all concealed surfaces are painted to prevent corrosion.

The center-sill channels, after passing through slot-punching machine no. 763, are skidded from the idler rollers to trestle just inside the erecting shop, where the draft castings are temporarily bolted on and the holes reamed ready for riveting. An electric hoist, operating on a runway below and clear of the overhead cranes, swing the sills into position,

eration, four positions are assigned for the purpose as indicated in fig. 2. These jigs, as shown in fig. 8, consist of 4 steel cradles, located at bolster and cross-bearer centers, and so arranged that each member of the underframe is held in proper alignment, and at centers that will coincide exactly with connections on the side frames. The bottom cover plates of the bolster and cross-bearers are first placed on centering pins; the overhead

hoists, the suspension mechanism being so arranged that the riveters can be tilted to drive the rivets in the inclined bottom flanges of the bolster and cross-bearers, which otherwise would have to be driven by an air hammer. The compression riveters were specially designed on the scissors principle, with a thin nose to permit of the top and bottom rows of rivets being driven without turning the underframe to complete the operation.

The side frames consisting of the side sill, side-plate, post, braces, door posts, and track, are assembled as a unit on a jig frame situated abreast of the under-frame jigs. This jig, as shown in fig. 9, consists of channel-iron stands, the four corners ones of which are capped with short sections of channel iron, in which are holes for locating exactly the side sills and plates. The stands on either side are tied together with angle bars,

the fourth position the end ladders, roof-frame brackets, and other parts are applied, the ends as completed being then placed opposite the final assembling position.

The final erecting.—As the trucks are assembled and painted, they are delivered from the truck shop, and enter the erecting shop by the side door immediately ahead of the underframe and side-frame jigs, where they are turned on a turn-

safety appliances, brake rigging, couplers uncoupling rods, etc., are applied, the remainder of the riveting completed, and the entire frame, as shown in fig. 11, is then sprayed with the priming coat of paint ready for finishing.

Finishing the car.—The steel frames are switched each day to the wood freight-car shop, where the decking, sheathing, roofing and doors are applied, and the painting operations are complet-

Fig. 11. Car with steel work completed and ready for finishing.

Fig. 12. Boards leaving matcher and passing automatically through painting machine.

which carry additional cross-bars, upon which the various members of the side frames are placed in proper relation to each other. In this position the side frame is temporarily bolted, reamed, and riveted ready for the final assembly posi-

table and placed in position on the assembling track. The underframe completed in the riveting jig is then lifted by the overhead crane and placed on the trucks, the slings are released, and a steel end is next placed in position, and bolted on

ed. The decking is of 1¼ in. red pine, and the sheathing of 1½ in. Douglas fir, both having tongued-and-grooved joints. High-grade lumber, free from knots, checks, or cracks, is selected for this purpose, and is then kiln dried, the mois-

Fig. 13. Interior of painting machine from above.

Fig. 14. Car completed and ready for service.

tion. Originally the end frames were assembled on jigs similar to those used for the side frames, but in recent years the end-post construction has been replaced by corrugated-steel ends. These steel ends, and the end sills, are assembled on trestles located between the final assembling tracks, and when temporarily bolted together they are skidded to the second and third positions, where they are then reamed and riveted. In

the end farthest away from the side-frame jigs; the side frames are then placed in position, as in fig. 10, and finally the second end, along with the center and side-sill cross-ties. The brake-cylinder reservoir and piping are also applied at this time.

The car is then moved, by car haul, to the second position, where the assembled members and the roof framing are riveted in place. In the third position, the

ture content being carefully limited, in order to prevent the possibility of further shrinkage later on; the only objection of any importance raised against the steel-frame box car, as compared with other box cars, having been one arising from improper drying of the sheathing. After being machined, the sheathing is again examined, and any boards checked or cracked in drying are set aside and use for lining the ends of the car.

Investigation of Properties of Chilled Iron Car Wheels.

Before leaving the planing mill, the sheathing, roofing, and running boards receive their priming coat of paint, in a painting machine recently developed at the Angus shops and which differs from those in use elsewhere. The boards, on leaving the matcher, pass automatically through the painting machine, as shown in figs. 12 and 13, where they are sprayed by a series of nozzles, which can be set in any desired position according to the surfaces required to be painted. The paint is drawn up through suction pipes from the bottom of the box, by means of air jets blowing across the nozzles, and as ejected it is atomized by the air, and blown on to the boards in the form of fine spray. The amount of paint to be applied is controlled by air valves, or by regulating the speed at which the boards pass through the machine. No brushing or wiping is necessary. The boards on leaving the machine are piled on trailer trucks, and distributed by tractors to the shops when dry. These machines will paint at the rate of 200 running feet a minute, which is about as fast as the boards can be conveniently piled for drying.

The first operation in the wood freight-car shop is to apply the decking, the joints of which are previously coated with a thick paint compound, as are also the ends of the boards making contact with the bottom boards of the side sheathing previously applied. The side sheathing, which has already received the priming coat of paint, is next applied, and to ensure that the sides of the car will be watertight, the joints are coated with paint compound, after which they are wedged down into position and bolted to the framing. The end lining is then applied in a similar manner, but vertically. In the succeeding operation the roof is applied, the boards and metal sheets of which have previously been primed. After the doors are hung in place and the remainder of the safety appliances have been installed, the car is given two additional coats of paint and stenciled, when it is complete and ready for service, as shown in fig. 14.

The foregoing paper was read at the American Society of Mechanical Engineers railway session, at its spring meeting in Montreal, May 29.

The Canada Club, London, Eng. held its annual dinner, April 24, under the presidency of Sir George MacLaren Brown, European General Manager, C.P.R. Among those present were P. A. Clews, General Freight Agent, Canadian National Rys., London; F. W. Cowie, Consulting Engineer, Montreal Harbor Commissioners; D. B. Hanna, ex President, Canadian National Rys., Toronto; Lt. Col. R. W. Leonard, formerly Commissioner, National Transcontinental Ry., St. Catharines, Ont.; Sir William Mackenzie, President, Toronto Railway Co., Toronto; A. J. Mitchell, ex Vice President (Finance), Canadian National Rys., Toronto; W. G. Murrin, Assistant Manager, British Columbia Electric Ry., Vancouver; W. Phillips, European Manager, Canadian National Rys., London; T. J. Smith, European Freight Manager, C.P.R., London.

Railway Lands Patented.—Letters patent were issued during March for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows,—

The Illinois University Experiment Station has issued a second bulletin on its investigation of the properties of chilled iron car wheels, dealing with wheel fit, static load, flange pressure, strains and ultimate strength of flange. The bulletin presents two additional phases of the investigation which had for its object the determination of the strains which may occur within a car wheel and the limitations of present designs, with the view of improving the chilled iron car wheel and making it more satisfactory under present and future service requirements. The work was done under a co-operative agreement between the Association of Manufacturers of Chilled Car Wheels and the Illinois University Engineering Experiment Station. The bulletin deals with the strains in arch plate chilled iron wheels which originate from, first, wheel fit, second, static loads, third, flange pressure and, in addition, the possibility of increasing flange strength by adding metal to the flange and tread is determined.

The first portion of the bulletin gives the strains that are developed when mounting a wheel on the axle. These are of large magnitude, and are worthy of very careful consideration. When they are measured a static load is placed upon the wheel increasingly, by increments of a few thousand pounds until 32,000 lb. is reached. The combined stresses due to pressing on the axle and vertical load are then determined. A side pressure is then placed upon the flange and measurements taken to determine the combined result of stresses developed from the three sources. It is shown that the stresses which are developed from load and from side pressure are very small in comparison with those which are developed from pressing on the axle and those which are developed by heat from the brake shoe. The latter part of the bulletin refers to increasing the strength of the flange. The present design of flange was developed when car capacities were very small, and each time that the capacity of the cars increased, the working stresses in the flange are increased, with a corresponding reduction in the factor of safety, and while the flanges for 30 and 40-ton cars, and perhaps 50-ton cars, are now satisfactory, it is certain that additional strength would be welcomed, and it is probably necessary in the 70-ton cars if adequate safety is attained.

To prove definitely the relation between the strength of flanges of various thicknesses, wheels were cast having thin flanges for half of the circumference, and thick flanges for the other half. This eliminated variables except flange thickness. Some of the results were as follows:—

	Strength of Flange	
	Normal	Thickened
New wheel no. 158,510		
average	90,400 lb.	117,500 lb.
Increased strength.....		30%
New wheel no. 132,649		
average	74,900 lb.	94,600 lb.
Increased strength.....		30%
New wheel no. 158,506		
average	82,000 lb.	115,600 lb.
Increased strength.....		41%

The above indicates that there may be expected approximately a 30% to 40% increase in strength for new flanges when $\frac{1}{8}$ in. is added at the back. It is not as necessary that the increased thickness should apply when a wheel is new as when it is worn sharp. Under these conditions the following results were obtained:—

	Normal	Thickened
Wheel no. 132,648, ground approximately vertical.....	38,900 lb.	76,500 lb.
Increased strength.....		Nearly 100%
Wheel no. 158,521, ground to 1 in. thick.....	32,200 lb.	54,800 lb.
Increased strength.....		70%

It would hardly seem necessary to require physical tests to prove that a flange of thicker section would have greater resistance, but this has sometimes been questioned and the percentage of increase has been unknown, and it is well to have these quantities definitely fixed, in order that the campaign for increasing the thickness of flange shall be definite and irresistible. This campaign should now have no material obstruction in its way since the Railway Engineers' Association's track committee submitted the following report, which was unanimously adopted by the association several years ago: "The track committee is willing to agree that the flanges can be increased as recommended by the chilled car wheel people without any serious detriment from the track standpoint provided; that the wheels are in all cases mounted to $\frac{1}{8}$ in. additional spread gauge; that the allowable flange wear before wheels are removed be changed so that the wheels will be removed when the flange is worn to within $\frac{1}{8}$ in. of the present limit of removal; that more care be used in matching wheels on any given axle, on account of the reduction in play and the corresponding reduction in compensation from coning; that this flange width be confined to the flanges of 4-wheel freight car trucks; that this conclusion on the part of the track committee be not construed as an invitation to increase the axle load. With the above provisions it is believed that it will be unnecessary to make any difference in the width of the flange ways of frogs and crossings, or change the present method of track construction."

The bulletin also contains notes on the flange strength of worn out 850 lb. wheel running up to very high figures, some of them reaching 175,000 and, in fact, in this case, the breakage of the plate occurred before the flange parted.

Disposition of Unclaimed Carload Freight by Terminal Switching Roads.—The Railway Association of Canada has issued the following circular: "The following regulation has been approved by the association to govern the disposition of carload freight by terminal switching roads when refused or unclaimed by consignees: 'When carload freight received in switching service is refused or unclaimed by consignees, written notice (or advice by 'phone confirmed in writing on the same day) must be given by the switching road to the carrier road within 24 hours after refusal by consignees, in the case of refused freight, or, within 5 days after arrival, in the case of unclaimed freight. Cars will be held by the switching road for disposal orders from the carrier road. If disposal orders are not furnished within 10 days from date of notice to delivering carrier road, the switching road may return the car to the delivering carrier road, accompanied by all charges, including switching, demurrage, etc.'"

Lindsay Shops, Canadian National Rys.—A press report states that the Peterborough, Ont., City Council was advised May 8, by Sir Henry Thornton, that the C. N.R. shops at Lindsay, Ont. would not be moved to Peterborough, as had been reported.

Railway Operating Revenues, Expenses and Other Statistics for February.

The following comparative table for Feb., 1923 and 1922, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are not in all cases the same as reported in 1922.

The column headed "Canadian National" gives the figures for the combined steam railways in Canada, under the

Canadian National Ry. Co's directors' management, including the former Canadian Northern System, the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers.

The column headed "Canadian Pacific"

includes also the Montreal & Atlantic and Esquimalt & Nanaimo Rys.

The items under side headings 1 to 6, inclusive, include rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, baggage, parlor cars, etc.

Ontario Railway and Municipal Board Expenses.—The estimates for the year ending Oct. 31, 1924, passed by the Ontario Legislature recently, contained the following items for salaries and expenses: Chairman, \$7,000; Vice Chairman, \$4,500; Member of the Board, \$4,000; Supervisor of Telephone Systems,

\$4,000; Secretary, \$3,300; Inspector of Telephone Services, \$2,400; Court Reporter, \$2,000; Consulting Engineer, \$2,000; Clerk, \$1,500; Clerk of Street Railway operations, \$1,500; 2 senior clerk stenographers at \$1,100, \$2,200; 2 clerk stenographers at \$1,050, \$2,100; Traffic Expert, \$900; Experts, \$6,000.

Shaughnessy Building, Montreal.—Senator Dandurand stated in the Senate, recently, in answer a question, that the Government had not entered into negotiations for the purchase of this building; that an offer had been received for its sale, but that no action had been taken.

Railway Operating Revenues, Expenses and Other Statistics.

The table on the preceding page gives the gross earnings, operating expenses, net earnings or deficits, and other operating statistics, for Canadian railways as a whole, for March, compared with March 1922, and separately for the Canadian National and Canadian Pacific Rys. The table on another page gives the revenue, expenses, and net earnings or deficits of the Canadian National, Canadian Pacific, and Grand Trunk Rys. for February, compared with Feb. 1922. These tables show that the Canadian railway industry did not occupy an enviable financial position during the first quarter of the year and the results of operation for that period suggest that railway employees who are looking for wage increases, and numerous agitators looking for freight rate reductions, are engaged in quests for something which is going to be pretty hard to secure.

In February, when the operating ratio for the railways collectively was 106.41 compared with 100.53 in Feb. 1922, the railways carried more freight than in Feb. 1922 and got less for doing it. They carried more passengers than in 1922, and derived a little additional revenue from the service, but not enough to prevent the total gross for Feb. 1923 being less than in Feb. 1922. While the total revenue was less, operating expenses were larger, the Feb. 1923 expenses being \$1,515,323 more than in Feb. 1922, causing an operating deficit of \$1,821,424, and the unfavorable operating ratio mentioned above. The Canadian railway industry has had operating deficits in February for four years, and it is commonly looked upon as a poor month, but the disquieting feature of the situation is that, while it was universally agreed that Feb. 1922 was about as poor a month as could be expected, Feb. 1923 was even worse. The operating statistics for the two large roads show the causes contributing to the poor result secured by the roads as a whole, and an analysis of them shows that both the large systems experienced conditions which contributed to the collective result. On the Canadian National, freight traffic increased slightly, but freight revenue decreased slightly; passenger traffic and revenue increased somewhat, but not enough to wipe out the loss in freight revenue, and with the operating expense increased by 9.4%, the Feb. 1922 operating ratio of 110.58 was exceeded in Feb. 1923 with a ratio of 121.82. On the C. P.R., freight revenues fell off 5.4% and passenger revenue decreased 3%, making a 4% decrease in total revenue, which, in combination with a slight increase in expenses, brought the operating ratio from 93.87 in Feb. 1922 to 98.01.

In March the C.P.R. had to pay out \$178,929 more in operating expenses than in March 1922 to derive gross revenues which were smaller than in March 1922 by \$261,864, the result of this being that net was reduced by \$440,793 for the month. Rate relationships being considered, it seems safe to assume that the C.P.R. hauled as much freight in March this year as in March 1922, and the difference in the results secured does not indicate desirable present conditions in the railway industry. The company's statement for the first quarter of the year, like that for March, also shows a decrease in net, and this despite a healthy increase in gross. January was a good month, but the de-

creases in net earnings in February and March wiped out the January increase. The increase in gross for the three months was \$1,405,247, but operating expenses increased \$1,768,486, and the reduction in net earnings was \$363,238.

The original portion of the present Canadian National system, i.e., the Canadian Northern, Canadian Government, and Grand Trunk Pacific lines had a much poorer month in March 1923 than in March 1922. The March 1923 gross earnings were \$964,442 less than in March 1922, and operating expenses were \$250,524 more, the months operating deficit, \$2,194,411, being \$1,214,965 more than in March 1922. Like the C.P.R. the original C.N.R. lines had a fine month in January, when the operating loss was but \$1,156,377, compared with \$2,223,162 for Jan. 1922, but in Feb. the operating loss was \$2,971,377 compared with \$2,375,829 in Feb. 1922, and this, in combination with the March results mentioned above resulted in the operating deficit for the first three months of 1923 being \$743,728 more than the first three months of 1922.

The Grand Trunk portion of the Canadian National system had a much better March than either the original Canadian National line or the C.P.R., this applying both to the G.T.R. system as a whole and to its Canadian lines. For the whole system, the gross revenue increase, while accompanied by an increase in operating expenses, was greater than the latter, with the result that net earnings were increased substantially. For the first quarter also, the G.T.R. system shows improved net earnings compared with the first quarter of 1922. This however does not apply to G.T.R. lines in Canada; as while in March net earnings for the Canadian lines were \$224,255 more than in March 1922, for the first three months of 1923 the net was \$307,745 less than in the same period of 1922.

The lesson to be derived from a study of the figures presented is obvious. The revenues derived by the railways for the performance of transportation service are not sufficient to bear a proper relationship to the expense of providing the service. The first part of 1922 was a trying time for the railway industry, but the first quarter of 1923 had even less favorable results. It may be said that trade conditions in February and March were not such that good traffic resulted, but more traffic was handled in Feb. 1923 than in Feb. 1922, and it is not likely that the March 1923 traffic was much, if any, smaller than that of March 1922. Preliminary statements for April and the first part of May show that the railways have been deriving larger gross earnings than in the corresponding periods of last year, which is a favorable sign; how great a proportion of those gross earnings will go to swell the net, however, remains to be seen. It is to be hoped that it will be larger than in the immediate past.

It must surely be evident to people who are agitating for rate reductions in various parts of the country, that as things stand the railway industry is in no position to grant them, and it should be equally evident to railway employees who seek higher wages, that, with present transportation rates the railways cannot grant them. Railway transportation is a commodity which must be made just as cheap as it possibly can be,

for the benefit of all industries, and railway employees must not bear, through lower wages, an undue share of railway deficits, but everyone should recognize, that transportation cannot be furnished at less than cost over any considerable period of time. There is a limit to the speed with which railway operating efficiency, as marked by improving equipment and methods secured only with great capital expenditure, can increase, and efforts to reap the benefits of increasing operating efficiency, in advance of the time when such increase has become a reality, will tend to prevent it becoming a reality. This country is just beginning to get on its feet, industrially and economically speaking; but the railways are getting altogether too small a share of the prosperity which is very hesitatingly making itself evident, and for the simple reason that railway, industrial and individual prosperity are interrelated and move together if wage increase and rate reduction agitation act to postpone the coming of reasonably prosperous times for the railways, it will most certainly be found to have the same result for all concerned.

Transportation Events of Twenty-Five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for June, 1898.

J. W. Swan appointed Official Photographer, G.T.R.

C.P.R. starts building baggage cars without platforms or hoods.

General Baggage Agent Quick, G.T.R., issues revised rules and regulations.

Construction started on first 35 miles of Winnipeg and South Eastern Ry.

Atlantic & Lake Superior Ry. opened from Metapedia to New Carlisle, Que.

E. D. Boswell, President, Temiscouata Ry., dies suddenly at Riviere du Loup.

G. A. Browne succeeds Alex. Milloy, as Traffic Manager, Richelieu & Ontario Navigation Co.

G.T.R. promulgates new operating rules, practically those of American Railway Association.

C.P.R. adopts consolidation locomotive, with compound cylinder, as standard for freight service.

G.T.R. notifies agents to stop taking large amounts of U.S. money, as bankers will not accept it.

C. E. A. Carr, Superintendent, London Street Ry., also appointed Superintendent, Montreal Park & Island Ry.

Mackenzie, Mann & Co. withdraw from contract with British Columbia Government, to build railway from coast to Teslin Lake.

Wm. Mackenzie, of Toronto, goes to England to finance Ontario & Rainy River, Winnipeg, and South Eastern & Dauphin Railways.

Intercolonial Ry. converts 3 passenger cars into dining and restaurants cars, with counter for passengers not wanting to sit down to a dining car meal.

J. Osborne, Assistant to Vice President, C.P.R., devoting considerable time to rolling stock matter, with oversight of shops at Farnham, Montreal and Perth.

E. A. James, theretofore Chief Dispatcher, C.P.R., Winnipeg, appointed Superintendent, Winnipeg to Brandon, and tributary branches, succeeding J. Murray, appointed Track Inspector, lines west of Fort William.

Canadian Pacific Railway Co's Annual Meeting.

The C.P.R. Co's 42nd annual meeting at Montreal, May 2 was presided over by Lord Shaughnessy, Chairman of the company. E. W. Beatty, K.C., in moving the adoption of the report for the calendar year 1922, which was published fully in Canadian Railway and Marine World for May, said:—

The active business conditions which developed at the end of last year have continued during the first three months of this year, involving a moderate increase in gross earnings over the same period of 1922. Traffic would undoubtedly have been much larger, and a freer movement would have ensued, were it not for the extraordinarily severe winter, particularly in Canada. These conditions were accentuated in traffic consequences by the slowness of the return of Canadian cars from the United States and embargoes placed by our connecting U.S. railways due to unsatisfactory conditions on their lines. With the termination of winter there has been an appreciable improvement in traffic, which is being felt by all Canadian companies. The net results during the first three months were of course, seriously affected by the severe weather conditions under which the company's operations were conducted.

As intimated in the annual report, the results of the operations for 1922 were, under the circumstances, satisfactory, especially in view of the adverse business conditions which existed during practically the first nine months of the year. The imposition of the lower scale of rates, under The Crow's Nest Pass Act, of necessity materially reduced the revenues from the grain traffic, which would have been extremely disappointing were it not for the extraordinarily heavy movement during the fall months in consequence of the large crop. It is apparent, however, that these rate reductions have had results not fully appreciated by Parliament when re-enacting the legislation, in that they have contributed to an uneven rate structure, which can only be removed when operating costs are lower and traffic heavier, and when removed will have to be in such a way as to first relieve that traffic which has not as yet experienced equivalent lower rates. If the suggestion made by the transportation companies last year had been adopted, freight rate reductions could then have been proceeded with, as circumstances warranted, in an orderly and uniform way, and without any dislocation of or discrimination against commodity traffic generally.

It is gratifying to note that the prospects for the immigration into Canada of the class of colonists that is so urgently needed to assist in developing the country's natural resources are much brighter than they have been in the past two or three years, and heavier traffic from Great Britain and northern Europe is indicated by the largely increased western movement on the company's ships during the first four months of this year. The agreement lately completed between the Imperial and Dominion Governments for joint action under the Empire Settlement Act justifies the expectation of still greater numbers of colonists from Great Britain. The countries of northern Europe, particularly Switzerland, Holland, Denmark, Norway and Sweden, which were neutral during the war and which, therefore, suffered no loss of man-power, owing to war activity, and from which emigration dur-

ing the war ceased, find themselves overpopulated and Switzerland and Holland have already found it necessary to follow the lead of Great Britain in voting public money to aid in the emigration of their nationals. The Government has recently, through the removal of restrictions which prevented the entry into Canada of citizens of certain countries, opened the door to the admission of immigrants of the highest type, men not only trained to agriculture but artisans thoroughly skilled in their crafts, with a reputation for hard work and thrift which will place almost beyond question their success in Canada. I feel strongly that citizens of these countries may be assimilated into Canadian life with great advantage to this country. We have, in the past, obtained a large proportion of our colonists from the United States, but the general farming conditions, there particularly in the western portions of the U.S., in common with portions of western Canada, have not been entirely favorable during the past two years, and these conditions have checked the flow of agricultural colonists to western Canada. A careful survey of existing conditions lately completed justifies the expectation that we can now hope to again stimulate a steady influx to Canada of desirable colonists from the U.S., but this is naturally dependent upon improved agricultural conditions there. The system lately inaugurated, of obtaining from Great Britain and Northern Europe qualified farm laborers to assist Canadian farmers in carrying on their operations, is proving successful, and already some thousands of farm laborers have been obtained to fill applications filed by western Canadian farmers on a basis of wages and employment which warrants the hope that our western farmers will be enabled to produce their crops at a less cost than has been possible in the past, with the class of itinerant labor available from time to time. In spite of the slowness which has marked this country's grappling with the problems of immigration generally, a slowness which has been in marked contrast to the energetic and forward policies of other portions of the Empire, some progress has been made, and the conditions today are more satisfactory and more hopeful than at any time during the past four years.

The shareholders are aware of the proposed retirement of the company's note certificates on July 10 next, though they do not mature until March 2, 1924. The moneys required to effect the retirement of these certificates have been provided without any additional financing being necessary, and, upon it being accomplished, the deferred payments on lands and townsites, a portion of which have been held for the special investment fund, will be released for the company's general purposes. I have no doubt that it is as gratifying to the shareholders as it is to the directors that the retirement of these certificates will be effected without dislocation to, or strain upon, the company's finances.

The shareholders will, I feel, be also very gratified that the physical condition of the property has been thoroughly well maintained, in spite of manifold difficulties under which the company's operations have been conducted in the past few years. As I pointed out on previous occasions, this has been possible only through the provision in former years

of ample facilities, including rolling stock and motive power, and the extraordinarily high standard of maintenance to which the properties were brought by the expenditure of large amounts of money when financial and traffic conditions were favorable.

The operations of your steamships is becoming increasingly important, the company now having 15 passenger ships in regular service on the Atlantic and 4 on the Pacific, and 12 freight ships on both oceans. The prospects for improved business, particularly on the Atlantic, are good, and that on the Pacific, notwithstanding the acute competition which exists, should show progress during this year, especially if economic conditions in China and Japan become more favorable. Your company has been in the Pacific trade for over 30 years and bears a very high reputation in the Orient. The expansion of Canada's trade with China and Japan is of great importance, both to the country and to the company, and it is to be hoped that the Government and Canadian commercial interests will not overlook these opportunities, to which other countries appear to be so keenly alive.

With the completion of the consolidation of the Grand Trunk and the Canadian National Rys., the railway situation of Canada, which has over many years past been so disorganized, has now settled into a condition in which the wisdom of the policies adopted by former governments can be tested, and it can be ascertained whether they can be successfully administered, and without further exhaustive demands upon the country's exchequer. In this situation, and its effect upon transportation companies generally, your company is, of course, vitally concerned, and upon the extent to which political interference is eliminated or reduced will depend in a large measure the result of the experiment. If the chief executive of the National Railways, and his tried and able assistants, are permitted to administer the properties as a private enterprise would be administered, the people of this country, will, in a short time, know exactly what prospects of success confront their venture into public ownership. If, on the other hand, political considerations prevail, and a free hand is not given to these administering officers, there can be but one result, viz., the increasing of the country's financial burdens, which are already onerous enough to give grounds for apprehension.

As is always the case where a drastic departure from conditions previously existing, either in Canada or elsewhere, is made, new situations arise and new competitive methods are adopted, and it is scarcely to be expected that an appeal should not be made to sentiment by those who ask for support to the National Railways, but I do not anticipate that these appeals would succeed to the extent of being detrimental to the interests of this company, as they would involve a forgetfulness of the history of the country and the extent to which private enterprise, whether commercial, industrial or other, have contributed to the country's advancement. Fundamentally, private property and private enterprise constitute, in no less degree than public property and public enterprise, the wealth and business of the nation. Their interest is no less a national interest, and entitled in all respects to the same

measure of protection and favor at the hands of the Government. It makes little or no difference that the private enterprise may be in part or even entirely the property of British or foreign investors. Canada must for a long time depend upon foreign capital and must continue to afford it the same privilege as domestic capital. I do not mean to suggest that private enterprises which have been over ambitious in their conception have not failed, because they have, but in the main the prosperity and progress of the country have been contributed to by individual initiative and enterprise to a greater extent than in any other way. It must, of necessity, follow, that if the country is to expand in its commercial and industrial development, reliance must be placed upon individual and corporate enterprise. This in turn involves the support of British and foreign capital, a support which I would consider might conceivably be slow in forthcoming were it thought that political or government influence were such that the integrity of capital investment were jeopardized. I have, as yet, seen no indication that the Government of the day desires to take any other attitude than a judicial and impartial one as between the National Railways and this company, and it is of great importance that it should not, if the credit of Canadian enterprises is to be maintained, and foreign capital successfully invited to its support and expansion.

This company is Canada's largest property owner and largest tax-payer. No other corporation or citizen has a greater interest in the national welfare, nor contributes, I think, more to its advancement. Its railway was projected and constructed for the purpose of carrying out one of the terms of Confederation, viz., the construction of a transcontinental railway connecting the railways of eastern Canada with the seaboard of British Columbia, and the contract with the Dominion Government contains a provision for its perpetual operation. It can therefore justly claim to be in the truest sense a national work.

The purposes for which it was projected have been more than fulfilled. Thousands of miles of other lines have been added to the original undertaking, uniting the provinces of Canada; most of them pioneer lines, anticipating settlement and providing transportation facilities for remote districts. By its steamships it has provided for the foreign trade of Canada, and by its colonization work it has been the means of attracting many thousands of settlers. Its success in all these directions has brought other less direct, but at the same time substantial, benefits to Canada in the attraction of foreign capital and foreign enterprise.

Your directors lost their oldest colleague in the death of Mr. Angus in September last. He was the last survivor of the first board of directors of the company, and the value of his services over a period of 41 years can scarcely be over-estimated. As his term of office would have expired at this meeting, it will be necessary to elect a successor, and your directors have recommended the election of F. W. Molson, whose name will be added to the ballots when they are distributed.

The shareholders will be glad, though not surprised, to know that the morale of the Company's officers and men remains high and that their loyalty and efficiency are, as always, unquestioned.

The report was adopted, also the fol-

lowing resolution:—

Whereas it is in the view of the directors expedient that portions of the undermentioned branch lines be constructed in the near future, viz:—Kipp-Relaw Branch, Kipp to Bow River, 22 miles; Archive-Wymark Branch, Mileage 25 to 50, 25 miles; Tuffnell-Prince Albert Branch 50 miles. It is therefore resolved that the directors are authorized to proceed with the construction of the said portions of the said branch lines when in their opinion conditions warrant, and that to aid in their construction and equipment the directors are hereby authorized to issue and dispose of consolidated debenture stock to such an amount as they may deem expedient, but not exceeding in respect of any of the lines the amount which the company is or may be empowered by statute to issue.

The retiring directors, Sir Edmund Osler, Sir Herbert Holt and Col. F. S. Meighen were re-elected and F. W. Molson was also elected a director.

At a meeting of the board held immediately after the shareholders' meeting, Lord Shaughnessy was re-elected Chairman of the Company, E. W. Beatty, President, and Grant Hall, Vice President, and the following were appointed the executive committee:—E. W. Beatty, Grant Hall, Sir Herbert S. Holt, Sir Vincent Meredith, Bart., Sir Augustus M. Nanton, Sir Edmund B. Osler, Lord Shaughnessy.

The C.P.R.'s New Land Policy.

E. W. Beatty, K.C., President, C.P.R., made the following announcement May 10:—"The Canadian Pacific Ry. is at all times, accurately apprised of the tenor of the national mind, because it is, in itself, one of the largest land owners in the west, because, as a national organization, it is vitally interested in preserving prosperity throughout the Dominion; and because it knows from past experience that its acts have constituted precedent. It unfortunately knows that in the western provinces, increasing farm costs, together with low prices obtainable for farm products, have seriously affected those farmers not definitely and firmly established in the operations. The present position is due to several causes. During the war the high prices realized for farm produce, and bountiful crops obtained in 1915-16, induced expenditures by farmers for extra equipment, and increased land holdings, which, since the decrease in value of farm produce, without a similar decrease in wages or cost of living, together with crop failures in some districts, has resulted in a rapidly increasing burden of debt, and in the case of some 30,000 farmers holding land under contract for purchase from the company—through no fault of their own—they find themselves behind in their payments, and a certain amount of discouragement and depression has resulted, which, if unchecked and unremedied, must inevitably spread wider, breeding a spirit of pessimism with its many attendant evils.

"The Canadian Pacific has always been the pioneer in providing favorable terms for the colonization of its lands in the west, particularly in connection with the terms under which their lands have been sold, in the preparation of ready made farms, the advance of livestock to settlers loans made to them, and the aid granted through its agricultural and development departments. It is clear that the new plan will do much to re-establish confi-

dence in the west, retain settlers who are now proposing to leave, and stimulate immensely the immigration of desirable agricultural colonists. Briefly, the plan is to take the indebtedness of the farmers who now have contracts with the company, rewrite their contracts and spread the present indebtedness over 34 years, on an amortization plan. The settler will pay the same amount annually for 34 years, and upon completion of the 34th payment receive title to the land; he is assured that no annual payment of interest and principal combined will exceed 7% of the cost of the farm. The plan will absorb his total indebtedness in easy payments, allowing him sufficient from profits to provide both the comforts and enjoyments of life for his family.

"The future of Western Canada, in fact, of Canada as a whole, is dependent upon greater population. If farmers were even fairly well satisfied with their conditions, it would greatly facilitate the securing of more desirable settlers. There is at present a considerable exodus from the west, which is practically nullifying the efforts of the C.P.R. and the Government to encourage new peoples to come in. The loss of people to the country is a loss to Canadian business in general, affecting manufacture, commerce, transportation, etc. To get desirable immigrants we must have fairly well satisfied settlers. Under the new C.P.R. plan, farmers will now be able to be successful upon their holdings, and the Government and the railways will be in a position to encourage prospective settlers to take up unsold or unoccupied farm lands. In Great Britain, the United States and other countries from which desirable immigration is ready to flow, a marked stimulus to land settlement will, without doubt, result from the introduction of the new policy as outlined."

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on May 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, as follows: Number of cars owned, 209,295; home cars on Canadian foreign lines; 11,545; home cars on U. S. lines, 55,589; home cars on home roads, 142,161; Canadian owned foreign cars on home lines, 9,855; U.S. owned foreign cars on home lines, 30,569; total cars on lines, 182,585; per cent on lines to total owned, 87.2; deficiency on lines to total owned, 26,710; home cars in bad order, 13,151; foreign cars in bad order, 360; total cars in bad order, 13,511; per cent in bad order, 7.4; privately owned U.S. cars on lines, 2,333; privately owned Canadian cars on lines, 992.

The figures given above are smaller than those for some time past. This is due to the elimination of statistics of the Central Vermont, Michigan Central, Pere Marquette and Wabash lines from the reports, in accordance with an understanding reached by the Railway Association's sub-committee on car service on April 11.

Some Recent Developments of the Railway Motor Coach.

By C. E. Brooks, Chief of Motive Power, Canadian National Railways.

In commencing this paper the writer must ask for lenient consideration, as the subject named is not only in the early stages of development, but also covers such a large field and variety of equipment that it is necessary to curtail descriptive matter as far as possible and to make a certain number of rather bald statements unadorned by detail.

The motor coach is not a new departure in railway work, but is instead a branch of the work which on most railways had sunk back, from a promising start 15 years ago, into obscurity, due essentially to high maintenance and operating costs, and to the general idea that the motor car was a toy only. During the past three years the subject has been actively revived as a result of: Firstly: The ever increasing encroachment of the motor bus on railway earnings. Secondly: To the improvement in the design of the motor and its appurtenances. Thirdly: To the idea which the automobile is gradually giving the public, namely, that it is not necessary to sit on a plush seat

main line trains. (4) To connect small summer resorts, golf clubs, etc., to branch line or through main line service. (5) To handle milk of a limited amount to a distributing or connecting point. (6) To provide connections to small suburbs.

Among the first real developments of the motor coach was the gas-electric car, the use of which spread rapidly fifteen years ago, but which, unfortunately, did not solve these problems successfully, on account of the high maintenance cost of the heavy duty gasoline motor driving the generator, the very uncertain service, the complications of the equipment, and the great weight of the motor coach itself. Indications are that the gas-electric system, with a modern gas engine generating plant, is making another bid for this class of work, and a brief description of such a unit is given farther on in this paper. About the same time steam units, having very considerable weight, and all the complications of the locomotive, appeared, but were discarded for

of 15 to 25 miles per hour, including stops. Consider a 5 mile run between stops, 1 minute for stops, acceleration from 0 to 30 m.p.h. in 2 minutes on level track; 30 to 35 m.p.h. at end of third minute, an average speed of 35 m.p.h. for the next $3\frac{1}{4}$ miles, and half minute to travel 0.21 mile, and come to a stop, means that in order to run 5 miles and make one stop, the elapsed time is 10.9 minutes, or an average schedule speed, including stops, of $27\frac{1}{2}$ m.p.h. This allows nothing for loss of time on gradients, slow orders, etc.

Generally speaking, class A units have been gasoline driven, and the experience of many railways points to this class of equipment being an economical and lasting development, which will be improved to the point of high grade automobile reliability within a very short time. Already, in many places, these cars have retrieved business which had been lost to bus lines on the highways, and also to the private owned car, and it has been the usual thing to find pas-

Self-propelled Steam Passenger Car, Canadian National Railways.

in order to travel short distances.

In order to enter into a discussion of present day developments, it will be necessary to briefly outline the service requirements, and in doing so the writer must be pardoned if he presents the motor coach as a "unit car," and not a train of cars, or a driving car hauling a trailer. The latter conditions may be possible on small interurban, or suburban, lines, but as a practical railway condition it is not being considered by many large railways. The reason for this is that up to the present time it has not generally been found to be economical to replace a necessary train service with a motor coach hauling one or more trailers, on account of motor capacity limitations.

On the other hand, high train mile costs for small returns have forced railway officers to turn to the motor coach for relief in the following classes of service: (1) To give a frequent passenger service on sparsely settled branch lines, or parts of main line adjacent to market towns or junction points. (2) To connect junction points, on important main lines, with the town or small city situated within a few miles of the main line. (3) To give a group of towns, situated on a main line or important branch lines, a frequent connecting service over and above through

much the same reasons as the gas-electric car. Present day developments are generally to provide for traffic requirements, which, for the purpose of discussion, are sub-divided as follows:

Class A—A seating capacity of from 24 to 40 persons, and provision for approximately 100 sq. ft. of baggage space. (Note: In some classes of service the baggage space is given up and seating accommodation substituted.) The light weight of such a car to be from 18,000 to 30,000 maximum, or in other words, not to exceed 750 lb. per single seat (with baggage space) or 500 lb. per seat if no baggage space is allowed. Smaller cars have been made, and are in daily use, but the rapid development of traffic, after cars are put into service, indicates that the above mentioned sizes are reasonable limits.

Class B—Units seating from 40 to 60 passengers, and providing for baggage space, minimum 100 sq. ft., maximum 200. While the trend of construction has resulted in this class of car weighing from 800 to 1,200 lb. per single seat, it is thought that the weight must be kept down to the same limits as prescribed in class A above, in order to get any fuel economy and keep maintenance costs at a reasonable figure.

Speed Requirements.—Schedule speeds

senger traffic develop to a marked extent after a service has been instituted. The failures have been rather heavy, due to conditions described later in this paper, to the over-exacting requirements of timetables, and to non-realization of the limitations of the gasoline motor. For the purpose of description class B units may generally be sub-divided as follows: (1) Storage battery; (2) H.p. steam, oil fired boiler; (3) Heavy duty gas engines; (4) Gas-electric.

Class A Cars—The Gasoline Engine Driven Motor Coach.—For cars described as class A, weighing approximately 30,000 lb. light weight, the general practice has been the use of the high grade truck engine—4 cylinder—and running at a maximum speed of approximately 1600 r.p.m., developing a maximum of 70 h.p. Wherever this type of engine has been used, it has transmitted its power through clutches, transmissions and universals, to gears, most of which are of standard truck or even heavier design.

A general description of a typical power plant, such as mentioned above, is as follows: Engine, 4-cylinder $4\frac{3}{4}$ x 6 in.; pressure oiling system; pump water cooling system; primary and secondary transmission; primary ratio first speed, 4 to 1, third speed, 1 to 1. Secondary increases the ratio from 26 m.p.h., for

normal engine speed, to 35 m.p.h. The first provides for ruling grade, and the second for level track conditions.

To a much less extent, the automobile type six-cylinder engine of the following general description has been experimented with: Engine, 6-cylinder $3\frac{1}{2} \times 5$ in.; pressure oiling system; gear ratio 4.7 to 1 between engine and wheel; nominal engine speed at 30 m.p.h., 1,450 r.p.m.; horse power developed, 50 at 2,200 r.p.m.; maximum speed, 2,200; pump, water cooling system. In general its power has been transferred through standard automobile clutches, transmissions, etc., which are used with the same type of engine in automobile service.

In so far as the actual power plant is concerned, it is the opinion of many that the automobile engine has, in almost every way, demonstrated its superiority over the truck engine for class A cars, and for general service, as described in the first part of this paper, due to the following main reasons: (1) Ability to run over rated speed without serious loss of balance and consequent excessive vibration; (2) Economy under light load conditions. Number 1 undoubtedly embraces conditions which are vital to the successful maintenance of any machine or engine, and it is the writer's intention to attempt to explain this from the everyday point of view, derived from experience, rather than from the dynamics of the problem.

Practically any high grade automobile engine designed for a rated engine speed of approximately 1,450 at 30 m.p.h. with a gear ratio between 4 to 1, and 5 to 1, may be driven at engine speeds of 2,200 and car speeds from 50 to 60 m.p.h., without any noticeable serious vibration. Experience indicates that a relative flexibility cannot be expected from the truck engines, for any length of time, without serious engine trouble, possibly resulting in a complete break down of the service. When a motor coach is being operated on a railway where there are schedule connections to make, and where there are meeting points, designated by train orders, and by the time card, it is certain that, regardless of the framing of a schedule, which should not develop an engine speed over that coinciding with the rated speed of 35 m.p.h., the operator will frequently exceed this by 15 or 20 m.p.h., in order to meet the operating requirements of the service after a delay of any kind. No such parallel exists in highway work, with either the automobile or the truck, but is such an accepted fact on a railway, that the only safe course is to provide the type of power plant which will meet this condition daily without breaking down; in other words, the power plant must be moved out of the sphere of ordinary usage, and into what might be called the outer edge of racing conditions. Railway gradients even accentuate this condition, as there is little, if any, opportunity for letting the engine cool off, as there is on the highway. The automobile engine has been designed, not only for easy and economical low engine speed conditions, but also for those outlined in the last paragraph above, and the experience of several railways in this country, with a number of cars operating under extremely different conditions, seems to bear this out, which leads to the conclusion that the light weight high speed gas engine is a satisfactory power plant for the light weight cars described as class A.

Class B Cars—(1) The Storage Battery Car.—The general dimensions and description of a typical unit are as fol-

lows: Car: Interior arrangement, to suit purchaser; weight, 60,000 lb.; length, 53 ft.; trucks, 2-4 wheel standard M.C.B. axles, except that journals are fitted with roller or ball bearings; electric motors, etc., 4-25 h.p. 250/300 volt, mounted with a gear ratio of 16 to 91, Standard series, and parallel controller and circuit breaker, installed at each end, and in baggage compartment; there are voltmeter, amp. hr. meter, underload circuit breaker and switches for control of air compressor and lighting. Storage batteries, 250 cell, capacity 450 a.h. amp. hrs. at 300 v or 135 k.w.h.; (Note 580 a.h. have been obtained with a minimum of 150 volts). Charging, d.c. 250 or 500 volts may be used for charging and the car is equipped with switches for arranging the battery cells in either series or parallel. Normal rate of charge 90 amps. Time required for a normal full charge 5 to 7 hours. Higher rate of charging may be followed provided temperature of battery does not exceed 115° F. Radius of operation, maximum of 140 miles, on a full charge, figuring on level or rolling grade. Recommended not to exceed 100 miles or to get a boosting charge. Consumption of power 35 watt hrs. per ton mile. Acceleration $\frac{1}{2}$ m.p.h. per second. Maximum speed, 45 m.p.h. on level track. As the car weighs approximately 60,000 lb., the figure of 35 watt hours per ton

point which may make steam power the most satisfactory unit car power, and it may be well to consider these defects more in detail, as they appear to exist in modern equipment.

(1) Insufficient boiler capacity is a defect directly coupled with excessive weight of equipment. Boiler plants of approximately 70 boiler h.p. nominal rating have been applied to cars with a total net weight in running order of from 50,000 lb. to 60,000 lb., providing for 100 sq. ft. of baggage space. The total live load will bring this equipment up to a gross weight of approximately 65,000 lb. or a load of 650 lb. per boiler h.p. Experience indicates that for a boiler of this capacity the weight should be reduced by approximately 15,000 lb. and the writer has no hesitation in saying that this should be possible, as the entire power plant may be carried on the leading (driving) truck and the rest of the body lightened proportionately. Total absence of vibration should be a very great advantage in lightening the car equipment. Practically all the first cars of continental make indicated that high pressure and high superheat were necessary, in order to provide for a gear ratio sufficient for starting, and at the same time for a piston speed of 800 ft. per minute at 40 m.p.h. The engine developed to meet these conditions has no doubt

Gasoline Motor Passenger Car, Canadian National Railways.

mile gives a consumption of 1.05 k.w.h. per car mile—level track and normal conditions.

General.—Within the before mentioned radius of operation this car has been extremely satisfactory, and is being operated successfully, under low temperature conditions, with no appreciable trouble. The tractive effort of 2,400 lb. makes it possible to use a trailer, if necessary. Cost per car mile, including all maintenance and transportation charges, power, etc., 17c. The maintenance has been extremely light, and all indications are that the life of the batteries will be 8 to 10 years at least.

(2) **Steam Cars.**—The steam power plant was probably one of the first tried, of any kind of power, for self-propelled cars, but unfortunately its development has not kept pace with requirements. Medium pressure boiler plants of 300-400 boiler pressure, with comparatively low superheat (100° F.) were introduced to a considerable extent in continental practice several years ago, but the use of this type of car has not developed, due principally to excessive weight of the equipment, the inefficiency of the boiler plant, and the general complications of the equipment. Recent developments indicate that while the seriousness of these defects has been noted, and improved, they have not yet been overcome to the

been a great mechanical success, but the boiler plant supplying it has not yet been developed to the point where it can exceed the schedule previously outlined, even under the most favorable conditions. The causes of this deficiency appear to be due to: (1) Insufficient header volume, resulting in carrying over an emulsion into the superheater units, with a consequent total loss of superheat and excessive water consumption, and (2) Unequal distribution of heat to all generating units, resulting in steam pockets, thereby destroying both circulation and evaporative qualities.

The problem of providing sufficient surface condenser for hot weather conditions, coupled with protective appliances which will be operated by thermostat in cold weather, has not been solved, with the result that under maximum conditions the water loss is as high as 45 lb. per car mile, necessitating replenishing at frequent intervals, with subsequent loss of time.

The automatic control of the oil flame has been highly developed, but is not yet perfected. Generally speaking, this automatic feature must have two distinct functions: (1) To cut off or reduce fuel supply when maximum b.p. is reached, and (2) To cut off fuel under low water conditions. The first named is undoubtedly perfectly developed, but the second

is not due to the varying quality of the steam coincident with the conditions (maximum load) which most often causes low water.

The least considered of all conditions in connection with the steam car is probably the comfort of the operator, and in this respect this type of equipment is unpopular, on account of the extreme heat, which may be overcome, and also the noise of the oil flame. The latter is by far the most serious, and is apparently impossible to control when using high velocity jets of steam for atomizing.

Space does not permit a further study of the steam plant, but the following general data of a steam car now being tested may be of interest:—

Space required for boiler plant.....	640 sq. ft.
Heating surface.....direct	385-sq. ft.
Gross weight of car.....	60,000 lb.
Net weight of complete power plant	
without oil and water.....	13,000 lb.
Quantity of water supply.....	200 U.S. gall.
oil.....	180 U.S. gall.
Oil rate per car mile average.....	1.0 gall.
Boiler pressure.....	300 lb.
Superheat (average).....	200° F.
Engine dimensions.....	6½ bore 8 in. stroke
Gear ratio between crank shaft and axle.....	1 to 1.46

(3) The Heavy Duty Gas Car.—Dimensions and description: Length, 55 ft.; weight, 60,000 lb. loaded; engine dimensions, 6-cylinder—6¾ in. stroke; power, 116 h.p., at 800 r.p.m.; 225 h.p. at 1,600 r.p.m. Transmission, 4 speeds forward, 3 reverse. Geared to give 56 m.p.h. forward at 1,400 r.p.m. in high, and 37 in third speed. This class of car has not been tested to the point where any accurate data may be given, but it is evident that gas consumption will be at least twice that of a class A car per car mile.

The problem of handling through transmission and clutch the mechanical drive from a heavy duty gas engine of possibly 200 horse power has not yet been solved, unless it is through the medium of the oil transmission, so successfully used in navy work. The extreme complication of this transmission or magnetic control makes it doubtful at the present time whether gas power plants will successfully exceed 70 horse power.

(4) The Gas Electric Car.—Earlier in this paper mention has been made of the gas-electric car, which came into prominence about fifteen years ago, and which has been practically discarded, for reasons mentioned, namely, unreliable power plant and general complication of equipment. The first mentioned cause of failure has undoubtedly been overcome, and reliable constant speed units are in general use for generating purposes. If it were possible to eliminate the starting troubles when using types of engines suited for low grade and cheap fuels, there would be no doubt about the general use of this type of equipment, on account of unit power costs. The difficulties mentioned are such an important factor in the successful operation of a motor coach in certain localities that we must necessarily turn to the gasoline engine for generating power.

The gas-electric system provides double ended control, and an efficient starting torque, but still retains all the complications of a dual power plant. The general data pertaining to a modern gas-electric plant is as follows: Size of car, 55 ft. length, 10 ft. width; seating capacity, 54, with 100 sq. ft. of baggage space; weight, loaded, 65,000 lb.; engine, 6-cylinder, governor controlled, bore 7 in., stroke 8 in., developing 150 b.h.p. at 900 r.p.m., driving a 100 k.w. 700 volt generator, which in turn drives two motors on forward truck. Fuel consumption, esti-

mated, 0.25 gall. per mile. It is thought that there may be a possibility of a smaller capacity constant speed gasoline engine (the equal of average running power consumption approximating 25 horse power for cars weighing 60,000 lb. loaded) driving a generator charging a limited battery capacity. Theoretically this might provide the starting torque desired, and at the same time eliminate the undesirable features of the large power plant, but it could not be an economic consideration where cheap power could be purchased.

The Ball and Roller Bearing.—As it is impossible, in the space of a paragraph or two, to even partially cover the question of low friction bearings, it is the intention to briefly indicate why the ball or roller bearing has been one of the most important factors in the development of the motor coach and may possibly be a greater factor in future railway developments in other equipment. Exhaustive tests indicate that the ball bearing has reduced starting friction, under summer conditions, to approximately 15% of that of plain bearings, or in other words has reduced friction of approximately 20 lb. per ton to 3 lb. per ton. At the same time average rolling friction at speeds up to 30 miles per hour has been reduced by approximately 40%, or from 3.6 lb. per ton to 2.2 lb. per ton.

Electric Storage Battery, Passenger Car, Canadian National Railways.

Experience in this country indicates that the ball bearing is suitable for class A cars, but that designed areas and sizes for industrial work should be at least doubled for railway work, due to excessive shocks and side thrusts. It is not possible at this time to say whether side thrusts or vertical rail shocks are more destructive, but it is certain that for poor rail conditions the bearings should have a side thrust capacity of 100% of vertical load. For class B equipment, it may be necessary to use the roller bearings for vertical loads, with special bearings for side thrusts.

Transmission and Type of Drive for class A gas driven and class B (heavy duty gas driven).—While it has been advocated in this paper that the automobile engine is most suitable for the light motor coach, it is also admitted that experience indicates that standard automobile transmission, clutches, universal connections and driving gears are entirely inadequate for motor coach service, and are the cause of probably 75% of the breakdowns. In this respect, the appliances which have been developed as counter parts of the truck engine are generally much superior, due to greater size and strength per h.p. transmitted than automobile parts. The argument has been advanced that the parts are designed for the engine, and will han-

dle all the power developed by same, but such are not sound, on account of the greater inertia to be overcome at starting, requiring a momentary torque much in excess of anything experienced in automobile work. There is also the condition in this country, and the northern states, of having to operate cars in snow storms, resulting in clutch slippage, and shocks to transmission, much in excess of that experienced in automobile service.

The method of transmitting the power to the wheels has been generally as follows:—

(1) Through a standard transmission to one driving axle, which supports the entire two-wheel rear truck, and which can move in a vertical plane only. While this is the simplest method of driving, it is not the opinion that it will ever be generally acceptable to the railways, as railway experience indicates that safety and good riding qualities are almost proportionate to the number of wheels in the trucks. This is particularly applicable to cars operating on cheaply maintained lines.

(2) To both axles of front four-wheel truck, by gearing and universal connections, from a transmission located behind the truck. Experience on some railways is showing that this method of transmitting the drive is very successful, and although the number of universal

connections is not reduced, the shafts are all short, and the entire driving forces are removed from the passenger carrying part of the cars, thereby reducing vibration.

(3) To a transmission located about the center of the car, and from there to nearest axle of each four-wheel truck, or to both axles of two-wheel trucks. The advantage claimed for this method of drive is that the entire weight of the car is available to give good adhesion (where the trucks are two-wheel type), but general experience indicates that this is not necessary, and is harder on the engine than an arrangement where part of the momentum of rotating parts may be taken up by slippage. Where four-wheel trucks are used this method gives better adhesive qualities than connecting to both axles of one truck, but seemingly not sufficient to warrant the extra complication of transmission.

(4) To the leading axle of rear four-wheel truck. The chief advantage of the drive to the rear truck is that the engine may be aligned in such a manner as to have its shaft center line pass through the center line of main driving axle, thus reducing wear on universals and friction to a minimum. The disadvantage is that it necessitates the use of one or more supplementary bearings, between the engine and the point where

the drive shaft is coupled to the front universal. The maximum lateral motion of a truck of 48 in. wheel centers and 18 ft. truck centers on an 80 ft. radius curve is shown by road check to average $\frac{3}{4}$ in. at a radius from center of 24 in., so that it is apparent that the swing of the truck has but little effect on the universals. The torque arms supporting the housings of such an arrangement should have both vertical and lateral swing. Only when the load on main axle is not sufficient for adhesion it may be conceived that driving power acts on the second axle. Under ordinary conditions transmitting power to the second axle generates no more friction than that due to the weight of rotating parts.

Methods of transmitting power from the front axle to the rear axle of rear truck may be sub-divided as follows:—

(a) Chain drive has the advantage of rapid wear, noise, and the complication of shields and covers, which more than overcome the advantage of the straight drive to the rear truck.

(b) Gear drives to the second axle no doubt appear the best mechanical means of transmitting power, but it has

light weight) gas engine driven by automobile type engine 6-cylinders with the following general characteristics and limiting conditions:—1.6 h.p. per 1,000 lb. light weight of car at engine speed of 2100 r.p.m., giving a car speed of 35 to 40 m.p.h. Rolling friction 2.2 per ton weight on rail, and wind resistance of 5 lb. per square foot cross sectional area of car at 40 m.p.h. Weight of car per passenger seat maximum 750 lb. Weight of car per maximum h.p. 600 lb. Gear ratio between engine and wheel for ruling grades not exceeding 1.25%, 4.7 to 1. (In hard operating conditions this may be increased to 5.5 to 1).

Class B cars.—It is difficult to come to a general conclusion with regard to this class of equipment, as it appears that only one class of car has actually passed out of the experimental stage. One of the Canadian railways has found the battery car to be a thoroughly reliable and economical unit to operate, provided that the schedule will permit of charging time. Severe weather conditions have had but little effect on the operation, and the simplicity of the power

The foregoing paper was read before the American Society of Mechanical Engineers at its railway session in Montreal recently.

Discussion on Hudson Bay Railway.

F. W. Cowie, Consulting Engineer, Montreal Harbor Commission, in addressing the Engineering Institute of Canada's Montreal branch recently, referred favorably to the Hudson Bay Railway, and the ocean route thence to Liverpool, arguing that by using that route Western farmers would obtain cheaper rates for their grain, and that the European markets would be much nearer than by present transportation routes. These observations aroused considerable discussion, the opinion expressed being generally against the route. A. D. Swan said that the cost of building the railway and the necessary facilities would be heavy; the season would be short, and the cost of operation would be in excess of other routes, so that the estimate of a 24c rate per bushel from Saskatoon to Liverpool was too low and he

Heavy Duty, Gasoline Motor Passenger Car, Canadian National Railways.

with it all the disadvantages of rapid wear, due to difficulty of adjustment of contact, and the maintenance of extra universals.

(c) Side rods and cranked wheels, in similar manner as locomotive driving wheels. Side rod drive to the second axle, while with many other locomotive developments is said to be crude and inefficient, in actual practice is a thoroughly reliable and easily adjusted and inspected arrangement, and is operating successfully at high and low speeds, and with no appreciable friction.

(5) Miscellaneous, including oil transmissions still being experimented with.

Summary.—In summarizing, the writer realizes that in dealing with such a subject there is no doubt a very great difference of opinion amongst railway men regarding what will fulfil the requirements of the service best. It is apparent to any engineer that there will be important developments in railway motor cars, both in so far as design and field of service are concerned, and therefore the conclusions which we may note here may be considered as preliminary only.

Class A cars (30,000 lb. maximum

controlling devices eliminates any chance of opposition from the operators.

The chief obstacles in the development of this type of units is first cost, and in some regions high power costs, but it is felt that the great advantage of double ended operation, without complication, more than offsets any serious disadvantages.

In conclusion it seems safe to say that there is a fairly large field for the motor coach in railway work, and that it will not be developed from without, but rather from within, slowly, conservatively, by motor manufacturers and railway engineers, as the travelling public will never tolerate from the railway companies the difficulties and disappointments which have been visited on them personally by the automobile manufacturers. The railway engineer, to do his part in this problem, must be familiar, not only with operating conditions, but also with the labor problems which are sure to arise in such a development, making it necessary and advisable to give consideration to the employee operating this equipment, and to the public using it.

believed would be as high as 40c or 50c a bushel. He favored the development of a route via Vancouver. H. Holgate was in favor of improving the St. Lawrence navigation route so that large grain boats from the upper lakes could reach Montreal. G. H. Duggan said that every dollar that had been expended by the Government on the Hudson Bay Ry. and on the proposed terminals at Port Nelson had been wasted, and the sooner the whole thing was dropped and forgotten the better it would be for Canada.

Liquor Transportation on Canadian National Rys.—On motion of H. H. Stevens, Vancouver Center, B.C., the House of Commons passed an order recently for a copy of all correspondence, letters, telegrams and other documents passing between the Prime Minister, the Minister of Railways, and H. R. Grant of Sydney Mines, N.S., or other persons, having reference to the transportation of liquor, over Canadian National Rys. or other lines under the control of the Canadian National Rys., into Nova Scotia.

Birthdays of Transportation Men in June.

Many happy returns of the day to:

Thomas Ahearn, President, Ottawa Electric Ry., Ottawa, Ont., and Honorary Councillor, Canadian Electric Railway Association, born at Ottawa, Ont., June 24, 1855.

F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y., June 4, 1860.

W. C. Bowles, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, born there, June 3, 1875.

J. H. Boyle, Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Waterloo, Que., June 26, 1869.

H. W. Brodie, Assistant Passenger Traffic Manager, C.P.R., Montreal, born at Fredericton, N.B., June 8, 1874.

G. W. Coburn, Resident Engineer, C.P.R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.

E. P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., born at Taunton, Mass., June 14, 1867.

W. S. Cookson, Manager, Tariff and Ticket Bureau, Canadian National Rys., Montreal, born at Port Jervis, N.Y., June 12, 1871.

E. L. Cousins, Consulting Engineer, Toronto Harbor Commission, Toronto, born there, June 11, 1883.

A. Craig, City Passenger Agent, C.P.R., Hamilton, Ont., born there, June 5, 1884.

W. Crowe, Locomotive Foreman, Canadian National Rys., Wainwright, Alta., born at Fergus, Ont., June 12, 1871.

J. M. Davidson, Division Engineer, Canadian National Rys., Winnipeg, born at Glasgow, Scotland, June 4, 1877.

Edward de la Hooke, Secretary-Treasurer, Canadian Ticket Agents' Association, London, Ont., born at Chichester, Sussex, Eng., June 29, 1842.

Capt. C. P. Disney, Assistant Bridge Engineer, Central Region, Canadian National Rys., Toronto, born at Montreal, June 11, 1887.

Knowlson Elliott, District Freight Agent, C.P.R., Edmonton, Dunvegan & British Columbia Ry. and Central Canada Ry., Edmonton, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., Montreal, born at Peterborough, Ont., June 30, 1873.

R. H. Fish, General Superintendent, Southwestern Ontario District, Central Region, Canadian National Rys., Toronto, born at Oakville, Ont., June 12, 1873.

M. Fitzgerald, Special Representative, C.P.R., Yokohama, Japan, born June 7, 1879.

A. A. Goodchild, General Storekeeper, Eastern Lines, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

W. C. Guthrie, Superintendent, Schreiber Division, Ontario District, C.P.R., Schreiber, Ont., born at Arnprior, Ont., June 15, 1876.

L. R. Hart, General Agent, Rail and Ocean Traffic, C.P.R., Boston, Mass., born at Fairport, N.Y., June 3, 1877.

J. A. Heaman, Assistant Chief Engineer, Western Region, Canadian National Rys., Winnipeg, born at Memphis, Tenn., June 3, 1874.

T. M. Hyman, Superintendent, Montreal Car Shops, Canadian National Rys., Montreal, born near Bristol, Eng., June 12, 1885.

Major R. B. Jennings, Division Engineer, Montreal District, Central Region,

Canadian National Rys., Montreal, born at Paris, Ont., June 29, 1888.

M. W. Kirkwood, General Manager, Grand River Ry., and Lake Erie & Northern Ry., Galt, Ont., born at Cheltenham, Ont., June 8, 1877.

L. Lavoie, Purchasing Agent, Canadian National Rys., Toronto, born at Rimouski, Que., June 22, 1879.

R. S. McCormick, Chief Engineer and General Superintendent, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

S. J. McLean, M.A., LL.B., Ph.D., Assistant Chief Commissioner, Board of Railway Commissioners, Ottawa, born at Quebec, June 14, 1871.

G. K. McNab, Port Agent, Canadian Government Merchant Marine, St. John, N.B., born at Montreal, June 8, 1896.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1862.

James Manson, Assistant to the Vice President, C.P.R., Montreal, born at Thurso, Scotland, June 8, 1863.

W. E. Massie, Mechanical Superintendent, Niagara, St. Catharines & Toronto Ry., St. Catharines, Ont., born at Elora, Ont., June 5, 1880.

L. Mulkern, Division Freight Agent, C.P.R., North Bay, Ont., born at London, Ont., June 18, 1871.

W. M. Neal, General Superintendent, Algoma District, C.P.R., North Bay, Ont., born at Toronto, June 20, 1886.

R. P. Ormsby, Secretary, Canadian National Rys., Montreal, born at Arklow, Ireland, June 26, 1869.

J. E. Pinault, General Superintendent, Canada & Gulf Terminal Ry., Mont Joli, Que., born at Rimouski, June 24, 1884.

F. R. Porter, Foreign Freight Agent, Canadian National Rys., Toronto, born at Stratford, Ont., June 13, 1875.

F. Price, Chief of Car Service, Canadian National Rys., Montreal, born there, June 11, 1864.

L. J. Reyecraft, Solicitor, Manitoba and Saskatchewan Districts, C.P.R., Winnipeg, born in Orford Tp., Kent County, Ont., June 20, 1868.

J. R. Shaw, Passenger Agent, Ocean Traffic, C.P.R., Manila, Philippine Islands, born at Montreal, June 28, 1871.

J. L. Simpson, Agent, C.P.R., Port McNicoll, Ont., born at Mount Forest, Ont., June 9, 1866.

H. H. Smith, Car Accountant, Canadian National Rys., Toronto, born at Quebec, Que., June 14, 1872.

F. W. Thompson, Chairman, Canadian Car Demurrage Bureau, and Canadian Freight Association, Western Lines, Winnipeg, born at Toronto, June 14, 1873.

L. O. Tremblay, District Passenger Agent, Rail and Steamship Lines, C.P.R., North Bay, Ont., born at Calumet Island, Que., June 19, 1885.

N. Van Wyck, General Purchasing Agent, Canada Steamship Lines, Montreal, born at Hamilton, Ont., June 29, 1883.

V. G. R. Vickers, ex-Manager, Foreign Department, and Superintendent Atlantic Division, Dominion Express Co., now Vice President, The Holden Co., Montreal, born at Toronto, June 1, 1866.

A. E. Warren, General Manager, Western Region, Canadian National Rys., Winnipeg, born at Taunton, Eng., June 9, 1874.

Walter White, Trainmaster, Canadian National Rys., Palmerston, Ont., born at

President Beatty Urges Continuance of C.P.R.'s Proverbial Courtesy.

E. W. Beatty, K.C., President, C.P.R., has issued the following circular letter to all officers and employees: "From its inception the company has enjoyed an enviable reputation for courtesy to its patrons. Inculcated in the early days when the company had to struggle for its existence, it has proved beyond question a most important factor in the steady success of the company in every field of competition. We will be called upon in the future to meet competition as keen as we have encountered in the past, and I cannot impress upon you too strongly the maintenance of this tradition. Canadian Pacific courtesy and efficiency must continue to be uppermost in the thoughts of all officers and employees. The personal touch that costs so little, and means so much, when it is sincerely shown, will in a great measure enable us to maintain the supremacy we now hold. Every patron must be made to feel that we have his personal interest at heart; that we appreciate his patronage; that he will receive our personal attention in the smallest details that may appeal to him, and that he will receive a quality of service from the Canadian Pacific that he cannot hope for elsewhere. Courtesy and civility hall-mark efficiency, and it must be the aim of everyone associated with the company, from the highest officer to the most humble employe, to cultivate this trait. The good opinion of a single patron, who feels that he has enjoyed any special consideration at our hands, that may in the smallest degree have contributed to his comfort or benefit, is the best advertisement the company can have. The fact that a representative of the Canadian Pacific has shown his personal interest and consideration is passed on from one person to another, and the expression of such experiences, multiplied by many instances, means everything to the welfare and continued success of the company's enterprises. I therefore earnestly request you to use your best efforts to foster and promote this spirit. Let us continue to enjoy in the future, as in the past, the excellent reputation earned by the company in this respect, and with your hearty and whole-souled co-operation I feel sure that the company will continue to enjoy the preference over its competitors which it has so long maintained."

C.P.R. Lake Helen Summer Camp.—The C.P.R. is, a press report states, going to establish a summer camp on Lake Helen, near Nipigon, Ont. It is said that it will consist of a central building to be used as dining room, dance hall, offices, kitchen, etc., together with 6 double and 9 single permanent bungalows, and 7 canvas houses. The camp will be reached by a road from a new station to be built about a mile east of Nipigon. It is expected that the camp will be ready for tourists by July 1.

Railway Ties for Japan.—The Japanese s.s. Kohnan Maru recently loaded 800,000 ft. of ties for maintenance work on the Imperial Japanese Ry. They were cut on the Saanich Peninsula, and transported over the British Columbia Electric Ry., to St. Lawrence Street, Victoria, whence they were transferred to Ogden Point for shipment. The order was placed through Vancouver Harbor Trading Co.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 378. April 13.—Amending uniform rules governing the determination of visual acuity, color perception, and hearing of railway employes.

General order 379. April 4.—Amending rules relative to inspection of locomotives and tenders, general order 289.

380. May 16.—Authorizing Canadian National Ry. to cancel arrangement in tariff C.R.C. no. E-4411, with regard to milling-in-transit on peas, and that right be reserved to any interested party, prepared to substantiate claim that peas should be given milling in transit rate, to apply to Board for order requiring railway companies to amend tariffs accordingly.

381. May 13.—Declaring that the word "traffic" in the first line of sec. 345 (1) (a) of the Railway Act, 1919, should be read as though preceded by the word "freight."

33,537 to 33,543. April 13.—Declaring that for the present, Canadian National Ry. crossings, just east of Lyndon station; half a mile east of Aultsville station; east of Beachville station; east of Thamesville station; west of Oakville station; east of Grimsby station; and east of Jordan, Ont., are protected to the Board's satisfaction.

33,544. April 14.—Amending order 33,145, Nov. 24, 1922, fixing rates, in pursuance of an agreement dated Dec. 23, 1915, to be paid to the London Railway Commission by Michigan Central Rd., by changing effective date of 5-year period from Dec. 23, 1920, to Jan. 1, 1921.

33,545. April 14.—Authorizing British Columbia Public Works Department to build highway crossing over C.P.R. at mile 17.65 from Cranbrook, B.C.

33,546. April 16.—Authorizing Brantford & Hamilton Electric Ry. to enter upon J. S. Coker's lands and remove hedge and trees obstructing view at crossing of Stone Road, just east of Cainsville, Ont.

33,547, 33,548. April 16.—Declaring that for the present, Canadian National Ry. crossings of Parkdale Ave., Ottawa, and Strange St., Kitchener, Ont., are protected to the Board's satisfaction.

33,549 to 33,551. April 17.—Ordering Canadian National Ry. to make alterations and additions to bells and wigwags at crossings of Francis, Brock and Amelia Sts., Fort William, Ont.

33,552. April 11.—Authorizing British Columbia Public Works Department to make highway crossing over Esquimalt & Nanaimo Ry. on Lockner Road, Cassidy, Vancouver Island, B.C.

33,553. April 17.—Approving relocation of C. P.R. station at Congress, Sask.

33,554. April 16.—Approving clearances of umbrella roofs, overhead passage and doorway to C.P.R. shed 28 on Quebec Harbor Commissioners' track, Quebec, Que.

33,555. April 16.—Authorizing City of Brantford, Ont., to build reinforced concrete arch bridge connecting Colborne St. with Colborne St. West, across the Grand River, cost of superstructure of approach to be paid by Lake Erie & Northern Ry.

33,556. April 16.—Authorizing Michigan Central Rd. to extend its tracks across First Ave., St. Thomas, Ont.

33,557. April 20.—Ordering that speed of Canadian National Ry. trains over highway crossing just west of Lyster station, Ont., be limited to 10 miles an hour.

33,558. April 21.—Approving proposed diversion of Niagara, St. Catharines & Toronto Ry. across new Welland Ship Canal, lock 1, at Port Weller, Ont., diamond crossing of Welland Ship Canal Construction Ry. and interlocking plant installed at the crossing of N. St. C. & T. Ry. to carry its traffic over diverted line, under construction, at speed not exceeding 8 miles an hour; and ordering that inner guard rails be laid on deck of temporary trestle bridge, and slow sign boards erected at beginning of diversion, on each side of canal crossing.

33,559. April 17.—Ordering that Canadian National Ry. crossing of Victoria Ave., Niagara Falls, Ont., be protected by watchman between 7 a.m. and 6 p.m. daily.

33,560 to 33,564. April 18.—Approving supplements to Bell Telephone Co.'s agreements with Garthby Local Telephone, Wolfe county, Que.; Home Telephone Co., York and Ontario counties, Ont.; Soulanges Rural Telephone Co., Soulanges and Vaudreuil counties, Que.; Fordwich Rural Telephone Co., Huron and Perth counties, Ont.; Belmont Telephone Co-operative Association, Middlesex and Elgin counties, Ont.

33,565. April 18.—Ordering C.P.R. to build farm crossing for Orsias Parent, Sturgeon Falls, Ont.

33,566. April 18.—Amending order 25,540, Oct. 17, 1916, requiring that crossing of Riverdale Park, Toronto, by Canadian National Ry. and G.T.R., where foot bridge crosses Don River, to be protected by flagman between 8 a.m. and 12 p.m.

from May 1 to Oct. 31 each and every year, by ordering the protection to be daily.

33,567. April 20.—Ordering that earth obstruction to the view just west of C.P.R. and Canadian National Ry. crossing of Eglinton Ave., York Tp., Ont., be removed, and wigwag signals installed on each railway in addition to automatic bells.

33,568. April 20.—Declaring that for the present, the C.P.R. crossing just east of Lonsdale station, Ont., is protected to Board's satisfaction.

33,569. April 23.—Amending orders 31,876 and 33,007, re half interlocker at C.P.R. and Peterborough Radial Ry. crossing of George St., Peterborough, Ont.

33,570. April 24.—Authorizing Vancouver Harbor Commissioners to remove 250 ft. of British Columbia Sugar Refining Co.'s south track at west end, and ordering them to lay track on north side of the company's warehouse at Vancouver.

33,571. April 24.—Approving road diversions of the Vancouver, Victoria & Eastern Ry. at Coal-mont, B.C.

33,572. April 24.—Approving revised location of portion of Interprovincial & James Bay Ry., mile 4.35 to 5.94, Ville Marie spur, Que.

33,573. April 23.—Ordering Canadian National Ry. to build siding adjoining provincial highway in Lot 28, Con. 1, Dumfries South Tp., Ont.

33,574. April 20.—Approving supplement 1 to Bell Telephone Co. agreement with the Mud Lake Rural Telephone Co., Renfrew county, Ont.

33,575. April 25.—Authorizing Kettle Valley Ry. to build spur for Reineth & Furu, Glen Walker, B.C.

33,576. April 25.—Authorizing Michigan Central Rd. to build spur for Ontario Public Highways Department, on Lot 5, range south of middle road, Tilbury West Tp., Ont.

33,577. April 23.—Authorizing Canadian National Ry. to remove its station agent at Merid, Sask., caretaker to be appointed.

33,578. April 24.—Declaring that Canadian National Ry. crossing west of diamond at Welland, Ont., is protected to Board's satisfaction.

33,579. April 24.—Declaring that for the present, C.P.R. crossing just west of Chesterville station, Ont., is protected to Board's satisfaction.

33,580. April 20.—Authorizing British Columbia Public Works Department to make highway crossing over C.P.R. at mile 11.36, south of Revelstoke, B.C.

33,581 to 33,591. April 20.—Approving supplements to Bell Telephone Co.'s agreements with Mink Lake Rural Telephone Co.; Donegal Telephone Co.; Grattan No. 7 Telephone Association; North Algona Tp. Telephone System, Renfrew county, Ont.; Caradoc-Ekfrid Telephone Co., Middlesex county, Ont.; Dore Telephone Co.; Augersburg Telephone Association, Renfrew county, Ont.; Springbank Telephone Co., Huron and Wellington counties, Ont.; Wroxeter Rural Telephone Co., Huron county, Ont.; Wilberforce Rural Telephone Co., Lower Bonaventure Telephone Co., Renfrew county, Ont.

33,592. April 24.—Authorizing New York Central Rd. to withdraw its 3.45 p.m. train, Montreal to Valleyfield, required by order 33,207, Dec. 11, 1922, during the life of the summer time table, effective June 24.

33,593. April 23.—Authorizing C.P.R. to operate over crossing of Canadian National Ry. at Allenby Jct., Que.

33,594. April 27.—Ordering C.P.R. and Canadian National Ry. to build jointly, or by either if agreed upon by the other, interchange tracks at Owen Sound, Ont.

33,595. April 28.—Authorizing British Columbia Electric Ry. to connect with Vancouver & Lulu Island Ry. at 4th Ave., Vancouver, B.C., with leave to abandon passenger service from intersection of V. & L. I. Ry. at 4th Ave., to present station on Granville St. bridge, and demolish that station.

33,596. April 27.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to operate from Edmonton to Smith, Alta., at 25 miles an hour; from Smith to McLennan at 20 miles an hour; and without speed restriction from McLennan to Spirit River, excepting from mile 287 to 307, 20 miles an hour, and mile 352 to 357, 25 miles an hour.

33,597, 33,598. April 30.—Declaring that for the present, first crossing east of Tilbury station, Ont., and crossing of Main St., Brighton, Ont., over Michican Central Rd., are protected to Board's satisfaction.

33,599. April 30.—Declaring that for the present, Canadian National Ry. crossing near Norman station, Man., is protected to Board's satisfaction.

33,600. April 30.—Declaring that for the present, Pere Marquette Ry. crossing near Darrell flag station, Ont., is protected to Board's satisfaction.

33,601. April 30.—Authorizing Canadian National Ry. to build across and divert highway at mile 32.1 Sanudo Sub-division, n.w. ¼ sec. 36, Tp. 56, Range 7, west 5th meridian, Alta.

33,602. April 27.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to operate over its Grand Prairie Branch from mile 0 to 50.19, at speed not exceeding 25 miles an hour.

33,603. April 28.—Authorizing Canadian National Ry. to make highway across its railway

in s.w. ¼ sec. 36, Tp. 38, Range 4, west 3rd meridian, Sask.

33,604. April 28.—Approving agreement between Bell Telephone Co. and Lievre River Telephone Co., Labelle and Ottawa Counties, Que.

33,605. April 28.—Approving Canadian National Ry. standard and joint freight mileage tariff C.R.C. no. E-608.

33,606. April 28.—Ordering Canadian National Ry. to install wigwag signal in addition to bell already provided at first crossing west of Humber River bridge, Weston, Ont.

33,607. April 28.—Declaring that for the present, Canadian National Ry. crossing at Bar River station, Ont., is protected to Board's satisfaction.

33,608, 33,609. April 28.—Approving Bell Telephone Co. agreement with Sandwich South Tp., Ont. and St. Angele de Laval Rural Telephone Co., Nicolet County, Que.

33,610. April 30.—Authorizing Canadian National Ry. to build spur for Northern Forests Products, Ltd., at milepost 12.66, Grismore, B.C.

33,611. April 30.—Authorizing Esquimalt & Nanaimo Ry. to build its Courtenay to Campbell River and Duncan Bay extension across highway at mile 48.85, Comox District, Vancouver Island, B.C.

33,612, 33,613. April 27.—Approving location and details of Dominion Atlantic Ry. proposed stations at Paradise and Clementsport, N.S.

33,614. April 30.—Approving Canadian National Ry. standard freight mileage tariff C.R.C. no. W-325, containing Pacific and Prairie scales.

33,615. April 30.—Authorizing C.P.R. to build additional spur for Backus Brooks Co., Kenora, Ont.

33,616. April 28.—Approving Canadian National and Canadian Northern Ry. bylaws of April 16, 1923, authorizing their officers to prepare and issue tariffs of tolls.

33,617. May 1.—Authorizing City of Brantford, Ont., for 6 months, to build temporary crossing at rail level over Lake Erie and Northern Ry. at Lorne Bridge.

33,618. May 1.—Authorizing Railways and Canals Department to install temporary diamond in Niagara, St. Catharines & Toronto Ry., at Port Weller, Ont.

33,619. April 30.—Authorizing C.P.R. to remove station agent at Iddlesleigh, Alta., caretaker to be appointed.

33,620. May 2.—Approving agreement between Bell Telephone Co. and Rodrigue Lapointe, operating in L'Assomption County, Que.

33,621. May 2.—Authorizing Michigan Central Rd. to rebuild gates at points where it and Pere Marquette Ry. cross Graham St., West Lorne, Ont.

33,622 to 33,627. May 2.—Approving Bell Telephone Co. agreements with Nicolet Telephone Co., Nicolet County, Que.; George Mason, Parry Sound, District, Ont.; Eganville & Brudenell System, Renfrew, Ont.; Chinguacousy Tp., Ont.; Mining Telephone System, Simcoe County, Ont. and King Telephone Co., York County, Ont.

33,628. May 4.—Approving plan of proposed Canadian National Ry. station at Fort Fraser, B.C.

33,629. May 4.—Declaring that for the present Esquimalt & Nanaimo Ry. crossing of Rosehill Ave., Nanaimo, B.C., is protected to the Board's satisfaction, and ordering that scrub obstructing view be cleared away by June 1 in each and every year.

33,630. May 2.—Approving agreement between Bell Telephone Co. and Brown Corporation, Champlain County, Que.

33,631, 33,632. May 7.—Approving supplements to Bell Telephone Co. connecting agreements with South Diagonal Telephone Co., Grey County, Ont.; and St. Marys, Medina & Kirkton Telephone Co., Huron, Perth, Middlesex and Oxford Counties, Ont.

33,633. May 7.—Declaring that for the present, C.P.R. crossing near Perth station, Ont., is protected to Board's satisfaction.

33,634. May 7.—Declaring that for the present, British Columbia Electric Ry.'s crossing near Lulu Island station, B.C., is protected to Board's satisfaction.

33,635. May 7.—Declaring that for the present, Canadian National Ry. crossing near St. Louis station, Ont., is protected to Board's satisfaction.

33,636. May 8.—Authorizing Canadian National Ry. to build spur for John Lucas & Co., York Tp., Ont.

33,637. May 7.—Approving supplements to connecting agreement between Bell Telephone Co. and Cambray Telephone Co., Victoria County, Ont.

33,638. May 8.—Amending order 33,545, April 14, 1923, authorizing British Columbia Public Works Department to cross C.P.R. at mile 17.65 from Cranbrook, B.C., to read "mile 17.65 from North Star."

33,639, 33,640. May 7.—Approving Bell Telephone Co. agreements with Belvidere Telephone Syndicate, Sherbrooke County, Que.; and Quebec Farmers Telephone Co., St. Hyacinthe and Bagot Counties, Que.

33,641. May 8.—Approving C.P.R. plan at automatic signal protection of tracks to be rearranged at crossing at Tichborne, Ont.

Alberta Domestic Coal and the Ontario Market.

In preceding issues of Canadian Railway and Marine World, attention was called to the transportation difficulties in the way of the proposed bringing of domestic coal from Alberta to Ontario and to the action taken by Alberta coal operators, the Alberta and Ontario Governments to get a favorable rate from the railways, and it was stated that Sir Henry Thornton, President, Canadian National Rys., had undertaken to make enquiries to determine the most favorable rate that could be given. On May 5, Sir Henry telegraphed Senator J. S. McLennan, chairman of the Senate committee on Canadian fuel supply, as follows: "After careful deliberation Canadian National Rys. are able to quote rate of \$9 per ton, on the average, for Alberta coal, moving in trainload lots from the coalfields of that province to Ontario. It is understood that in naming this rate it will be applicable only during the months of May, June and July, as prior to May adverse weather conditions materially affect the cost of movement, and after Aug., our equipment is needed for transportation of grain. Similar consideration will also of course be given to the rates on coal from the maritime provinces. It is also to be understood that coal operators at shipping points, and distributors in Ontario, will co-operate with the railway company to achieve the common object, as I am sure it will be their desire so to do."

On learning of the extent of the reduction offered, western mine operators expressed dissatisfaction with it, and declared that with such a rate, they could not compete in the Ontario market. G. R. Pratt, Fuel Engineer for the Alberta Government, stated in order to compete with U.S. anthracite, a \$6 rate would be necessary, that he would advise Alberta coal operators to refrain from trying to develop the Ontario market and that further efforts would be made to have the rate reduced to \$6. Premier Greenfield, of Alberta, was reported as having stated that he would use his influence to have the rate reduced to \$6 and that he was prepared to go to Ottawa and Montreal to take the matter up with Sir Henry Thornton and others, but Sir Henry was subsequently reported as saying that the \$9 rate was the lowest which the Canadian National Rys. could make.

The House of Commons has also had a committee looking into the fuel question, under the chairmanship of W. E. Carroll, Liberal M.P. for Cape Breton South and Richmond, N.S., and some of the testimony taken by it in connection with the proposed development of the Ontario market by the Alberta operators is of interest. J. Errington, a mining engineer with experience in Alberta, stated that transportation was the only difficulty in the way of developing the Ontario market. While he admitted that Alberta coal does not contain as many B.t.u.'s per pound as U.S. anthracite, he claimed that more heat could be got out of it, because ordinary furnace temperatures do not allow the anthracite gases to undergo complete combustion, while the Alberta domestic coal burns perfectly. Howard Stutchbury, Alberta Trade Commissioner, stated that he did not want the railways to haul coal at a loss, but claimed to have figures to show that they could haul coal at \$6 a ton and make money. M. J. Butler, formerly

Deputy Minister of Railways and Canals, appeared before the committee to explain a letter he wrote about the fuel situation, which was published in Canadian Railway and Marine World for April, and explained that he had figured only on solid trainload movements, with the empties returning likewise in solid trains. Questioning showed that he was assuming carloads and trainloads which are out of the question, as intimated in our comment in our April number. His theoretical assumption of fifty 100-ton cars, 5,000 net tons, 7,500 gross tons, was shown to be away without question beyond the bounds of immediate possibility.

D. Crombie, Chief of Transportation, and E. P. Mallory, Director, Bureau of Statistics, Canadian National Rys., appeared before the committee on May 15, and was examined as to transportation costs and the method by which the C.N.R. president arrived at \$9 as the lowest rate which could be given. Mr. Crombie showed that calculations had been based on a train of 2,720 gross tons, 1,800 net, made up of 50 cars at 36 tons a car, and also showed by exact calculation which cut expenses as fine as they could be cut, and made no charge for traffic expense at all, that the lowest cost at which such train could be handled would be \$3.772 per train mile. Figuring on 4,252 miles, which allowed for the return of the cars empty, on account of the preponderance of east-bound traffic, this came to \$16,038 for the movement or \$8.91 a ton. He showed, by another set of figures, that if only 40 ton cars were used and with these loaded to the maximum capacity, 46 tons, the cost of movement would come to \$8.34. A lot of discussion ensued, in the course of which members of the committee did not refrain from asking the witnesses many questions about rates, not realizing the distinction between traffic and operating department functions, and in which locomotive tractive effort, grades, car capacity and track and bridge capacity figured prominently. The stupendous amounts which would have to be spent for cars and for bridge strengthening, etc., to approximate conditions on the Virginian Ry., which, as Mr. Crombie pointed out, is a special type of road, built and equipped for a special purpose, viz.: hauling coal, were emphasized, and it was pointed out by the witnesses that the Alberta domestic coal has to be shipped in box cars, so that the provision of large capacity gondolas would not help matters any.

W. B. Lanigan, General Freight Traffic Manager, C.P.R., appeared before the committee on May 16, and gave details as to the method by which he had arrived at a cost of \$9.90 a ton to haul Alberta coal to Toronto. His calculations, which were of a most thorough and convincing nature, were based largely on car mile costs, which he figured as \$230 from Lethbridge to Toronto bringing the cost of moving a 46-ton car of coal to \$457.70, providing for empty car mileage at a rate of 45% of total car mileage, a figure derived from experience. He showed the theoretical nature of any calculations based on the assumption of being able to operate solid trainloads of coal, and explained thoroughly the functions of yards and switching operations and the variation of locomotive hauling capacity on different

divisions. He also explained a few things about the car situation, and showed that there are not likely to be as many box cars in the west in May and June as there are popularly supposed to be, due to traffic movements. These empties, he explained, drift west throughout the summer, after being repaired at Angus shops, Montreal, and are handled so that by Aug. 15, the required number will be on western lines. He believed that if box cars were started east with coal in May, June and July, it would be doubtful whether many of them would be back to the west and in good repair when they would be required for the grain movement. While he agreed with the proposition that a railway may sometimes put in a losing rate, to develop a territory and secure future traffic, he declared that a railway should not be asked to carry traffic at less than cost, and that he would certainly hesitate about recommending a large capital expenditure for equipment to handle a traffic with the prospects of the Alberta coal traffic. Regarding Mr. Butler's observations on the operation on the Virginian Ry., he showed the kind of road it is and the conditions it operates under, and by demonstrating the absurdity of comparing conditions on the Virginian with those in this country, justified his remark that while he did not consider Mr. Butler "absolutely carried away", he did, as a matter of fact, consider him impractical.

The Senate committee, while developing much information in connection with the country's coal deposits, and the use of substitutes for anthracite, did not get information beyond that above given in connection with transportation. H. Stuchbury's testimony, however, made it plain that the Alberta people have no expectation of ever getting their bituminous coal into Ontario, but hope to market only their domestic coal there. He stated that the domestic variety will not stand trans-shipment well, and that therefore he would not recommend a combined lake and rail movement. He also stated that gondolas or open top cars are not suitable for its movement, and that while it will store well under cover, it cannot be kept in the open for any length of time. He described how it had taken the domestic market in Winnipeg away from U.S. anthracite, and stated that with a \$6 rate it would do the same in Ontario.

After studying the evidence presented before the two committees, and reading the opinions given by various persons, we see no reason to change the opinion expressed in our April issue, shortly after the matter was first brought to the fore. There is no doubt but that the Alberta domestic coal is a good household coal—the commission investigating it in Toronto stated it to be very satisfactory, and were of opinion that at \$12.50 a ton to the consumer it would drive U.S. anthracite at \$15.50 out of the market—but the simple fact of the matter is that it has to be brought too far to reach the Ontario market. We would certainly be glad to see it secure the market, but with transportation conditions such that U.S. bituminous is being used as far west as Winnipeg, and even as far as Broadview, Sask., and with other conditions as they are, the chances of the Alberta operators realizing their ambitions do not under the circumstances appear favorable.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—N. FAHEY, heretofore chief clerk, Export and Import Freight Department, Toronto, has been appointed Solicitor, Export and Import Department, there.

C. E. HUNT, heretofore chief clerk, Freight Department, Toronto, has been appointed Solicitor, Freight Department, there, vice E. C. Boland, whose appointment as District Freight Agent, Toronto, was announced in our last issue.

P. J. PEER, heretofore City Passenger Agent, Hamilton, Ont., has been appointed District Passenger Agent, there.

SIR HENRY THORNTON, President, Canadian National Rys., has been elected a director of Canada Steamship Lines.

Canadian Government Merchant Marine.—C. H. IRELAND, who was secretary to the late Hon. W. C. Kennedy, Minister of Railways and Canals, has been appointed an Assistant to General Manager, C.G.M.M., at Montreal.

Canadian National Railways.—ARNOLD ARONOVICI, heretofore Continental Manager, Great Eastern Ry. of England, has been appointed by the President, Sir Henry Thornton, as General Agent, C.N.R., at Paris, France, reporting to W. D. Robb, Vice President, Insurance, Lands, Express, Telegraphs, Colonization, Development, etc., Montreal, with respect to all matters relating to colonization and development in connection with the C.N.R. interests in Canada, and to the European Traffic Manager, Wm. Phillips, in London, Eng., upon all matters relating to traffic. A Paris press cablegram says that the Hotel Scribe has been bought for 28,000,000 francs (about \$1,848,000), and that the Canadian National Railways will occupy the whole ground floor of the building. The basement will be turned into a moving picture theatre showing Canadian views. It is expected that 25 rooms on the second floor will be taken by the Canadian Trade Commissioner, Lt. Col. Hercule Barre.

W. J. ATKINSON, heretofore Superintendent, St. Maurice Division, Quebec, Que., has been appointed Assistant Superintendent, Quebec Terminals, Central Region, vice J. H. Pakenham transferred. Office, Quebec, Que. The St. Maurice Division has been abolished, and the territory attached to the Cochrane and Saguenay Divisions, Quebec District, Central Region.

G. G. BAIRD, heretofore Collection Manager, Land and Townsites Department, Winnipeg, has been appointed Assistant Land Commissioner. Office, Winnipeg.

F. F. CAREY, heretofore Master Mechanic, St. Maurice Division, Quebec District, Central Region, Quebec, Que., has been appointed Master Mechanic, Levis Division, Quebec District, Central Region, vice R. L. Mitchell, assigned to other duties. Office, Levis, Que.

J. H. DUFF, heretofore Assistant Superintendent, St. Maurice Division, Quebec, Que., has been appointed Assistant Superintendent, Cochrane Division, Quebec District, Central Region. Office, Parent, Que.

Dr. W. A. FERGUSON, heretofore Chief Medical Officer, Canadian Government Rys., Moncton, N.B., has been ap-

pointed Assistant Chief Medical Officer, Atlantic Region, C.N.R. Office, Moncton, N.B.

D. McK. FORD, formerly of the President's office, Toronto, has been appointed Office Assistant to Director of Purchases and Stores, at Montreal.

H. G. HANNA, formerly Auditor of Passenger Receipts, C.N.R., Toronto, has been superannuated.

C. L. HARRIS, heretofore Relieving Superintendent, Maritime District, Atlantic Region, has been transferred to the Chief of Transportation's staff at Montreal.

J. M. KERR, Master Mechanic, Saguenay Division, Quebec District Central Region, Quebec, Que., has had his jurisdiction extended from Viaduc to Fitzpatrick, Que., inclusive.

R. E. LAIDLAW has been appointed Solicitor. Office, Toronto.

J. F. LEIGHTIZER, heretofore locomotive man, Moncton, N.B., has been appointed acting Master Mechanic, Island Division, Atlantic Region, vice Peter McQuaid, retired on the Provident Fund. Office, Charlottetown, P.E.I.

J. S. McADAM, heretofore Trainmaster, Ottawa Division, Eastern Lines, G.T.R., Ottawa, Ont., has been appointed Trainmaster, Beauharnois, Cornwall, Hemingford, Rouses Point and Massena Subdivisions, St. Lawrence Division, Montreal District, vice E. S. Cooper, on leave of absence. Office, Montreal.

J. D. MORTON, formerly Special Auditor, C.N.R., Toronto, has been superannuated.

H. A. PALMER, formerly Property Commissioner, G.T.R. lines east of Detroit and St. Clair Rivers, at Montreal, has been appointed Right of Way Agent, Central Region. Office, Toronto.

J. H. PAKENHAM, heretofore Assistant Superintendent, Bridge Subdivision, and Quebec Terminals, Levis Division, Quebec Terminals, Saguenay Division, Quebec District, Central Region, Quebec, Que., has been appointed acting Trainmaster, Alexandra, Hammond and Vanleek Subdivisions, St. Lawrence Division, Montreal District, Central Region, vice J. S. McAdam, transferred. Office, Coateau Jct., Que.

C. S. PUSHIE, Relieving Superintendent, Atlantic Region, is acting as Superintendent, Island Division, Maritime District, Atlantic Region, during the absence of T. B. Grady, on two months leave. Office, Charlottetown, P.E.I.

J. J. RICHARDSON, heretofore Division Engineer, St. Maurice Division, Quebec District, Central Region, Quebec, Que., has been appointed Division Engineer, Cochrane Division, Quebec District, Central Region, vice A. H. Willett, transferred. Office, Cochrane, Ont.

W. H. ROACH, Master Mechanic, Cochrane Division, Quebec District, Central Region, Cochrane, Ont., has had his jurisdiction extended to Fitzpatrick, Que., exclusive of shop.

J. SCHOFIELD, heretofore Architect (Building Standards), Toronto, has been appointed Architect, Engineer of Standards Office, Operation and Construction Department. Office, Montreal.

H. THRUPP, heretofore clerk, has been appointed chief clerk to Division Freight Agent, Prince Rupert, B.C., vice H. McEwan, whose appointment as Division Freight Agent there was announced in our last issue.

J. A. TRUDEL, heretofore Assistant Superintendent, Levis Division, Levis,

Que., has been appointed Assistant Superintendent, Saguenay Division, Central Region. Office, Quebec, Que.

A. H. WILLETT, heretofore Division Engineer, Cochrane Division, Quebec, District, Cochrane, Ont., has been appointed Division Engineer, Nipigon Division, Northern Ontario District, Central Region. Office, Hornepayne, Ont.

Other appointments made in connection with the co-ordination of the Canadian National Rys. consequent on the amalgamation of the G.T.R., are given on another page of this issue, under "Further Co-ordination of G.T.R. with Canadian National Rys."

Canadian Pacific Ry.—H. A. AMY, heretofore Division Master Mechanic, Ottawa Division, Quebec District, Ottawa, Ont., has been appointed Division Master Mechanic, Smiths Falls Division, Quebec District, vice R. McAdam, appointed Division Master Mechanic, Ottawa Division, Quebec District. Office, Smiths Falls, Ont.

W. J. ANDERSON, Travelling Freight Agent, London, Ont., is acting District Freight Agent, there, vice H. G. Buchanan, District Freight Agent, acting District Freight Agent, Toronto.

V. BEARDMORE, heretofore fitter, Chapleau, Ont., has been appointed Locomotive Foreman, Webbwood, Ont., vice P. Pincombe, appointed Locomotive Foreman, Cartier, Ont.

H. G. BUCHANAN, District Freight Agent, London, Ont., is acting District Freight Agent, Toronto, vice G. C. Cochlan, deceased.

A. S. FRASER, heretofore Roadmaster, Broadview, Sask., has been appointed Roadmaster, Wynyard Subdivision, Saskatoon Division, Saskatchewan District, vice P. Sevvick, transferred. Office, Saskatoon, Sask.

A. HART has been appointed acting Roadmaster, Hardisty Subdivision, Saskatoon Division, Saskatchewan District, vice M. Bourne, Roadmaster, transferred. Office, Wilkie, Sask.

O. HIBBERT has been appointed Roadmaster, from Markinch section at mile 68, to Neudorf, Lanigan Subdivision, Saskatoon Division, Saskatchewan District. Office, Lipton, Sask.

T. LEES, has been appointed District Engineer, Alberta District, vice H. Rindal. Office, Calgary, Alta.

J. U. LEMIEUX, heretofore stenographer, city freight office, Quebec, Que., has been appointed Contracting Freight Agent, there, as reported in our last issue.

R. McADAM, heretofore Division Master Mechanic, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has been appointed Division Master Mechanic, Ottawa Division, Quebec District, vice H. A. Amy, appointed Division Master Mechanic, Ottawa Division, Quebec District. Office, Ottawa, Ont.

W. J. McKAY, heretofore Assistant Locomotive Foreman, Chapleau, Ont., has been appointed Locomotive Foreman there, vice H. Smith, appointed Locomotive Foreman, John St., Toronto.

A. G. MURDOCH has been appointed Roadmaster, Expanse Subdivision, Moose Jaw Division, Saskatchewan District. Office, Assiniboia, Sask.

P. PINCOMBE, heretofore Locomotive Foreman, Webbwood, Ont., has been appointed Locomotive Foreman, Cartier, Ont., vice J. St. Louis, who has been given work as hostler there.

J. H. SHEAHAN, heretofore Road-

master, Winnipeg, has been appointed Roadmaster at Bassano, Alta., vice J. R. Padgett, transferred to Construction Department.

H. SMITH, heretofore Locomotive Foreman, Chapleau, Ont., has been appointed Locomotive Foreman, John St., Toronto, vice J. H. Wilson, appointed Division Master Mechanic, Sudbury Division, Algoma District, Sudbury, Ont.

J. STEWART has been appointed Roadmaster, from Markinch section, mile 68, to Lanigan, also of the Naicam Sub-division, Saskatoon Division, Saskatchewan District. Office, Lanigan, Sask.

E. TREMBLAY, heretofore fitter, North Bay, Ont., has been appointed Assistant Locomotive Foreman, Chapleau, Ont., vice W. J. McKay, appointed Locomotive Foreman there.

C. A. WHEELER, heretofore Division Master Mechanic, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed District Master Mechanic, Quebec District, vice Capt. A. H. Kendall, M.C., resigned. Office, Montreal.

J. H. WILSON, heretofore Locomotive Foreman, John St., Toronto, has been appointed Division Master Mechanic, Sudbury Division, Algoma District, vice C. A. Wheeler, appointed District Master Mechanic, Quebec District, Montreal. Office, Sudbury, Ont.

Roberval-Saguenay Ry.—Capt. A. H. KENDALL, M.C., heretofore District Master Mechanic, Quebec District, C.P.R., Montreal, has been appointed Manager, Chicoutimi Pulp Co., and has supervision of the company's mills at Chicoutimi and Val Jalbert, Que., the Saguenay Light & Power Co., and the Roberval-Saguenay Ry. Office, Chicoutimi, Que.

Reduction in Rates on Grain for Milling and Export.

The Canadian National and Canadian Pacific Rys. announced, on May 10, that, effective May 15, rates on milling-in-transit grain, and flour, from lower lake ports to the Atlantic seaboard, for export, would be reduced by $2\frac{1}{2}c$ per 100 lb. We are officially advised that this action was taken on the strength of representations made to the railways, by the milling interests, to the effect that very keen competition was being met in the European market, and that its object was to afford assistance to the milling industry. Some time ago the Dominion Millers' Association and the Canadian National Millers' Association asked the Dominion Government to review the Board of Railway Commissioners' decision, in the case concerning flour arbitraries over wheat for export, which was unfavorable to the millers, the matter being heard by a sub-committee of the Privy Council on April 19, 1922. An order in council was passed, Oct. 27, 1922, dismissing the petition. Subsequently the Dominion Millers' Association sent a deputation to Ottawa to request a re-opening of the case, and although it received further consideration, no reversal of judgment was obtained. F. C. Cornell, Secretary, Canadian National Millers' Association, is reported, in a Montreal press dispatch, as having expressed the milling interests' satisfaction with the relief offered by the railways, on their own initiative.

Monctonians' Occupations.—A recent enumeration of the City of Moncton, N.B., shows that of 6,763 employed persons, 3,473 were engaged in transportation work in some form or other.

President Beatty on Immigration, Etc.

E. W. Beatty, K.C., President, C.P.R., was the principal guest at the Hamilton, Ont., Chamber of Commerce annual dinner recently. He referred to a number of matters affecting the development of Canada and transportation interests, and said one of Canada's needs is what he would term a "balanced immigration" which would supply industries and farmers with the best available help. Canada has been tardy in proceeding to frame its immigration policy as compared with other parts of the Empire. If Canadians believe in Canada they must know that it can support more than 9,000,000 people and that it will require more than that number to support it. Certain agencies had, to a considerable extent, counteracted the propaganda of despondency; Canadians are regaining faith in themselves; immigrants are coming forward in increasing numbers, and many more will continue to come, consequent upon the increasing confidence and optimism which is being manifested. Removal of certain government restrictions is another factor conducive to the entry of the best type of immigrants. In connection with industrial development it is essential that Canada ensure the entry of skilled artisans. It is economically unsound to count on recruiting industrial labor from an agricultural population or from agricultural immigration. Even if the agricultural immigrants remain on the land it is questionable whether it would be the best thing for Canada to confine immigration of male labor to this class. Farmers require an enlarged home market for their produce, and this can only be secured through building up Canada's industrial and commercial population. Hence the necessity of a balanced immigration. For all classes the burden of taxation is too heavy, and Canada must move in the direction of decreasing the tax burden on the population.

Turning to transportation matters Mr. Beatty said that for the past four or five years no railway in Canada could be said to have secured a reasonable return on the capital invested, or to have secured an adequate margin of earnings to ensure proper participation in the country's development. The Canadian National Rys. burden on the taxpayers would be lightened as the railway progressed and succeeded. The same factors which would contribute to the Canadian National's success would make possible the C.P.R.'s greater success.

The General Eastern Passenger Agents' Association, to the number of 60, visited Montreal, May 3, as guests of the C.P.R., having travelled from New York by New York Central and Delaware and Hudson Lines, they were taken on a trip round the city by the Canadian Transfer Co.'s motor vehicles and were guests at a luncheon at the Place Vigor Hotel, at which G. E. I. Ussher, General Passenger Traffic Manager, C.P.R. presided. Some of the party returned to New York the same evening via the Delaware and Hudson, while others went to Quebec on a Canadian Steamship Lines trip.

Welland Terminal Facilities.—The Board of Railway Commissioners has recommended the Governor-in-Council to sanction an agreement made July 1, 1922, between the Michigan Central Rd. Co., and the Toronto, Hamilton and Buffalo Ry. Co., for the use by the latter railway company for the M.C.R.'s terminal and other facilities at Welland, Ont.

The Car Situation: Bad Order, Surplus and Shortage.

The Railway Association of Canada has issued a statement showing that, at May 1, out of a total of 182,585 freight cars on Canadian lines, 13,511 were in bad order, or 7.4% of the total. The A.R.A. allowance for bad order cars on a 7% basis would be 12,781, so that the excess over that allowance was 730 cars. The car shortage for one day's loading was 1,360 cars.

The Railway Association has issued the following circular: "There being a lack of uniformity by railways in preparing information shown on R.A.C. form 2, Report of Car Shortages and Car Surpluses, it is recommended to member lines that the shortages shown in this report be based upon the actual daily requirements on date it is prepared, and not upon accumulated orders."

The American Railway Association's Car Service Division reports that, on April 15, the total number of freight cars on U.S. Class 1 railways was 2,280,011, of which 214,051, or 9.4%, were in bad order. Out of 1,051,022 box cars, 88,537, or 8.4%; out of 60,417 refrigerator cars, 6,982, or 11.6%; out of 952,322 gondolas, 99,253, or 10.4%; out of 80,481 stock cars, 7,814, or 9.7%, and out of 93,772 flat cars, 8,487, or 9%, were in bad order. At April 30, on the U.S. class 1 roads, there was a shortage of 13,940 box cars, and of 17,634 coal cars, with a total shortage of 35,282 cars.

United States Railways' Financial Results.

The U.S. class 1 railways, for the first time since the Interstate Commerce Commission fixed the "fair" rate of return on valuation as 5 $\frac{3}{4}$ %, exceeded this return in March, when the railway operating income was \$83,568,473, which is at the rate of 5.84% on an annual basis. In March 1922, the net operating income was \$83,487,078, which was at the rate of 5.96% on the then tentative valuation, but at that time the 5 $\frac{3}{4}$ % rate had not been set, the previous rate set by the Commission being to all intents and purposes 6%.

For the first three months of 1923, net operating income was \$183,124,865, an increase of 13.98%, compared with the first three months of 1922. This was representative of a rate of return on tentative valuation of 5.13%, compared with 4.60% in the first three months of 1922.

The U.S. class 1 roads in March provided freight transportation to the extent of 39,000,000,000 net ton miles: an increase of 19% over the figures for March 1922, and a record for any March. As car loading is now running at a high figure, and as heavy traffic is looked for during next autumn, the U.S. railways' prospects seem more favorable at present than they have for some time past.

G.T.R. Officials' Gratuities Enquiry.—F. T. Congdon, K.C., who was appointed by the Dominion Government, on April 20, as a commissioner to enquire into the bonuses, or gratuitie, given certain G.T.R. officials, full particulars of which were published in Canadian Railway and Marine World for May, has resigned, the reason being given ill health, and F. H. Honeywell, barrister, Ottawa, has been appointed to make the enquiry instead.

The British Columbia and Alberta Rate Appeal and the Pacific Grain Route.

British Columbia's and latterly Alberta's, dissatisfaction with the Board of Railway Commissioners' decision in the equalization of rates cases has been dealt with fully in previous issues of Canadian Railway and Marine World, to the point where, as noted in the May issue, the case was discussed in the House of Commons on a motion introduced by J. A. Clark, Conservative M.P. for Burrard, B.C. The latest information available is to the effect that the Dominion Cabinet will not hear the appeal till the present session of Parliament is over, but British Columbia and Alberta are giving their case all the publicity possible and making it appear as favorable as they can. Following the Winnipeg Board of Trade's decision to oppose the appeal, the Vancouver Sun, which has been among the British Columbia Premier's strongest backers in demanding rate equalization, published a full page advertisement in which it claimed that the rate on grain from Grande Prairie, in the Peace River district of Alberta, to Vancouver, 1,182 miles, is 29c. a bush.; and from Calgary to Fort William, 1,253 miles, it is 15½c. a bush., from Calgary to Vancouver, 640 miles, it is 15c. a bush., and from Edmonton to Fort William, 1,240 miles, it is but ½c. more, or 15½c. a bush. The Sun then asked: "Do Winnipeg business men want Grande Prairie settlers to pay 29c. a bush. for hauling their grain 1,182 miles westward to Vancouver, when a fair charge based on eastbound rates would be 14c.? Do Winnipeg business men want the farmers of Calgary and Edmonton districts to pay 15c. a bush. for hauling their grain to Vancouver, when a reasonable rate, based on eastbound charges, would be 9c.? What other construction could be placed on the Winnipeg Board of Trade's action in asking Premier Bracken to oppose the west's appeal for a removal of discriminating rates like those above given?"

A Winnipeg press despatch of May 11, credited Isaac Pitblado, K.C., who has been retained by the Winnipeg Board of Trade to oppose the B.C. appeal, with stating that British Columbia is unjustly accusing Winnipeg of trying to hurt B.C. interests, as Winnipeg is not going to fight the B.C. appeal on commodity rates, but is going to oppose it only in so far as class and distribution rates are concerned, i.e., only in connection with rates which would cut into Winnipeg's business as a distributing center for western territory. He was also quoted as saying that Premier Oliver is mixing the commodity rates with class and distributing rates, in the statements he is broadcasting, for propaganda purposes.

A large delegation from Edmonton also met Premier King and several other ministers at Ottawa on May 8, and presented a memorial signed by officers of about 200 boards of trade and endorsed by the Alberta Government, urging the immediate development of a second grain outlet, via the Pacific Coast, and the erection of storage, cleaning and hospital elevators at Edmonton. The memorial stated that even under existing rail rates the breaking point of the eastbound and westbound routes for grain is about the center of Saskatchewan, which means that approximately 100,000,000 bush. of grain can be moved out more economically via the Pacific than via the Atlantic. The delegates pointed out that although the Government has

already given evidence in its faith in the westbound route, by providing for an increase of 2,500,000 bush. in the terminal elevator facilities at Vancouver, that was only a start towards providing the facilities needed, among which they claimed should be those desired at Edmonton. The Premier promised that the Board of Grain Commissioners would be asked to report on the advisability of going ahead with the development asked for.

Arguments for reduced grain rates to the Pacific coast, and for the erection of elevators at Edmonton were advanced by J. M. Imrie, of the Edmonton Journal on May 9, before the House of Commons Committee appointed to enquire into agricultural conditions. He stated that the use of a new all-year-round route to the west would have a wholesome competitive influence upon transportation charges via the eastern route, and that in that way the agricultural industry of eastern Saskatchewan, Manitoba and Eastern Canada would benefit to a great extent. He said that under present tariffs there is a potential saving to Alberta farmers of 7c. a bush. by sending grain via the western route, and that if the grain rates were equalized there would be an additional saving of from 2 to 6c., the extra benefit varying with the individual farmer's location. He claimed that on the Canadian National Rys., there are heavier grades for eastbound traffic than there are for westbound traffic through the mountains, a thing difficult for eastern people to understand, and he stated that, although he is not an expert in railway economics, he was unable to see any excuse for higher westbound rates than the eastbound ones so far as the C.N.R. is concerned. He said that he considered a second well-established outlet for grain imperative, and thought that the establishment, on a permanent basis, of the western route would, by creating competitive transportation conditions, by extending harvesting operations over a longer period, and by preventing the rush to dump wheat on the market during the period of Great Lakes navigation, give the farmers a better price. He claimed there should be interior reservoirs for grain at Edmonton as at Calgary. At present, when a farmer ships wheat to Vancouver, he does not know if it will grade good enough for export or not; if it does not, the former is taxed another 10c. a bush. in additional freight rates, due to the domestic rate being that much higher than the export rate, and in addition has his wheat in Vancouver in a very poor domestic market, but with elevators at Edmonton and a grading system established, the farmer would not be taking the chance which he now does in shipping west, because his grain would be graded as Edmonton, and if rejected as unfit for export, he would have it in a good domestic market, or be in position to reach one.

The British Columbia and Alberta people are leaving no stone unturned to influence opinion favorably on their demands for rate equalization and more elevator and grain marketing facilities for the western route. Of course, they are not advancing as arguments any of the factors which caused the mountain differential to be applied in the first place, or any of the considerations which influenced the Board of Railway Commis-

sioners to give the decision it did. As against the arguments advanced by the B.C. and Alberta people there must be weighed the arguments that investigation has demonstrated that the cost of operation per car mile is 56.77% higher in B.C. than on the prairies; that the present eastbound freight rates from B.C. are lower than those over U.S. lines from Seattle and other U.S. Pacific coast ports; that westbound rates into B.C. are lower than on U.S. railways for corresponding hauls, and that B.C., in virtue of her location adjacent to the Pacific, is the recipient of many favorable rates which other localities are denied. The B.C. and Alberta people do not advance as rate equalization arguments, the fact that 100 lb. of apples may be shipped from Vernon, B.C. to Toronto, 2,409 miles, for \$1.50, while it costs \$1.76 to ship the same 100 lb. from Annapolis Royal to Regina, 2,303 miles.; that the rate on canned fish from Vancouver to Montreal, 2,882 miles, is \$1.05, and from Halifax to Regina, 2,516 miles, it is \$1.69, or that Vancouver receives many commodities from the east at lower rates than do many points greater distances inland from the Pacific coast.

After perusing the numerous volumes of evidence covering this case when it was before the Board of Railway Commissioners, the only logical conclusion one can come to is that if the Dominion Cabinet wants to settle the matter on purely economic grounds, and without reference to any political or near-political considerations whatever, its members will be busily engaged in studying the matter, and related facts and theories, for some years. And, for the simple reason that it should be settled purely upon economic grounds, the only body in the country qualified to deal with it is the Board of Railway Commissioners. The House of Commons debate reported in our May issue wherein was mentioned the discovery that J. A. Clark, M.P. for Burrard, B.C., had, presumably unintentionally, on the order paper for some weeks a resolution which proposed extraordinary discrimination against British Columbia, does not detract from the reasonableness of this view.

Canadian Railway Club Officers.

The following were elected at the annual meeting in Montreal, May 8:—President, H. R. Naylor, Assistant Works Manager, Angus shops, C.P.R.; First Vice President, C. E. Brooks, Chief of Motive Power, Canadian National Rys. Second Vice President, J. A. Shaw, Electrical Engineer, C.P.R. Executive committee.—E. R. Battley, Superintendent Motive Power, Montreal District, Canadian National Rys. J. Burns, Works Manager, Angus Shops, C.P.R. W. F. Connal, Mechanical Engineer, Canadian National Rys. J. D. Muir, Assistant Works Manager, Angus Shops, C.P.R. T. M. Hyman, Superintendent Car Shops, Canadian National Rys. G. Whately, Assistant Superintendent, Motive Power, C.P.R. Secretary W. A. Booth, Chief Draftsman Motive Power and Car Department, Canadian National Rys. Treasurer, P. C. Reynolds, Chief Clerk, to Chief of Motive Power and Rolling Stock, C.P.R. The retiring President, T. W. Wilson, Superintendent Motive Power Shops, Canadian National Rys., was presented with a souvenir by A. A. Goodchild, General Storekeeper, C.P.R.

Railway Rolling Stock Orders and Deliveries.

Knox Bros. Ltd., Montreal, has bought 14 standard gauge flat cars from Canadian Equipment Co., 36 ft. long, 60,000 lb. capacity.

Donaston Breakey Ltd., Breakeyville, Que., has received a 4-wheel (0-4-0-T) locomotive, from Montreal Locomotive Works, details of which were given in a previous issue.

Victor Osterberg, Kingston, Ont., has bought a rebuilt, 4-wheeled Vulcan saddle tank locomotive, and 6 four-yard, two-way Western dump cars, all 36 in. gauge, from Canadian Equipment Co.

The Northern Construction Co. has bought a second hand Marion 300 full revolving steam shovel, and a 35 to 40 ton Brownhoist, 8-wheel, double drum, locomotive crane, from Canadian Equipment Co., for power development work in Newfoundland.

Canadian Salt Co., Windsor, Ont., has bought a rebuilt 15 to 17 ton Brownhoist, 8-wheel, double drum locomotive crane, from Canadian Equipment Co. It has a 48 ft. boom, and has been equipped with a new Ontario boiler, 125 lb. pressure, by John Inglis Co., Toronto.

Schroeder Mills and Timber Co., Pake-sley, Ont., has bought a second hand, 40-ton, 4-wheeled Pennsylvania switching locomotive, from Canadian Equipment Co. It has a separate tender, is of standard gauge, cylinders 17 x 24 in., 18,865 lb. tractive power, 80,200 lb. in working order.

Grenville Crushed Rock Co. has bought an Osgood model 73 railway type steam shovel, second hand, and 20 second hand 16 cu. yd. air dump cars, from Canadian Equipment Co., for some rip-rap work along the C.P.R., where it parallels the St. Maurice River, near Shawinigan Falls, Que.

Imperial Oil Ltd. has bought a second hand Baldwin, 4-wheel, saddle tank locomotive, 52 tons, from Canadian Equipment Co. It is standard gauge, 103,000 lb. in working order, cylinders 17 x 24 in., 180 lb. working pressure, steam brakes, automatic couplers, electric headlights front and rear, 23,100 lb. tractive power, with boiler built to Ontario specifications.

P. Lyall and Sons Construction Co. has bought a standard gauge, saddle tank, 0-4-0 locomotive, 37 tons, 15 x 24 in. cylinder, and 12 twelve-yard air dump cars, second hand, from Canadian Equipment Co., for its contract on Welland Ship Canal.

Solvay Cement Co. has ordered a 4-wheel switching (0-4-0) locomotive from Montreal Locomotive Works. Following are the chief details:—

Gauge	4 ft. 8½ in.
Weight, total	80,000 lb.
Wheel base, total	7 ft.
Cylinders, diar. and stroke	14 x 22 in.
Driving wheels, diar.	40 in.
Driving journals	7 x 8 in.
Boiler, type	Radial stay, straight top
Boiler pressure	190 lb.
Firebox, length and width	46½ x 59½ in.
Tubes, no. and diar.	111 2 in.
Tubes, length	11 ft. 8 in.
Heating surface, tubes	675 sq. ft.
Heating surface, firebox	60 sq. ft.
Heating surface, total	735 sq. ft.
Grate area	16.2 sq. ft.
Tractive power	17,400 lb.
Factor of adhesion	4.6
Tank, type	Saddle
Capacity, water	1,700 gal.
Capacity, coal	1,600 lb.

The Dominion Coal Co.'s steel hopper coal cars, to be used on the Sydney and Louisburg Ry., 100 of which have been

built by Eastern Car Co., as mentioned in our last issue, have the following dimensions,—length inside, 30 ft. 0¼ in., width inside 9½ ft., height from rail to top of frame, 10 ft. They will have a carrying capacity of 100,000 lb., but each car is designed to carry 120,000 lb. The bodies are all steel, and in general the A.R.A. design is maintained, as well as its standards and specifications. They are self cleaning, with the usual hopper and floor sheets, and with 4 dump doors, operated in pairs from the car sides. The trucks are A.R.A. standard arch bar design, with the following specialties,—Simplex brake bolsters, National journal boxes, A.R.A. axles, 5½ x 10 in., cast iron wheels 33 in. diar. 750 lb. each, Cardwell G-11-A draft gear, A.R.A. forged yoke and Westinghouse 10 x 12 in. air brake equipment. The cars are claimed to be the first built in Canada for which all material has been produced in Canada, they being designed, using all rolled sections and plates within the limits of the rolling capacity of the British Empire Steel Corporation, of which the Eastern Car Co., is a constituent. The specialties mentioned, as well as miscellaneous materials are also made in Canada. The company is having another 100 of these cars built to the same specifications for delivery later this year.

Canadian Pacific Railway.

The C.P.R.'s order, given the Eastern Car Co., as stated in Canadian Railway and Marine World for April, should have been referred to as 300 41-ft. flat cars, not 300 freight cars.

The C.P.R., between April 12 and May 14, ordered the following rolling stock from its Angus shops, Montreal: 1,000 steel underframe, double sheathed box cars, 36 ft. long; 300 steel frame automobile cars, 40½ ft. long; 7 steel snow ploughs. The decision to place these orders was mentioned in our last issue. The company has also bought a Jordan all steel ballast spreader.

Canadian National Railways.

Rolling stock had been received up to May 21, as follows,—589 box cars, part of order for 1,000, numbered 428,000 to 428,999; 100 Hart ballast cars, nos. 99,500 to 99,599, order completed, from Canadian Car and Foundry Co.; 100 hopper cars, nos. 119,550 to 119,649, order completed, from Eastern Car Co.

Since the information given in Canadian Railway and Marine World for May, was received, orders have been given as follows: Canadian Locomotive Co., 10 six-wheeled switching locomotives; Canadian National Rys. shops, Port Huron, Mich., 15 milk cars; and Canadian Car & Foundry Co., 6 steel first class cars, increasing the order then mentioned to 41. It was intended originally to build 6 of these cars at the old G.T.R. shops at Port Huron, Mich.

The House of Commons, on motion by Mr. Meighen, leader of the Opposition, passed an order recently for a return showing all orders for equipment placed by the Canadian National Rys. since Oct. 4, 1922, including orders for cars of different kinds, separately stated; for locomotives of different kinds, separately stated, with prices in each case, or basis of prices, and comparison of such prices with last prices at which similar goods were ordered; the said return to contain also names of firms, and location of

factories, with whom orders have been placed, and where same are to be filled; also showing all correspondence and requisitions between officers of the companies, and any member of the Government referring to the necessity for such orders.

It was stated in Canadian Railway and Marine World for February that 1,000 thirty-ton steel frame box cars were to be converted into stock cars, and 50 box cars into cabooses, at the C.N.R. shops at Moncton, N.B., and details of the work to be done were given in our March issue. It was stated early in May that the conversion of 750 of the freight cars into stock cars would be done by Canadian Car & Foundry Co., at its Amherst, N.S., works, instead of at the C.N.R.'s Moncton shops, intimation to that effect having been given in a telegram to Amherst by H. J. Logan, M.P. for Cumberland, N.S. We are officially advised that 500 30-ton box cars are to be converted at Amherst into stock cars, and that 500 30-ton steel underframe box cars are to be converted into stock cars at the C.N.R. Moncton shops. The 50 box cars, which it was first announced would be converted into cabooses at Moncton, are to be converted at Amherst.

Following are chief details of the 10 six-wheeled switching locomotives, ordered from Canadian Locomotive Co.:—

Weight in working order	175,900 lb.
Wheel base, engine	11 ft. 6 in.
Wheel base, engine and tender	46 ft. 1½ in.
Heating surface, firebox	167 sq. ft.
Heating surface, tubes and flues	1,778 sq. ft.
Heating surface, total	1,945 sq. ft.
Driving wheels, diar.	56 in.
Driving wheel centers	Cast steel
Driving journals, diar. and length	9½ x 12 in.
Cylinders, diar. and stroke	22 x 26 in.
Boiler, type	Radial stayed, extended wagon top
Boiler pressure	190 lb.
Tubes, no. and diar.	178 2 in., 28 5½ in.
Tubes, length	12 ft. 4 in.
Valve gear	Baker
Fire door	Franklin butterfly
Superheater	Superheater Co. Schmidt type A
Power reverse gear	Ragonnet
Headlight	Pyle National 14
Adjustable driving box wedges	Franklin
Cylinder lubricator	Detroit automatic sight feed
Packing	King
Automatic grease cellars	Franklin
Inspirators	Hancock E. A. lifting type, 5,000 gals. capacity
Boiler check	Hancock vertical with stop valve
Air brake	Westinghouse E.T.
Steam heat	Leslie type A.C.
Sanders	Hanlon
Safety valves	World
Tender, weight loaded	131,850 lb.
Tender frame	Commonwealth
Draft rigging	Miner
Radial buffer	Economy
Brake beams	Buffalo
Brake shoes	Diamond S
Tank, type	Water bottom
Tank, capacity, water	5,000 imp. gals.
Capacity, coal	9 tons
Tender truck, type	4-wheel equalizer
Truck wheel diar.	33 in. chilled cast iron

Large Coal Orders.—The C.N.R. has ordered from the British Empire Steel Corporation over 1,000,000 tons of coal to be shipped by water, principally to Levis, Quebec, and Montreal, the order involving an expenditure of between \$5,000,000 and \$6,000,000. The C.N.R. also expect to use about 75,000 tons of New Brunswick coal, this year and purchases have been made from Minto Coal Co., Welton & Henderson, Rothwell Coal Co., Miramichi Lumber Co., and Harvey Welton. In this connection it is stated that a spur line of some five miles is to be built, to give connection between the C.N.R., at Chipman, and the Minto district.

Further Co-ordination of G.T.R. With Canadian National Railways.

Finance and Accounting Work.

Effective May 1, important changes were made in regard to the financial and accounting work. Corporate financial matters, payments, etc., are being handled at the general offices in Montreal, under the General Treasurer and the General Comptroller. The entire revenue accounting is being done in Montreal under the General Auditor of Revenues.

A regional treasurer, and a regional comptroller, have been appointed for each region, with offices at Moncton, N. B., for the Atlantic Region; at Toronto for the Central Region and at Winnipeg for the Western Region. The operating accounts particularly applying to the respective regions are now dealt with through the regional comptrollers' offices, and disbursements are made through the regional treasurers' offices. Each regional treasurer reports to the General Treasurer at Montreal, and each regional comptroller reports to the Assistant General Comptroller at Montreal.

All freight, railway and ticket agents pay their receipts into local banks for transfer to a bank at regional headquarters.

Finance and Accounting Department Appointments.

James A. Yates, General Treasurer, has announced the following:—

Geo. F. Ancrum, heretofore Assistant Treasurer, G.T.R., to be Treasurer, C. N.R., handling headquarters and subsidiary companies' accounts. Office Montreal.

Legal Department Appointments.

R. H. M. Temple, Regional Counsel, Western Region, Winnipeg, has announced the following:—

J. N. Brooks, to be Assistant General Claim Agent, Western Region, Winnipeg.

J. H. Parkinson, to be Assistant to General Claim Agent, Western Region, Winnipeg.

Thos. Nichol, Winnipeg; O. H. Wickland, Saskatoon, Sask.; S. Taylor, Edmonton, Alta.; Wm. Johnson, Duluth, Minn.; and Wm. J. McRae, Virginia, Minn., to be District Claims Agents.

Passenger Traffic Department Appointments.

H. H. Melanson, General Passenger Traffic Manager, has announced the following rearrangement of staff, in respect to mail, baggage and milk service.

G. D. LeBlanc to be General Baggage Agent, Atlantic Region, vice G. C. Allen, assigned to other duties, Office Moncton, N.B. The position of Assistant General Baggage Agent, Moncton, to be abolished.

L. L. Grabill, General Baggage Agent, Central Region, Toronto, has had his jurisdiction extended to include all lines in the Central Region.

H. M. Spence to be General Baggage Agent, Western Region, Office, Winnipeg. The position of Assistant General Baggage Agent, Winnipeg, has been abolished.

E. M. McDonald continues as Assistant General Baggage Agent, lines, Jasper, Alta., and west, including Canadian National, Pacific coast services, Western Region, reporting to General Baggage Agent, Western Region, Winnipeg. Office, Vancouver, B.C.

The general baggage agents report to their respective general passenger agents on baggage and mail traffic, and to the

Manager of Passenger Service Bureau, Montreal, on matters pertaining to royal mail service.

The Manager of Passenger Service Bureau, Montreal, in co-operation with regional passenger traffic officers, has general supervision over baggage and mail traffic for the system.

C. W. Johnston, Passenger Traffic Manager, has announced the following:—

W. J. Gilkerson, heretofore General Agent, Passenger Department, G.T.R., Minneapolis, Minn., to be General Agent, Passenger Department G.T.R., and C.N.R., Boston, Mass., vice W. R. Eastman, whose appointment as Assistant General Passenger Agent, G.T.R., and General Western Passenger Agent, C.N.R. Chicago, Ill., was announced in our last issue.

L. L. Grabill, General Baggage Agent, Central Region, has announced the following, with approval of R. L. Fairbairn, Manager, Passenger Service:—

W. P. Corking, heretofore chief clerk, General Baggage Department, G.T.R., Toronto, to be District Baggage Agent, C.N.R., with territory, Province of Ontario, and also Suspension Bridge, Black Rock and Buffalo, N.Y. Office, Toronto.

T. P. Mooney, heretofore Baggage Agent, G.T.R., Montreal, to be District Baggage Agent, C.N.R., with territory Province of Quebec, Riviere du Loup, Monk and west, not including Riviere du Loup, and lines in New England and in New York State, south of Montreal, Office, Montreal.

G. E. Weeks, heretofore clerk in charge of baggage matters, General Passenger Agent's office, G.T.R. Western Lines, Chicago, Ill., to be District Baggage Agent, C.N.R., with territory, lines west of Detroit and St. Clair Rivers, in Michigan, Indiana and Illinois, Office, Chicago, Ill.

From May 1, train and station records, reports and statements of mail, baggage and milk traffic are forwarded to the district passenger agent of the territory.

H. R. Charlton, Manager, Advertising Bureau, has announced the following:—

W. C. Riddell, heretofore Advertising Agent, Quebec and Ontario Lines, Toronto, to be Advertising Agent, Central Region, Office, Toronto.

A. H. Lindsay, to be Advertising Agent, Atlantic Region, Office, Moncton, N.B.

C. W. Higgins, heretofore Advertising Agent, Western Lines, Winnipeg, to be Advertising Agent, Western Region, Office, Winnipeg.

Changes in Divisions, Central Region.

Circulars have been issued announcing territorial changes as follows, in addition to those published in Canadian Railway and Marine World for May:—

By W. U. Appleton, General Superintendent, Atlantic Region. The St. Quentin Subdivision of the Campbellton Division, Maritime District from Tide Head, N.B., to National Transcontinental Ry. Jct. 105.74 miles, has been transferred to the Edmundston Division, Maritime District, and all operations thereon now come under the jurisdiction of Superintendent F. Griffin, Edmundston, N.B. All accounting and preparation of statistical reports in connection with St. Quentin Subdivision are now handled by the Edmundston Division.

By W. R. Davidson, General Superintendent, Montreal District. The Portland Division of the G.T.R. formerly ex-

tending from Portland, Me., to Island Pond, Vt., 149.52 miles, has been extended from Island Pond to the east yard limit board at Southwark Yard, near Montreal, Que., 140.0 miles, and also to include the old third district between Richmond and Chaudiere, Que., 87.18 miles, and the branch line to Doucets Landing, Que., 35.34 miles, the whole under the jurisdiction of A. B. McNaughton, Superintendent, whose office has been transferred from Portland, Me., to Richmond, Que.

By W. R. Davidson, General Superintendent, Montreal District, Central Region. The old G.T.R. 30th district, between Ottawa, Ont., and Swanton, Vt., 138 miles, including branch from South Indian to Rockland, Ont., 15.96 miles, and from Glen Robertson to Hawkesbury, Ont., 21.02 miles, in addition to the old G.T.R. 4th District, Montreal, Rouses Point and Massena Springs Subdivision, Montreal, to Massena Springs, N.Y., 95.70 miles; the Hemmingford Subdivision, St. Isidore, Que., Jct. Quebec to Moores Jct., N.Y., 2.15 miles; the Beauharnois Subdivision, St. Martins Jct. to Beauharnois, Que., 5.90 miles, and the old G.T.R. 5th District, Montreal to Brockville, Ont., 125.64 miles, are under the jurisdiction of J. J. Connolly, Superintendent, St. Lawrence Division, Montreal District, Central Region, at Montreal.

Superintendent's Divisions, Central Region.

The old G.T.R. lines, now comprised in the Canadian National Rys., Central Region, have been divided into divisions, under superintendents, with headquarters as follows:—Portland Division, Montreal District, A. B. McNaughton, Richmond, Que., transferred from Portland, Me., St. Lawrence Division, Montreal District, J. J. Connolly, Manager, Belleville Division, Montreal District, J. D. McMillan, Belleville, Ont. Allandale Division, formerly Barrie Division, Southwestern Ontario District, W. E. Weegar, Allandale, Ont. Stratford, Ont. London Division, Southwestern, Ontario District, C. Forrester, London, Ont. St. Thomas Division, Southwestern District, H. W. Matthews, St. Thomas, Ont. Detroit Division, Michigan District, T. King, Durand, Mich. Chicago Division, Michigan District, D. T. Crawford, Battle Creek, Mich.

Co-ordination Notes.

In the co-ordination of the G.T.R. with the Canadian National Rys., the whole system has been divided first into regions, then into districts, then into divisions, and then into subdivisions. The old G.T.R. plan of designating subdivisions as districts, with numbers, has been abandoned, and they are now designated by names only.

The old Canadian Northern Ry. yard at Hurdman, Ottawa, has been closed, and the whole yard business for the co-ordinated lines has been concentrated at the former G.T.R. yards, which will effect a considerable saving in operating costs.

D. E. Galloway, Assistant to President; A. J. Hills, Assistant to Vice President, Operation and Construction Departments, and W. S. Harrison, General Auditor of Revenues, arrived in Moncton, N.B., from Montreal, on May 22, a press report stating their object being to look into the question of reimbursing employees who owned their homes, and had to remove to Montreal in consequence of the centralization of accounting there.

Canadian Pacific Railway Construction, Betterments, Etc.

Fredericton Station.—A press report states that plans have been prepared for a new station to be built at Fredericton, N.B., of somewhat similar size and construction to the Sherbrooke, Que., one, and work will be started immediately, with the expectation of having it finished in the autumn.

Lachute Subdivision Bridges.—We are officially advised that the following bridges on the Lachute Subdivision, Quebec District, are being reconstructed:

Bridge 56.8, Kingly Branch.—Existing 37 ft. deck plate girder span to be replaced by a 30 ft. I beam span.

Bridge 60.1, Calumet River.—Existing 50 ft. deck truss span to be replaced by a 50 ft. deck plate girder span.

Bridge 62, La Rouge River.—Existing bridge, consisting of three 150 ft. deck truss spans, to be replaced by three spans of similar type and dimensions, but of heavier structure.

Bridge 64.3, Riviere au Cheve.—Existing 50 ft. deck truss span to be replaced by a 50 ft. half deck plate girder span.

Bridge 67.2, Salmon Creek.—Existing 50 ft. deck truss span to be replaced by a 50 ft. half deck plate girder span.

Bridge 72.8, Salmon River.—Existing 100 ft. through truss span to be replaced by a 100 ft. deck plate girder span.

Bridge 79.17, Papineauville Creek.—Existing 18 ft. deck plate girder span to be replaced by an 18 ft. I beam span.

Bridge 97.6, Trepanier Creek.—Existing 29 ft. deck plate girder span to be replaced by a 25 ft. Bethlehem I beam span.

Bridge 80.1, Trepanier Creek.—Existing 30 ft. deck plate girder span to be replaced by a span of similar type and dimensions, but of heavier structure.

Bridge 84.6, North Nation River.—Existing bridge, consisting of one 150 ft., one 200 ft., and one 100 ft. through truss spans, to be replaced by two 78 ft. and two 53 ft. deck plate girder spans and one 200 ft. deck truss span.

Bridge 89.2, Blanche Creek.—Existing 50 ft. deck truss span to be replaced by a 50 ft. half deck plate girder span.

Bridge 92.7, Blanche River.—Existing 100 ft. through truss span to be replaced by a 100 ft. deck plate girder span.

Bridge 106.1, Blanche Creek.—Existing present 50 ft. deck truss span to be replaced by a 50 ft. half deck plate girder span.

Bridge 109.4, Blanche River.—Existing 100 ft. through truss span to be replaced by a 100 ft. deck plate girder span.

We are also advised that contracts have been let as follows: To McKinnon Steel Co., Sherbrooke, Que., for fabrication of steel for bridges 56.8, 80.1 and 97.6; to Dominion Bridge Co., Montreal, fabrication and erection of bridges 62 and 84.6; and to Canadian Bridge Co., Walkerville, Ont., for fabrication and erection of the other bridges named above, and for the erection of bridges 56.8, 80.1 and 97.6.

Port McNicoll Bridge.—We are officially advised, in connection with a press report that a bridge on the Georgian Bay and Seaboard Ry., near Port McNicoll, Ont., was to be rebuilt, and that the work would involve some changes in the line and the construction of double track overhead bridges at the level crossing, that the matter has been deferred, and that nothing will be done this year.

Regina Terminals.—Tenders were re-

ceived recently for the construction of a cinder pit at Regina, Sask.

Tuffnell-Prince Albert Branch.—D. C. Coleman, Vice President, Western Lines, announced, May 4, that construction would be started in the near future on the first 50 miles of the projected branch from Tuffnell to Prince Albert. Tuffnell is on the Manitoba & Northwestern Ry., at mile 273 from Portage la Prairie, and the line will run northwesterly to Prince Albert. A press report states that the contract has been given to Grant Smith & Co. and McDonnell, Ltd., Vancouver, B.C.

Rosetown Southeasterly Branch.—In 1919 the Dominion Parliament authorized the building of a line from Rosetown, Sask., in Tp. 30, Range 15, West of 3rd Meridian, southerly for 50 miles, then generally easterly for 30 miles to Tps. 20, 21 or 22, Range 10, West of 3rd Meridian. In July, 1919, a contract was let to Canadian Construction Co. for grading 25 miles on this branch, construction to be started at mile 20 from Rosetown, and to proceed southerly. This grading was completed in 1920, and a further distance of 20 miles was graded during 1921. D. C. Coleman, Vice President, Western Lines, announced, May 4, that these two sections of the branch will be completed this year. The starting point of the grading, mile 20 from Rosetown, is at the point of junction with the projected Empress-Milden line.

Wymark-Archive Line.—In 1919 the Dominion Parliament authorized the building of a line from near Archive, on the Moose Jaw Southwesterly Branch, in Tp. 15, Range 27, West of 3rd Meridian, Sask., to near Wymark, on the Swift Current Southeasterly Branch, in Tp. 13, Range 13, West of 3rd Meridian. In July, 1919, a contract was let to the J. W. Stewart Construction Co., Vancouver, B.C., for grading 25 miles, starting from Wymark, which was completed in 1920. A press report states that arrangements are being made for laying track on this section of the line. D. C. Coleman, Vice President, Western Lines, announced, May 4, grading on the second section of this line is to be done this year. A recent press report stated that R. B. Kimball was in Swift Current, Sask., getting men together to start work on this branch, and another one stated that the contract had been given to W. A. Dutton, Winnipeg.

Swift Current Station.—Tenders were received recently for building an extension to the Swift Current, Sask., station, to accommodate a lunch counter service.

Calgary Station.—A press report states that steam and water for heating trains are being installed at Calgary, Alta., station.

Kipp-Retlaw Branch.—D. C. Coleman, Vice President, Western Lines, announced May 4, that further construction would be gone on with the year on that line, so as to carry it to the crossing of the Little Bow River, Alta. Kipp is a station 8 miles west of Lethbridge, and is the starting point of the branch to Aldersyde. Retlaw is a station at mile 57 from the Suffield-Lomond branch. Grading on this line may be delayed somewhat to enable final surveys to be made and arrangements affected for crossing the irrigation canals.

Loop Tunnel Relining.—We are advi-

sed that the relining of the loop tunnel, mile 4.9 Fernie Subdivision, British Columbia District, for which a contract was let recently to Nickson Construction Co., Vancouver, is being done under C. L. Bates, the contractor's engineer. The tunnel, which is over 800 ft. long is on a 10 degree curve. The contract calls for a 10 x 12 in. interior fir timber lining upon reinforced footings, with sand filling space between the old logging and timber and the new timbering of the walls. All surface of the new timber in contact is to be coated with carbolineum; the new timbering is to be jacketed tight to the old timbering, to give 17½ ft. horizontal clearance. After the lining has been completed the track will be lowered about 20 in. to give sufficient overhead clearance, slack grade near each end of the tunnel allowing this to be easily accomplished. Collapsible staging will be used in putting in the new lining, and traffic will be kept open through the tunnel while the work is in progress. An electric light plant and an air compressor were installed preparatory to starting the work.

Shuswap Subdivision Bridge.—We are officially advised that reconstruction of bridges on the Shuswap Subdivision, British Columbia District, has been decided on as follows:—

Bridge 17.77 existing 60 ft. half deck plate girder span to be replaced by a span of similar design and dimensions but of heavier structure.

Bridge 26.5. Existing 101 ft. through truss span to be replaced by a 100 ft. through plate girder span.

Bridge 37.26. Existing 150 ft. through truss span to be replaced by a span of similar design and dimension, but of heavier structure.

Bridge 40.61. Existing 150 ft. through truss span to be replaced by a span of similar design and dimension, but of heavier structure.

Bridge 65. Existing 60 ft. through plate girder span, to be replaced with a 60 ft. half deck plate girder span.

Canadian Bridge Co., Walkerville, Ont., has been given a contract for the fabrication and erection of these five bridges.

Vancouver Car Repair Shops.—In connection with the fire at the car repair shops at the foot of Duke St., Vancouver, B.C., April 11, we are officially advised that the building destroyed was the passenger car repair shop, the damage to the building being about \$25,000, and to equipment about \$70,000. The burned building is to be replaced by a one-story brick veneered structure of the same type and on the same site, the only change proposed being to add 16 ft. to the length, making the new structure 241 ft. x 89 ft. A contract for it has been let to Western Construction Co., Vancouver, and work is to be started immediately. (May, pg. 223.)

Vancouver Delegations at Angus Shops.—A Vancouver Board of Trade delegation, which is on a trip to Great Britain, while in Montreal, on May 11, was entertained by the C.P.R. and various public bodies. The C.P.R. took the party on a special train to the Angus shops, which were inspected, and gave them luncheon in the dining car. Grant Hull, Vice President received the delegates on behalf of the company.

Freight and Passenger Traffic Notes.

The Canadian National Rys. have advanced freight rates on coal, from Northern Alberta Mines to Prince Rupert, B. C., \$1 a ton.

The Canadian National Rys., have withdrawn from the consolidated ticket office at Buffalo, N.Y., and opened an office in the Ellicott Square building, 11 South Division St.

The C.P.R. during the week ended May 7, moved 955 cars of grain, containing 1,172,014 bush., from western points into Winnipeg, against 976 cars and 679, 862 bush. for the corresponding week in 1922.

The Canadian National Rys. moved from western points, during the present season to May 1, to Winnipeg, Man., and Vancouver, B.C., 112,934 cars of grain against 102,379 cars for the same period 1921-22. Of these cars 4,254 were moved to Vancouver.

The Canadian National and Canadian Pacific Rys. are reported to have completed arrangements with the Agriculture Department for icing of cars of cheese in transit between June 4 and Sept 1, the Department will bear the cost of icing a certain number of cars operating to Montreal up to \$8 a car, the balance of the cost to be met by the shippers.

The Canadian National Railways started, on May 13, running trains on Sundays only, between Montreal and Huntingdon and Hemmingford, Que. The train for Huntingdon leaves Montreal at 7.15 a.m. and starts for Hemmingford at 7.35 a.m., the return trains leave Huntingdon at 6.05 p.m. and Hemmingford at 6.15 p.m., reaching Montreal at 8.25 p.m. and 8.10 p.m. respectively.

The Canadian Passenger Association Eastern Lines in 1922 authorized a reduction in fares for week-end trips from the larger centers of population to nearby summer resorts and certain country points. They are in effect from May 1, to Oct 31; tickets being good going Saturday and Sunday, returning Monday. They were put in operation for this season on May 1.

The Canadian National and Canadian Pacific Rys. are issuing return tickets at special fares from points in the east to certain places in western Canada, and from centers in the west to eastern points, as well as to certain tourist centers in the United States. The sale was commenced May 15, and will be continued to Sept. 30, and they are available to make the return trip to Oct. 31.

The Canadian National and Canadian Pacific Rys., have, we are officially advised, in order to encourage immigration from Europe, arranged that, effective from the opening of navigation by the St. Lawrence route, immigrant fares from Europe to points in Canada are substantially reduced. The new fares to Winnipeg and other western points are approximately on the pre-war basis.

The C.P.R. in conjunction with the Minneapolis, St. Paul and Sault Ste. Marie Ry., and its affiliated line the Wisconsin Central Ry., will commence the operation of a daily through train between Vancouver, B.C., and Chicago, Ill., June 10. The train will leave Chicago daily at 9.45 p.m. and will run through the Rocky Mountains in daylight, Vancouver being reached on the fourth morning after leaving Chicago.

The Pacific Great Eastern Ry. has put on a tourist and standard sleeping car service from Squamish to Quesnel, B.C., 348 miles. The train leaves Squamish on the arrival of the steamboat from Vancouver every Monday evening, making the trip to Quesnel in 29½ hours, and returns from Quesnel every Wednesday, making the trip to Squamish in 25½ hours, in time to connect with the morning steamboat to Vancouver.

The Canadian National and Canadian Pacific Ry. put into effect on May 13, general changes of time all over the system for the summer. The two principal alterations in the C.P.R. schedules were mentioned in Canadian Railway and Marine World for May, pg. 225. The Canadian National Prince Edward Island car ferry will make two round trips every weekday, connecting with the through service to St. John, Halifax and Montreal, which will be accelerated; the Quebec-Montreal service is improved, and a new night train each way is put on between Montreal and Toronto, as detailed elsewhere in this issue.

An Edmonton, Alta., press dispatch stated recently that the Canadian National Rys. had slashed passenger fares for commercial travellers, between the east and the west, the cut amounting to about \$15 either way. We are advised that there has been no reduction in commercial travellers' fares and that none is contemplated. The issuance of commercial travellers' tickets was confined formerly locally to the territory east of Port Arthur, and the territory west of Port Arthur. Now, as a convenience to commercial travellers going from eastern Canada to western Canada, and vice versa, the Canadian National and Canadian Pacific Rys. have arranged to issue tickets through between the east and the west, in both directions, at the combined local commercial fares.

The Canadian National Rys. management has announced commodity rates for various products between Prince Edward Island and the mainland, which have hitherto moved on class rates. The commodities affected include building material, lumber and other forest products, live stock, high explosives, cooperage stock, hay and straw, grain, grain products and other farm products, and scrap iron. Coal and fertilizers move between Prince Edward Island and the mainland at the same rates as on the mainland, and class and commodity tariffs applicable locally between points on the island are stated to be on the same or a lower basis than on the mainland. The placing of the products mentioned above under commodity rates, instead of class rates, will make some reductions. The new rates, which came into effect in the early part of May, apply to traffic moving in both directions.

Canadian Railway and Marine World for May stated that the C.P.R. was placing a new passenger train in service between Montreal and Toronto, effective May 13, to be operated as no. 41 westbound, and no. 42 eastbound, and it was pointed out that this addition gave the company five trains each way, nos. 19, 35, 21, 23 and 41 westbound, and nos. 20, 36, 22, 24 and 42 eastbound, all daily except nos. 23 and 24, which are daily except Saturday. The Canadian National Rys. also put on a new passenger train on May 13, operating westbound as no. 21 and eastbound as no. 20. No. 21 leaves

Montreal at 9.30 p.m. and arrives at Toronto at 6.20 a.m.; and no. 20 leaves Toronto at 9.45 p.m. and arrives at Montreal at 6.45 a.m. It carries first class cars, standard sleeping and drawing room and compartment sleeping cars. This addition gives the Canadian National five trains daily between Montreal and Toronto, as follows: westbound, no. 21, as stated above; no. 15, International Limited, leaving Montreal at 10 a.m., and arriving at Toronto at 5.40 p.m.; no. 9, leaving Montreal at 10.05 a.m., and arriving at Toronto at 10.10 p.m.; no. 19, leaving Montreal at 7.30 p.m.; and arriving at Toronto at 6 a.m.; no. 17, leaving Montreal at 11 p.m. and arriving at Toronto at 7.30 a.m. Eastbound, there are no. 29 as stated above, no. 10 leaving Toronto at 7 a.m., and arriving at Montreal at 7.35 p.m.; no. 14, International Limited, leaving Toronto at 9.20 a.m., and arriving at Montreal at 5.40 p.m.; no. 16, leaving Toronto at 11 p.m., and arriving at Montreal at 7.30 a.m.; no. 18, leaving Toronto at 8.30 p.m., and arriving at Montreal at 7.10 a.m. Express business is handled westbound on trains 21 and 19 and eastbound on trains 20 and 18, instead of on separate trains as formerly.

Letter from a Canadian National Railways' Director.

J. H. Sinclair, of New Glasgow, N.S., has written Canadian Railway and Marine World as follows:—In your last issue you give currency to the following questions, asked in the House of Commons by Mr. Baxter, viz.: "Is it true, as reported recently in the public press, that J. H. Sinclair a member of the Canadian National Rys. Board, stated to members of the delegation of the St. John Board of Trade, which attended a conference at Amherst, N.S., that 'it was news to him that Cochrane and Brockville were not to be the western termini of the Atlantic Division, as that was the understanding at the last meeting he had attended,' or words to that effect? If Mr. Sinclair has been substantially correctly reported, why was a matter of such importance dealt with in his absence?" The acting Minister of Railways, Mr. Graham, replied: "The Government has no information as to the correctness of the report in question."

The answer is that the report is not true. I was not present at the Amherst conference. I did not at any time have an opportunity of discussing this matter with the members of the St. John Board of Trade and made no such statement as that referred to in Mr. Baxter's question. I do not regard this report as of sufficient importance to write a letter about, but as it reflects upon my colleagues on the board, it calls for some reply.

Abitibi Transportation & Navigation Co.—The Abitibi Power & Paper Co.'s President is reported to have stated at the annual meeting in Montreal recently that the logging railway which the company had built into its timber limits in Northern Ontario, had been delivering wood since January, and had proved very satisfactory, the work being done at a considerable saving over the former deliveries by water.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alma and Jonquieres Ry.—Work is reported to be progressing satisfactorily on the construction of the 11 miles of railway which is being built by the Quebec Development Co., in connection with its power development project at the Grande Discharge of the Lake St. John, Que. The railway starts from the old Quebec and Lake St. John Ry., now part of the Canadian National Rys., about two miles from Hebertville station, and runs to the power site, crossing Alma Island, which separates the Little Discharge and the Grande Discharge. Three steel bridges are in course of construction. The railway is expected to be ready for operation early in June. The railway will be used principally at first for taking in construction material for the power plant, and by the Quebec Development Co.'s employees. A large village for the officials and men engaged on the construction is being laid out on the bank of the Grande Discharge, about three miles from St. Joseph D'Alma. W. S. Duke, New York, President; Sir William Price, Quebec; and other officers of the company inspected the work on May 11. (March, pg. 118.)

The Brown Corporation, La Tuque, Que. will a press report states, build a spur line to a wharf which it is proposed to erect near there. The estimated cost of the spur is \$16,000. G. W. Boswell, Quebec, is Manager.

Burrard Inlet Tunnel and Bridge Co.—A special meeting of the shareholders, who are representatives of the various municipalities round Burrard Inlet, was called to be held at North Vancouver, B.C., May 31, to authorize the directors to issue \$630,000 of series A bonds in aid of the construction of the projected bridge across the second narrows of Burrard Inlet. A delegation representing the various municipalities interested, waited on the British Columbia Government at Victoria, May 1, and a press report states, it was advised by the Premier that government engineers would examine the plans of the proposed bridge, and if these were approved, the Government would ask the Legislature to vote \$100,000 towards the cost of erection. (May, pg. 205.)

Cowichan Bay Ry.—A press report states that the British Columbia Minister of Railways has approved plans for this projected railway, from Deerholme, on the Esquimalt and Nanaimo Ry., to tide-water, at the head of Cowichan Bay, about 7 miles. The surveys were made in 1922 by D. O. Lewis, formerly Division Engineer on Vancouver Island for the Canadian Northern Pacific Ry. (Jan., pg. 8.)

Edmonton, Dunvegan & British Columbia Ry.—We are officially advised that the Alberta Legislature has provided \$410,000 for an extension of the line for 15 miles westerly from Grande Prairie, to near Lake Saskatoon; and \$331,000 for a 13 mile extension of the Central Canada Ry.—a branch of the E. D. & B. C. Ry.—from Berwyn westerly. These are the two McArthur lines which were taken over by the Alberta Government under an agreement, and handed over to the C.P.R. for operation. The new construction will be done under the Alberta Department of Railways, of which J. Callaghan, formerly Chief Engineer of the railways, is Deputy Minister. H. G. Dimsdale has been appointed engineer in charge of location and construction of

these extensions. Tenders for the work were received to May 21.

A press report states that the engineering party under Mr. Dimsdale started on May 5 to locate the line west of Grande Prairie, which will be the first to be gone on with. (May, pg. 205.)

Esquimalt and Nanaimo Ry.—The company's machine shops at Wellington, B. C., were burned, April 30, the damage being estimated at \$20,000. H. E. Beasley, General Superintendent is reported to have stated that no plans had been prepared for rebuilding, but that there was no intention to concentrate the company's shops at Victoria, as it was necessary to have shops at Wellington to take care of the rolling stock on the up-island portions of the line.

We are officially advised, in connection with the approval by the Board of Railway Commissioners, of revised location of the proposed extension from Courtenay to Campbell River and Duncan Bay, that the survey of the revised location to Duncan Bay was made in 1922 by the company's engineers. The route is a direct one from Courtenay to Duncan Bay, and the location varies from 5 miles at Courtenay to, in some places, half a mile from the east coast of Vancouver Island, according to the contour of the country. The right of way is cleared for the first eight miles, but nothing has been decided about further work. (May, pg. 205.)

Fecunis Limited.—The Ontario Legislature has extended the time within which the company may build its projected railway from the C.P.R. in Dowling Tp., Sudbury District, to the Canadian National Rys. in Wisner Tp. (March, pg. 119.)

Grouse Mountain Scenic Ry.—A press report states that the company is applying to the British Columbia Railways Department for an extension of time for the construction of its projected scenic incline railway to the top of Grouse Mountain, near Vancouver. The charter was granted by the B. C. Legislature in 1911, during which years surveys were made. The plans were fully described in Canadian Railway and Marine World, Nov., 1911, pg. 1061. An extension of time for construction was granted by the B. C. Government in 1913, since when nothing has been heard of the project.

Inverness and Richmond Ry.—During the sittings of the House of Commons Committee which is investigating the coal supply question, a representative of an English syndicate said that development of the coal fields in the Mabou district of Cape Breton Island would be proceeded with if the Dominion Government would provide railway facilities. There is a railway from Point Tupper to Inverness, which is still in the hands of a private company but which might be taken over by the Government, and extended to provide the necessary accommodation. The advantages of the Mabou coal area, it was stated, include a harbor much closer to Montreal than Sydney or Louisburg.

Some 15 or more years ago the Mabou Ry. and Coal Co. built the Mabou and Gulf Ry. from its collieries to Mabou Harbor, 5 miles, and partially graded a line thence to a junction with the Inverness and Richmond Ry., about 3 miles. The company subsequently ceased operations, and for some years past nothing has been heard of it. The Margaree Coal

and Ry. Co. was incorporated by the Nova Scotia Legislature to build a line from the Chimney Corner mines, in part of the same area of Cape Breton Island, but this charter was revoked by the Legislature in 1920. The Inverness and Richmond Coal and Ry. Co. has a charter to build an extension from its present terminus, through the Mabou coal areas, on to Broad Cove, Margaree and Cheticamp.

Michigan Central Rd.—The Board of Railway Commissioners, after hearing the St. Thomas City Council, and the Yarmouth Township Council, in regard to the company's plans for yard extension at St. Thomas, Ont., has authorized the company to lay seven additional tracks across Park Ave., in Yarmouth Tp., as shown on the company's plans, the question of protection and the cost thereof, and any contribution by the M. C. R. toward the betterment of the streets, and the improvement of conditions at the First Ave. subway, to be reserved for further consideration and order. (May, pg. 206.)

Montreal to National Transcontinental Ry.—P. Mercier, Westmount-St. Henri, Que., asked in the House of Commons, recently: "Does the Government intend to connect Montreal with the National Transcontinental Ry., by a branch line; if so, at what date does it expect to begin the necessary work; and if not, would the Government be disposed to grant subsidies to any person or company willing to undertake such work?" The acting Minister of Railways, Mr. Graham, replied: "Parliament voted a subsidy in 1908 for a railway from Montreal to a point on the National Transcontinental Ry., not exceeding 200 miles, and revoked it in 1910. Any application for subsidy which might now be made would be dealt with on its merits, the final decision resting with Parliament."

Pacific Great Eastern Ry.—Work is reported to be nearing completion on the extension of the wharf at Squamish, on which tracks will be laid to permit trains to be run to the end of the wharf to meet steamboats from Vancouver. At present passengers and their baggage have to be transferred from the steamboats to the train by motor cars. (May, pg. 119.)

St. John and Quebec Ry.—A press report states that the New Brunswick Government is considering plans for improving this railway with a view to facilitate the proposal for its being taken over by the Canadian National Rys. The line extends from a junction with the C.P.R. at Westfield Beach, 13.9 miles from St. John, to Centerville, 157.9 miles. One proposal being considered is for the extension of the line to a connection with the National Transcontinental Ry. and another proposal is to build a branch from Meductic, about 40 miles west of Fredericton, to a connection with the proposed Eastern Maine Ry. (June, 1922, pg. 287.)

Timiskaming & Northern Ontario Ry.—The estimates passed at the Ontario Legislature's recent session contained the following items of capital expenditure:

For Year ending Oct. 31, 1923.	
Engineering: surveys and investigations (re-vote, \$3,065.50).....	\$25,000.00
Grading: widening cuts and fills, etc. (re-vote, \$10,500).....	14,000.00
Replacing timber bridges and culverts (re-vote, \$32,000).....	94,115.00
Additional weight of rail and improved fastenings (re-vote, \$25,701.36).....	35,060.00
Additional track material (re-vote, \$61,297.17).....	86,021.75
Snow fences (re-vote, \$1,500).....	9,000.00

Road crossings and signs (re-vote, \$7,887.04)	18,362.15
Roadway buildings (re-vote, \$2,100).....	18,075.05
Water stations (re-vote, \$123.70).....	4,750.00
Fuel stations	7,653.17
Shops and locomotive houses (re-vote, \$1,695.66)	5,000.00
Station and office buildings, etc. (re-vote, \$54,662.60)	180,138.43
Additional yard tracks, sidings, spur tracks (re-vote, \$42,216.60).....	43,295.57
Roadway machines and tools (re-vote)	4,657.50
Shop machinery (re-vote, \$11,339.81).....	15,000.00
Steam locomotives (re-vote, \$13,816.17)	17,816.17
Freight train cars (re-vote, \$651.23) ..	139,615.44
Passenger train cars (re-vote, \$27,026.60)	284,802.81
Work equipment (re-vote, \$2,747.75)	30,546.06
Extension of main line north from Cochrane	1,750,000.00
Telephone circuits, Porquis Jet, to South Porcupine; also iron circuit, Connaught to Hoyle (re-vote, \$3,819.11)	4,885.87

\$2,782,794.97

For the Year ending Oct. 31, 1924.

Main line extension, north of Cochrane, mile 70 to James Bay.....	\$750,000.00
Estimated amount to be advanced re Nipissing Central Ry., for construction of extension from a point on T. & N. O. Ry., at or near Swastika, to Larder Lake, 25 miles, more or less	900,000.00
	<u>\$4,432,794.97</u>

The item for replacing timber bridges and culverts covers the replacing of a number of timber structures. The work will all be done by the railway forces. None of the structures that are to be replaced this year are of importance.

In relaying the main line rail the original 80 lb. A.S.C.E. section is being replaced by 90 lb. A.R.A. type A section. The item for additional weight of rail and improved fastenings covers the additional weight of rail, and the increased cost of continuous joints, which are used in place of ordinary angle bars. Orders for the rails and fastenings were given the Algoma Steel Corporation, several months ago.

The additional track material item covers the cost of additional tie plates, rail anchors, etc. Sellers anchor bottom tie plates have been ordered for this year's requirements.

The station and office buildings item covers an addition to the general office building at North Bay, and the rebuilding of stations and employes' dwellings that were destroyed by forest fires in October, 1922. These buildings are all being replaced by structures similar to those destroyed, except at Haileybury, where a brick station is to be built. The contract has been given to Hill-Clark-Francis, Ltd., Liskeard.

When the main estimates were under consideration, a question was raised on the vote for \$1,750,000 for the extension of the main line north from Cochrane as to whether fair wages were being paid to the men working on it. On the following day the Premier stated he had made investigations and did not think there was any ground for complaint. The pay last summer was 40c an hour, it being impossible to get men at a lower figure. The contractors provided board at \$1 a day, but the men could board themselves if they so desired; a deduction of \$1 a month was made from each man's pay to provide for illness, and the men were protected in the usual way under the Workmen's Compensation Act in case of accident. No complaints had been received from the men.

We are officially advised that some classes of work on the extension from Cochrane to near New Post on the Abitibi River were carried on during the winter; that other classes have been resumed, and that work was being pushed all over the extension. The contract

calls for the completion of the 70 miles, including tracklaying and ballasting, by Oct. 31.

Tenders will be received by the Commission to June 12, for the construction, other than steel work for bridge of the roadbed, ready for all ties and rails, and for the tracklaying, ballasting and fencing, upon the 25 mile branch line, to be built under the Nipissing Central Ry. charter from Swastika, on the T. and N. O. Ry., mile 165.8 from North Bay to Larder Lake. The surveys for this branch are being gone on with.

The Commission will also receive tenders to June 12, for the erection of an extension to its office building at North Bay.

Tenders are expected to be invited about August for the construction of the projected extension from near New Post, on the Abitibi River, towards Moose Factory. (May, pg. 206).

The Victoria Lumber and Manufacturing Co. which has its headquarters at Chemainus, Vancouver Island, B.C., is building 13 miles of a logging railway, from Cowichan Lake, to the Robertson River Valley. The railway starts from Cowichan Lake, the terminus of an Esquimalt and Nanaimo Ry. branch, runs along the south shore of Cowichan Lake, to Bear Lake, and thence up the valley of the Robertson River. It is expected that it will be in operation about Sept. 1. (March, pg. 120.)

Railway Finance, Meetings, Etc.

The Canadian Pacific Ry. Co. has arranged to pay off on July 10, \$52,000, 000 6% note certificates, issued March 2, 1914, which will be about 7 months in advance of the maturity date. Payment of interest on any outstanding will stop after July 10.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—There are said to be still legal difficulties in the way of the payment of the dividends decided upon by this C.P.R. subsidiary. On March 10, 1922, the directors declared dividends of \$2 a share on both preferred and common stock, payable on April 15, 1922, out of accumulated surplus earnings from 1909 to 1919 inclusive, there being no surplus earning in 1921. The dividends declared were made equal on the two classes of stock, because the company's articles of consolidation provide that after preferred and common stock have received 7% each from the earnings of any year, as they had received from the earnings of 1909 to 1919, all further dividends from the earnings of any such year shall be equal on the two classes of stock, share for share. On April 12, 1922, two of the company's preferred shareholders brought suit in the United States District Court for Minnesota, claiming that the preferred stock was entitled to receive the first 7% in dividends declared in any year regardless of the source from which they were to be paid. The court enjoined the company from paying the dividends pending the decision of the suit. On June 26, 1922, the District decided the suit in favor of the company, sustaining the action of the directors. The plaintiffs appealed to the U.S. Circuit Court of Appeals at St. Louis, the injunction against payment of the dividends remaining in effect. Further and similar dividend action was taken by the directors in Dec. 1922, but payment was again held up by the same plaintiffs. Decision of the Court of Appeals is now pending.

Britishers for the Canadian National Railways Service.

Montreal press reports of May 15 stated that Col. N. H. Balfour, formerly in the Great Eastern Ry's service in England, had come out to be an assistant to Sir Henry Thornton, President, Canadian National Rys., and that his work would relate to immigration and colonization. It was also stated that he was accompanied by A. J. Thomas, a son of J. H. Thomas, the English labor M.P.; that he had been in the Great Eastern Ry's. Operating Department for some five years, and that he had been in war service in France under Sir Henry Thornton. The following is reproduced from the House of Commons Debates of May 16: Sir HENRY DRAYTON (West York, Ont.): There is a newspaper dispatch to the effect that Colonel Balfour, formerly an assistant to Sir Henry Thornton in the management of the Great Eastern Ry. of England, has arrived in Montreal to assume the duties here of assistant to Sir Henry in the management of the Canadian National Rys. It is also stated that A. J. Thomas, who as well was a former assistant to Sir Henry Thornton in England, has come to Montreal to take office here. Will the Minister of Railways inform the House whether these statements are correct, and if they are, what Canadians are being displaced? Hon. G. P. GRAHAM, Minister of Railways: I have no information in reference to the matter except what I have seen in the press. Sir HENRY DRAYTON: Will my hon. friend get that information?

The Crowsnest Pass Agreement Suspension.

The parliamentary enquiry into freight rates, and the Crowsnest agreement by a special committee, which took place at Ottawa in 1922, was dealt with fully in Canadian Railway and Marine World, the committee's report being given in full in our July 1922 issue. As then stated a bill was passed in which the committee's recommendations were embodied, one of them being to the effect that the Crowsnest agreement should, except in respect of grain and flour, be suspended for one year from July 6, 1922, with power to the Government to suspend it for a further period of one year, if in its judgment the then existing circumstances should justify such further suspension.

The leader of the opposition, Mr. Meighen, asked in the House of Commons on May 15; "Has the Government yet taken action with respect to the Crowsnest Pass, or so-called Crowsnest Pass, agreement extension? It will be remembered that there was power to order an extension of the temporary arrangement, or so-called temporary arrangement, for one year. Has action been taken to do so?" Premier King replied: "The matter is under consideration. I will give my right hon. friend a reply later".

Shawbridge Boy's Farm and Training School.—E. W. Beatty, K.C., President C.P.R., presided at the annual meeting of this institution held in the C.P.R. board room, Montreal, recently and was re-elected President, F. W. Molson, director C.P.R., and A. D. MacTier, Vice President Eastern Lines, C.P.R., were elected directors.

Serious Damages to Railways by Floods.

Heavy damages and interruptions to traffic were occasioned on C.P.R. lines in New Brunswick and Maine, resulting from heavy rains on April 27, 28, 29 and 30, and consequent melting of snow in the woods. On April 29 tributary streams to the St. John River became very high, followed by the rising of the Aroostook, Tobique, Keswick, Oromocto, and Nerepis Rivers, flowing into the St. John River; the Magaguadavic, Musquash and St. Croix Rivers in Southern New Brunswick, and the Mattawamkeag River and its tributaries in northern Maine.

The St. John River became very high north of Fredericton, and a few days later, after water had fallen in its upper reaches, it rose to a height unprecedented since 1887 in its lower reaches and the estuaries of the Washademoak and Kennebecasis. A series of very high sea tides occurring at the same period added to the high water conditions, by obstructing the discharge of the freshets through the narrow gorge at the Reversing Falls at St. John.

Traffic first became interrupted by damage to pile bridge at mile 78.4 Shogomoc Subdivision, at Bristol, on April 29, caused by logs and driftwood. By late in the evening of April 29, interruptions had occurred between St. John and McAdam, and on April 30, interruptions to traffic were caused on the Aroostook, Tobique, Shogomoc, Gibson, Mattawamkeag, St. Stephen, St. Andrews, Fredericton, and Shore Line Subdivisions.

In addition to numerous places where washouts and bank slides occurred, high water flooded the track for some 6 miles on Aroostook Subdivision; 2½ miles on Tobique Subdivision; 4 miles on Shogomoc Subdivision, north of Woodstock; half a mile on St. Stephen Subdivision; 10 miles on Shore Line Subdivision; half a mile on St. John Subdivision; and 11 miles on Mattawamkeag Subdivision, on the joint section owned by the Maine Central Rd. In all there were more than 100 places where traffic was interrupted or damage suffered.

The most serious damages were at miles 21, 35, 8 and 41.0 on the St. John Subdivision, where washouts occurred which had to be bridged; mile 27.4, St. Stephen Subdivision, where two bridge abutments were undermined; mile 57.7, 91.2 and 103.75, Shogomoc Subdivision, where pile bridges had to be built; miles 33.1 and 36.2, Gibson Subdivision, where the Keswick River cut through and along the roadbed, necessitating temporary line diversions; mile 18, Mattawamkeag Subdivision, washout bridged; and mile 19.1, Fredericton Subdivision, washout bridged.

On the Shore Line, very serious damage was occasioned by the breaking of a hydro electric power development dam on the west branch of the Musquash River. The resulting flood carried away a 119 ft. Howe truss bridge, at mile 65.22, and destroyed the roadbed from mile 64 to 66, and washed track off the roadbed up to mile 67.6.

The lines from St. John to McAdam, and from McAdam to Woodstock, were opened for traffic again on May 2; St. Stephen and Fredericton Subdivisions on May 3; Tobique and St. Andrews Subdivisions on May 4; Shogomoc Subdivision, Woodstock to Aroostook, May 6; Aroostook Subdivision, May 7; Gibson and Mattawamkeag Subdivision, May 8; and Shore Line Subdivision, Stephen to

Lepreau, May 10.

On account of the joint section on the Maine Central Rd. not being re-opened until May 8, through traffic between St. John and Montreal was diverted to the Canadian National Rys. lines, via Moncton, and a large number of steamship specials were handled in this way, in addition to regular St. John-Montreal service. This route was interrupted between 12 noon, May 3, and 1 a.m., May 6, by washouts on the C.N.R. near Rothesay, caused by the high water in the Kennebecasis River and a strong wind washing the roadbed very badly. During this period through traffic from St. John to Montreal was suspended. Connection with the Maine Central Rd. to Boston was restored May 9, but connection with the Maine Central at St. Stephen will be broken for some considerable period, due to the complete destruction of the Washington County Ry's. international railway bridge at Milltown, across the St. Croix River.

The Canadian National Rys. suffered to a less extent. There was a serious washout between College Bridge, mile 11, east of Moncton and Upper Dorchester, mile 14, on May 1, which interrupted main line traffic for 24 hours. There was also serious damage at several points between Hampton, and Rothesay, about 9 miles out of St. John, affecting about a mile of track, which interrupted train service for about 60 hours. Serious damage was done to the St. John and Quebec Ry., particularly between Westfield Beach and Gagetown, on the Centreville Subdivision, and about two miles west of Woodstock, the Meduxnakeag bridge is in such bad shape that it will be some time before the Woodstock-Centreville section can be operated. This bridge consists of three 84 ft. spans, of which the center one has been carried away for 100 ft. from the piers, the piers are badly damaged, and the two spans have been shifted, so that the outside ends no longer rest on their piers. There was also very serious damage to the track at different points on the old Canada Eastern Ry., between Fredericton and Newcastle. A temporary service was provided between Newcastle and McGivney Jct., the point of crossing the National Transcontinental Ry.

The Canadian National Rys. service on the Quebec and Saguenay Ry., from Quebec to Murray Bay, and on the St. Maurice and La Tuque Subdivisions of the National Transcontinental Ry., was suspended for two or three days at the end of April, owing to washouts. On the Quebec-Murray Bay line, no less than 15 washouts were reported; and land slides were reported on the La Tuque Subdivision, and on the old C. N. Ry. About 200 men were reported to be engaged in repairing the damage, and train services were resumed May 1 and 2.

The New Brunswick Coal & Ry. Co's line between Norton and Chipman was entirely under water, and traffic was suspended for several days from May 1.

The Temiscouata Ry. ceased operating south of Edmundston, May 1, owing to washouts, and the carrying away of a bridge at St. Hilaire.

The Quebec Central Ry. is reported to have suspended the operation of several of its trains for two or three days during the same period, on account of floods on the Lake Frontier Subdivision, but no serious damage was occasioned to the roadbed.

During the last 10 days of April train services on the Canadian Pacific and Canadian National Railways, in Manitoba, were considerably dislocated by floods. The most serious damage on the C.P.R. is reported to have been a 500 ft. washout on the main line west of Poplar Point, mile 45 from Winnipeg, which necessitated the operation of transcontinental traffic via Souris. Another serious break was between Portage la Prairie, and Bredenbury, on the Manitoba Northwestern Ry. Damages of a similar character, but not so serious, were reported on a number of subdivisions, on account of which train services had to be suspended or re-routed for several days. Temporary repairs were made and permanent work is now being gone on with. C. Murphy, General Manager, Western Lines, is reported to have stated that the estimated amount of the damage is \$200,000; but that the actual figures might be below this.

The Canadian National Rys. line between Portage la Prairie and McCreary, was flooded to such an extent that traffic was diverted via Neepawa; on the Rapid City Line, a bridge was washed out 4 miles west of Neepawa; traffic on the Winnipeg-Brandon line was suspended for several days; bridges at Morris and St. Jean, on the Winnipeg-Emerson line, were washed out; and on other lines, including the Grand Trunk Pacific, between Winnipeg and Portage la Prairie, the rails were covered to a considerable depth, causing the entire or partial suspension of train services. Traffic generally was reported to have been resumed April 27.

Alberta Coal for C.P.R. Western Lines.

A Calgary press dispatch stated recently that C. Murphy, General Manager, Western Lines, C.P.R., had announced there that the management was considering using Alberta steam coal as far east as Winnipeg, instead of only as far east as Moose Jaw, and that orders would probably be placed for some 200,000 tons. We were officially advised, May 15, that it is expected to store on the Manitoba District, at Winnipeg and divisional points west, during the next four months, approximately 200,000 tons of Alberta coal, and in addition, during those months, Alberta coal will be used currently on the Manitoba district as far east as Winnipeg. This coal will displace United States coal to the extent of about 350,000 tons. The coal will be obtained from Hillcrest Collieries at Hillcrest; West Canadian Collieries at Blairmore, McGillivray Creek Coal & Coke Co., and International Coal & Coke Co., at Coleman; and Canmore Coal Co., Canmore.

The coal, which will be placed on the ground, will be picked up and used during the autumn rush, in order to facilitate the grain movement, by reducing the amount of switching at Fort William, through the smaller quantity of coal which will have to be loaded there during that time for Winnipeg and points west. In addition to the operating advantages, it will mean employment during the summer for a large number of miners, who would otherwise be laid off, and will also give work to C.P.R. employes in moving the coal down to Manitoba.

Railway Wages and Working Conditions in Canada and the United States.

Maintenance of Way Employees.—A dispatch quoted in Canadian Railway and Marine World for May, stated that the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, had given the Railway Association of Canada the required 60 days notice of a desire to enter into negotiations for a revision of the schedule. We are officially advised that nothing definite was specified as to the changes desired. W. Aspinall, Secretary of the brotherhood's central committee, is reported as having said as follows, in connection with the notification given: "The present rate of pay for a trackman in Canada is 36c an hour after the first six months, and 38c after the first year. The present rate for the first 6 months is 30c an hour, but this can be changed at any time, as these employees are not covered by agreement until the end of the 6 months. The present rate for bridgemen is 46c an hour for the first year, this being increased to a maximum of 56c after three years service. Carpenters get 56c an hour for the first year and a maximum of 60c thereafter, and cabinet makers and carpenters doing planing mill work get 70c an hour. Section foremen at intermediate points gets \$4.40 a day, and section foremen in yards get from \$4.55 to \$4.80 a day. These rates are, it is claimed, considerably lower than those now paid on many roads in the U. S., and much less than the rates paid to men in similar classes of work in Canada, and the central committee feels quite justified in asking for increased rates, as the majority of the men represented are the lowest paid class of employees in the railway service."

Shopmen.—Press reports from various points indicate that machinists, boiler-makers, and carmen included in the American Federation of Labor's railway department's division 4, comprising shopmen generally, have been advocating in their local lodges an attempt to secure higher wages, and a return to the working conditions in force prior to the last schedule change. Several locals have passed resolutions, and forwarded them to the division's headquarters in Montreal, asking that action be taken to secure the higher wages and changed working conditions, particularly in regard to overtime rates for Sunday and holiday work. We were officially advised, May 15, that no notice of a desired conference to revise schedules had been received by the Railway Association of Canada.

Canadian National Rys. Pensions.—Canadian National Rys. general officers met representatives of the employees from the whole system at Montreal, May 16, to discuss a pension plan and other matters of interest.

C.P.R. Carmen.—Representatives of C.P.R. carmen met in Montreal during the week ended May 19, to discuss wages, working conditions and policy. More than 40 delegates, representing all C.P. R. lines, attended.

Wages on Timiskaming & Northern Ontario Ry.—J. H. Marceau, Nipissing, stated in the Ontario Legislature, on April 26, that sub-contractors on the T. & N. O. extension from Cochrane were paying inadequate wages, and, by exorbitant charges for board, doctor's fees, transportation, and clothing, etc., sold in the camps, were securing labor for

practically nothing. Hon. Walter Rollo, Minister of Labor, replied that the T. & N. O. Commission had assured him that a fair wage clause would be inserted in all contracts on the work, providing for the payment of wages current in the district. Premier Drury promised to have the matter fully investigated.

U. S. Situation.—The railway wage situation on U.S. lines has been marked, during the past month, by the granting of numerous wage increases, by various roads, and by applications for wage increases by employees on other roads, some of these having got before the U.S. Railroad Labor Board. The Atcheson, Topeka & Santa Fe granted wages increases to its maintenance men and shop laborers, averaging 2½c an hour, and also increased its section foremen's pay. An agreement with the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers was made, by which the increased wages will be kept in effect till May 1, 1924. The Boston & Maine has increased trackmen's wages 3c an hour. The Pennsylvania has increased common laborer's wages in the northwestern region, and in certain other sections, by from 1½c to 3c an hour, but announces that no general increase has been made. The Illinois Central has granted 2c an hour increase to shop machinists, helpers and apprentices. The Buffalo, Rochester & Pittsburgh, and the Philadelphia & Reading, have given increases to trackmen, foremen and certain bridge and building department employees. It is stated that these increases were found necessary, to prevent men from going to outside industries, some of which were offering higher wages for common labor than the railways were.

The U.S. Railroad Labor Board has before it a petition from the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, filed April 25, asking increases in pay per hour as follows: shop and assistant foremen, 15c; section and assistant section foremen, 11c; mechanics, 14c; mechanics' helpers, 8½c; trackmen, 15c; and track laborers, shop laborers and watchmen, 11½c. The application affects more than 100,000 employees on 28 roads. Another application before the Board is from the Brotherhood of Railway Station Employees, asking for an increase of 15c an hour for Boston & Albany Rd. employees. A third application is from an organization representing some 50,000 teamsters, chauffeurs, stablemen and helpers employed by the American Railway Express Co., who want increases of from 10c to 15c an hour. A separate application has been filed with the Board, by the Order of Railroad Expressmen, representing 72,000 express employees on railways all over the U.S., asking for an increase of 10c an hour. Increased cost of living is the reason given for seeking the increases, in all cases.

Canadian National Rys' Employees in Dorchester County.—The House of Commons passed a motion recently, by L. Canno, Dorchester, Que., for a return showing the names of the Canadian National Rys. employees in the County of Dorchester, the dates of their respective appointments, their duties and respective salaries, and on whose recommendation appointment was made.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System (steam and electric lines), Grand Trunk Pacific Ry., and Canadian Government Rys., the last including the Intercolonial Ry., Prince Edward Island Ry., and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue.	Expenses.	Deficit.	Increase or Decrease.
Jan. \$	9,652,600	\$10,808,306	\$1,555,706	\$1,076,307
Feb.	7,764,196	10,724,382	2,960,186	* 575,596
March	8,558,468	10,741,903	2,183,435	*1,200,059
	\$25,975,264	\$32,274,591	\$6,299,327	\$ 699,348
Inc'se	\$ 252,745	\$ 699,348
Dec'se	\$952,093

*Decrease.

Grand Trunk Railway.

Following are total operating revenues, total operating expenses, and net operating earnings, or deficits, of the G.T.R. system, for 1923 and 1922:—

	Revenue.	Expenses.	Net.	Increase or Decrease.
Jan.	\$8,623,348	\$7,937,775	\$ 685,573	\$ 89,768
Feb.	7,942,776	7,582,837	359,939	*836,517
Mar.	10,197,599	8,408,341	1,789,258	613,896
April	10,838,158	7,763,879	3,074,279	2,771,740
	\$37,601,881	\$31,692,832	\$5,909,049	\$2,638,899
Inc'se	\$7,380,705	\$ 4,741,816	\$2,638,889

*Decrease.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross.	Expenses.	Net.	Increase or Decrease.
Jan.	\$13,148,914	\$12,428,888	\$ 720,026	\$ 236,549
Feb.	11,159,865	10,664,371	495,494	*158,994
Mar.	13,585,763	11,606,049	1,979,714	*440,793
April	13,651,494	11,700,615	1,950,879	402,107
	\$51,546,136	\$46,399,923	\$5,146,113	\$38,868
Inc'se	\$2,725,371	\$ 2,686,503	\$ 38,868

*Decrease.

Railway Accidents Throughout Canada.—The number of railway accidents during April, reported to the Board of Railway Commissioners, was 248, in which 20 employees and 43 others were killed, and 24 passengers, 180 employees and 43 others were injured. In "others" are included 4 persons killed, and 19 injured, in 13 highway crossing accidents. In another highway crossing accident, one railway employee was killed. In these accidents, the crossings were unprotected in 8 cases, and protected, 3 by gates, 2 by bells, and 1 by a flagman, and pedestrians were concerned in 2, automobiles and trucks in 6, and other vehicles in 5.

Geo. E. Bunting, Australasian Manager, Canadian National Rys. and Canadian Government Merchant Marine, Auckland, New Zealand, who has been a subscriber to Canadian Railway and Marine World for many years, in renewing his subscription, writes:—"Your publication, which contains much interesting information with regard to railway and marine matters, is greatly appreciated by me down here."

Purchasing for Canadian National Rys.—C. C. Labrie, who has been confirmed in his position as Purchasing Agent, Canadian National Rys., Vancouver, B.C., will buy the Pacific Coast requirements of the railways, the Canadian Government Merchant Marine, Grand Trunk Pacific Coast Steamships and the Prince Rupert drydock, as well as British Columbia lumber for the system.

Canadian Railway AND Marine World

Founded in 1898 by Acton Burrows.

Devoted to Steam and Electric Railway, Marine, Shipbuilding, and Railway, Harbor and Canal Contractors' Interests.

Official Organ of various Canadian Transportation Associations.

Published on the first of each month at 70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and Edwin Winfield.

United States Business Representative,

A. Fenton Walker, 143 Liberty St., New York.

Member of Associated Business Papers, Audit Bureau of Circulations, Business Newspaper Association of Canada, Canadian National Newspapers and Periodicals Association, Canadian Press Association.

Authorized by the Canadian Postmaster General for transmission as second class matter.

SUBSCRIPTION PRICE, including postage, Canada, United Kingdom, most other British Possession, (except Australia), and to Mexico, \$2 a year. Extra postage to United States, 50c a year; to other foreign countries, except Mexico, \$1.50 a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or post office money order. If remittance is made by cheque, 15 cents should be added to cover cost of collection, unless cheque is payable at par in Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers by the 10th of the month preceding the date of the issue in which it is to appear.

TORONTO, CANADA, JUNE, 1923.

Cost of C.G.M.M. Ships.

The Canadian Government Merchant Marine directors, in their annual report, which is given farther on in this issue, recommend that the capital cost of the ships to be retained in the fleet be reduced to what may be considered present replacement value, as was recommended by the previous directors in their 1921 report, and state that construction cost of ships of the types in the fleet is now in the neighborhood of \$50 per d.w. ton. The ships were built as a war measure at very high prices, and could never begin to earn any interest on their cost, in fact, last year the whole fleet was not able to even earn operating expenses, entirely apart from interest, depreciation, etc. When the ships were turned over by the Government to the Canadian Northern Ry. directors for operation, they were charged up to Canadian Government Merchant Marine, Ltd., at cost, and Canadian Railway and Marine World never could understand why the then President, D. B. Hanna, and his colleagues, consented to this being done, and we are of the opinion that it would have been much better had they refused to manage the ships, loaded down as they were with such impossible capitalization. The building of the ships under the war conditions existing at the time, was perfectly justifiable, but it was badly managed, orders being placed under the authority of the then Minister of Marine without any regard to the trade in which the ships were to be employed, and without consultation with the people who were to operate them, with the result that many of the ships are absolutely unsuitable.

The Heavy Railway Burden.

The burden which the Dominion assumed, when it required the Canadian Northern and Grand Trunk Rys., was strikingly illustrated by Finance Minister Fielding, in his recent budget speech, during which he said that, for the year ended March 31, there was a surplus of \$37,589,000 of ordinary revenue over ordinary, capital and special expenditures, but that \$92,190,000 which had to be advanced for railway deficits, and \$6,080,720 for Canadian Government Merchant Marine deficit, caused an addition of \$49,293,086 to the public debt. For the fiscal year ending March 31, Mr. Fielding estimated a surplus over ordinary, capital and special expenditures of about \$14,100,000 and that a deficit of over \$73,000,000 in the railways, and \$1,500,000 in the Merchant marine, would have to be provided for, making a still further addition to the public debt of \$60,400,000. It is no wonder that President Beatty, of the C. P.R., representing the largest taxpayer in the country, earnestly hopes that the Canadian National Rys. may be successful, and that his company's taxation, to assist in paying deficits, may be reduced.

A Doubtful Project.

At London, Eng., from cablegram of May 22, read:—G. R. Hall Caine, Independent M.P. for East Dorset, announced in a speech at Poole tonight that he is sailing next Wednesday for Canada to negotiate with the Dominion Government for the construction of 200 miles of railway to open up new country for settlers. He holds out hope of valuable orders for the British steel industries, which, if received, will be a big factor

in relieving unemployment in Great Britain."

When Mr. Caine proposes to build a railway with English capital and without any authority from the Dominion it is hardly likely that he will succeed in his proposed negotiations at Ottawa. The Dominion railway Committee are such that prlkier subsidies are not to be expected for some time. The hope of valuable orders for the British Steel industries is mythical. Canadian mills can supply all the rails and accessories required in that country.

The Financial Vice Presidency, Canadian National Railways.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, has resigned his other positions of Vice President of Canadian National Ry. Co., and Vice President of Finance, Canadian National Rys., in charge of Finance and Accounting Department, but remains a director of the C.N.R. Co. He was appointed by the Dominion Government, on Nov. 5, 1917, as a member of the Canadian Northern Ry. Co's directorate, the jurisdiction of which was extended subsequently over the Canadian Government Rys., the National Transcontinental Ry., and the Grand Trunk Pacific Ry., and in Aug. 1922, the Government appointed him a director of the G.T.R. Co. On Oct. 4, 1922, when the new directorate for the Canadian National Rys., including the Canadian Northern, the Canadian Government, the Grand Trunk and the Grand Trunk Pacific Rys., was appointed, headed by Sir Henry Thornton, Major Bell was included, and at the first meeting of the combined boards on Oct. 10, 1922, he was elected Vice President, and Vice President of Finance, of each of the companies. On Jan. 5, 1923, the Dominion Government passed an order in council, at Sir Henry Thornton's request, placing Major Bell's services at the Canadian National Rys' disposal for about three months.

The following statement was issued at the C.N.R. head offices in Montreal, on May 22: "Major Graham A. Bell, C.M.G., Vice President in charge of finance and accounts, Canadian National Rys., will return to his office as Deputy Minister of Railways and Canals, Dominion Government. Major Graham Bell was loaned to the Canadian National Rys. under order in council. From this date the office of Vice President in charge of finance and accounts will remain unfilled, and these departments will be for the time being under the direction of the President. The report, emanating from Ottawa, to the effect that Sir Henry Thornton was considering the appointment of an American to this post, and had conferred with certain friends in the United States with that object, is entirely without foundation."

Prior to the issuing of the statement quoted above, the position of Vice President of Finance, C.N.R., the salary attached to which is \$25,000 a year, was offered to Lorne W. Mitchell, formerly Treasurer, Canadian Northern Ry., who resigned a few years ago to become General Auditor, T. Eaton Co., Toronto, but he declined to accept it. It is said, however, that efforts are being made to get him to reconsider the matter.

Major Bell issued a circular in April, announcing D. E. Brown, Chief Assistant to the Vice President of Finance, as the ranking official next to himself in the Finance and Accounting Department.

Mainly About Railway People Throughout Canada.

Sir W. M. Acworth, who was one of the royal commissioners appointed by the Canadian Government in 1916, with H. L. Drayton, then Chairman of the Board of Railway Commissioners for Canada, and A. H. Smith, President, New York Central Rd., to enquire into a report on Canadian railways, has, according to a Vienna dispatch, been appointed Director of Austrian Railways, which have been placed under the League of Nations' control.

Harry Freeman Alward, who has been appointed Regional Counsel, Atlantic Region, Canadian National Rys., Moncton, N.B., was born in Salisbury Parish, Westmoreland County, N.B., Sept. 8, 1873, a son of Abram Alward, Legislative Librarian for New Brunswick, and was educated at Petitcodiac, N.B., and New Brunswick University, Fredericton. He became an attorney in 1900, and a barrister in 1901, and has practised at Fredericton, Port Elgin and Sackville, N.B. In 1904 he was appointed Assistant Law Clerk, Railways and Canals Department, Ottawa; 1904, Law Clerk, and later, Departmental Solicitor. In 1913, he was appointed General Solicitor, Canadian Government Rys., Moncton, N.B., and from Dec. 1, 1918, to Feb. 1, 1923, was General Solicitor, Canadian National Rys., there.

Edward Arnold, who has been appointed General Freight Claim Agent, Canadian National Rys., Montreal, was born at Kingston, Ont., Aug. 26, 1864, entered railway service in 1880, and to April 10, 1923, was, consecutively, telegraph operator, relieving agent; travelling freight claim agent, Chicago, Ill., and Battle Creek, Mich.; Freight Claim Agent, G.T.R., Montreal. From 1913 to 1916, he was Vice President and President, Freight Claims Association, now American Railway Association Section 7, and has served on several of that section's committees. His chief recreation is the study of bird life, and he is a member of the American Ornithologist Union, New York, and the Cooper Ornithologist Club, San Francisco.

Thomas M. Arthur, who died at Toronto, May 20, aged 62, was on the C.P.R. engineering staff in its early days, and was later engaged on the Duluth, Mesaba and Northern Ry's Iron Mountain Division, afterwards becoming a building contractor in Toronto.

E. W. Beatty, K.C., President, C.P.R., sailed from Quebec, May 14, on the s.s. Empress of Scotland, for Great Britain and the continent, and expects to return to Montreal about the end of June, after completing a tour of the company's European offices. He has resigned as Chancellor of Queens University, Kingston, Ont., on account of pressure of business.

Gordon Murray Beatty, who died in Toronto, Jan. 29, left an estate valued at \$1,036,437, to be divided equally between his two brothers, E. W. Beatty, K.C., President, C.P.R., Montreal; Dr. H. A. Beatty, Chief Medical Officer, Eastern Lines, C.P.R., Toronto, and his sister Miss M. H. Beatty.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, returned to his office in Ottawa, about the middle of May, after a short enforced absence owing to illness.

Mrs. Graham Bell, wife of the Deputy Minister of Railways and Canals, and her sons, have returned to Ottawa, after spending some time in California.

E. N. Bender, General Purchasing Agent, C.P.R., Montreal, and his daughters, have gone to their country house, at Dorval, Que., for the summer.

R. Carr-Harris, at one time lecturer in civil engineering at the Royal Military College, Kingston, Ont., and later, at Queen's University, there, died at Bathurst, N.B., May 13, aged 79. From 1865 to 1870, he was engaged on survey and construction work on the Intercolonial Ry., and subsequently was assistant to a district engineer of that railway. He was later engaged as Divisional Engineer of Surveys of the C.P.R. in British Columbia, and from 1876 to 1877, was in charge of C.P.R. construction work between Thurso and Lachute.

George C. Cochran, District Freight Agent, C.P.R., Toronto, died at Milwaukee, Wis., May 4, from complications following influenza, contracted while visiting in Chicago in February. He was born at Port Huron, Mich., Nov. 27, 1876, and entered railway service Aug. 28, 1891, since when he was, to Sept. 30, 1895, customs and general clerk, G.T.R., Port Huron, Mich.; Oct. 1, 1895 to June 1, 1900, customs agent, G.T.R., Port Huron; June 2, 1900 to July 1, 1902, rate inspector, Trunk Line Association, Port Huron; July 2, 1902 to June 1, 1906, customs agent, G.T.R., Port Huron; June 2, 1906 to Feb. 1, 1907, Travelling Freight Agent, Lackawana and Grand Trunk Line, Chicago, Ill.; Feb. 2, 1907 to Aug. 1, 1908, Import Freight Agent, C.P.R., Chicago, Aug. 1, 1908 to Oct. 9, 1915, Export Freight Agent, C.P.R., Chicago; Oct. 10, 1915 to Dec. 31, 1922, District Freight Agent, C.P.R., Chicago; and from Jan. 1, 1923, District Freight Agent, C.P.R., Toronto.

D. C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, and Mrs. Coleman, visited Montreal and Ottawa early in May.

Thomas Cooper, who has been appointed Assistant Superintendent, Investigation Department, Central Region, Canadian National Rys., Toronto, was born in London, England, March 7, 1887, and entered railway service in Jan. 1911, since when he has been, to 1913, assistant agent, Sellwood, Ont., freight clerk, car accountant, telegraph operator, ticket agent, cashier and relieving agent, Canadian Northern Ontario Ry.; 1913 to 1916, constable, Investigation Department; 1916 to 1918, Special Agent, same department; 1918 to March 16, 1923, Assistant Chief Special Agent, same department, Canadian Northern Ry., latterly Canadian National Rys., Toronto. As some of the details mentioned in our May issue were incorrect, the foregoing is published.

Senator Nathaniel Curry, Chairman of the Board, Canadian Car & Foundry Co., and Mrs. Curry, who spent the winter in Bermuda, returned to Montreal, recently, and then spent a short time at their country house, Greenbank, Tidnish, N.S.

W. P. Hinton, formerly Vice President and General Manager, Grand Trunk Pacific Ry., is President of Athabasca Petroleum Products, Ltd., which is stated to have applied for incorporation in Alberta, to build an extraction and refinery plant on tar sand leases near McMurray.

John M. Egan, who was the first General Superintendent of the C.P.R., at Winnipeg, in 1882, died suddenly, May 9, at Dixon, Ill. He was born at Springfield, Mass., March 26, 1848, and

entered railway service in May 1863, since when he was, to April 1867, machinist apprentice, Illinois Central Rd., Amboy, Ill.; April 1867 to April 1868, clerk in freight office, and from July to Dec. 31, 1869, clerk in Engineer's office, same road; Jan. 1, 1870 to Jan. 1877, consecutively, clerk, Engineer's Department, Assistant Engineer, Division Engineer, and Chief Engineer's Assistant, Northern Missouri Rd.; Jan. 1877 to Dec. 1881, Chief Engineer, Assistant Superintendent, Superintendent, consecutively, Southern Minnesota Rd.; Jan. 1, 1882 to Sept. 1, 1886, General Superintendent, C.P.R., Winnipeg; Sept. 1, 1886 to Feb. 1888, General Superintendent, St. Paul, Minneapolis and Manitoba Ry.; Feb. 1888 to Sept. 9, 1890, General Manager, Chicago, St. Paul and Kansas City Ry.; Sept. 9, 1890 to May 1, 1894, President and General Manager, same road; March to Nov. 1896, Assistant to President, Lake Superior and Ishpeming Ry., Marquette, Mich.; Nov. 1896 to April 1900, Vice President, Central of Georgia Railway and Ocean Steamship Co.; April 1900 to 1904, President, same company. He was also at various times President, Ocean Steamship Co., and of the company which built the Union Station, Kansas City, Mo.; Vice President, Brazil Rd. Co., and President, Metropolitan St. Ry. and Kansas City Light & Power Co.

S. W. Fairweather, who was appointed Assistant to Director, Bureau of Economics, Canadian National Rys., was born in New Brunswick, April 30, 1892, was educated at Acadia University, and graduated from McGill University, Montreal in civil engineering in 1916. He entered railway service in 1911, and was, to 1914, consecutively, tapeman, rodman and instrument man, C.P.R., in Nova Scotia; 1916 to 1923, Assistant Engineer, Department of Railways and Canals, in connection with Prince Edward Island car ferry, Quebec Bridge consulting engineer's staff, and the G.T.R. arbitration.

D. B. Hanna, ex-President, Canadian National Rys., and A. J. Mitchell, ex-Vice President, Finance and Accounting, Canadian National Rys., who left Toronto, in the middle of April, to spend several weeks in Europe, are expected back early in June.

Wm. Hawkins, police magistrate, of Acton Village, Ont., who died there recently, aged 83, was the first station master there, on the Toronto, Grey and Bruce Ry., when it was built as a narrow gauge line about 50 years ago.

W. H. Holland, who died in Toronto, May 18, aged 75, was a member of the location survey party for the first section of the C.P.R., west from Prince Arthur's Landing, (now Port Arthur), and continued in the service until 1883, when he removed to Toronto, and went into the insurance business.

S. J. Hungerford, Vice President, Operation & Construction Departments, Canadian National Rys., who has removed from Toronto to Montreal, has leased the late James Ross' house, 91 Westmount Boulevard.

Captain Albert Henry Kendall, M.C., who has been appointed Manager, Chicoutimi Pulp Co., Saguenay Light and Power Co., and Roberval-Saguenay Ry., was born at Aspatria, Cumberland, England, April 4, 1878, and completed his apprenticeship with the Canada Atlantic Ry., Ottawa, Ont., in June

1901, and, has been, from June 1901 to March 1902, machinist, C.P.R., Revelstoke, B.C.; March 1902 to Aug. 1903, Locomotive Foreman, C.P.R., Nakusp, B.C.; Jan. to Dec. 1903, General Foreman, C.P.R., Revelstoke, B.C.; Dec. 1903 to Dec. 1904, Locomotive Foreman, G.T.R., London, Ont.; Dec. 1904 to Dec. 1913, leading hand, general erecting shop, Angus shops, C.P.R., Montreal; Dec. 1913 to April 1915, General Foreman, C.P.R., North Bay, Ont.; April 1915 to Aug. 1916, Assistant Works Manager, Angus shops, C.P.R., Montreal; Aug. 1916 to Jan. 1917, Master Mechanic, Ontario District, C.P.R., Toronto; Jan. 1917 to Sept. 1919, in military service as captain, No. 1 section, Skilled Railway Employees, and later transferred to the 58th Broad Gauge Operating Company, British Expeditionary Force in France, and was awarded the Military Cross in the latter part of 1918, for superintending evacuation under heavy fire, and keeping lines running until the last moment; Sept. 1919 to May 1923, Master Mechanic, Quebec District, C.P.R., Montreal.

Hon. W. C. Kennedy, M.P., Minister of Railways and Canals, who died at Naples, Florida, Jan. 17, after a long illness, left an estate valued at \$645,228. The will, after giving some small legacies, totalling \$10,000, provides that half of the residue goes to the widow, in addition to house and contents at Windsor, Ont., and of the balance, four-fifths is divided among four sisters, and the remaining fifth between a nephew and a niece.

Sam King and Mrs. King of London, Ont., celebrated the fiftieth anniversary of their wedding at their home there on May 17, both being in very good health. He was born at Thetford, Norfolk, Eng., Sept. 12, 1853, and entered railway service Oct. 16, 1876, since when he has been, to Sept. 12, 1881, car builder; Sept. 12, 1881 to April 1, 1882, car inspector; April 1, 1882 to Feb. 22, 1887, draftsman and clerk; Feb. 22, 1887 to March 1, 1889, General Foreman (position abolished); March 1, 1889, to July 1, 1890, Shop Foreman, G.T.R., London, Ont.; July 1, 1890, to May 1, 1896, Foreman, Bonaventure Station, G.T.R., Montreal; May 1, 1896 to July 23, 1897, Assistant to Superintendent, Car Department, G.T.R., Montreal; July 23, 1897 to Aug. 1, 1900, Master Car Builder, Middle and Northern Divisions, G.T.R., London, Ont.; Aug. 1, 1900 to Oct. 1, 1904, Master Car Builder, Intercolonial Ry., Moncton, N.B.; Oct. 1, 1904 to Nov. 1, 1906, Assistant Master Car Builder, C.P.R., Montreal; Nov. 1, 1906 to Jan. 1, 1911, Superintendent Turcot car shops, Canadian Car and Foundry Co., Montreal; Feb. to Oct. 1917, Managing Director, National Steel Car Co., Hamilton, Ont.; Oct. 1917 to Feb. 1919, retired; Feb. to Oct. 1919, Managing Director, National Steel Car Co., Hamilton, Ont.; at which date he retired from active business. Between 1911 and 1917, when he decided to retire, he was pressed into service in various ways for short periods, and in 1912 was engaged by the Dominion Government in taking an inventory and valuing the Intercolonial and Prince Edward Island Rys. cars.

Robert Everett Laidlaw, who has been appointed Solicitor, Central Region, Canadian National Rys., Toronto, was born at Durham, Ont., Oct. 3, 1891, and from 1911 to 1915, was a student in the Faculty of Applied Science, University of Toronto, and graduated with the degree of B.A.Sc.; 1915 to 1916, Assistant Cost Engineer with Interstate Commerce

Commission on valuation of Michigan Central Rd., Detroit, Mich.; 1916 to 1919, law student, Osgoode Hall, Toronto; 1919 to May 1, 1923, barrister and solicitor, with McCarthy and McCarthy, Toronto. In 1922 he was appointed lecturer in engineering law to the students in civil engineering, Faculty of Applied Science, University of Toronto.

Lieut.-Col. R. W. Leonard, C.E., St. Catharines, Ont., formerly Commissioner, National Transcontinental Ry., is giving Queen's University, Kingston, Ont., 12 acres of land to be used in connection with its extension plans.

D. O. Lewis, formerly Assistant Engineer, Maintenance of Way, Canadian National Rys., Toronto, and latterly with the Engineering Corporation, Ltd., Vancouver, B.C., has severed his connection with that company, to engage in civil engineering practice, specializing in railways, wharves, timber and concrete structures, and the mechanical handling of materials.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal, who sailed from St. John, N.B., on April 24, on the s.s. Empress of Britain, with Mrs. MacTier, for a visit to England and Scotland, are expected back in Montreal about June 7.

J. D. McDonald, whose retirement from railway service was announced in our last issue, was born at Toronto, Aug. 27, 1885, and entered G.T.R. service in 1868, since when he has been, to 1870, messenger, Toronto; 1870 to 1875, Assistant Ticket Agent, Toronto; 1875 to 1896, Ticket Agent, Buffalo, N.Y.; 1896 to May 1902, City Passenger and Ticket Agent, Buffalo; May 1902 to Mar. 1, 1911, District Passenger Agent, Toronto; Mar. 1, 1911 to Oct. 1918, Assistant General Passenger Agent, Chicago, Ill.; Oct. 1918 to May, 1919, Assistant General Passenger Agent, Eastern Regional District, U.S. Railroad Administration, Chicago; May 1919 to Mar. 1, 1920, General Passenger and Baggage Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago; Mar. 1 to Aug. 2, 1920, General Passenger Agent, Western Lines, G.T.R., Chicago; Aug. 2, 1920 to Mar. 31, 1923, General Passenger and Baggage Agent, G.T.R., and General Western Baggage Agent, Canadian National Rys., Chicago. A circular issued by H. H. Melanson, General Passenger Traffic Manager, Canadian National Rys., said:—"J. D. McDonald, General Passenger Agent, Chicago, who has had a continuous service with this company of more than 54 years, will retire effective March 31, 1923, after which he will participate in the benefits of our superannuation fund. During his long period of association with the company, he acquired the goodwill and respect of all our officers and staff, and it is the earnest wish of his confreres that, for many years, he may enjoy his release from the cares of business."

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., and Mrs. McPherson, left Winnipeg early in May, to visit Toronto, Montreal and St. John, N.B.

Sir Donald Mann, ex Vice President, Canadian Northern Ry., left Toronto early in May for England.

Thomas Marshall, Manager Traffic Department, Toronto Board of Trade, who has also been appointed Secretary-Treasurer, Ontario Associated Boards of Trade and Chambers of Commerce, entered railway service, Aug. 1882, since when he has been, to March, 1883, operator, Northern and North Western Ry.,

Elmdale, Ont.; Apr. 1883, to Dec. 1885, operator and ticket agent, same road, Allandale, Ont.; Jan. 1886, to Sept. 1887, relieving agent, same road; Mar. 1887, to June, 1899, chief clerk, Traffic Manager's office, Lake Erie and Detroit River Ry., Walkerville, Ont.; July, 1899, to Nov., 1901, Assistant General Freight and Passenger Agent, same road; Dec. 1901 to Jan. 1904, General Freight Agent, same road; Feb. 1904 to Jan. 1905, General Agent, Pere Marquette Rd., London, Ont.; Jan. to July, 1905, Division Freight Agent, same road, London, Ont. He was, from July, 1905, to May 1, 1912, Secretary-Treasurer and from May 1 to June, 1912, Chairman, Canadian Freight Association, Eastern Lines, and in June 1912 was appointed Manager, Traffic Department, Toronto Board of Trade.

R. C. Morgan, Superintendent, Winnipeg Terminal Division, C.P.R., who has been on leave of absence for some months, acting as General Manager, Reid Newfoundland Co., St. John's Nfld., left there May 2, for Winnipeg via New York, with Mrs. Morgan, after she had been in the St. John's Hospital for 7 weeks, in consequence of having fallen on ice and breaking a leg. He will resume his duties as Superintendent, Winnipeg Terminal Division, C.P.R., June 1.

H. R. Naylor, Assistant Works Manager, Angus Shops, C.P.R., Montreal, whose paper on steel car construction, read before the American Society of Mechanical Engineers, at its Montreal meeting recently, is published elsewhere in this issue, was born at Hull, Eng., Aug. 30, 1885, educated at the Municipal Technical School there, and served an apprenticeship in general engineering with the North Eastern Ry. in its Hull shops. He entered C.P.R. service in Dec. 1907, since when he has been, to Feb. 1909, pattern maker, Angus shops, Montreal; Feb. 1909 to March 1911, draftsman, Angus shops; March 1911 to April 1912, steam heat inspector, Eastern Lines Montreal; April 1912 to Oct. 1913, General Car Foreman, Passenger Car Shops, Toronto; Oct. 1913 to June 1915, Divisional Car Foreman, Eastern Division, Montreal; June 1915 to Oct. 1919, Supervisor of Construction Work, Angus shops, and for the latter portion of that time, engaged in statistical work in the Chief Mechanical Engineer's office, Montreal; Oct. 1919 to March 1920, General Foreman, in charge of freight car work, Angus shops, Montreal; and from March 1920, Assistant Works Manager, Angus shops.

Leslie Richard Parry, who has been appointed Sleeping and Dining Car Agent, Canadian National Rys., Prince Rupert, B.C., was born at Sydney, Australia, Jan. 26, 1887, and entered transportation service in March 1911, since when he has been, to June 1917, successively, second class steward, second steward, s.s. Prince George; second steward, acting chief steward, s.s. Prince Rupert; chief steward, s.s. Prince Albert, Grand Trunk Pacific Coast Steamship Co.; June 1917 to Feb. 1923, Commissary Agent, same company, Prince Rupert, B.C.

J. G. Scott, formerly General Manager, Quebec and Lake St. John Ry., and Great Northern Ry. of Canada, Quebec, Que., has been appointed a member of the royal commission to investigate all branches of the grain trade in Canada.

Osborne Scott, whose appointment as General Passenger Agent, Western Region, Canadian National Rys., east of Jasper, Alta., including Duluth, Winnipeg and Pacific Ry., Winnipeg, was announced in our last issue, was presented

with a grandfather's clock and an antique armchair, May 4, by the staff at Vancouver, B.C., where he had been General Passenger Agent, C.N.R., for some time.

Hon. W. J. Shaughnessy, K.C., director, C.P.R., was a passenger on the s.s. *Empress of Scotland*, which sailed from Quebec, for England, May 14.

Thomas Short, station master, Canadian National Rys., Ottawa, Ont., died there April 26, aged 43, after a long illness. He had been in G.T.R. service for a number of years and had been station master at Ottawa since the erection of the central station, in 1912, previous to which he had been at Hamilton, and London, Ont.

V. Irving Smart, who has been appointed Special Engineer, Bureau of Economics, Canadian National Rys., Montreal, was born at Brockville, Ont., Feb. 14, 1876, and graduated from Queens University in 1897. From 1897 to 1898 he was engaged on surveys for the Dominion Government; 1900 to 1902, Assistant Engineer, Illinois Central Rd.; 1902 to 1904, Assistant Signal Engineer, same road; 1904 to 1905, Signal En-

gineer, Chicago and Eastern Illinois Rd.; 1905 to 1907, Engineer Maintenance of Way, same road; 1907 to 1914 Professor of railway engineering and operation, McGill University; 1914 to 1917, Vice President and General Manager, General Railway Signal Co.; 1917 to 1920, consulting engineer, Montreal; 1920 to 1923, Consulting Engineer, Department of Railways and Canals, in connection with the G.T.R. arbitration. While at McGill University and with the General Railway Signal Co., he made investigations and recommendations for improvement in operating conditions on the Intercolonial Ry., between Truro and Moncton; on the C.P.R., between Montreal and Farnham, Farnham and Megantic, and Guelph Jct. and London; and on Canadian National Rys., between Fort Francis and Winnipeg. Mr. Smart has recovered recently from an attack of scarlet fever.

Lady Thornton, wife of the President, Canadian National Rys., who, as mentioned in our last issue, had spent a short time at Algiers, underwent a slight operation in London, Eng., towards the end of April.

Traffic Orders by Board of Railway Commissioners.

Milling in Transit Arrangement on Peas.

General order 380. May 16.—Re application of Canadian National Ry. Co., for authority to cancel the arrangement erroneously published, effective Feb. 1, 1923, in Tariff C.R.C. no. E-4411, with regard to milling in transit arrangement on peas. Upon hearing the application at Ottawa, May 15, the applicant, the Toronto and Montreal Boards of Trade, the Canadian Manufacturers' Association, Cannery Seeds, Ltd., and H. Murton, Ltd., being represented, and what was alleged,—the board orders that the applicant be authorized to cancel the said arrangement in the said tariff; and that the right be reserved to any interested party, prepared to substantiate the claim that peas should be given the milling in transit rate, to apply to the Board for an order requiring the railways to amend their tariffs accordingly.

Reduced Rates and Free Transportation.

General order 381. May 12.—Reduced rates and free transportation, and the interpretation of the word "traffic" in the first line of sec. 345 (1) (a) of the Railway Act, in its relation to the remainder of the said subsection. Upon hearing the matter at Ottawa, Feb. 20, 1923, the Railway Association of Canada, the Canadian Pacific and Canadian National Railways the Dominion Express Co., Canadian Pacific Railway Co's Telegraph, Canadian National Express Co., and the Canadian National Telegraphs being represented, and what was alleged—the Board declares that the said word "traffic" should be read as though preceded by the word "freight".

Editor's Note.—The sub-section of the Railway Act referred to is as follows:—"345. (1). Nothing in this act shall be construed to prevent, (a) the carriage, storage or handling of traffic, free or at reduced rates, for the Dominion, or for any provincial or municipal government, or for charitable purposes, or to or from fairs and expositions for exhibition thereat, or the carriage, free or at reduced rates, of destitute or homeless persons, transported by charitable societies, and the necessary agencies em-

ployed in such transportation, or the carriage at one-half the regular single fare of ministers of religion or persons exclusively engaged in charitable, religious, or eleemosynary work."

Canadian National Railways' Freight Tariffs.

33,605. April 28.—Re application of Canadian National Ry. Co., under the Railway Act, 1919, sec. 330, for approval of its standard and joint freight mileage tariff, C.R.C., no. E-608, upon the report and recommendation of the Board's Assistant Chief Traffic Officer, the Board orders that the tariff be approved.

33,614. April 30.—Re application of Canadian National Ry. Co., under the Railway Act, 1919, sec. 330, for approval of its standard freight mileage tariff, C.R.C., no. W-325, upon the report and recommendation of the Board's Assistant Chief Traffic Officer, the Board orders that the said tariff, containing the Pacific and the prairie scales, be approved.

Preparation of Canadian National Railways Freight and Passenger Tariffs.

33,616. April 28.—Re application of Canadian National Ry. Co., under the Railway Act, 1919, sec. 323, for approval of a bylaw of the company, dated April 16, 1923, and of a bylaw of the Canadian Northern Ry. Co., dated April 16, 1923, authorizing the officers of the companies, as therein specified, to prepare and issue tariffs in respect of the tolls upon passenger or freight traffic of every description to be charged by the companies upon the said railways, or any part thereof; also to specify to whom, the places where, and the manner in which such tolls shall be paid. Upon the report and recommendation of the Board's Assistant Chief Traffic Officer, the Board orders that the said bylaws be approved.

Packing House Products Mixing Rule.

33,750. May 11.—Re order 33,366, Feb. 8, 1923, suspending rule 5/a in Supplement 4, to C.P.R. tariff C.R.C. no. W-2658; whereas the C.P.R. Co. has filed tariff C.R.C. no. W-2706, effective June 1, 1923, cancelling tariff C.R.C. no. W-2658, and upon its appearing that the

new tariff is satisfactory to the Swift Canadian Co., the Board orders that order 33,366, Feb. 8, 1923, be rescinded.

Mileage Rates on Carload Freight From Loading Sidings.

The following circular was issued by the Board's Secretary, May 18: Enquiry has been received by the Board which involves the question, how should the distance be computed from loading sidings, located between stations, with respect to carload traffic carried under tariffs naming mileage rates, said loading sidings not being shown in the official distance tariffs of the railway companies? The Board is of the opinion that there should be a uniform practice in such cases and I am directed to ask that you advise promptly if you have any objections to the issuance by the Board of an order requiring:—

1. Publication of an amendment to official distance tariffs issued in compliance with the Board's order 5054, Dec. 21, 1908, by adding thereto a rule reading:—"In computing the distance governing traffic handled under mileage rates from loading sidings not named herein, that applicable from the nearest station thereto shall be used."

2. Publication, where not already done, of the following clause in tariffs naming mileage rates:—"In computing distance rates under this tariff, distances shown in official distance table No. C.R.C. No., supplements thereto, and reissues thereof, will apply."

Among the Express Companies.

The Canadian National Rys. Express Department has opened offices at Florence, N.S., and MacDiarmid, Ont. The name of the office at Murray Bay, Que., has been changed to La Malbaie.

The Canadian National Rys. Express Department has opened offices at Marshy Hope, N.S.; River Henry, Que.; Oaknor, Man., and has closed offices at Lowbrush, the Elgin and Reaboro, Ont. The name of the office at Morien, N.S., has been changed to Morien Jct.

The Minister of Railways and Canals introduced a bill respecting the Canadian National Rys. in the House of Commons, May 2, which contains the following paragraphs:—"1. The Canadian National Railway Co. may carry on all business which is customarily carried on by express companies, including, without restricting the generality of the foregoing, the handling of express money orders or other methods of transmitting or handling money, securities, or other handled by the company shall move or be dealt with by the company on the same terms and conditions as to the liability of the company or otherwise as are from time to time approved by the Board of Railway Commissioners for Canada with respect to similar traffic when handled by express companies, subject to such variations therein as may be necessary in view of the handling of the traffic by a railway company instead of an express company.

Additional matter relating to express companies appears on the next page.

Time Enquiries.—The Canadian National and the Canadian Pacific Ry. managements, in Montreal following the Bell Telephone Co.'s example which their offices will not answer telephone enquiries for "the time." It was stated that the Montreal station offices of each company received over 1,000 such requests a day.

Among the Express Companies.

The American Ex. Co. has moved its Montreal offices to 521 Phillips Square, from 231 St. James Street, and the American Railway Ex. Co. has removed to 276 Craig St. West from 231 St. James Street.

Quebec City Council, which planned to increase the license fee on express companies doing business in the city, from \$1,000 to \$3,000, has decided that in future the tax will be \$1,500. Arrangements have been made with the companies for extension of delivery limits, and, it is stated, that the city proposes to utilize the additional amount of the tax in further extensions of the express service to all parts of the city.

John Pullen, whose retirement, on superannuation, from the position of President, Canadian National Express Co., was announced in a recent issue, was entertained at dinner by a number of business associates, at the St. James' Club, Montreal, and presented with a mahogany mantel clock. The dinner, which was presided over by F. H. Phippen, K.C., was attended by a large number of officials of all the express companies operating in the Dominion. A second presentation was made at his house shortly afterwards, when he was given a set of cut glass decanters and tray, and also a combined cut glass ink well and sterling silver clock for himself and Mrs. Pullen. The presentations were made, on behalf of the company's staff from the Atlantic to the Pacific, by W. C. Muir, Assistant General Manager, and W. W. Williamson, General Auditor, who both referred to the happy relations which had at all times existed between Mr. Pullen and the officers and employes, and the high regard they all had for him.

Reasons for the Canadian National Railways Express Department.

Sir Henry Thornton, President, C. N. Rys., gave out the following statement in Montreal, May 10: "There seems to have developed considerable misapprehension in regard to the proposal that the Canadian National Express Co. should be operated as a department of the railway company. It is proper, therefore, that the public should be reliably informed upon the subject. The functions of the express company and the duties of its employes are intimately connected and interwoven with the railway, and the work of its employes. Where express companies operate independently, as is the case in the United States, there is always a certain amount of lost motion, and friction, arising from the fact that there are two companies, with two sets of employes trying to perform a transportation service on the same railway. If, as is sometimes the case, the express company and the railway company are in effect the same thing, there would seem to be no particular virtue in maintaining two separate companies. Furthermore, by operating the express company as a department of the railway, considerable economy can be effected in administration and clerical expenses. Lastly, but by no means least, it is the desire of the administration that every employee of the express, telegraph and railway departments should regard himself as working for the Canadian National Rys. system. Such a spirit provokes co-operation, team work, and a correspondingly improved service. These arguments are so obvious that they hardly require further elaboration.

"It has been said that no railway operates its express company as a department of the railway. This statement can only be based upon ignorance of the conditions. The express companies which operated over the railways of the United States represented interests generally distinct from the railway, although there was usually a considerable interlocking in financial affairs. The American express companies originally were private companies, organized by private capital, for the purpose of handling the express business. Moreover, when express companies first appeared in the U. S., the railway systems were relatively small, and it was desirable to have one company which could transport package freight from one end of the country to the other. This is not the position in Canada, because the Canadian National Rys. system reaches to practically every point of importance. In England the express business is all handled by a department of the railway. In fact, package freight, which corresponds to our express business in Canada, is handled by the traffic department, and within the last two years numerous studies have been made of the position by American railway officers, with a view to considering the introduction of the English collection and delivery system in the U. S. by the railways, which is nothing more nor less than an express business.

"To recapitulate: It will be seen that the proposal to operate the Canadian National Express Co. as a department of the railway is, in the first place, economical; in the second place, there will be an improved and more efficient service, and, in the third place, it is in accordance with the trend of the best practice in the transportation industry."

Dominion Express Co.

Thomas Glover has been appointed wagon agent, Dominion Ex. Co., Calgary, Alta., vice M. Flynn, promoted.

G. H. Taylor, heretofore agent Dominion Ex. Co., Calgary, Alta., has been appointed agent, Nelson, B.C.

O. E. Ford, heretofore agent Dominion Ex. Co., Calgary, Alta., has been appointed route agent, Vancouver, B.C.

S. M. Biesoecker, messenger, Dominion Ex. Co., Moose Jaw, Sask., for the past 10 years, died suddenly there, recently.

M. Flynn, heretofore wagon agent, Dominion Ex. Co., Calgary, Alta., has been appointed agent, Banff, Alta., vice P. G. Kelly, transferred.

P. A. Dunne, heretofore agent, Dominion Ex. Co., Edmonton, Alta., has been appointed agent, Calgary, Alta., vice O. E. Ford, transferred.

E. E. Nixon, of the Dominion Ex. Co. staff at Vancouver, B.C., has been appointed agent, Edmonton, Alta., vice P. A. Dunne, transferred.

H. H. Kingsett, heretofore agent, Dominion Ex. Co., Calgary, Alta., has been appointed route agent for Alberta, vice G. H. Taylor, transferred.

P. G. Kelly, heretofore agent, Dominion Ex. Co., Banff, Alta., has been appointed agent, Calgary, Alta., station, vice H. H. Kingsett, transferred.

The Dominion Ex. Co., which withdrew its service from Canadian Government Railways, after May 31, continues its service into Halifax, N.S., via St. John, N.B., and Digby, N.S.

John J. Murray, General Superintendent, Lines East, Dominion Ex. Co., Toronto, died at St. Michaels Hospital, Toronto, May 1, following an operation.

He was born at Toronto, July 1, 1875, and entered Dominion Ex. Co.'s service, Oct. 1, 1897, since when he was, to Sept. 1, 1903, in various minor positions; Sept. 1, 1903, to May 1, 1906, chief clerk, Superintendent's office; May 1, 1906, to Dec. 31, 1910, secretary to President; Jan. 1, 1911, to Dec. 31, 1918, Superintendent, and from Jan. 1, 1919, General Superintendent, Lines East, all at Toronto. The funeral took place from St. Anthony's Church, Toronto, May 5, the honorary pall bearers being, W. S. Stout, President; T. E. McDonnell, Vice President and General Manager; W. H. Burr, Traffic Manager, Dominion Ex. Co.; H. C. Grout, General Superintendent, Ontario District, C.P.R.; W. C. Muir, Assistant General Manager; and F. N. Wiggins, General Superintendent, Eastern District, Canadian National Railways Express Department; the active pall bearers being W. E. Norman, General Superintendent, Central District, C. N. R. Express Department; C. A. Girvin, and the following Dominion Ex. Co.'s officials, H. P. Sharpe, General Agent, Toronto; P. A. Keeler, Treasurer; F. W. Branscombe, Superintendent, Montreal; J. R. Martin, Manager, Foreign Department; W. H. Plant, General Auditor; H. J. Palmateer, Assistant Superintendent, Toronto.

Withdrawal of Dominion Express Co. from Canadian Government Rys., Etc.

T. E. McDonnell, Vice President and General Manager, Dominion Ex. Co. issued a circular May 7, in part as follows:—To accommodate the Government, the Dominion Express service will be withdrawn from the Intercolonial and Prince Edward Island sections of the Government lines at close of business, May 31. At the same time the Dominion Express service will be withdrawn from Atlantic, Quebec & Western Ry., Quebec Oriental Ry., Cumberland Ry. & Coal Co., Maritime Coal, Ry. & Power Co.

Regarding standing with the Company of exclusive employes, whose positions will be discontinued by the necessity of withdrawing service from Government lines on May 31, Mr. Paton, Grand President, Brotherhood of Dominion Express Employes, advises that the grand lodge executive have adopted the following resolution:—"In the event of the Dominion Express Co. coming off I.C.R. lines, that the principle of seniority and ability for the protection of our members be generally recognized for the placing of such members of our brotherhood who may be affected thereby." The spirit of this resolution meets the views of the management as fair.

In transferring to other divisions and departments of the service employes displaced by this change, a broad view will be taken to the end that the standing and service records of employes with the company as a whole shall be recognized. Interested officials and department heads will please co-operate to this end.

On and after May 31, at competitive points on Dominion Ex. lines, shipments destined to offices which will become non-competitive after May 31, should not be accepted or waybilled. If inadvertently accepted they must be promptly handed to Canadian National Express in local transfer.

Additional matter relating to express companies will be found on the preceding page.

Electric Railway Department

Intersection Installation Toronto Transportation Commission.

The Toronto Transportation Commission has completed the installation of what is said to be the largest street railway intersection ever laid down in Canada. It is at the intersection of Queen St., Roncesvalles Ave., King St. and Lake Shore Road, where they come together near the Canadian National Rys. Sunnyside station, in the west end of the city. The accompanying illustration shows the work in progress, the photograph being taken on the completion of the steel laying, but prior to the final lift and tamping and before the paving base and wearing surface were laid.

The installation was accomplished with the same degree of speed and efficiency which marked the work on the Bloor-Bathurst intersection in 1922, described in Canadian Railway and Marine World for Sept. 1922. The preliminary work including the breaking and removal of

old steel, which was then taken to the material yard. Following the laying and bolting of the steel, the intersection was lifted to grade and all ties were pneumatically tamped. After tamping, a concrete paving base, in which 201 cu. yards of concrete was used, was poured, and the wearing surface, in which are 45,000 granite blocks, was laid on May 3 and 4, completing the job.

The change in the overhead work did not require the use of other than standard materials, except at one point, where a 3-way crossover was necessary, this being provided by welding an extra part on a standard 2-way fitting. On account of the great weight of the overhead wire structure, additional supporting spans were considered necessary; these were erected 3 ft. above the wiring and the weight of the latter picked up on them at desirable points. The intersection,

vised by A. T. Spencer, the Commission's Engineer of Way, and F. W. Drowley, Roadmaster, and the changes in overhead layout were supervised by W. Gibson, Superintendent of Overhead Lines, and E. Hillis, foreman, under the direction of J. F. Neild, Electrical Engineer.

Quebec Railway, Light, Heat & Power Co's Control Changed.

Quebec Railway, Light, Heat & Power Co's affairs have been prominent in financial circles for the past year or more. Over a year ago E. A. Robert, President, Montreal Tramways Co., and associates, secured control. Following this, Mr. Robert made an investigation of the company's affairs, and outlined plans for an extensive development, particularly of the power plant, which necessitated a

Toronto Transportation Commission Intersection at Roncesvalles Ave., King and Queen Sts., and Lake Shore Road.

the old concrete wearing surface, was finished, and everything put in readiness to proceed with the changing of the steel on the evening of April 18. Car operation over the intersection was stopped at 8.45 p.m.; the old steel was removed, together with the old ties; the subgrade and foundation being already prepared, the new ties were put in, the new steel laid and bolted up, and the overhead layout changed to conform with the new curves, and cars were again in operation on April 19, at 5.45 a.m., exactly 9 hours after the work had started. About 164 men were used on the job. As soon as the final car had gone over the intersection on the evening of April 18, two crane cars and four flat cars were brought up, the old steel was loaded on them and run back about half a block on Roncesvalles Ave. and Queen St. and unloaded, and the old ties were piled up clear of the work. The broken stone foundation was prepared, the new ties, which had been distributed near the scene of work beforehand, were put in, and the new steel, brought up on the crane cars and flat cars, was laid and bolted. The flat cars and crane cars were then run back and loaded with the

of solid manganese steel construction, weighs 266,185 lb. complete with bolts, tie rods and other accessories. The complete layout contains 2252 single track feet of steel, 429 joints, 129 cast pieces and 140 pieces of rail. Some of the special ties used were 21 ft. long, some of them being 7 x 12 in. and 308 standard 7 x 9 in. ties were put in. There are 32,026 ft. b.m. of tie timber in the layout, of which the special ties constitute 22,170 ft. The foundation required 777 tons of crushed stone.

The street shown at the bottom of the illustration is the Lake Shore Road; that leading away from the reader and to the left is Roncesvalles Ave.; Queen St. is shown at the left of the illustration and also at the right, farthest from the reader, while King St. is at the right, nearest to the reader. The angle between Roncesvalles Ave. and Queen St. is 90 deg. 58 min.; between King and Queen Sts. 45 deg. 32 min.; between King St. and the Lake Shore Road 107 deg. 30 min.

The intersection was fabricated by Canadian Steel Foundries, Ltd., being bolted together and taken apart at the plant before shipment. The installation was super-

reorganization of the company's affairs. For this purpose application was made to the Quebec Legislature for the incorporation of three separate companies, one for power development purposes, one for electric railways, and another for the gas undertaking. Very considerable opposition was manifested in the legislature to these proposals, which were withdrawn, and two bills were substituted, one to incorporate the Quebec Tramways and Gas Co., and the other the Quebec Power Co., which were passed, notwithstanding the opposition, stated to directed by the Shawinigan Power Co. interests, which also had plans for power developments in the vicinity of Quebec. Mr. Robert then took up the matter of reorganization, and of financing, the most important feature of the latter being the falling due in April of \$2,500,000 of Montmorency power debentures. For several weeks this financing was discussed on the exchanges, and finally it was announced, May 12, that Shawinigan Power Co. interest had secured control, and on May 14, at a board meeting, the following directors resigned: E. A. Robert, A. C. Barker, J. N. Greenshields, K.C., Lt. Col. J. E. Hut-

cheson, K. B. Thornton and N. G. Valiquette, Montreal, their places being taken by W. S. Hart, Howard Murray and Julian C. Smith, of Montreal; J. H. Fortier, J. M. McCarthy and C. E. Taschereau, Quebec. The following old directors remained on the board: C. G. Greenshields, K.C., Hon. G. E. Amyot; Senator D. O. L'Esperance, Hon. A. Turgeon and Senator L. C. Webster. The newly constituted board elected the following officers: Julian C. Smith, President, and Howard Murray, Vice President; and appointed the following officials: W. J. Lynch, General Manager; James Wilson, Secretary; Arthur Lemoine, Assistant Secretary; W. S. Hart, Treasurer; R. A. Wilson, Assistant Treasurer. The company's head office was transferred from Montreal back again to Quebec.

Punishment for Obtaining Passage by False Tickets or Badges.

A bill introduced in the House of Commons, at this year's session, by the Minister of Justice, contained several amendments to The Criminal Code, R.S.C., chap. 146, one being to insert the word "badge," after the word ticket, in each case where it occurs in sec. 412. During the discussion on the second reading of the bill, Sir Lomer Gouin said:—"The amendment is asked for by the Toronto Transportation Commission, and appears to be unobjectionable. Sec. 412 provides that everyone is guilty of an indictable offence and liable to six months imprisonment who by means of any false ticket or order, or any other ticket or order, fraudulently and unlawfully obtains or attempts to obtain passage on any carriage, tramway or railway, or in any steam or other vessel. The effect of the amendment is to extend these provisions to the fraudulent use of a badge as well as a ticket or order."

Kitchener & Waterloo Street Railway New Car House.

The car house which the Kitchener Light Commissioners are having built in Kitchener, Ont., for the Kitchener and Waterloo St. Ry. has its main frontage on King St. It will be 178 ft. long and 123 ft. wide and will be of red pressed brick, on concrete foundations, with a roof of 3 in. gypsum slab covered with a built up asphalt. Provision is made in the foundation work for a storage tank 35½ ft. by 15 ft. and for a soft water tank with 10,000 gall. capacity. The car accommodation on the main floor will have 5 sets of rails, with pits, and a similar number of tracks for storage purposes. The Commissioners have adopted the Detroit car house plan of installing pits, using steel truss to tie tracks together, and embedding the steel in 1 ft. of concrete. The floors above the pits will be supported by concrete foundations instead of having rails to help to support the floors as is the case in some recently built car houses. A boiler shop, 23 x 40 ft. is located at the rear of the car storage area. On the main floor there is a considerable space for stores; a work shop; a luncheon room for conductors, and a locker room, with bath for the employees.

The Commissioners have let the following contracts in connection with the car house.—Excavation, concrete work, brick work and installation of the 3 in. gypsum roof to Ball Bros., Kitchener, for \$40,670;

steel work, to Hamilton Bridge Co., for \$12,775, plus \$2,127 for steel stairs with mastic treads for pits, etc., and for pipe railing and steel doors to oil storage rooms, etc. A car hoist and the special track work have been ordered in the United States.

Electric Railway Passenger Fares.

Hamilton St. Ry.—At the Hamilton, Ont. City Council meeting, April 24, Ald. Lawrence moved that the resolution authorizing the company to charge a straight 5c fare be rescinded. An amendment by Controller Treleven, providing for negotiations with the company to see what service improvements it would give in return for a continuance of the 5c fare was carried by 10 to 5. Controller Etherington gave notice that at a future meeting he would move that a plebiscite be taken at the municipal election, Jan. 1, 1924, on a question of continuing the 5c fare.

Kingston, Portsmouth and Cataraqui Electric Ry.—The Ontario Legislature has confirmed the City of Kingston's bylaw 40 and the village of Portsmouth's bylaw 403 passed in Aug. 1922, amending the sections in the franchise granted by those municipalities to the company fixing the fares to be charged. The new fare schedule which is now in force is as follows:—From 6.30 a.m. to 10.30 p.m., 7c; from 10.30 p.m. to 6.30 a.m., 10c; tickets good between 6.30 a.m. and 10.30 p.m., four for 25c; workmen's tickets, good between 6.30 and 7.59 a.m., and 5 to 6.30 p.m., 6 for 25c; children's tickets available for children between 5 and 12 years, 8 for 25c; transfer free; police constables in uniform, city detectives wearing badges, and children accompanied by parents or other adult persons free, transfers free. The company is also authorized to charge a reasonable compensation for carrying packages and bundles as common carriers, but may not charge for packages of reasonable size carried by passengers.

Kitchener and Waterloo St. Ry.—The new 20-year franchise granted by the town of Waterloo, Ont., for the operation of an electric railway provides that the fares to be charged shall be those at present in force and that whenever it shall be deemed necessary to increase them the Ontario Railway and Municipal Board shall decide whether they shall be increased.

Nova Scotia Tramways and Power Co.—The annual report for 1922 states the passenger earnings of the electric railway in Halifax were \$599,914.92 and that the 6¼c tickets were used almost exclusively.

Regina Municipal Ry.—The Regina, Sask., City Council authorized the municipal railway management to issue weekly passes at \$1, available for an unlimited number of rides from Monday morning to Sunday night. A press report states that the passes will be transferable. The commissioners in recommending the passes reported unanimously against a return to a 5c fare. It would require an increase of 1,500,000 passengers, or 28% more than were carried in 1922, to enable such a reduction to be made.

Regina Municipal Ry. issued the following notice to take effect May 14:—"Weekly Pass \$1.00. On Monday and Tuesday, each week, the street railway has on sale the weekly pass for \$1. It is good until the following Sunday night. You buy a week's riding at one time.

The number of rides you can take is unlimited. Whether you ride one block or 20 the pass pays for it. If you are shopping you do not have to think of car-fare. With a pass in the home any member of the family can make use of it. Buy a pass next Monday morning and you will be surprised how many steps you have saved by the following Sunday night. One passenger writes: Sure, let us praise the Lord for everything, including dollar passes.

Winnipeg Electric Ry.—Under the agreement entered into between the company and the city council, in 1921, the latter body may ask for a change in fares each year before May 15, the new fare to come into effect Aug. 1. An application for a reduction was made in 1922, but the company declined to agree, and the council refrained from taking advantage of the arbitration clause of the agreement, pending the outcome of the franchise extension negotiations then in progress. Under the draft agreement drawn up, there was to have been a slight reduction of fares this year, but, as the draft agreement is being held up by the council, the 1921 agreement is still operative. Alderman Simpson asked at a city council meeting on April 29, whether it was proposed to take any action to secure a lower fare, but there was a general expression of opinion that there was no ground for asking for it on the basis of present costs, and no action was taken.

Actions Against Hydro Electric Railways Permitted.

The Ontario Legislature, at its recent session passed a bill introduced by Hartley Dewart, K.C., Toronto, entitled The Hydro Electric Negligence Act 1923, the principal section of which is as follows: "2. Notwithstanding anything contained in any other act, it shall not be necessary to secure the consent of the Attorney-General before commencing any action against the Hydro Electric Power Commission of Ontario for damages arising through the negligence of the agents, contractors, officers, employees or servants of the said Commission in the construction, equipment or operation of any electric railway constructed or acquired, equipped and operated by the said Commission under the authority of any act of this Legislature."

This removes a most objectionable exemption that the Hydro Electric Railways, owned by various municipalities, and operated for them by the Commission, enjoyed, and places them in the same position as railways owned and operated by companies, a position from which they should never have been removed.

Hamilton and Dundas St. Ry. difficulties.—Early in January the Dominion Power and Transmission Co. gave notice of its intention to cease operating the Hamilton and Dundas St. Ry., on Jan. 31, but decided to continue operations for the six months following negotiations initiated by the Dundas Town Council which resulted in the cancellation of all workmen's tickets and the sale of a 10-trip unlimited ticket between Hamilton and Dundas for \$1. The other fares are as provided for by the Railway Act, and the Hamilton city bylaw. A press report, says the indications are that the Hamilton and Dundas St. Ry. will throw up its franchise at the end of July, when the arrangements for its continuance will end.

Track Construction, Hydro Electric Rys., Essex District.

The Hydro Electric Power Commission of Ontario received tenders to May 5, for the construction of 26,935 single track feet, of main track, and 475 feet of siding, to be located as follows: In Walkerville, 1,925 ft. of single track, on Sandwich St., from the Canadian National Rys. bridge to the city's eastern limits; in Ford City, 3,250 ft. of single track, from the eastern limits of Walkerville to Strabane Ave.; in Windsor, 3,740 ft. of double track on Erie St., from Ouelette Ave. to Parent Ave. (7,480 single track ft.); in Windsor, 2,540 ft. of double track on Ottawa St., from Parent Ave. to Lincoln Road (5,080 single track feet); in Windsor, 2,100 ft. of double track, on Parent Ave., from Erie St. to Ottawa St. (4,200 single track ft.); in Sandwich, 2,500 ft. of double track, on London St., from Bridge St. to Soper St. (5,000 single track feet.); in Windsor, a passing siding, 475 ft. long, on Ouelette Ave., near Maple Ave. The work will be under the direction of T. U. Fairlie, Engineer, Railways Department, Hydro Electric Power Commission of Ontario.

The accompanying plan shows longitudinal and cross sections of the double track to be built, and the single track will be of the same general character. The rails to be used will be 80 lb. A.S.

Mainly About Electric Railway People.

G. H. Dahl, heretofore statistician, Winnipeg Electric Ry., has been appointed as assistant to the Vice President and General Manager.

Alphonse Dubee, who was in the service of Montreal Tramways Co. and its predecessor for 51 years, latterly as chief clerk at the St. Henri depot, died at Montreal, April 25, aged 80. Patrick Dubee, Secretary-Treasurer of the company, is a son. The funeral at Cote des Neiges, was largely attended by officials and employees of the company.

G. Gordon Gale, M.Sc., Vice President and General Manager, Hull Electric Co., has been elected Vice President, Rowal Ottawa Golf Club.

L. L. Price, heretofore in charge of appliance department, Winnipeg Electric Ry., has been appointed Superintendent of Distribution and Sales.

Julian Cleveland Smith, who has been elected President, Quebec Ry., Light, Heat and Power Co., was born at Elmira, N.Y., Oct. 7, 1878, and was educated at Buffalo, N.Y., and Cornell University. He began his business career as draftsman with W. C. Johnston, consulting engineer, Niagara Falls, N.Y., and two years later was appointed his assistant engineer at Shawinigan Falls, Que.

Nova Scotia Power & Tramway Co's Annual Report.

The directors' report for the calendar year 1922, issued recently, deals with the company's electric railway, light and power, gas, and steam heating departments. Its financial position improved greatly during the year. While gross earnings continued to decline, the decline was much more than offset by rapid decrease in operating expenses, the net result proving far more satisfactory than in 1921. The cost of material decreased to some extent, and wages were reduced about 4% in August. The resumption of preferred dividends is, however, not yet in sight, and there is no immediate prospect of being able to finance the cumulative preferred dividends not paid to date, amounting to \$24 a share.

The tramways department's gross earnings were 11.8% below 1921, due entirely to business depression, and the increased use of automobiles. The number of passengers carried, including transfers, was 10,897,160, compared with 12,143,197 in 1921. To meet this situation, service was curtailed to some extent. The car mileage decreased to 1,733,439, from 1,860,342 in 1921. The total amount received from tramway passengers was \$599,914.92. They used the 6½¢ ticket almost exclusively. The cost of tramway service, exclusive of

Longitudinal and cross sections standard double track construction, Hydro Electric Railways, Essex District.

C.E., in 60 ft. lengths. Joints will be welded, and International steel twin ties will be used. Dimensions of track allowance, distance between tracks, depth of foundation, etc., are shown in the plan.

The double track construction on Erie St., Windsor, will enable street car service to replace the trackless trolley service which has been given for some little time, the change being considered desirable due to increasing passenger traffic density. A new trackless trolley route, ¾ mile long, will be established on Tecumseh Road. In the Erie St. service the trolley bus has fulfilled what promises to become one of its chief functions, i.e., that of providing a growing district with adequate transportation until such time as traffic density warrants the construction of an electric railway line.

Winnipeg, Selkirk and Lake Winnipeg Ry., Winnipeg Electric Ry. subsidiary, is reported to be discussing with the Selkirk, Man. Town Council, a proposition for leasing Selkirk Park, and operating it in conjunction with the railway.

A Niagara, St. Catharines and Toronto Ry. car was struck by lightning on May 20, while between St. Catharines and Port Dalhousie, but no damage was done, except to the motor.

Montreal & Southern Counties Ry. is in the market for 1 motor baggage car and 2 suburban passenger trailer cars.

From 1903 to 1906 he was Superintendent, Shawinigan Water and Power Co., Montreal; 1906 to 1909, General Superintendent, same company; 1909 to 1913, General Superintendent and Chief Engineer, same company; and from 1913 he has been Vice President and General Manager, same company, and executive of all its subsidiary companies. Among other positions he holds are,—President, Public Service Corporation, Quebec, Que.; Canada Carbide Co.; Canadian Electro Products Co.; and North Shore Power Co., Three Rivers, Que.; Vice President, Dominion Engineering Works Ltd.; and director, Dominion Bridge Co.

W. N. Smith, Consulting Engineer, Winnipeg Electric Ry., has been presented with one of the two Plummer gold medals, for the best papers of 1921 and 1922, on a metallurgical or chemical subject.

The Montreal Tramways Co., was sued in the Quebec Supreme Court, Montreal, recently by the British America Insurance Co., British America Underwriters' Agency to recover \$137.50 for damage alleged to have been done by one of the company's electric cars to an automobile insured by the agency. Rt. Justice MacLennan found that the accident to the automobile was caused by the improper and negligent driving of its chauffeur and dismissed the action with cost.

taxes, necessary reserves, and return on the property dedicated to this service, was \$460,670.92. Of this amount 69.3% was expended in wages and salaries. The cost of conducting transportation was \$253,000, of repairs \$127,000 and other expenses were \$80,000. The company was able to effect a very great saving in operating expenses, with the result that the net earnings before taxes were 27.5% greater than in 1921. The number of kilowatt hours used by this department was 3,664,725, and the car miles operated, 1,733,439.

The Hydro Electric Railways Investigation.—The Premier of Ontario in answering questions as to the cost of government commissions stated in the Legislature, recently that the investigation into the Hydro Electric Radial Railways proposals by Mr. Justice Sutherland and other Commissioners cost \$162,705.41.

The Hydro Electric Power Commission of Ontario has issued passes for distribution to blind persons resident in the province, enabling them to ride free on all cars on railways operated by the Commission. Under certain conditions, these passes will be issued to persons of low grade partial sight. The lines upon which the passes are available are the Hydro Electric Rys., Toronto and York District, and Essex District and Guelph Radial Ry.

Arrangements for Canadian Electric Railway Association's Annual Meeting.

The committees appointed to make arrangements for the Canadian Electric Railway Association's annual meeting, to be held at Toronto, June 27 to 30, both inclusive, have been actively at work, and there is every indication that the meeting will be most successful in all its features, the business programme, the exhibits of electric railway equipment and supplies, and the social entertainment. The City Council has granted the use of the Music Building and the Press Building, on the Canadian National Exhibition grounds, which front on Lake Ontario, and are probably more attractive at the end of June than at any other time. The members' meetings will be

cheon at Toronto Harbor Commission pavilion, with address by the Association's President, Major F. D. Burpee, Manager, Ottawa Electric Ry. Afternoon:—Inspection of exhibits.

June 28, Thursday, Morning. Association meeting. Luncheon at Toronto Harbor Commission pavilion, with address by the Mayor of Toronto. Afternoon:—Inspection of exhibits. Inspection of Toronto Transportation Commission's different types of cars, which will be on loop near the exhibition grounds entrance. Motor trip round the city for ladies, finishing with tea at the Old Mill on the Humber. Evening, 7.30. Association's annual dinner at

Manager, Hydro-Electric Rys., Toronto & York District, Chairman; E. P. Coleman, General Manager, Dominion Power Transmission Co.; H. H. Couzens, General Manager, Toronto Transportation Commission; D. W. Harvey, Assistant Manager, Toronto Transportation Commission; W. J. Radford, Assistant Manager, Toronto Suburban Ry.; D. M. Campbell, Preston, Ont.; W. G. Gordon, Traction Engineer, Canadian General Electric Co.; H. T. Gibbs, Sales Engineer, Canadian Westinghouse Co.; and O. C. Rehfus, Mechanical Engineer, Canadian Steel Foundries.

Entertainment:—W. R. McRae, Superintendent of Rolling Stock and Shops,

Music Hall, Canadian National Exhibition.

The portion of the building marked "Exhibit space" will be divided by railings, to suit the different exhibitors. The Association's meetings will be held in the amphitheatre.

held in the amphitheatre in the Music Building and the exhibits will be displayed in the main portion of the building. The Press Building will be devoted to the use of ladies attending the meeting. The Toronto Transportation Commission will operate buses between its nearest electric railway lines, terminating outside the exhibition grounds and the Music and Press Buildings, and also between those buildings and the Toronto Harbor Commissioners pavilion, on the Lake front at Sunnyside, where the luncheons will be held.

The general programme arranged so far is as follows:—June 27, Wednesday. Morning.—Registration of members and associate members. Get-together lun-

King Edward Hotel.

June 29. Friday. Morning. Association meeting. Luncheon at Toronto Harbor Commission Pavilion, to be enlivened by a professional entertainer. Afternoon:—Inspection of exhibits. 5 p.m. Base ball game between members and associate members. The ladies will be taken on a trip round the harbor, finishing with tea at Royal Canadian Yacht Club. Evening. Dance at King Edward Hotel.

June 30. Saturday. Morning. Association meeting and election of officers.

The committees in charge of the arrangements are as follows:—

Exhibits:—C. L. Wilson, Assistant

Toronto Transportation Commission, chairman; I. S. Fairty, K.C., Solicitor, Toronto Transportation Commission; E. W. Oliver, General Superintendent, Electric Railways, Central Region, Canadian National Rys.; F. S. Livingstone, Traffic Manager, Hydro Electric Rys., Toronto and York District; F. J. Neale, Vice President, Dominion Wheel & Foundries, Ltd.; H. A. Moore, Toronto District Manager, English Electric Co. of Canada; W. R. Carr, Editor, Electrical News; and Aubrey A. Burrows, Business Manager, Canadian Railway and Marine World.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., who is Papers, Etc.—D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways

Co., who is in charge of the papers to be read, has arranged for the following: "The operation of a scientific survey of traffic movements on urban railways," by Alex. Jackson, Superintendent of Time Tables, Public Service Railway Co., Newark, N.J. "Deciding on the proper motor for a given cycle of duty," by W. G. Gordon, Traction Engineer, Canadian General Electric Co., Toronto.

The President, Major F. D. Burpee, will lead a discussion on timely topics. The member companies have been asked to make suggestions as to questions they would like to have discussed, and the following have already been sent in:—

What is the experience of members who have tried automatic heater control?

Does the Peter Witt type of car increase or reduce the abuse of transfers?

What steps have been taken by city authorities to restrict vehicular traffic at congested loading points during rush hours?

Has the redipping of old armatures in varnish been tried, and with what results?

Exhibits.—The Association's meetings have, as stated above, been fixed for the mornings and the afternoons are to be devoted almost entirely to the associate members' exhibits, which promise to be extensive and most interesting. The accompanying plan of the Music Building shows the portion to be devoted to exhibits, which will be divided by railings into about 40 separate spaces. Up to May 25 the following have signified their intention of exhibiting:—Allen General Supplies, Toronto; Don. M. Campbell, Ltd., Preston, Ont.; Canadian Car & Foundry Co., Montreal; Canadian General Electric Co., Toronto; Canadian Steel Foundries, Montreal; Canadian Street Car Advertising Co., Montreal; Canadian Westinghouse Co., Hamilton, Ont.; Dominion Wheel & Foundries, Toronto; Ferranti Meter & Transformer Mfg. Co., Toronto; Lyman Tube & Supply Co., Montreal; Metal & Thermit Corporation, New York; Ohio Brass Co., Mansfield, Ohio; Ottawa Car Manufacturing Co., Ottawa, Ont.; E. F. Phillips Electrical Works, Montreal; Railway & Power Engineering Co., Toronto; Sarnia Bridge Co., Sarnia, Ont.; Southam Press, Montreal; Standard Underground Cable Co., Hamilton, Ont.; United States Steel Products Co., New York; Witherow Steel Co., Pittsburgh, Pennsylvania.

The Toronto Transportation Commission will give every possible facility to members to inspect its property, the most interesting features of which will doubtless be the new Eglinton car house; the new Hillcrest shops and stores, now being built; and also some of the track work under construction. The Commission's staff will be glad to accompany members, and show them everything possible.

A Montreal City Council's special committee, which has been studying the transportation situation for some months past, is stated to have prepared a report to be laid before the Council. Such will attest that the present electric service is inadequate for the requirements, that there are too many car stops; that an auto bus service will relieve the situation, and that there should be a municipal inspection of the service.

Two London St. Ry. employees were presented with rings, by the local Kiwanis Club, recently, in acknowledgment of courtesy.

Port Arthur and Fort William Electric Railway Differences.

The cities of Port Arthur and Fort William, Ont., continue to have difficulty with the operation of the electric railways which connect and serve the two cities. For some years past each city has owned the lines within its own boundaries and has operated its cars over the connecting lines to a central point in the other city. One minor matter after another has developed since this system went into force, which have been the cause of considerable friction between the Port Arthur Public Utilities Commission and the Fort William Utilities Committee, which finally culminated in the passing of the following resolution by the first named city:

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council: Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee: The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

"That whereas the Fort William Utilities Committee and the Port Arthur Public Utilities Commission, cannot arrive at a mutual satisfactory working agreement in connection with the operation of the street railway on the main line; therefore this Commission advise the Fort William Utilities Committee that on and after May 15, this Commission will operate exclusively main line service of its street railway with its own equipment and men." The second resolution was "That this Commission requests the Manager to arrange all details with Fort William relative to ticket fares and interchange of same after May 15, and that other operating details be also discussed in an effort to facilitate the conveyance of passengers from Port Arthur to Fort William and vice versa."

Following this decision the Port Arthur Commission installed a loop to turn its cars at the boundary and the Fort William Committee made arrange-

ments for terminating the run of its cars at the same point. It was announced May 12, that an arrangement had been completed between the officers of the two lines for a schedule which would give practically the same service between the two cities as formerly, except that passengers would have to change cars. The new service was put in force May 15, as arranged, and was reported to be working smoothly.

The Fort William Utilities Committee on May 18, passed a resolution deploring the inconvenience caused to passengers by having to change cars at the boundary, and expressed its willingness to continue the through service as heretofore.

Cars for Montreal & Southern Counties Ry.

The Montreal & Southern Counties Ry. has ordered a motor baggage car, and a trailer, from Ottawa Car Manufacturing Co. The baggage car will be of the inter-urban type, with arch roof, steel underframe and wood superstructure, and will have the following chief details: Length over buffers, 49 ft. 8 in.; center to center of bolster, 27 ft.; width over all, at eaves, 8½ ft.; height, top of rail to top of roof, 12 ft. 8½ in.; height, top of rail to center line of couplers, 2 ft. 10½ in.; wheel base, 6½ ft.; trucks, Taylor M.C. B.; motors, 4 Westinghouse 306-CV-4 60 h.p.; control, Westinghouse cabinet H. L.; air compressor, Westinghouse D-2-EG, 25 cub. ft.; air brake, Westinghouse AMM, M.23 brake valve; wheels, rolled steel, 34 in.; heater, Peter Smith 1-S; couplers, Tomlinson special 8; trolley bases, O.B. form 2; signal, electro-pneumatic; headlight, Golden Glow, 250 watt; gears and pinions, helical 20-64; weight, approximate, 56,000 lb.

The trailer car will be of the suburban Pullman type, with steel underframe, wood superstructure and drop platform, without smoking compartment, and will have the following general details: Length over buffers, 49 ft. 8 in.; center to center of bolster, 27 ft.; width over all at eaves, 8½ ft.; height, top of rail to top of roof, 12 ft. 6½ in.; height, top of rail to center line of coupler, 1 ft. 10½ in.; height, top of rail to platform, 3 ft.; height, top of rail to top of floor, 3 ft. 8½ in.; seating capacity, 56; wheel base, 6 ft.; heaters, electric; seats, Hale and Kilburn reversible; trucks, Taylor M.C.B.; air brake, Westinghouse AMM; wheels, rolled steel, 34 in.; couplers, Tomlinson, form 8; signal, electro-pneumatic; ventilators, Utility; weight, approximately, 39,000 lb.

The Manitoba Legislature has passed an act transferring the duties of the Public Utilities Commission to the Provincial Secretary, and amending the Public Utilities Act as rendered necessary by the abolition of the Commission. Provision is made for the appointment by the Lieutenant-Governor in-Council of a person to assist, or to act in place of, the Provincial Secretary in carrying out the new duties developing on him. The arrangement under which P. A. Macdonald, former Public Utilities Commissioner has done the work since May, 1922, to which date provision was made in the estimates for a salary, terminated, and, by agreement, Mr. Macdonald has been given \$2,000 as a final payment for his services.

Toronto Transportation Commission's Activities.

Appropriations and Expenditures.—

The city council has authorized an appropriation of \$5,000,000 for the Commission's 1923 programme. We are officially advised that of this, \$1,660,000 will be spent for cars, and \$90,000 for buses. Other estimated expenditures will be as follows: Trackwork on Dundas St., from Ossington to Bathurst St., and from Ritchie Ave. to Roncesvalles Ave.; on College St., from McCaul St. to Spadina Ave.; on Queen St., from Broadview Ave. to King St.; on Scott St., from Front St. to Wellington St.; and on Gerrard St. bridge approaches, \$897,925. Special work: Carlton and Sherbourne Sts.; College and Yonge Sts., Richmond and Yonge Sts., Front and Bay Sts., Front and Scott Sts., Dundas and Bathurst Sts., and curves on Spadina Crescent, \$333,475. Track extension and special work connected therewith, \$436,720. Miscellaneous track work, \$175,440. Car house layout, trackage, etc., Roncesvalles and Lansdowne car houses, \$328,090. Overhead construction, \$275,000. Land and loops, Coxwell yard, \$160,000; Roncesvalles Ave. car house and Russell and Lansdowne car houses, \$620,100. Miscellaneous equipment, \$21,250. No provision has been made for rehabilitation of the portion of the Toronto Suburban Ry. within the city limits, which will, it is expected, be acquired from the Canadian National Rys. It is estimated that this work will require \$2,500,000.

Shortly after the appropriation was passed by council, representatives of machinists, boilermakers, joiners, etc., appeared before that body and asked that it be impressed upon the Commission's officials that orders for all equipment should be placed in Toronto, if possible. This request inspired one alderman to move that the appropriation be deferred until it was ascertained whether all contracts could be let to local firms, but the motion was voted down. Another alderman moved that, as the Commission had undertaken to expend \$1,500,000 for new repair shops, the appropriation for cars and buses should be deferred until the repair shops were completed and it was ascertained whether the Commission could build the equipment there. This was also defeated.

The new cross town line on Dundas St. is being proceeded with, track laying on Dundas St., west of Yonge St., being completed, and installation of the intersection at Yonge St. being under way at the time of writing (May 18). On completion of this part of the work, construction of the track east of Yonge St. to a junction with the line running east on Dundas St., from Victoria St., will be undertaken, coincidentally with the installation of intersections at Bay and Dundas Sts., and at the eastern connection near Victoria St., the idea being to keep Bay and Victoria Sts. open to vehicular traffic while Yonge St. is closed, and to have Yonge St. open while Bay and Victoria Sts. are closed. The connection will provide a new east and west route across the city.

Toronto Suburban Ry. Rehabilitation.

—A deputation of citizens from the area served by the Toronto Suburban Ry. city lines waited upon Commission officials recently to present their views as to what should be done with the T. S. R. within the city limits when the city acquires it. The deputation urged an immediate service on Dovercourt Road, north to Davenport Road; and after

acquisition, a double track on Davenport Road to replace the present T. S. R. single track line. The Commission informed the deputation that definite plans had not been made as to the trackage and car routing to be provided. It was pointed out to the deputation that they must not expect too much, because it will likely cost about \$2,500,000 to rehabilitate the lines; that they are incurring a \$50,000 annual deficit now; that the \$90,000 annual revenue now being received will be lost when the lines are placed in the one fare system, and because the cost of operating large cars on the rehabilitated lines will be heavy. Consideration of the representations made was, however, promised.

Roncesvalles Car House.—The Commission received tenders to May 18, for the construction of the Roncesvalles car house and a brick office building, including all work for the completion of the buildings, such as plumbing, heating, electric wiring, rolling steel doors and automatic sprinkler system. We are officially advised that the contract has been awarded to Sullivan & Fried, Toronto, subject to satisfactory settlement of details. This car house will be located at Roncesvalles Ave. and Queen St., and will be of thoroughly modern construction, very similar to the house built at Eglinton Ave. and Yonge St. in 1922. A preliminary description was given in Canadian Railway and Marine World for April, the Eglinton Ave. house having been described and illustrated in preceding numbers.

The Commission has been authorized by the council to raise the grade of Queen St. for about 500 ft. west of Roncesvalles Ave., to provide approaches for the new car house and yard, and has also been given authority to widen the street from 44 to 66 ft., for 220 ft. west of Roncesvalles Ave. On account of grade variations at the car house site, a retaining wall is necessary for some distance along the south and west sides, and tenders for it, including excavation, concrete work, steel reinforcement, etc., were received to May 21. The wall will be gone ahead with at once, to permit work on the car house to proceed without delay. Families living in houses on lands expropriated have removed, and the entire site for car house and yard will be available in the near future.

Repair Shop Equipment.—The Commission received tenders to May 31, for machinery and other equipment for the large new repair shops being built at Bathurst St. and Davenport Road, as follows: Machine shop tools: 1, 36-in. lathe; 1, 24-in. lathe; 1 pattern lathe; 1, 20-in. x 10 ft. bed speed lathe; 1, 18-in. x 10 ft. bed speed lathe; 1 tool room lathe; 1 turret lathe; 1, 14-in. x 6 ft. bed speed lathe; 1, 4-spindle drill press; 1, 5-spindle automatic drill; 1, 3-spindle drill; 1, 20-in. stroke shaper; 1 inclinable power press; 1 universal milling machine; 1 power hack saw; 1 tool room grinder; 1 wet twist tool and twist drill grinder; 1 surface plate; 5 wet wheel grinders; 2 combination floor grinders and buffers; 1 bolt cutter; 1 bench leg; 1 dial test indicator. Armature room requirements: 12 sets armature stands; 3 tension reels; 3 coil winding machines; 1 insulation test set; 1 dipping room, with racks, etc.; 1 baking oven, 10 arm. capacity; 1 stationary cleaner; 6 gas heaters for soldering irons; 6 gas and air blow torches; 1 bulldozer; 1 oil furnace, 24 x 36 in.; 1

oil furnace, 24 x 72 in.; 1 roll former; 1 shear, 42-in. capacity; 1 forge; 1 welding outfit; 1 rabbit furnace. Woodworking tools: 1 chain mortiser; 1 knife grinder; 1 saw sharpener; 1 band saw filer; 1 grindstone. Hoists: 1, 5-ton electric monorail hoist; 14, 1½-ton hoists; 1, 1-ton hoist. Air hammers and electric drills: 1, no. 40 safety chipping hammer; 1, no. 60 safety chipping hammer; 1, no. 90 safety chipping hammer; 2 universal electric drills, ¾ in. drill; 1 universal electric drill, ½ in. drill; 1 universal electric drill, 1¼ in. drill. Lift trucks: 6 lift trucks, 17 x 37 in.; 4 lift trucks, 24 in. x 5 ft.; 2 electric elevating trucks. Miscellaneous equipment: 5 time clocks; 14 jib cranes; 8 car hoists.

Special Work Installation.—In addition to track work in various parts of the city, the Commission is installing new special work at various intersections. The large intersection at Roncesvalles Ave., Queen St., King St. and Lake Shore Road has been installed and the paving laid, and installation of an intersection at the south junction of Dundas St. and Bathurst, in addition to others, is proceeding at the time of writing (May 18).

York Township Transportation Surveys.—The Commission has entered into an arrangement with York Township Council, by which Commission surveyors and engineers will make surveys and studies in connection with the transportation situation within the township. In various parts of the township adjacent to the city limits, population is increasing rapidly, with the result that more adequate transportation is becoming necessary. Extensions of the T. T. C. lines into the township, at the latter's expense, and the inauguration of bus lines, are looked upon as possible results of the investigations. The Commission will be paid \$1,200 for the investigation.

Loss from Special Fares.—Prior to construction by the Commission of the double track line from Farnham Ave. to Toronto's north limits, agitation by North Toronto citizens, for a single fare to cover the Commission's lines and the Toronto & York Radial Ry. Metropolitan Division, led to the Commission and the radial railway issuing a joint ticket, which consisted of four 2-part strips, one part of each strip being good on the Commission's lines, and the other part on the T. & Y. R. R. Metropolitan Division. These tickets sold for 25c. For each ride the Metropolitan Division got 5c, which left the Commission but 5c for four rides, or 1¼c a ride. The loss to the Commission from this arrangement was \$27,000. The joint ticket arrangement was covered from the city board of control, as follows: "The board beg to report that they have made arrangements with the Toronto Transportation Commission, whereby passengers using the Metropolitan Ry. cars, between Farnham Ave. and the north city limit on Yonge St., will be carried to and from any part of the city upon payment of the fare fixed by the Commission, and on behalf of the city the board has given assurance to the Commission that the operation of the foregoing arrangement shall not be at the expense of the Commission."

Some aldermen and city officials are now trying to make the Commission bear the loss, maintaining that if the Commission had had its double track line on Yonge St. in operation during

the period when the joint tickets were in use, it would have had to carry the passengers at a single fare anyway. The Commission maintain that it was only upon the city undertaking to make good the losses incurred that it undertook to be a party to the joint ticket arrangement. No decision in the matter has been reached.

Old Cars Etc., Sold:—The Commission has sold to Don M. Campbell, Ltd., Preston, Ont., the following cars, etc., which were advertised in Canadian Railway and Marine World for May:—59 single truck cars, complete with G. E. 67 motors; 6 single truck cars, complete with G. E. 1000 motors; 1 Brill M.T. truck car, complete with G. E. 67 motors; 2 single truck trailer cars complete; 11 single truck trailer car bodies and trucks (no motors; 7 double truck closed motor car bodies, (no motors or trucks); 10 single trucks (no bodies), with G. E. 1000 motors; 6 G. E. 1000 motors and 6 pairs of wheels (no trucks or bodies).

* Deficit.

Guelph Radial Ry.—The Ontario Legislature has amended the Guelph Railway Act of 1921 by authorizing the city to pay on a proposed \$150,000 50-year bond issue, with interest not exceeding 6%, instead of a 20-year bond issue of \$150,000 with 6% interest as originally authorized, the city to pay 5% on its \$300,000 of 50-year debentures, instead of 6% rate, to be issued in connection with the transfer of the Guelph Radial Ry. to the Hydro Electric Power Commission of Ontario. The act also provides that it should not be necessary for the city to deposit with the Commission any debentures in addition to the \$300,000 already deposited, until the amount of bonds issued by the Commission for the rehabilitation and extension of the line shall be in excess of that amount, when further deposits of debentures shall be made by the city to cover the cost of such work.

Kitchener and Waterloo St. Ry.—The town of Waterloo, Ont. has granted the Kitchener Light Commissioners a 20-year franchise for the operation of an electric railway in the town, one of the conditions being that the commissioners shall pay annually to Waterloo Town Council 25% of the net profits of the line.

New Brunswick Power Co.—The control of the New Brunswick Power Co., owning the electric railway and other properties in St. John, N.B., is reported to have been acquired by the Federal Light and Traction Co., New York, N.Y. A press report states that the transaction involved the purchase of 20,000 shares of the common stock at \$15 a share, a total of \$300,000. The company has outstanding \$1,869,000 of 5% bonds due in 1937; \$1,000,000 of 7% cumulative 1st

preferred stock, and \$350,000 7% non-cumulative preferred stock. The bonds and preferred stock are held largely in the New England States.

St. Thomas Municipal Ry.—The St. Thomas, Ont. City Council authorized the City Engineer and the City Treasurer recently to make an appraisal of the municipal railway, which has been completed. A press report states that the valuation is \$129,550.36.

Waterloo-Wellington Ry.—An agreement is reported to have been reached between the company and the Kitchener Light Commissioners, operating the Kitchener and Waterloo St. Ry., for the sale to the latter of the Waterloo-Wellington Ry. lines for \$25,000. Bridgeport ratepayers were to vote on the proposal on May 19, and Kitchener ratepayers on May 30.

The Waterloo-Wellington Ry. is the new title of the Berlin and Bridgeport Ry., which extends from Kitchener to about half a mile beyond Bridgeport, Ont., 3.45

miles, and has a charter for an extension, which is partially built from Bridgeport to Guelph. For the calendar year 1921 its gross receipts were \$10,660.04 and gross operating expenses \$8,212.50, leaving a net income from operation of \$2,447.54. Against this was charged:—Taxes, \$585.40; interest on funded debt, \$3,600; interest on floating debt, \$339.98; total \$4,525.44, showing a net loss of \$2,077.90. The number of passengers carried was 173,371, and the cars ran 35,000 miles. The capital account shows common stock \$19,200, and \$60,000 of bonds. The company owns 3 closed cars, and 7 miscellaneous cars. W. H. Breithaupt, Kitchener, Ont., is President.

Electric Railway Employees' Wages, Working Conditions, Etc.

Brantford Municipal Ry.—We are officially advised that a board of conciliation has been appointed by the Labor Department to investigate wage and other differences between the Brantford, Ont., Municipal Railway Commission and its employees. The board consists of J. G. O'Donoghue, K.C., Toronto, chairman; F. H. McGuigan, Toronto, representing the commission, and Jas. Simpson, Toronto, representing the men. G. D. Kelley, Ottawa, was originally nominated by the Commission as its representative, but he was unable to accept, as he had been nominated by the Ottawa Electric Ry. to serve on a similar board at Ottawa. The present wages for motormen and conductors per hour are; 1st year 41c; 2nd year, 43c; 3rd year and thereafter, 45c; with time and a quarter for overtime. The employees asked for a new agreement with the following pay;—1st year, 51c; 2nd year 53c; 3rd year, and thereafter, 55c, with time and a half for overtime, and 7 days holiday in the year with full pay.

The board concluded the hearing May 21, and a press report states that it arrived at a unanimous decision, which has been accepted by the Municipal Railway Commission and its employees. The decision, it is reported provides for 9 hours work a day, to be performed, where practicable, in 9 consecutive hours, but in no case to exceed 12 hours, with time and a half for overtime, the pay for motormen and conductors to be 10% higher than heretofore viz:—1st year, 46c. an hour; 2nd year, 48c. and 3rd year, 50c.; and that those rates will be retroactive to April 1.

Calgary Municipal Ry.—A special arbitration board appointed by Calgary, Alta., City Council, and the Civic Employees' Federation which began its sittings April 13, to consider the wage schedules arranged by the city commissioners for all classes of civic employees, completed its work May 7, and presented a report.

The board consisted of J. S. Arnold and G. E. Hughes, nominated by the city council; A. Farmilo and R. Livett, nominated by the Civic Employees' Federation; and Col. Saunders was selected as chairman. There is one general report, which by prior agreement between the parties, is to be binding on all. In ad-

dition, the chairman, in a covering letter, expressed the opinion that the present time is most unpropitious for arbitrating a wage schedule. The city's representatives, in a supplemental report, objected to some of the grounds on which the finding was based, and expressed the opinion that the present award should not be used as a precedent upon which to base future agreements, particularly when it is considered that the 1922 agreement was one of expediency. The men's representatives also presented a supplemental report in which they stated that the rates fixed by the general report were too low. The city commissioners proposed a wage schedule from 6 to 20% lower, than that in force for 1922, the reductions in wages for street railway employees department—varying from 6 to 10%. The arbitrators general report declared for the retention of the 1922 schedule, with a few exceptions which do not affect the street railway employees. Overtime is to be paid for at the rate of time and a quarter for the first hour; time and a half for the next three hours, and double time after instead of time and a half for first four hours and double time thereafter. Some minor alterations are made in working conditions.

London and Port Stanley Ry. Trackmen's wages were reduced from 40c an hour to 38c about a couple of months ago, the bonus of 10% being also cut off, in order to place them on the same level as steam railway trackmen in the district. The Michigan Central Rd. and the Pere Marquette Rd. subsequently increased their trackmen to 40c an hour, and the L. and P.S.R. has followed suit, the 40c an hour rate being made effective from May 1.

Montreal Tramways Co.—A press report states that the employees decided on May 17, to ask the company for an 8-hour day with an increase of pay to 60c. an hour, for senior men, against 40c. as at present, to take effect on the expiration of the present agreement on June 30.

In Aug. 1920, a board of conciliation recommended the following wages per hour, as from July 1:—1st year, 45c., 2nd year, 50c., 3rd year and after 55c., which schedule was accepted by the company and its employees after several conferences. In 1921, the company

gave notice of a 20% reduction of these rates to take effect July 1, but after some consideration conceded something to the men fixing the reduction at 12½%. On the men's application a board of conciliation was appointed, in which the company refused to take part. This board reported in September, the majority finding that the proposed reduction was not unreasonable.

Ottawa Electric Ry.—A board of conciliation has been appointed by the Labor Department to investigate a dispute as to wages and working hours between the

company and its employees. The board consists of F. J. Costello, Alexandria, Ont., chairman; G. D. Kelley, Ottawa, representing the company, and H. J. Burns, Ottawa, representing the men. The board was appointed upon the application of the employees, which stated that a draft agreement was presented to the company, March 19, in which were embodied changes in the present working conditions, a reduction in the daily hours of labor, and an increase in wages. The application stated that the proposed agreement had been discussed with the

Manager and Secretary of the company, without result. The men ask that all employees shall belong to the union; that an 8-hour day be established in all the company's departments, and that a 25% increase of wages be given. The management stated that it could not increase wages and that it was unlikely that the present rate could be continued after May 1. The 8-hour day was asked for by the men in 1922, and was reported against by the majority of a board of conciliation which then made an investigation.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—Brantford City Council has authorized the following expenditures: Repairs and renewals of permanent track and roadway \$21,000; new track and overhead on Oxford West, 1,200 ft., \$9,000. The new track will connect up the West Brantford section, which is now served with buses, and the work will be done in connection with the building of the new Lorne Bridge, which will cost about \$240,000. The Municipal Railway Commission visited Toronto recently to see the welding system on the City lines (Dec. 1921, pg. 660).

British Columbia Electric Ry.—The Board of Railway Commissioners has authorized the company to connect its tracks with those of the Vancouver and Lulu Island Ry. (which it operates under lease from the C.P.R.), at 4th Ave., Vancouver, with leave to abandon passenger service from intersection of V. and L.I. Ry. to the present station on Granville St. bridge, and to demolish the station there.

A contract is reported to have been let to Robertson and Rendell, Vancouver, for the foundations and walls of a new automatic electric substation at 34th Ave., and Main St., South Vancouver. The new building will, it is said, be one story of reinforced concrete, 35 x 50 ft., provided with a concrete slab roof, to be put on by the company's own forces, as soon as the heavy equipment has been installed by Canadian Westinghouse Co. (May, pg. 238.)

Chatham, Wallaceburg and Lake Erie Electric Ry.—Some time ago the Chatham, Ont. City Council requested the company to move its tracks on Queen St. South, from the side to the middle of the street, about a mile, so that the city might go on with the paving. The estimated cost of the removal work is put at \$4,000, but the company claims that its financial condition will not permit it to do it. The city authorities are said to be determined to proceed with the paving and the company's officials are reported to have stated that if this is done service over the entire system will be suspended. The city council is making an application to the Board of Railway Commissioners in connection with the matter. (March, pg. 134.)

Hamilton Radial Ry.—G. E. Mountain, Chief Engineer, Board of Railway Commissioners, was in Hamilton, Ont., May 9, inspecting the company's tracks on Birch Ave. Hamilton City Council wants the tracks moved off the street, and re-laid on the company's private right of way. The cost of the removal of the tracks is estimated at \$12,000, and the company says that it is unable to finance the work. (March, pg. 134.)

Kitchener and Waterloo St. Ry.—Waterloo, Ont. ratepayers have, by a

vote of 217 to 19, granted a 20-year franchise to the Kitchener Light Commissioners, for the operation of a street railway in the town. The franchise authorizes the operation of a street railway on King St. from the southeastern boundary to the northwestern boundary, and on Church St. from King St. to the northeast side of Water St. The King St. line is to be double track from the southeastern boundary of the town to William St., about 2,500 ft., and the single track thence to the northwestern boundary of the town, is to be provided with turnouts to enable a 5-minute service when required. The paving between the tracks and for 12 in. on the outside of the rails is to be paid for in the first place by the town, but the Commissioners agree to pay for any additional cost of pavement between the tracks and for 12 in. outside, over the regular cost of pavement on the same portions of the street, and to maintain the pavement as described after it has been laid. This is a renewal of the franchise under which a single track line is being operated. The present line to William St., 2,500 ft. is to be taken up, and a new double track line laid. The material for the new construction has been ordered, and was expected to be put in hand by May 31. (May, pg. 238.)

London St. Ry. An arrangement is reported to have been arrived at, between the company and the London, Ont., City Council, under which the roadbed and track on Stanley St. will be renewed at once, and paving work on other streets for which the company is responsible will be done as required by the city. The work will, it is said, be done by the city and the company will be given 10 years within which to pay for the work. (Nov. 1922, pg. 581.)

Montreal Tramways Co.—The construction of a double track line on Rosemount Boulevard, between Papineau Ave. and Frontenac St., was started May 2.

The Montreal City Council executive committee visited Shakespeare Road, May 5, to the project to extend a Montreal Tramways Co., line to the Mountain Park.

A city water main at Windsor St. and Antoine Street burst May 16, doing considerable damage to both streets, along which the Montreal Tramways Co. has a line. Cars were diverted to permit of the construction of a temporary trestle to carry the line pending the permanent repair of the road and the installation of a new intersection. (May, pg. 238.)

New Brunswick Power Co.—The Federal Light and Traction Co., New York, N.Y., which is said to have secured control of the N.B. Power Co. is reported to be preparing to spend a large sum in rehabilitating the electric railway, and

the lighting and power plant in St. John, N.B., and in developing a water power site. (April, pg. 181.)

The New Brunswick Power Co. is relaying the track on Dock and Wall Streets, St. John, with new 82 lb. rails on new ties. (April, pg. 181.)

Niagara, St. Catharines and Toronto Ry.—The Board of Railway Commissioners last autumn directed the company to remove its tracks in Merritt, Ont., from Thorold Road to Merritt St. and to repave the street, the work to be commenced by March 15, 1923. As nothing was being done the Merritt Town Council took steps to enforce the order. A. C. Boyce, one of the commissioners sat at Merritt to consider the application. A. Fraser, K.C. is reported to have stated on behalf of the company that the railway was not making maintenance expenses, let alone operating costs, and the enforcement of the order might compel the cessation of operation. It was decided that the town council would advertise for tenders to have the work done, in anticipation of the rehabilitation report now being prepared by the Canadian National Rys. in connection with the electrification of lines in the Niagara region, which it was expected would be ready for consideration in a few weeks.

The Board of Railway Commissioners has approved the proposed diversion of the company's line across the new Welland Ship Canal, lock no. 1 at Port Weller, Ont., the diamond crossing of Welland Ship Canal construction railway and interlocking plant installed at crossing of N.St.C.&T.Ry. to be moved to diverted location, and has authorized the company to carry traffic over the diverted line under construction at not exceeding 8 miles an hour, and has also ordered that inner guard rails be laid on deck of temporary trestle bridge, and that slow boards be erected at the beginning of the diversion on each side of the canal crossing. (Feb., pg. 81.)

Regina Municipal Ry.—Regina, Sask. ratepayers have by 808 votes to 455 passed a bylaw to provide \$24,000 for betterment works on the railway which is to be expended as follows:—Extension of 13th Ave. track one block, and building loop at terminus \$1,100; half cost of half-interlocking plant, installed at 4th Ave., and C.P.R. Saskatoon line \$2,700. Electric track switches \$900. Improvements to stand-by plant at city power house, consisting of a motor to operate d.c. machines, now run by auxiliary steam plant, \$19,300. (May, pg. 238.)

The Windsor, Essex & Lake Shore Rapid Ry. is building a siding, about 600 ft. long, south of the town of Essex.

Marine Department

Canadian Government Merchant Marine Ltd. Annual Report.

The Canadian Government Merchant Marine Ltd. fourth annual report for the calendar year 1922 has been issued over the signature of Sir Henry W. Thornton, as follows: The fleet consists of 64 ships with a deadweight tonnage of 378,237.

Results of Operation—The accounts for the year, as certified by the auditors, show the following results:—

Gross revenue from closed voyages.....\$ 9,705,786.97
Operating expenses, closed voyages..... 12,089,976.14

Deficit from operation.....\$ 2,384,189.17
Interest accrued on notes
to Government \$4,078,277.74
Reserve for depreciation 2,932,130.14
Reserve for outstanding
liabilities 40,000.00
Reserve for doubtful
debts and claims..... 96,122.00
Interest on Government
advances 118,759.67

Deficit, after all charges, including
depreciation and interest..... \$9,649,478.72
7,265,289.55

The loss in operation during the year, owing to adverse conditions in the steamship business was to be anticipated. It is admitted by the best authorities that the past year was the worst in recent shipping annals. While tonnage offering increased to some extent, the commodities were of lower value than in preceding years, and, as a consequence, the earnings fell off considerably. Outward tonnage was fairly well maintained, but on the other hand the inward business, more especially from the United Kingdom, Oriental and Australasian ports fell away to such extent that it was exceedingly difficult, and at times impossible, to obtain, and, on this account, a great proportion of the voyages during the year resulted in losses.

The company's operations, while showing a loss during 1922, have proved to be a decided advantage to the Canadian National Rys. Shipments turned over to the railway for the 11 months ended Nov., 1922, amounted to 172,577 tons, to which should be added 36,949 tons of import freight handled over the Government dock at Vancouver from Dec. 1, 1921, to Nov. 1, 1922. The revenue accruing to the railways for passengers carried to and from our steamships during the same period amounted to \$34,101.21. It will be admitted that a large portion of business of this nature would undoubtedly have been handled through other channels and by other railways had the company's ships not been in operation.

West Indian Passenger Service—The combined passenger and freight steamship operation inaugurated to give service every three weeks to the Bahamas, Jamaica and British Honduras, has, from the outset, been unprofitable from a revenue standpoint, and in an endeavor to reduce losses Bermuda was added to the itinerary in June, the Canadian Fisher and the Canadian Forester making Hamilton, Bermuda, an additional port of call. The result, both as regards passenger and freight, has been satisfactory, and, as a consequence, the loss in this branch of the service has been materially reduced. The Canadian Fisher and Canadian Forester in operation on this route are not suitable for the trade, and it is considered essential, in order to make a success of this branch of the service, that a special type of oil-burning steamships, with increased passenger accommoda-

tion, and fitted with proper refrigeration and ventilation facilities to take care of perishable shipments, be provided. This service was established at the Government's request, as a result of the Canada-West Indies trade agreement, and, as against the loss chargeable to the Government, may be applied any subsidy collected by it, from the West Indies Government, as provided for in the agreement. The loss in operation on this account for 1922 was \$255,320.96, and including depreciation on the ships, \$372,989.83. This loss forms a part of the total deficit shown in the income account.

Trade Routes—No new services were established during 1922, but a number of

and continent 11; Australia, 10; Asiatic ports, 5; West Indies and Cuba, 6; Newfoundland, 0; Vancouver-California, 3; Coastwise, 1; Great Lakes grain trade (grain storage cargo), 10; Laid up, Montreal, 6; Laid up, Halifax, 3; In port, Halifax, 3; In port, St. John, 4; In port, Vancouver, 2; Total, 64.

Voyages During 1922—A total of 235 voyages were made as follows: Atlantic Services, United Kingdom and continent, 81; West Indies, freight, 29; West Indies, passenger, 18; Newfoundland, 20; Australian, 12; Mediterranean, 4; Total, 164. Pacific Services: California, 38; Australian, 15; Orient, 16; India, 2; Total, 71. Grand total, 235.

Ship Losses—No total losses were encountered during the year, and no very serious accidents occurred. As intimated in the report for 1921, the Canadian Recruit, sunk in the St. Lawrence by collision, proved to be a total loss. The company has since been paid for the loss of the vessel. Payment was received from the underwriters for the loss of the Canadian Exporter on the Pacific coast.

Insurance—Willis, Faber & Co., of London, who submitted the most favorable proposal to our tenders for renewal of insurance on the fleet, were awarded the contract for 1922, at a considerably reduced value schedule, in line with reduction in replacement values in Canada.

Recommendation—The experience in past years, leads your directors to make the following recommendations: That the fleet be kept in operation, but reduced to a total complement of 37 ships, the balance to be disposed of; and that the capital cost of the ships be reduced to what may be considered present replacement value, as recommended in our report for 1921. On account of the great value to the Canadian National Rys. of the operation of ships on recognized trade routes, your directors would be much opposed to withdrawing altogether from such services, but desire to confine operations to ships suitable for these services and capable of making an economic performance. Enquiries made in various shipbuilding centers indicate that construction cost of ships of the types which make up your fleet is now in the neighborhood of \$50 per deadweight ton, and this value would, in our opinion, constitute a fair replacement value. It would seem desirable to have further consideration given to the recommendation made in our last report that interest due the Government be payable for each year only if earned, after allowing for depreciation, such remission of interest to be applicable for five years.

With the experience of 1921 and 1922, it is difficult to be optimistic as to the future, yet present indications are that in several trades conditions are improving, and we have reason to anticipate a gradual return to better conditions in the near future. Generally, steamship people look more optimistically upon 1923 than upon the two preceding years. To certain ports trade is quite active, and the ships are doing fairly well; on other routes conditions have not improved, and it is on such routes that our losses are being sustained. The services performed by your company are being carefully scrutinized and readjustments

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; M. J. Haney, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

ships were required for special charters to assist Canadian trade developments and in special trade as referred to below. Once again, in the late fall, to assist in the grain movement, and for the purpose of providing lake port storage, ten of the smaller ships of the fleet were operated on the Great Lakes where they loaded full cargoes of grain at the lake head and transported them to Georgian Bay ports, where they were tied up for winter storage.

In addition, to assist in relieving the acute fuel situation in Canada, our ships were used in transporting coal to this country from British ports; the total tonnage imported amounted to 108,139 tons. These activities prevented the management from retiring from service during the year as many ships as it was expected could be laid up when the 1921 report was being prepared. It was found possible, however, to lay up an additional 9 ships.

The disposition of the fleet, at Dec. 31, 1922, was as follows, as to trade routes and number of ships: United Kingdom

will be effected which it is felt will be beneficial in all respects.

Management—Your directors desire to take this opportunity of expressing to the officers, employes and crews, their appreciation of the loyal and efficient work performed during the year.

Expenses—Following are details of the expenses:—

Operation of ships, closed voyages.....	\$11,438,157.21
Stevedoring and wharf expenses.....	38,862.14
Operation of agencies.....	98,506.61
Interest and exchange.....	15,987.25
Management and office salaries.....	311,629.83
Rent, taxes and insurance.....	13,153.33
Travelling expenses.....	25,713.14
Printing and stationery.....	18,336.54
Advertising.....	33,015.59
Postage, cables and telegrams.....	56,641.82
Office expenses and supplies.....	27,478.13
Miscellaneous.....	12,544.55
	\$12,089,976.14

Deficit Account as at Dec. 31, 1922.

Balance as at Dec. 31, 1921.....	\$9,116,144.28
Subsidy for 1921 West Indies passenger service.....	59,090.00
	\$9,057,054.28

Deficiency on insurance recovered s.s. Canadian Recruit lost. \$ 84,751.90	
Loss for year ended Dec. 31, 1922.....	9,649,478.72
	9,734,230.62

Deficit at Dec. 31, 1922.....\$18,791,284.90

The interest due Dominion Government at Dec. 31, 1922, was \$8,670,707.13.

Ocean, Coast, Lake and River Steamship Officers for 1923.

The following appointments made by Canadian navigation companies for their steamships and tugs, have been reported to Canadian Railway and Marine World, in addition to those mentioned in previous issues. The first column gives the names of the ships, the second those of the captains and the third those of the chief engineers.

Bay Line Steamships Ltd., Montreal.

The National Waterways Association and the Canadian Deep Waterways and Power Association, both of which are interested in the proposals for the development of a deep waterway from the Great Lakes to the ocean, via the St. Lawrence, propose to amalgamate to prevent duplication of work.

Additional Steamships for the Great Lakes.

Canadian Railway and Marine World has, in previous issues, detailed the orders which have been given, and purchases which have been made, in Great Britain and France, for steamships for the Great Lakes by various Canadian companies. The majority of these ships have been completed, and are on their way to the lakes, and no doubt, several of them will be in service in June.

Bay Line Steamships Ltd.—The majority of the 10 steamships, bought from the French Government, details of which have been given in previous issues, were reported during May to be en route for Montreal. These, with the three bought from the Webster Steamship Co., as mentioned in our last issue, will form the company's fleet, operating between Montreal and Port Colborne and other Lake Erie ports.

Eastern Steamship Co.—It was anticipated that before the end of May, all the 10 steamships of this company's order would be launched and ready to sail for this side. Six of them were expected to arrive at Montreal before the end of the month, and the remaining four early in June. Full details of these ships, which were built by five different companies in Great Britain, together with their names, etc., have been given in previous issues. They will be operated in the grain trade between Port Colborne and Montreal, and to Erie lake ports.

Glen Line Ltd., for which application for incorporation has been made, under the Dominion Companies Act, with \$1,000,000 authorized capital, in \$100 shares, to carry on a general transportation business in all its branches, including the building and operation of ships, docks, wharves, shipbuilding yards, marine railways, grain elevators, etc., will have as its principals, James Playfair, representing the Great Lakes Transportation Co.; Jas. Richardson, representing Jas. Richardson and Sons; and James A. Paisley, representing Valley Camp Coal Co., Cleveland, Ohio. The provisional directors are, James Playfair, D. L. White, D. S. Pratt, J. W. Benson and F. W. Grant, Midland, Ont. The company is being formed to own the steamships Glenbuckie, Glencassie, Glengeldie, Glenlockie, Glenlinnie, Glenclorrie, Glenclavie, Glenorvie and Glenburnie, which will be operated under the Great Lakes Transportation Co.'s management. The first eight of these have been built by Swan, Hunter and Wigham Richardson, Wallsend-on-Tyne, Eng., and the ninth by Barclay, Curle and Co., Glasgow, Scotland. Orders were placed for nine ships, not 10 as mentioned in previous issues. They are being brought to Canada under contract by Capt. Timmouth. The s.s. Glenclorrie sailed for Montreal, April 8, but had to put into St. John's, Nfld., on account of ice. The ships, full details of which have been given in earlier issues, are of the latest type.

Great Lakes Transportation Co.—The s.s. George E. Hartnell which was bought from the Valley Camp Coal Co., Cleveland, Ohio, last autumn, and which has been remodelled by the Midland Shipbuilding Co., Midland, Ont., has been renamed Glensannox, and will be operated in the Great Lakes trade by the Great Lakes Transportation Co.

The s.s. Matoa, which was bought in Boston, Mass., last autumn was cut in two by Montreal Drydock and Ship Repairing Co. about the end of April, and the two sections were towed from Mon-

treau to the Welland Canal by Sincennes-McNaughton Line tugs whence they were towed by two lake tugs to Collingwood, where the two sections are being rejoined, with the addition of 36 ft. to the total length of the ship.

The two foregoing ships having been bought from U.S. parties, with certain restrictions imposed by the U.S. authorities as to their future operation, are apparently unable to obtain Canadian register. At the time of writing, no information is available as to what steps will, or can, be taken with regard to the matter. It is reported that they have been registered in Newfoundland.

The s.s. Glenelg, a self unloading canal sized steamship, which was launched May 12, by Midland Shipbuilding Co., for the Great Lakes Transportation Co., is expected to be ready early in June.

Keystone Transports Ltd.—The s.s. Keybar, which was launched by Smith's Dock Co., Southbank-on-Tees, Eng., recently, has been built for the Great Lakes and St. Lawrence River service to Lloyd's classification, with the following chief dimensions,—length 250 ft., breadth 42½ ft., depth 19¼ ft., with d.w. capacity of about 2,300 tons on Welland canal draft. She is equipped with triple expansion engines, with cylinders 16, 26 and 44 in. diam., by 33 in. stroke, supplied with steam by two boilers. It is said that she is practically a sister ship of the company's s.s. Keynor.

A.B. Mackay Steamship Co.—The s.s. Eugene C. Roberts, which was launched by Cammell, Laird and Co., Birkenhead, Eng., recently, is of the same type as those built for Eastern Steamship Co., two of which were built by the same firm, all the orders being placed through A. B. Mackay, formerly of Hamilton, Ont., now of London, Eng., and who, we are advised, will operate the s.s. Eugene C. Roberts in the Great Lakes and St. Lawrence River trade.

J. F. M. Stewart, Toronto.—The Welland Canal size steamship, which was ordered from Smith's Dock Co., Southbank-on-Tees, Eng., in March, was launched April 14, and named Donald Stewart, after the owner's younger son. The ship is of the single deck type, of steel, with the following dimensions,—length over all 256¾ ft., length b.p. 250 ft., breadth over steel plating 42¾ ft., depth moulded 18½ ft., with a d.w. carrying capacity of 2,300 tons on 14 ft. draft. She has a straight stem, elliptical stern, with the engine and boiler casing placed aft, and with raised forecastle, with texas on top, and navigating and wheel house above. The hull has a cellular double bottom all fore and aft, and after peak tanks. She will class 100 A1 at Lloyd's for service on the Great Lakes and St. Lawrence River and Gulf. The hull is divided into compartments by 3 watertight and 2 nonwatertight bulkheads. The propelling machinery consists of direct acting, surface condensing, triple expansion engines with 3 inverted cylinders, 16, 26 and 44 in. diam. by 33 in. stroke, supplied with steam by 2 cylindrical, multitubular boilers, each 12½ ft. diam., by 10½ ft. long, at 180 lb. working pressure, under forced draft. Accommodation is provided for the captain, navigating officers and owner, in the forecastle, and for the engineers, stewards, etc., in the deck-house aft. For handling cargo, there are a double cylinder windlass and 2 double cylinder, 7 and 10 in. steam winches.

Atlantic and Pacific Oceans.

The Eastern Steamship Co. resumed its service between St. John, N.B., and Boston, Mass., May 21, with the sailing of the s.s. Governor Dingley, from St. John.

The Anchor-Donaldson Line's s.s. Athenia arrived at Halifax, N.S., May 2, on her maiden voyage. It was intended that she should go direct to Montreal, but owing to ice in the Gulf of St. Lawrence, she was diverted to Halifax. She sailed from Glasgow, April 19, and from Liverpool, April 20, and carried 240 cabin, and 1,126 third class passengers.

The Cairn-Thomson Line's s.s. Cairndhu, which underwent extensive repairs by Davie Shipbuilding & Repairing Co., Lauzon, Que., during the winter, after grounding in the St. Lawrence, near the Quebec Bridge, last autumn, was undocked April 27. In proceeding to her moorings at shed 26, Quebec, after having had her compasses adjusted, she collided with the wharf, damaging her bows. It was stated that she would probably have to be drydocked again, to have the damage repaired.

The Anglo-Newfoundland Development Co. has ordered a specially designed steamship from Vickers Ltd., Barrow-in-Furness, England, for delivery in 1924, for its paper shipping trade. The design is somewhat out of the ordinary, as she will be specially built to withstand heavy winter weather on the north Atlantic, her stem being so constructed as to contend with heavy ice. Accommodation for the crew will compare favorably with that usually found on Atlantic passenger ships. She will be about 400 ft. long, 13,000 tons displacement, with capacity for about 5,000 tons of news print in reels. She will have a sea speed of about 11 knots an hour. She will be operated between Newfoundland and London, and Manchester, Eng.

Maritime Provinces and Newfoundland.

The name of the s.s. Edith C., owned by P. J. Walker, Port Hawkesbury, N.S., has been changed to Edith C. Walker.

The Marine Department has announced that 4 lighthouses along the St. John River, were destroyed during floods at the end of April and early in May, at Fanjoy Point, Palmers Point, Lower Jemseg and Belyea's Point.

The s.s. Cymric Queen, owned formerly by Anglo-Belgique Shipping Co., Cardiff, Wales, arrived at Sydney, N.S., at the end of April, to go into the Dominion Coal Co's service. She was built at West Hartlepool, Eng., in 1912, and is of steel, screw driven by engine of 350 h.p., and has the following dimensions: length 350 ft., breadth 51.1 ft., depth 23.9 ft.; tonnage, 3,847 gross, 2,421 net. She was formerly named Apsleyhall and Newfield.

Province of Quebec.

The Montreal Harbor Commissioners entertained a British Columbia Board of Trade delegation, May 10. A tour of the harbor was made on the Commissioners' s.s. Sir Hugh Allan. J. E. Dalrymple, Vice President of Traffic, Canadian National Rys. accompanied the party, which was taken through the C.N.R. Montreal shops.

The 1923 season of St. Lawrence navigation from the ocean to Montreal, was

opened by the C.P.R. s.s. Bolingbroke, which arrived there, May 3. The Montreal Harbor Commissioners presented the master with a gold headed cane. The Cairn-Thomson Line s.s. Cairnvalona was ahead of the Bolingbroke in the river, but remained at Quebec to unload cargo.

Canada Steamship Lines Ltd. is building a shed and office at Dalhousie St., Quebec, which are expected to be ready for occupation early in June. This will increase the floor space by about 6,000 sq. ft., which is made necessary by increased business. The building is of brick, with concrete foundation, 2 stories high. The upper floor will be occupied by the freight staff, and the lower floors arranged for the handling of freight, and for the disembarkation of passengers. The cost of the building will be about \$20,000.

The first steamship to arrive in Montreal harbor, this season, from an outside point, apart from the icebreaking s.s. Lady Grey, was the Kirkwood Line's s.s. Greypoint, which left Quebec, April 28, and arrived at Montreal, April 30, about four hours after the icebreaker. She was also the last steamship to leave Montreal, last autumn, before the close of navigation, and to reach her destination, for though the s.s. John S. Thom left Montreal after the Greypoint, she was frozen up near Sorel, and had to remain in the ice all the winter.

The Dominion Labor Department has granted the application for a board of conciliation to investigate a wage dispute between steamship checkers and certain shipping companies at Montreal. The application was made by the steamship checkers' division of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, and arises from the men's demand for 50c an hour for day work, and 60c an hour for night work, or 10c an hour higher than is offered by the companies. The men nominated J. G. O'Donahue as their representative.

The C.P.R. has adopted a novel method of handling passengers' baggage arriving by its steamships at Quebec, between the ships and the baggage department in the immigration building. A number of trailer cars are placed alongside the ship, and the baggage loaded on them, and as they are loaded they are collected by a motor car and taken to the baggage department for examination, after which the baggage is loaded on the trains. By this means the time taken in handling the baggage is reduced by half. The motor car is driven by electricity, and has 42 storage batteries, enabling it to run for 12 hours without recharging. When the motorman rises from his seat, it is raised automatically, current shut off, brakes applied and the car brought to a stop. The car weighs 5,200 lb., and cost about \$5,000.

Ontario and the Great Lakes.

Canal navigation between Montreal and Cornwall was opened May 3, by the Montreal & Cornwall Navigation Co's s.s. Britannic.

The Northern Navigation Co. commenced its season's traffic, May 12, with the sailing of the s.s. Huronic from Sarnia, the early summer schedule being a sailing every Tuesday and Saturday.

Canada Steamship Lines' steamships Maplebrook and Sarnian collided near Whitefish Point, Lake Superior, about May 11. The former ship, which has a wooden hull, is stated to have been considerably damaged.

The Toronto Harbor Commissioners have had the names of their steam tugs Emily Stewart, Mary Stewart, Viper, John E. Russell and Handy Boy, changed to Toronto Harbor Commissioners Nos. 1, 2, 3, 4 and 5, respectively.

The Union Transit Co's s.s. Wahcondah touched bottom in the St. Lawrence River, May 18, when down bound from Port Colborne to Montreal, with grain. After being lightered at Prescott, the damage, which was slight, was repaired and she proceeded to Montreal.

The U.S. War Department has notified shipping interests that the St. Mary Falls Canal locks will be closed to shipping for the season, on Dec. 14, each year, at 6 p.m. eastern standard time. Final trips each year must be timed so that ships will reach the locks prior to the limiting date and hour specified.

The Deputy Harbor Master, Toronto, has reported that soundings taken recently at the eastern entrance to the harbor, show that a sand bar formed during the winter, with a least depth of 12 ft. thereon. Ships drawing more than 12 ft. must, therefore, use the western entrance until the sand bar has been removed, of which notice will be given in the ordinary way.

The s.s. George E. Hartnell, which was bought by the Midland Shipbuilding Co., Midland, last autumn, and which has been completely remodelled and refitted, has had her name changed to Glensannox. She has been transferred to the Great Lakes Transportation Co., and will be operated in the Great Lakes trade.

The laying of submarine cables across the western entrance to Toronto harbor is under way. In the event of masters having to use the western channel, they must proceed with caution, while passing between the piers, and should take warning of any signals that might be given them by those in charge of the work, as to what direction they should take while passing the construction plant during the progress of the work.

The United States Lake Survey reports the stages of the Great Lakes, in feet above the mean sea level, for April, as follows,—Superior 601.39; Michigan and Huron 579.18; St. Clair 574.14; Erie 571.31; Ontario 245.33. Compared with the average April stages for the last 10 years, Superior was 0.43 ft. below; Michigan and Huron 1.25 ft. below; Erie 1.17 ft. below; and Ontario 1.06 ft. below.

Judgment was given, May 10, by the Exchequer Court of Canada, Toronto Admiralty District, at Port Arthur, in the claim of Canada Steamship Lines Ltd., against the Henderson Transfer Co's s.s. Robert L. Fryer, for damage sustained by the s.s. Westmount in a collision at the Davidson and Smith elevator slip at Port Arthur, in Nov. 1922. The Robert L. Fryer was condemned to pay half the damages, still to be assessed, and half the costs of the action, the balance to be borne by Canada Steamship Lines.

The actual reopening of the grain shipping season at the head of the Great Lakes, took place, May 5, when 2,600,000 bush. were loaded out, which is stated to have exceeded the previous record by about 500,000 bush. The Great Lakes Transportation Co's s.s. Glenisla was the first ship to enter the harbor, and Capt. Jas. Tindall was presented with the local board of trade silk hat. The same company's s.s. Glenshee opened navigation at Port Arthur, and Capt. W. A. Levisne also received a silk hat from the Port

Arthur Chamber of Commerce.

The Thunder Bay Paper Co., Port Arthur, is reported to have bought the steam tug Butterfield, in New York, and she was expected to arrive at Port Green Bay, Wis., before the end of May, to work there till about July 15, and then to be taken to Port Arthur. She is stated to be the largest and most powerful tug of her type on the Great Lakes, being 150 ft. long, and equipped with engines of 1,000 h.p. It is not stated whether she is to be transferred to the Canadian register, or not, but on account of the restrictions imposed on the transfer of United States ships to outside registers, her United States registry will presumably be maintained.

A. J. Grant, Chief Engineer, Welland Ship Canal, is reported to have stated that a change of route has been decided on, for the construction of the Welland Ship Canal, between Rameys Bend and Port Colborne, passing through Humberstone village. The change, which has been made by the Railways and Canals Department's engineers, will it is said, allow navigation on the present canal to be uninterrupted during the construction of the Port Colborne end of the ship canal, and there will be a saving in the cost of construction. It is stated that specifications for the construction of the remaining sections are in course of preparation, and that tenders will be invited shortly for the work on sections 8 and 9.

The claim of the Northern Navigation Co. against the Henderson Transfer Co's s.s. Robert L. Fryer for \$5,000 for damage sustained by the s.s. Hamonic, when the two ships collided in the Kaministiquia River in Sept. 1922, was dismissed by the Exchequer Court of Canada, Toronto Admiralty Division, at Port Arthur, May 12, and the counter-claim was withdrawn. Mr. Justice Hodgins, in giving judgment, stated that he took into consideration the age and disability of the s.s. Robert L. Fryer, as compared with the s.s. Hamonic which had, by her more modern equipment and greater power, better facilities to enable her to keep clear of the Robert L. Fryer. Both ships had disregarded certain rules of the road, neither having signalled the other its intention when sighting, and this had, to a certain extent, contributed to the accident.

The following changes in aids to navigation in Ecorse channel, Detroit River, have been made: Ecorse buoy 1, a third class spar, in place of Ecorse float light 1; Ecorse channel buoy 2, red, cylindrical, with skeleton superstructure, showing a flashing red light every 2 secs., 10 c.p., 12 ft. above water, established 240 yds. 240 deg. from position of Ecorse float light 2 discontinued; Ecorse channel gas buoy 3, black, cylindrical, with skeleton superstructure, showing a flashing white light every 2 secs., 30 c.p., 12 ft. above water, in place of Ecorse float light 3; Mud Island shoal north buoy, a third class spar painted red and black in horizontal bands, in place of Mud Island shoal north float light. In the West Neebish channel, St. Mary River, the east side upper gas buoy 14A, cylindrical, with skeleton superstructure, showing a flashing red light every 3 secs., 20 c.p., 10 ft. above water, has been established in place of the east side float light 16. In the Livingstone channel, Detroit River, the buoy 17 and the gas buoy 17A have been moved 50 yds. westward to the new channel bank, the widening of the channel having been completed.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Hudson's Bay Co's steamboat Athabasca River, was launched at McMurray, Alta., May 2. She has accommodation for 58 passengers, and is equipped with electric light, steam steering gear, and propelling machinery designed for a speed of 15 miles an hour.

The Northern Trading Co's s.s. Northland Echo was launched at McMurray, Alta., May 10. Her dimensions are,—length 135 ft., breadth 24 ft. She has passenger accommodation for 70, with freight accommodation, in conjunction with her barge, of 125 tons. She is in charge of Capt. Harry Alexander as master, and D. Mackenzie as chief engineer, and sailed from McMurray, May 16, on her first trip to Fitzgerald.

During the break up of ice and the consequent floods in the Red River, the steam tug Phyllis Williams, the s.s. City of Selkirk, and two barges broke from their moorings at Selkirk, Man., towards the end of April. They were located later by the steam tug Rocket, the City of Selkirk being reported as sunk in the river, the Phyllis Williams as icebound in the old east channel running into Lake Winnipeg, one barge in Netley Creek and the other in the old east channel.

The s.s. Keenora, owned formerly by J. F. Waller, Winnipeg, has been bought by a syndicate, consisting of W. J. Guest Fish Co., Winnipeg, and the Northern Fish Co., Selkirk, Man., and is being refitted for passenger traffic on Lake Winnipeg, between Selkirk and Warrens Landing, under the Northern Fish Co's management. She will have stateroom accommodation, promenade deck, music room, etc., and is expected to be ready for operation about the end of June, after which she will make weekly trips around Lake Winnipeg, calling at Gull Harbor, Bull Head, Beren's River, Grand Rapids and Warrens Landing, where arrangements can be made for a return trip from there to Norway House. These trips will be in addition to the usual semi-weekly service by the Northern Fish Co's s.s. Wolverine.

British Columbia and Pacific Coast.

The Vancouver City Council, at a recent meeting, decided to have a bylaw prepared providing \$150,000 for a fireboat for the harbor.

The Vancouver Harbor Commission has awarded a contract for the construction of an addition to the elevator at Vancouver, to Pacific Construction Co. The addition will increase the elevator's capacity by 808,000 bush.

The Vancouver Harbor Commission has established 5 pile beacons, 4 on the port side and one on the starboard side, to mark the turn in the channel opposite the C.P.R. shops in False Creek. The beacons are about 50 ft. back from the edge of the channel.

The Dominion Public Works Department has dredged a cut through the sand bar by Forrest Glen, Arrow Lakes, about 2½ miles south of West Demars wharf, to a depth of 8 ft. at low water. The north end of the dredged cut is 140 ft. and the south end 190 ft. wide.

The Pacific Salvage Co's s.s. Algerine, which was sent to the relief of the Alaska Steamship Co's s.s. Lake Gebhart, which ran aground on the Umatilla Reef, off the Washington coast, May 10, re-

ported that she was breaking up, with the bottom all gone, and no hope of salvaging her.

The Consolidated Whaling Corporation commenced operations for the season, early in May, when the whole fleet was sent out. The company operates a whale meat packing plant at Kyuquot, and cold storage plant at Naden Harbor, for packing and chilling for export.

Preparations were under way early in May for the reopening of navigation on the Yukon and adjacent rivers. It was stated that about 9,000 tons of silver ore, valued at \$250,000, was awaiting shipment at Mayo. At Dawson, four steamboats and a number of barges were being overhauled and things generally got in readiness for the traffic.

The Hudson's Bay Co's auxiliary powered schooner Lady Kindersley is expected to sail from Vancouver, early in June, for the Arctic, calling at Point Barrow, Baillie Island and Coronation Gulf, and will carry cargo for ports along the Arctic Coast, to the Mackenzie River. The s.s. Baychimo is announced to sail from Vancouver shortly, for Siberia and Kamchatka.

The British Columbia Cement Co's s.s. Matsqui, bound from Victoria to Bamberston, ran aground at Darcy Island, Gulf of Georgia, May 12. The Pacific Salvage Co's s.s. Algerine was dispatched to the wreck and found the ship on an isolated rock, 6 ft. clear of the water, with a hole in the port bilge, and her hold full of water. She was released and taken to Victoria for examination and repairs.

The steam tug Czar, owned formerly by Pacific Construction Co., Vancouver, and which has been purchased by Greer and Christie, for operation by the Czar Towing Co., incorporated recently, was built at Victoria in 1897, and was screw driven by 56 h.p. Her dimensions are,—length 101 ft., breadth 21.5 ft., depth 11 ft., tonnage 152 gross, 93 net. During May she was equipped with a heavy oil, internal combustion engine of 350 h.p., with fuel capacity for 50 days, and is expected to be ready for operation early in June.

The masters of the steam tugs Prosperative, Qualicum, Sea Swell, Lornett and Commodore, were charged at Vancouver police court, recently, with breaches of the harbor bylaws, in entering the Narrows with their tows at a lesser distance than a quarter of a mile from each other, when it was stated considerable difficulty occurred, during which the C.P.R. s.s. Princess Victoria was almost stranded. For the defence it was claimed that the waters, being outside the city limits, were not under the magistrate's jurisdiction, and that the bylaw was unreasonable and unworkable, and owing to tides, back eddies and currents, it was impossible to live up to its provisions, as tugs could not keep their tows back without extreme danger to themselves. Four of the masters were fined \$10 each, the charge against the fifth being withdrawn.

The Union Steamship Co. of British Columbia's s.s. Cardena, which has been built by Napier Miller and Co., Glasgow, Scotland, sailed from Glasgow, May 3, for Vancouver, via the Panama Canal, and is expected to arrive on the British Columbia coast about June 12, when she will be placed in service on the northern route, calling at Prince Rupert, Anyox and Stewart. She is a combined cargo and passenger steamship, of the sheltered deck type, with accommodation for passengers on the shelter deck and with the

machinery placed amidships. She is propelled by a single screw and equipped with Babcock and Wilcox boilers, with machinery designed for a speed of 14 knots. Her dimensions are,—length 220 ft., breadth 4 ft., depth 21 ft., tonnage 1,573.03 gross, 908.12 net. It is reported that the company is considering the provision of an additional steamship, for the Howe Sound service, in the near future.

The Minister of Marine stated in the House of Commons, recently, that the London Guarantee & Accident Co., Toronto, was pledged for \$321,000 in connection with the contract to build two ships on the Pacific coast; that no portion of the guarantee had been paid by the bonding company, and that action was taken some time ago by the Justice Department, on behalf of the Marine Department, to recover the full amount of the guarantee. Pleadings had been made and the case was awaiting trial. These ships were to be built by Victoria (B.C.) Shipowners Ltd., and one of them, Simon F. Tolmie, was subsequently completed by the Government and is now in operation by the Canadian Government Merchant Marine.

The First St. Lawrence Pilot Honored.—The memorial erected at Quebec by the C.P.R. and Canadian Pacific Steamships Ltd., in memory of Abraham Martin, was unveiled May 12. It is on a site given by the Quebec Harbor Commission, near the C.P.R. sheds. Abraham Martin, who came to Canada in the early part of the 17th century, was the son of a Scotch father and French mother, and his name was included in a list of 31 French persons living in Canada between 1629 and 1632. He was described as a pilot, fisherman and farmer, and owned the land, since known as the Plains of Abraham, and which, about 100 years after his death, was the scene of the final battle which settled Canada's destiny.

The Muskoka Lakes Navigation and Hotel Co's annual meeting was held in Toronto, May 18, when it was reported that 6 per cent. dividend had been paid on 1922 operations, and that pay of captains and mates was being increased, and that a pension fund was being established. Officers and other directors were elected as follows:—Hugh C. MacLean, President; G. T. Somers, Vice President; F. F. Brentnall, A. MacLean MacDonnell, Andrew D. MacLean, Lt. Col. R. S. Wilson.

Sunrise Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Montreal, to own and operate ships, and to transport passengers and merchandise on rivers, lakes and other waters. The incorporators are: B. Robinson, M. Garber, A. S. Cohen, L. A. Sperber and J. P. Beaupre, Montreal.

Captain A. Blouin of the Canadian Government Merchant Marine steamship Canadian Sapper, writes:—"I enclose my subscription for 1923 with great pleasure, for it would be hard indeed for me to be without Canadian Railway and Marine World, which contains so much interesting matter, especially for a mariner."

British Columbia Pilotage Association Ltd., an extra provincial company, has been registered under the British Columbia Companies Act, with office at 837 Hasting St. West, Vancouver. The company has an authorized capital of \$5,000, of which \$2,500 is paid up.

Canadian Government Merchant Marine Operations, Etc.

Appointments.—Albert Davidson was mentioned in Canadian Railway and Marine World for April as reported to have been appointed Assistant Freight Agent, C.G.M.M. at Vancouver. We are advised that he has been appointed Assistant General Freight Agent, C.G.M.M. and Grand Trunk Pacific Coast Steamship Co.

C. H. Ireland, who was secretary to the late Hon. W. C. Kennedy, Minister of Railways and Canals, has been appointed assistant to General Manager, C. G. M. M., Montreal.

Officers of Steamships.—The following captains have been appointed since those mentioned in our last issue.—Canadian Adventurer, Peter Shaw; Canadian Beaver, J. Slater, vice J. F. Smeltzer, transferred; Canadian Engineer, Wm. Carson; Canadian Harvester, A. E. LeBlanc, vice W. B. Armit; Canadian Importer, E. Randell, vice J. McConachy; Canadian Pathfinder, R. D. Simpson; Canadian Runner, J. F. Smeltzer, heretofore on Canadian Beaver, vice J. H. Miller; Canadian Sailor, J. Mann; Canadian Skirmisher, W. H. Miller, vice H. S. Hilton; Canadian Sower, C. Dineen; Canadian Trader, J. Williams; Canadian Volunteer, J. Edgecome, vice D. McKenzie; Sheba, D. M. Dickson, heretofore on Canadian Voyageur, vice A. E. Seamen. The following chief engineers have been appointed.—Canadian Carrier, W. Geddie; Canadian Harvester, W. Fotheringham; Canadian Mariner, F. Todd; Canadian Squatter, R. C. Prydie.

The s.s. Canadian Sapper, in charge of Capt. A. C. Blouin, was the first cargo steamship to enter the port of Sydney, N.S., for the 1923 navigation season.

Ships for Sale.—The Minister of Marine gave the following information in the House of Commons recently, in answer to questions by T. L. Church, Toronto North: As proposed by the late board of directors, and recommended by the present management, authority has been taken to sell 27 of the smaller Canadian Government merchant ships by public tender, if satisfactory offers can be obtained, but otherwise by private sale. They are being sold because they are too deep in draft, and of a wrong type, for service through the St. Lawrence Canals, but would be serviceable for the upper lakes, where some are already being made use of. The C.G.M.M. management maintains that it was never a party to a combine, though its representative has sat in at the weekly session of the North Atlantic Conference, for the stabilization of freight rates, and the ensuring of equality to all shippers.

Montreal Sailings.

London & Antwerp service.—Canadian Planter, June 6; Canadian Conqueror, June 20; Canadian Victor, July 4.

Cardiff & Swansea service.—Canadian Explorer, June 1; Canadian Leader, June 15; Canadian Challenger, June 29.

New Zealand & Australia service.—Canadian Cruiser, June 26; Canadian Constructor, July 28.

St. Kitts, Antigua, Barbados, Trinidad & Demerara service.—Canadian Runner, June 13; Canadian Squatter, June 27.

Hamilton, Nassau, Kingston, Belize, Bermuda, Bahamas, Jamaica, & British Honduras service.—Canadian Forester, June 14; Canadian Fisher, July 5.

St. John's, Nfld., via Charlottetown, P.E.I.—Canadian Sapper, June 21, July 12.

Mainly About Marine People.

Edward Charles Boland, who has been appointed Division Freight Agent, Canada Steamship Lines Ltd., Toronto, was born there, Aug. 8, 1872, and entered transportation service, June 15, 1888, since when he has been, to Apr. 1, 1907, rate clerk, and chief billing clerk, G.T.R.; Apr. 1, 1907 to Sept. 1912, City Freight Agent, Canadian Lake Line; Sept. 1912 to Sept. 1917, Soliciting Freight Agent, Canada Steamship Lines; Sept. 1917 to March 1923, City Freight Agent, same company, all at Toronto.

E. L. Cousins, Consulting Engineer, Toronto Harbor Commission, has also been appointed one of about 20 consulting engineers for the port of New York, in connection with its port development project, the estimated cost of which will be between \$50,000,000 and \$75,000,000.

N. Fahey, heretofore chief clerk, Export and Import Freight Department, Canada Steamship Lines, Toronto, has been appointed Solicitor, Export and Import Freight Department, Toronto.

Capt. J. B. Henry, formerly with the Allan Line Steamship Co., and Canadian Pacific Ocean Services Ltd., died suddenly at Halifax, N.S., May 15, aged 65, where he was supervising the outfitting of the s.s. Petrel, for a Labrador expedition. He had been in Atlantic Ocean service for several years, and at different times had been master of the steamships Sardinian, Scotian, Corsican and Ionian for the Allan Line, and of the s.s. Melita for Canadian Pacific Ocean Services Ltd. During the war, he was in charge of the s.s. Ionian, which was used as a troopship to the Dardanelles. Latterly he acted as nautical assessor in several investigations into marine casualties.

C. E. Hunt, heretofore chief clerk, Freight Department, Canada Steamship Lines, Ltd., Toronto, has been appointed Solicitor, Freight Department, Toronto.

Alex. McDougall, shipbuilder, etc., who died at Duluth, Minn., aged 70, following an operation, was the first builder of the whaleback type of Great Lakes freight steamships, and was at one time interested in Collingwood Shipbuilding Co., Collingwood, Ont.

J. F. Paige, Operating Manager, Halifax Shipyards Ltd., addressed the Commercial Club there, recently on the progress of shipbuilding during the past 100 years.

P. J. Peer, heretofore City Passenger Agent, Canada Steamship Lines, Ltd., Hamilton, Ont., has been appointed District Passenger Agent, there.

Sir Henry W. Thornton, President, Canadian National Rys. has been elected a director of Canada Steamship Lines, Ltd., to fill a vacancy which has existed for some time.

Labor Organization Steamships.—A New York press report states, that the Marine Engineers Beneficial Association has offered to buy three 12,000 ton ships from the U.S. Shipping Board, for \$300,000 cash, which it proposes to use as the nucleus of a labor owned and labor operated steamship fleet.

National Shipping & Forwarding Co. Ltd. has been incorporated under the New Brunswick Companies Act, with \$10,000 authorized capital, and office at St. John, N.B., to own and operate ships for transportation of ocean and inland traffic. Among the incorporators are: F. L. Forward, R. A. Davidson, St. John, N.B., and J. Durand, Montreal.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

Canadian Vickers, Ltd., Montreal.—The Minister of Trade and Commerce stated in the House of Commons recently, in answer to questions by J. S. Woodsworth, Winnipeg Center, that the Government has no investment in Canadian Vickers, Ltd., plant. An annual subsidy of \$150,000 is paid the company, by agreement, under authority of the Drydock Subsidies Act.

Collingwood Shipbuilding Co., Collingwood, Ont.—The steamship, yard no. 72, which the company has built on its own account, was launched April 30, and christened Dalrymple, by Miss Helen Dalrymple, daughter of John Dalrymple, Superintendent of the plant. The ship is of the latest design of canal size freight steamships, and built under British Corporation classification and supervision. The captain and officers' accommodation is decorated in oak, and is placed in the fore end of the ship, the accommodation for the chief engineer, engine room staff and firemen being in the deckhouse aft, where the dining room, galley and pantry are also located. Her dimensions are, length over all 259 ft. 7 in., length b.p. 252 ft., breadth 43 ft., depth moulded 19 ft. She has 3 large cargo holds and 7 hatches, with capacity for about 90,000 bush. of wheat. The propelling machinery consists of triple expansion engines with cylinders 15½, 26 and 44 in. diam., by 26 in. stroke, supplied with steam by a single Scotch marine boiler 14 ft. diam. by 10¼ ft. long, at 195 lb. working pressure under forced draft. When launched she was fully equipped and with steam up ready for sailing.

Collingwood Shipbuilding Co., Kingston, Ont., did the following repair work to various steamships, during the past winter: City of Ottawa, repairs to port side damage; Edmonton, repairs to starboard and port side and starboard bow damage, new cargo door, repairs to fairleads; Maplebranch, repairs to wheel; Mapleheath, repairs to bulwark and bow damage, stanchions, rails and ventilators; Maplehill, repairs to hold ladders and hatch coamings; Vinmount, repairs to port side damage, for Canada Steamship Lines; Nevada, repairs to port bow and side damage and repairs to frames and boilers, for Dominion Coal Co.; Trevisa, repairs to boiler, fender and electrical work, for Export Steamships Ltd.; Aube, repairs to margin bar, for Aube Steamship Co.; Keybell, repairs to boilers, fenders and electrical work; Keynor, repairs to bulwark damage, boilers, fenders and electrical work; Keyport, repairs to bottom and boat deck damage, wheel and shaft, boilers, fenders and electrical work; Keyvive, repairs to bulwark damage, boilers, fenders and electrical work; Keywest, fitting new spar, repairs to boilers and fenders, for Keystone Transports Ltd.; Malton, wheel and repairs to bottom damage, for Mathews Steamship Co.; Wolfe Islander, repairs to bottom damage, for Wolfe Island Tp., Ont.; car ferries Ontario No. 1 and Ontario No. 2, temporary repairs made at Cobourg, following a collision between the two ships in March, for Ontario Car Ferry Co., (Canadian National Rys.). Ontario No. 1 was docked later at Kingston, for permanent repairs, consisting of new shaft and hub, new hawse pipe, windlass parts and repairs, and repairs to bottom and fenders, as well as some machinery and piping repairs.

Ernst Shipbuilding Co., Mahone Bay,

N.S. launched the schooner Nina M. Conrad towards the end of April. Her dimensions are, length over all 133 ft., beam 26½ ft., depth of hold 11 ft. She has been designed for fishing and coasting service. She was launched complete, with the exception of rigging, and later left for Lunenburg for supplies.

Halifax Shipyards Ltd., Halifax, N.S. did the following repair work during April,—Dominion Coal Co's s.s. Dagbild, docked for survey and repairing ice damage to hull, which included 3 plates renewed, 14 plates off, faired and replaced, tail shaft drawn for examination, hull scraped and painted, undocked Apr. 13. Canadian Government Merchant Marine s.s. Canadian Miller, miscellaneous hull repairs, scraping and painting, opening up sea connections for examination, rudder repairs, undocked Apr. 15; C.G. M.M. s.s. Canadian Challenger, scraping and painting, 6 zinc plates renewed, opening up sea connections for examination, and miscellaneous hull repairs, undocked Apr. 18; Dominion Coal Co's s.s. Kamouraska, hull repairs due to ice damage, including 3 plates renewed, 6 plates off, faired and replaced, 5 plates faired in place, 6 new chafing strips, rivetting, scraping and painting, undocked Apr. 28; Dominion Coal Co's s.s. Hochelaga, docked for extensive repairs due to grounding, about 31 plates to be treated, which work was carried out during May.

Northern Boat Building Co., Edmonton, Alta.—Three auxiliary powered schooners named Henry Ford, Mayflower and Bluenose, built specially for the Eskimo trading service in the Mackenzie River delta, were dispatched from Edmonton, at the end of April and early in May, for Waterways, where they were to load general cargo for ports along the route. They were towed to Waterways by Northern Trading Co's vessels, and it was intended that from Waterways north, they would proceed under their own power.

Prince Rupert Dry Deck and Shipyard, Prince Rupert, B.C., did the following repair work during April,—Canadian Government Merchant Marine s.s. Canadian Observer, 2,410 tons, docked, painted and generally overhauled; Canadian Government snagboat Bobolink, generally overhauled and extensive hull repairs; Grand Trunk Pacific Coast Steamship Co's steamships Prince George, 3,372 tons, and Prince John, 905 tons, completion of annual overhaul, and G.T.P. car ferry barge, extensive repairs due to grounding; also general repairs to 24 halibut fishing ships.

Union Shipbuilding Co., Port Union, Nfld. has launched 2 fishing schooners, each 70 ft. long, one of which has been bought by Thos. Hynes, St. Brendans, Bonavista Bay, Nfld. A similar schooner, of about 60 tons, has been laid down, and also an auxiliary powered schooner of about 110 tons, the latter of special construction for seal fishing in the spring, and for general coasting purposes in the summer. This ship will, probably, be equipped with a Bolinder oil engine of 100 h.p. Hon. W. F. Coaker, Minister of Marine and Fisheries, is General Manager. H. A. Russell is Assistant Manager and Jas. Jones is master builder at the plant.

Yarrows Ltd., Victoria, B.C. did the following repair work during April,—Canadian Government Merchant Marine s.s. Canadian Volunteer, 3,188 tons, dry-docked, cleaned and painted, tail shaft drawn, spare propeller fitted, sea con-

nections overhauled and since renewed; C.P.R. s.s. Princess Victoria, 1,943 tons, repairs to engine room ventilators and general repairs; Coastwise Steamship and Barge Co. s.s. Griffco, 1,519 tons, docked on marine railway, surveyed and extensive repairs made to underwater plating due to stranding; Admiral Line s.s. President Madison, 14,187 tons, repairs to main condenser. In addition to the foregoing repair work, the completion of the C.P.R. motor car ferry Motor Princess was rushed so that she might be ready for operation by May 15.

Wreck of the C.P.R. Steamship Marvale.

The Canadian Pacific Steamships Ltd. s.s. Marvale, formerly the Allan Line s.s. Corsican, which sailed from Montreal, May 18, with 436 passengers and crew, for Liverpool, struck a reef off Cape Freels, Nfld., May 21, and sank in seven fathoms of water, while an attempt was being made to beach her. A dense fog prevailed, but, with a calm sea, the whole of the passengers and crew were transferred to the boats without accident, and landed safely at St. Shotts. At the time of writing (May 23), the reports as to the subsequent happenings are very meager but it apparently was the intention to divert the company's s.s. Empress of Britain, which was in the vicinity, and to return the passengers to Canada, but as they preferred to proceed to England, this was not done. The Newfoundland steamships Seal, Mary, Cabot and Susu were dispatched immediately from St. John's to St. Shotts, and the passengers and crew were taken round to Trepassy Bay, a short distance to the east, then travelling by special train from Trepaty, the terminus of the Reid Newfoundland Co's Trepassy Branch railway to Waterford Bridge, the junction with the company's main transinsular line, and thence to St. John's, a total distance of 106.63 miles, to await the arrival of the company's s.s. Melita, which sailed from Montreal, May 23.

The s.s. Marvale was built at Glasgow, Scotland, in 1907, for the Allan Line, and was originally named Corsican. Her dimensions were,—length 500.3 ft., breadth 61.2 ft., depth 38 ft.; tonnage, 11,438 gross, 7,121 net, and she was screw driven by engines of 1,440 h.p. She had passenger accommodation for about 400 cabin, and 850 third class passengers, and was in charge of Capt. H. Lewis, one of the best known captains in the C.P.R. steamship service, with which he has been connected since its inception. The latest press reports state that only the Marvale's boat deck is above the water and that her refloating will probably be attempted. Cape Freels is on the south coast of Newfoundland, one mile westward of Cape Pine, and is low lying, with the Cape Pine light seen over it, which is not obscured by the intervening land until on a 105 deg. true bearing. A fog signal is given from a small white wooden house, 94 ft. above high water, erected on Cape Freels. Henry rock and Freels rock are 2-1/10 miles southward, and 3 miles southwestward, respectively from Cape Pine light, the former with 8 fathoms of water, and the later with 3 fathoms, and there is a clear channel, with 9 to 12 fathoms of water, between Freels rock and the cape. St. Shotts cove is west-northwest

about 3 miles from Cape Pine, and is quite open, with a few families residing on the eastern shore. Many shipwrecks have occurred in the vicinity, principally on the eastern head, from which a ledge of slate rocks extends southwestward

for one cable. In most cases these wrecks have occurred during foggy weather from neglect to use the lead, and want of attention to the currents. There is a Marconi wireless telegraph, signal station and direction finding sta-

tion at Cape Race, which is approximately 25 nautical miles east of Cape Pine. The point where the Marvale was wrecked should not be confused with another Cape Freels, one of the outer points of Bonavista Bay.

Dominion Marine Association's Annual Meeting.

The Dominion Marine Association's annual meeting was held at Montreal, May 9, the President, T. R. Enderby, in the chair. The executive committee's report for 1922, prepared by the Counsel, Francis King, K.C., and approved by the executive committee, was submitted. The introduction stated, in part, as follows:—The year presented peculiar features in many respects. The financial stringency following war expenditures has for some time prevented the undertaking of any new public works of importance, and, with the exception of the new Welland Ship Canal, no navigation work of any serious cost has been permitted to draw upon the public resources; but the year just past presents a new phase of this situation in the fact that no meeting of the Lighthouse Board of Canada has taken place, for the reason, it is understood, that no funds have been available for new work. The exigencies of the financial situation have had their influence upon the Association's affairs all along the line, and while aids are withheld, at the same time the Government appears to have lost no opportunity to reimpose taxes, and has at least lent no willing ear to plead for the removal of burdens of this kind. But while the field for the Association's activity has been to some extent restricted and its successes somewhat reduced by the causes mentioned, its members have found more than enough to do in the effort to cope with the difficulties arising in one special line of trade, the transportation of grain, perhaps the most important to the Canadian carrier; difficulties vastly exaggerated by the inadequacy of port transshipment and storage facilities for an exceptionally large western crop. Congestion of terminals was a cause of delay to ships and a source of worry to their owners since early in the season, and much thought was given and effort expended by the committee to bring about some alleviation of the trouble, notably at the port of Montreal. At the same time, and as if the congestion of Canadian terminals was not bad enough efforts were renewed throughout the season to break down the coasting laws of Canada and allow U.S. tonnage to add to the trouble. These efforts were consistently fought by the committee, and successfully until the very end of the season, when the Government gave way to the argument pressed upon it that winter storage space must be provided.

The report then dealt fully with legislation enacted, including pilotage, public harbors and harbor masters, Canadian Wheat Board, Admiralty Act, and revision of the Canada Shipping Act, as well as with the following subjects:—The coasting laws; grain movement, season 1922, Canadian and U.S. crops; grain shoveling charges; pilotage dues in the St. Lawrence below Montreal; immigration laws, forms and fees; steamship inspection fees and tonnage taxes; steamship inspection regulations; sick mariners dues, or hospital taxes, in Quebec province; St. Lawrence River development scheme; St. Lawrence

River Power Co., submerged weir in South Sault channel; use of flashlights by fishermen; emptying water ballast in St. Mary's River; aids to navigation; Canadian Lake Protective Association; public works, harbors, channels, etc.; canals; permissible canal drafts; Chicago Drainage Canal; lakes disaster fund of Canada, 1913. The Association's membership continues practically unchanged. The steam tonnage enrolled in 1922 was 155,514 net registered tons against 155,530 in 1921, and the barge or sailing tonnage was 25,213, against 32,173 in 1921; a total of 180,727 net registered tons, against 187,703 in 1921.

Proceedings at Meeting.—The appointment of a Commission by the Dominion Government to enquire into Great Lakes grain freight rates was discussed and the executive committee's action in refraining from any step which would have involved the Association as a defendant was approved, as the Association has consistently left the question of rates to individual members for the last 13 years. Members expressed their gratitude to the President for his special efforts to bring before the commission the real facts which led to the difficulties of the past season, and the meeting approved and commended the references made to the subject in the annual report including the statement therein protesting against any suspension or repeal of the coasting law in Canada only, without reciprocal action in the United States.

The action of the past year in regard to steamship inspection fees and boiler and engine inspection rules was reviewed and T. R. Enderby, A. A. Wright, A. E. Mathews and J. Waller, were appointed a committee to carry on aggressive action regarding the regulations, to secure and tabulate specific complaints, and to interview the officials at Ottawa, going first to the Chairman of the Inspection Board, and if necessary to the Minister of Marine. The same committee was requested to interview the Minister and seek the allowance of the petition already filed for abolition of the compulsory payment of St. Lawrence pilotage dues. The support of the Shipping Federation of Canada, promised last year, is to be enlisted.

The questions of sick mariners' fees in Quebec Province and tonnage taxes in U. S. ports, which are linked together by the Act of Congress relating to tonnage taxes, were discussed with special reference to the Association's action in 1922, and to the question of expediency.

A report was presented of the action taken in regard to fees for overtime work of immigration officials, and the present state of the matter, and it was resolved to allow the question to drop.

It was resolved that the committee mentioned above, of which the President is chairman, press upon the Minister's attention the urgent need of appropriation of funds for Lighthouse Board undertakings, as navigation interests are seriously prejudiced by the Board's forced inactivity. It was resolved to refer to the executive committee the consideration

of requirements, and presentation of petitions for improvements, as in 1922.

The Association's counsel having reported interviews with counsel for the Canadian Pacific and the Canadian National Railways and with the Ontario Minister of Labor, in reference to the Ontario Workmen's Compensation Act, regarding proposals to provide for cases of default in payment of claims by parties in schedule 2 of the act, and in particular a proposal to abolish schedule 2 and place the whole system on a premium basis, it was resolved to endeavor to have provision made for a guarantee of schedule 2 by its own members, or in the alternative, if necessary, for a guarantee of each class of schedule 2 by the members of the respective classes.

C. H. Nicholson, Manager, Steamships and Car Ferries, Central Region, Canadian National Rys., introduced a proposal for the enlistment of assistance from Pacific coast companies for mutual benefit, and was asked to conduct correspondence with a view to securing some arrangement for co-operation, and to report to the executive committee.

Plans were discussed for the enrollment of new tonnage of companies formed recently for trade on the lakes and the St. Lawrence.

It was resolved to hold monthly meetings of the executive committee on the 2nd Wednesday of each month, alternately in Toronto and Montreal, the first meeting to be held in Toronto on June 13. It was also resolved that the annual general meetings be held between the 1st and 15th of January, to enable members to attend before leaving upon annual holiday trips.

A resolution was passed expressing the Association's regret at the death of W. H. Smith, Manager, Canada Atlantic Transit Co., and G.T.R. Lake Ontario Car Ferries.

The executive committee was elected as follows: A. A. Wright, Vice President and Managing Director, Davie Shipbuilding and Repairing Co., Montreal and Toronto, Honorary President; T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal, President; G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y., First Vice President; A. E. Mathews, Mathews Steamship Co., Toronto, Second Vice President; W. E. Burke, Century Coal Co., and Canada Steamship Lines, Montreal; W. Crawford and Yvon Dupree, Sincennes-McNaughton Lines, Montreal; L. L. Henderson, formerly of Montreal Transportation Co., honorary member; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa; C. H. Nicholson, Canada Atlantic Steamship Co., and Canadian National Rys. Central Region car ferries, Toronto; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Toronto; John Waller, Keystone Transports Ltd., Montreal; Senator L. C. Webster, Webster Steamship Co., Montreal.

Floating Drydock for North Vancouver B.C.

Canadian Railway and Marine World for May, stated that the Dominion Government had advised the Burrard Drydock Co. Ltd., that it might proceed with building the sectional floating drydock, as agreed to under the Drydock Subsidies Act, between the government and the company in Dec. 1912, and which was held up, pending further enquiry into the need for such a drydock, on the change of government about that time.

The drydock will be of the pontoon type, with wooden pontoons and continuous steel wings, and it will have a lifting capacity of 15,000 tons. It will be built in two sections, one 200 ft. long and the other 300 ft. long, the first section having 4 pontoons and the second 7, with entirely independent machinery for operating the pumps, so that each section may be used as a separate dock. Provision is also made that, should the necessity arise in the future, a third sec-

thoroughly protected against attack by the teredo and other marine borers, by the sheathing described, which will be treated with tar and arsenic, and also protected by outside hemlock sheathing. The pumping equipment will comprise 22-18 in. centrifugal pumps, one on each side of each pontoon, all electrically driven and controlled from a central station. In conjunction with the floating drydock there will be a concrete pier, 700 x 50 ft., built of concrete cylinders on a similar plan to the Ballantyne pier at Vancouver. It will be equipped with heavy cranes, and pier legs, up to 75 tons capacity. Considerable dredging will be necessary to obtain the depth for sinking the drydock, and, with the material removed, a large area will be reclaimed on which the machine shops to be operated in conjunction with the drydock, will be erected. These will consist of steel buildings, including machine shop

Welland Canal Navigation.

L. D. O'Hara, Superintending Engineer, Welland Canal, has issued the following notice: Attention is drawn to the fact that in connection with the Welland Ship Canal, the Canadian Dredging Co. is constructing the easterly abutment of the new bridge over the canal at Port Robinson. All downbound ships must take the old or easterly draw, in passing Port Robinson bridge, and must do so at moderate speed, and with great caution, owing to the bend in the canal, the current and the narrow passage. They must avoid collision, or contact, with the double row of wooden piles placed at the southerly side of the steel sheetpile cofferdam driven for the new easterly abutment, as the double row of wooden piles is of light and flimsy construction, and is merely for the purpose of warning ships and not for protecting the steel cofferdam construction. Downbound ships must not attempt to take the new or westerly draw, as there is great danger

Floating Drydock, of type to be built at North Vancouver.

tion of 200 ft. may be added. When the two sections are operated together, the total length of the dock will be 556½ ft., length over pontoons 495½ ft., width over all 126 ft., clear width between wings 98 ft., draft over 4 ft. keel blocks, 24 ft. Each of the 11 pontoons will be 125 x 44 x 14½ ft. deep, all of heavy timber and rigidly connected to the side walls or wings by steel links and pins, and so arranged that any pontoon may be detached quickly and drydocked on the remaining part of the dock for examination or repairs. Howe trusses will be fitted every 3 ft. consisting of top and bottom chords, diagonal trussed members, heavy stanchions and iron rod tension members. There will be a solid center line bulkhead and 3 nonwatertight bulkheads on each side. The deck and bottom planking will be 5 x 12 ft. timbers and the sides and ends 6 x 12. The pontoons will be covered on the outside by 3 layers of prepared felt, fastened by 1 x 12 creosoted sheathing. The detaching of any of the pontoons for examination or repairs will not interfere with the continuous use of the drydock, so long as there be sufficient space at the end to receive the pontoons. Experience has shown that these pontoons need only be examined about once in 7 years, as they will be

250 x 60 ft., equipped with gravity crane, 30 tons capacity, and galleries for small machine tools; blacksmith shop 100 x 40 ft., equipped with gantry and jib cranes, furnaces, forges, etc.

The drydock, etc. will be located on a site extending eastward from Lonsdale Ave. for about 700 ft., and will be built from plans drawn by W. T. Donnelly, New York, which are similar to those he designed for drydocks for Prince Rupert, B.C., for several places in the United States and at Honolulu. The accompanying illustration of another drydock designed by Mr. Donnelly shows exactly how the North Vancouver one will appear. A. D. Swan, M. Inst. C.E., M.I.Mech.E., Montreal, is retained by the company as engineer for the work, covering the floating drydock, dredging for basins and piers, construction of piers, one concrete and one creosoted timber, and the construction of a rubble embankment, etc.

Mite Towing Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$25,000 authorized capital, and office at Victoria, B.C., to acquire the steam tug Mighty Mite from Chas. Granholm, and to carry on a general towing business.

of colliding with the present highway swing bridge, which is not very well protected. All upbound ships must take the new or west draw, which has a clear width of 70 ft. with 14 ft. of water.

Quinnat Towing Co. Ltd. has been incorporated, under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, to take over the motor tug Quinnat, from the Cedar Creek Logging Co., and to carry on a general towing and shipping business. The Quinnat was built at Port Nelson, B.C., in 1909, and is screw driven by engine of 5 h.p. Her dimensions are,—length 40.5 ft., breadth 11.8 ft., depth 4.7 ft., tonnage 16 gross, 11 net.

Public Works Marine Contracts.—The Dominion Public Works Department has awarded contracts as follows,—March 27, construction of wharf at Fanny Bay, B.C., to William Greenlees, Vancouver, B.C., at unit prices; March 27, extension to wharf at Grand River, Gaspé County, Que., to M. Bernatchaz and G. E. Fournier, Montmagny, Que., at unit prices; April 5, dredging entrance channel basin and crib seats for proposed breakwater at Matane, Que., to Horace Dussault and Co., Quebec, Que., class B at 37c a cub. yd. place measure.

Pilotage Certificates for Masters and Mates.

The Minister of Marine moved in the House of Commons, on May 11, that it is expedient to amend the Canada Shipping Act, R.S.C. chap. 113, sec. 487, by providing that a master or mate upon application as therein provided may, if his application be approved by the pilotage authority, be thereupon examined, and, if found competent, a pilotage certificate may be granted to him. In explanation, Mr. Lapointe said: "By section 487 of the Canada Shipping Act, apart from the pilotage districts of Montreal, Quebec, St. John and Halifax, the master or mate of any vessel can apply to the pilotage authorities to pass an examination as pilot, and the pilotage authorities, after the ordinary examinations, and upon the payment of the dues, are compelled to deliver a certificate to that master or mate. The object of the resolution is, that instead of making this compulsory on the pilotage authorities, to make it discretionary. The pilotage authority, instead of 'shall deliver the certificate,' 'may deliver the certificate' after it has approved the request. The necessity for this has been shown to the Department in a special case this season in the pilotage district of Miramichi, N.B. At this place the channel is narrow, and any accident that takes place there would block the traffic altogether. It is not a very important district, and the pilots could not make a living if the most important ships that go there were relieved from the obligation of taking those pilots on those ships. It is very important to the port that pilots should be retained there to bring foreign ships in. The only purpose of the resolution and of the bill which will be introduced based upon it, is, in special cases, to empower the pilotage authorities to refuse the examination of a master and mate and to place the small pilotage districts on the same level as Quebec, Montreal, St. John and Halifax in this regard. The Governor in council, under a section of the Shipping Act, can at any time nominate the Minister of Marine and Fisheries as pilotage authority for any port. For the port of Miramichi, for instance, the Minister is the authority."

The resolution was carried, and a bill based on it was read a first time.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties;—

Princess Beatrice-Camosun Collision.

Held at Vancouver, B.C., March 6, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. H. Mowatt and William Wright, as nautical assessors into a collision between the C.P.R. s.s. Princess Beatrice and the Union Steamship Co. of British Columbia's s.s. Camosun, near Kingcombe Point, McKay Reach, B.C., Jan. 20. The court considered that the evidence was so conflicting and contradictory as to be absolutely unreliable and unconvincing, and concluded that having in view the locality where the collision occurred, in a short and straight channel between Kingcombe Point and Trivett Point, about 4½ miles apart, and the fact that both ships rounded those points at almost the same time, bound in opposite directions, it is evident they were approaching each other end on, on a clear and dark night, with their lights distinctly visible to each other. No action, however, appears to have been taken on either ship until they were dangerously close, when, almost immediately before the impact, the Princess Beatrice ported her helm, but did not at the same time comply with article 28, as she should have done, and almost at the same moment the Camosun blew two blasts and starboarded, undoubtedly a wrong manoeuvre. Both ships contributed to the collision, and both are undoubtedly to blame. The court was not prepared to say that either ship was being handled in a careless or negligent manner, but the officers in charge of each certainly showed little judgment, and less prudence, in allowing their ships to approach so close before taking any action. At the moment when it must have been apparent that risk of collision was imminent, the engines of both ships should have been put full astern. No blame can be attached to the masters of either ships, both of whom were below until within a few seconds of the collision the ships being under the charge respectively of G. S. Forbes, second mate of the Princess Beatrice, and S. Nelson, first mate of the Camosun, both of whom deserve censure for taking such risks.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. Empress of Canada, on an easterly trip recently, during a portion of the run, did 572 knots in 24 hours, averaging between 23 and 24 knots for the day, a record which it is said has never been approached by any other commercial ship on the Pacific run. Had the time been figured closely, allowing for probable steaming time due to change of longitude, viz.,—23½ hours the average speed for the day would have been over 24 knots.

The company has announced the ships which will be engaged on its various trans-Atlantic services during this season, as follows,—Montreal to Belfast and Glasgow—Metagama, Marburn, Marloch and Marvale; Montreal to Cherbourg, Southampton and Antwerp—Minnedosa and Melita; Montreal to Cherbourg, Havre and Southampton—Marglen, Havre being substituted for Cherbourg on the westbound trips; Montreal to Liverpool—Montclare, Montcalm, Montrose; Quebec to Liverpool—Montlaurier; Quebec to Cherbourg, Southampton and Hamburg—Empress of Scotland, Empress of France, Empress of Britain.

Halifax Graving Dock Expropriation.—The expropriation of the Halifax Graving Dock Co's property at Halifax, N.S., by the Dominion Government, in 1918, has been revived by the circularizing of members of the Senate and House of Commons, by S. M. Brookfield, Chairman of the company. The property was expropriated under an order in council of May 27, 1918, and leased to Halifax Shipyards Ltd., for one year, for \$62,500, with an option for one year of the purchase of the property for \$1,250,000. The Halifax Shipyards Ltd. exercised its option, and has operated the dock since, as a portion of its ship building and ship repairing plant. The circular referred to complains of the expropriation, and of the terms, and asks for redress for the shareholders. The arguments advanced are largely the same as in the original complaint, details of which were given in Canadian Railway and Marine World for Dec. 1918.

The World's Largest Ship.—With the completion of the reconditioning of the s.s. Leviathan, by the U.S. Government, the question of settling which is the largest ship in the world, has arisen, U.S. claims, of course, being in favor of the Leviathan, as against the British s.s. Majestic. Both ships were originally German, and passed to allied hands under the peace terms, and it is stated, with some authority, that the designer, who was the same for both ships, had said that the Majestic was the larger of the two. In regard to tonnage alone, the Leviathan, 59,956 tons increased by reconditioning, is the greater, but the Majestic is longer, and has larger passenger capacity. The increase in the Leviathan's tonnage, is stated to be due to the changes in measurement, on account of additions to the superstructure for the auxiliary Diesel machinery, and to the elimination of excess bunker space by the substitution of oil for coal, as fuel.

Bridge Damage Suit.—The Canadian National Ry. Co., as successor to the G.T.R. Co. of Canada, has issued a writ for \$6,000 against Lake Erie Navigation Co., to recover approximately \$6,000, claimed as damage to bridge over the Welland Canal, near Welland Jct., which is alleged to have been struck by the defendant's steamship Marquette and Bessemer No. 1, May 3, 1922.

Grain Shipped from Fort William and Port Arthur.

The following table, prepared by the Dominion Bureau of Statistics, Internal Trade Division, shows the bushels of each kind of grain shipped from Fort William and Port Arthur, with ports of destination, during the 1922 navigation season.

	Wheat Bush.	Oats Bush.	Barley Bush.	Flaxseed Bush.	Rye Bush.

In addition to the above, 28,896,900 lb. of sample mixed grain, and 16,673 tons of elevator screenings, were shipped to Canadian ports, and 241,727,419 lb. of sample mixed grain and 74,840 tons of elevator screenings, to U. S. ports.

Report of Commission on Great Lakes Grain Rates Etc.

The Minister of Trade and Commerce tabled in the House of Commons, on May 18, a report by the commissioners appointed by the Dominion Government to enquire into an alleged combine among Great Lakes steamship owners. The commissioners, S. J. McLean, Assistant Chief Commissioner, Board of Railway Commissioners; Brig. Gen. T. L. Tremblay, member and Chief Engineer, Quebec Harbor Commission; and Levi Thomson, barrister, Qu'Appelle, Sask., were unanimous in their report, from which the following is reproduced:—

It is admitted that, at one time during the 1922 shipping season, vessel operators controlling a sufficient proportion of the bulk freighters on the upper lakes to constitute a virtual monopoly, combined to fix rates to be charged on the shipment of grain on these lakes, and in the opinion of your commission a tacit understanding between these operators, as to those rates, existed during the whole season, and measures should be taken to prevent its continuation.

Rates on grain between Canadian ports were discriminatory, as compared with rates charged by Canadian operators on grain and other bulk freight between Canadian and United States ports, and as compared with those charged by American operators on grain and other bulk freight between U.S. ports.

In justification of discrimination, it is alleged that there was congestion at Canadian ports; that the Canadian vessels got less return cargo than the American; that the work of Canadian vessels was less steady than that of the American by reason of the season's character of the grain traffic; and that rates to Buffalo were, during the early part of the 1922 season, "distressed" rates by reason of American freighters being unable to procure their usual tonnage of iron ore.

Congestion was as bad at Buffalo as at Port Colborne, and was worse than at Bay ports; therefore, discrimination cannot be justified by congestion.

Congestion did exist both in 1921 and 1922, and was one cause of high freight rates. The fact that grain can be so much more rapidly discharged from Port William and Port Arthur than it can be transferred at Montreal, Quebec and Port Colborne makes for congestion. With the completion of the Welland Canal and the addition of such facilities along the all water route as may be found necessary, in order to take advantage of the more economical operation offered thereby, it may be anticipated that there will be an increase in the grain traffic moving by the St. Lawrence route, called by Mr. Stocking, of Duluth, "the natural attractive route;" and in order properly to utilize such facilities, for the transferring of grain at Montreal, Quebec and Port Colborne, every effort should be made through effective co-operation to ensure the fullest possible co-ordinated use not only of all the facilities at the ports in question but also of all factors used bearing on the transportation and transfer of grain.

The U.S. vessels have some advantage over Canadian vessels in the matter of return cargo. Coal is the only extensive return cargo for vessels carrying bulk freight from Lakes Superior and Michigan, and as the available return cargo is much less than the cargo carried down, coal being only about 20 or 30% of American bulk freight on the Great

Lakes, the most of the vessel tonnage carrying bulk freight from the Upper Lakes, whether Americans or Canadians, must go back light; and so long as a returning vessel can get a cargo of coal, she can afford to carry at any rate that will pay her better than returning light. Whatever she gets beyond sufficient to pay for the extra time and cost caused by taking the return cargo over the time and cost of going back light, is clear gain. It is alleged that trade connections existing between U.S. vessels, and coal companies give the former an advantage over the Canadian vessels in obtaining this return cargo. It would seem, however, that, in general, the advantage possessed by the American vessel in respect of coal is not so great as represented.

Canadian bulk freight being mostly grain is more seasonal than American, and Canadian vessels may not have quite so steady employment as American, but the claim that American rates were "distress" rates shows that American vessels were at times also short of employment; and although the companies controlling nearly all the Canadian upper lakes tonnage were ably represented before the commission, they were only able to show that one Canadian vessel had been laid up for want of work during the season, and that vessel only for 30 days. On the other hand, it has been admitted that labor costs were lower on the Canadian side than on the American.

After making due allowance for additional cost of operating and handling, to which the grain was subject, but which did not apply to ore and coal, there is still an excess of earnings from the transportation of grain between Canadian ports, over earnings from the carriage of other bulk freight, which shows high and unjustifiable rates.

The increase of the 1922 rates over those of 1921 by the Canadian vessel operators was so great as to be high and unjustifiable.

Railway rates, and rates for the transportation of all important bulk freight on the Great Lakes, except grain, are being controlled in some way; the former through commissions acting on behalf of the public, the latter by agreement between the producers and carriers. The difference in cost of operation of lake vessels at different periods of the shipping season, and the movable nature of the capital invested in lake transportation, owing to the boats not being tied down to one fixed route, among other things, make it impractical to attempt to control lake traffic in exactly the same way in which rail traffic is controlled; and joint fixing of rates by agreement between producer and carrier, as in the case of iron ore, does not seem feasible.

The season of 1922 was characterized by high levels of rates, which cannot but have been detrimental to all those engaged in the production and disposal of grain, and it is, therefore, essential that, through control of the upper level of rates, the competitive principle which has been relied upon by Parliament in the case of water transportation should be permitted to be operative.

The difficulties in the way of controlling rates on lake borne grain are such that your commission is of the opinion that the only feasible method of rate control through a regulative tribunal is through maximum rates.

Power to suspend the coasting laws in respect of the grain trade should be conferred upon the Governor-in-council. It is suggested in this connection that the Dominion Bureau of Statistics should keep statistical records of the port-to-port cargoes in the coasting trade, such records to be based on returns from the vessel or vessel companies operating.

The broker should not obtain the payment for his services from participation in the premium of insurance written by him. The basis of compensation for services rendered should be a direct charge.

There is justification for publicity in connection with chartering of space and date of same.

The present practice in Winnipeg is that the chartering of vessels or space therein is done by agents generally known as vessel brokers, the work, so far as Canadian work goes, being nominally in the hands of the Standard Shipping Co., managed by Mr. L. H. Wolvin, a brother of Roy Wolvin; the Tomlinson Co., managed by Mr. Spendlove, and the Western Shipping Co., managed by Mr. Rule. It is questionable if the Western can be called an independent company; one of its organizers and directors, as well as owner of one-third of its stock, being L. H. Wolvin of the Standard Shipping Co., and its manager being Mr. Rule, Mr. Wolvin's former deputy, who appears to hold nearly another one-third of the stock.

It seems clear that competition on the Canadian side is not nearly so keen as on the American side. In fact, among Winnipeg brokers it is almost non-existent; but the natural explanation of this is the absence of any real or active competition among the Upper Lake vessel companies by whom the brokers are employed. So long as there is a practical monopoly of that traffic in the hands of three or four companies, who find it so easy to get together to arrange rates, there is not likely to be very serious competition among the brokers.

It would appear that, under the circumstances, the only direct rate control advisable is through maximum rates. This also is not without its difficulties; but control through maximum rates would leave a reasonable margin for that competitive bargaining as to rates which the grain dealers desire, while at the same time controlling the upper level of rates.

Without attempting to enumerate here factors that would have to be taken into consideration in this connection it may be said that it would not appear that one maximum rate applicable to the whole season of navigation would be a workable arrangement. It would appear that cognizance must be taken of the differences in conditions as between the first part of the season down to the end of August and the second portion down to the close of navigation; and it might be necessary, because of special conditions arising within each of these seasonal periods, to further readjust the maximum rate from time to time.

The regulation of rates through suspension of the coasting laws would not of necessity mean that whenever such suspension took place there would be a large influx of American tonnage into the Canadian grain trade. As already pointed out, the American grain rates are, to a certain extent, controlled by

ore rates, and whether or not the American grain carrier would desire to participate in Canadian business would depend upon the question of whether there was much profit in the Canadian grain traffic, as compared with the American ore traffic.

It would seem that what is important is not so much the amount of tonnage that might be added to the trade in such case as the possibilities of having tonnage brought in which would keep the Canadian carrier from so increasing his rates as to make the traffic more than usually attractive to the American grain carrier.

The fact seems to be that, so far at least as the 1922 season was concerned, when the fixing of rates suited the carriers, they fixed the rates without consulting the producer whose grain they were carrying, or the shipper from whom they receive the grain; but when the demand for space from shippers became so great that they could scarcely meet it they allowed the law of supply and demand to operate to a great extent, but still acted so well in concert that the going rate from day to day was easily ascertainable.

Open competition in this traffic is what the general public is interested in. The primary object, therefore, to be considered is the effect of permitting those holding a virtual monopoly of an exceedingly important line of business to do everything to prevent or lessen competition, even among themselves. Neither the intentions of the parties nor the presence of a pool have anything to do with the result. It is the result of actions, not the intentions of the party, nor the manner of dealing with the profits, that concerns the persons affected. If it be necessary that the principle of open competition must be so sacredly guarded, it becomes necessary that the actions of corporations constituting a virtual monopoly shall be critically scrutinized, and that all reasonable steps should be taken to ensure that open competition is interfered with to the least possible extent.

Dealing with the small profits which the steamship companies claim they made last year, viz., Canada Steamships, 9.36% Great Lakes Transportation Co., 11%; and Mathews Company, 10.24%, the report says. It is very difficult to test the accuracy of these statements, and, without saying that they are in a general way unfair, it may be said that some evidence has been submitted which shows ground for questioning the accuracy of the material filed by those companies.

As to the allegation that brokers chartering space were speculating in space the commission says, the evidence does not satisfy the commission that such speculation has been practised to any material extent.

The commissioners made the following specific recommendations: That supervision of lake rates for grain between Canadian ports should be placed in the hands of the Board of Railway Commissioners, or some independent body, with the assistance of advisers and experts who are thoroughly conversant with this problem.

That all persons or corporations carrying grain between Canadian ports shall be obliged to file maximum rates with such commission; that the commission shall have power to approve or disapprove such maximum rates, and, when not so approving, shall prescribe reasonable maximum rates; that provision shall

be made for alteration of such rates to suit different portions and conditions of the shipping season; and that rates in excess of the maximum shall be illegal.

That power be placed in the hands of the Governor-in-council to suspend coasting regulations in so far as the same may be necessary to enable American vessels to carry grain for winter storage between Canadian ports; and that the Governor-in-council shall be empowered to suspend such regulations on grain in other cases, on the recommendation or report of the commission having power of supervision over rates to be charged on the Great Lakes.

That all vessel brokers and persons in any way engaged as agents or otherwise in chartering vessels, or space on vessels, from Fort William and Port Arthur east, be prohibited from writing cargo for out-turn insurance on grain, from acting in any way as agents for the placing of such insurance, and from accepting any commission on such insurance or any premium connected therewith.

That all vessel brokers and persons in any way engaged as agents or otherwise in chartering vessels, or space on vessels, for the carriage of grain from Fort William and Port Arthur east, shall, at the grain exchange at the place where such chartering for vessel or space, is made, afford to the grain dealers a detailed statement showing the space, date of shipment, and destination for carriage of each grain charter entered into each day.

Transportation to Labrador.

It is anticipated that there will be a considerable influx of prospectors and others during the early part of the summer into the districts in Labrador where discoveries of gold have been reported. The Labrador Gold Fields, Ltd. announced that it expects to send 5,000 men, and about 100,000 tons of freight, and on this basis, a steamship service was arranged by W. N. Macdonald, Sydney, N.S., as follows,—s.s. Curlew, sailing from Sydney, N.S., May 10; s.s. Constance, sailing from Charlottetown, P.E.I., and Pictou, N.S., May 25; s.s. Dieuze, sailing from Sydney, N.S., June 5, and thereafter, daily, or weekly sailings from Sydney and other maritime province ports, according to the traffic offering.

The s.s. Curlew was built at Owen Sound, Ont., in 1892, and is screw driven by engine of 50 h.p.; her dimensions being,—length 116.3 ft., breadth 19.8 ft., depth 11.3 ft., tonnage 158 gross, 96 net, 415 displacement. The s.s. Constance was built at Owen Sound, Ont., in 1892, and is screw driven by engine of 50 h.p., her dimensions being,—length 115.6 ft., breadth 19.6 ft., depth 11.2 ft., tonnage 185 gross, 126 net, 400 displacement. The s.s. Dieuze was built by Fraser Brace Ltd. Montreal, for the French Government, her dimensions being,—length over all 204½ ft., length b.p. 195 ft., breadth extreme 40½ ft., breadth moulded 39 ft. 8 in., depth of hold 15 ft., tonnage 1,500 d.w. In addition to the foregoing, Mr. Macdonald has bought from the Anderson Co. of Canada, the s.s. Obernai, which was built by Davie Shipbuilding and Repairing Co., Lauzon, Que., for the French Government, in 1920. She is a sister ship of the s.s. Dieuze, and it is expected that delivery would be taken at Marseilles, France during May and that she would immediately commence her trip across the Atlantic.

Montreal Harbor Commissioners' Cold Storage Plant.

The Minister of Marine gave the following information in the House of Commons, recently, answering questions by T. H. Thompson, Hastings East, Ont. The Montreal Harbor Commissioners have a cold storage plant at that port, in addition to other cold storage plants at Montreal. The building of this plant was financed to the extent of \$2,765,000, out of money loaned by the Government, under statutory authority, and secured by debentures bearing interest at 5%. The financial results, for the first seven months were: operation and maintenance, \$113,789.62; interest on cost of construction, \$80,665.60; receipts, \$55,416.45. It is confidently expected that the plant will in future be self-sustaining, but any deficit that may occur will be met from general harbor revenues, without increasing harbor dues. The rates charged by the Commissioners' cold storage plant are the same as those charged by other cold storage plants in Montreal, except that the Commissioners' plant makes no charge for insurance. It is not the Government's intention to subsidize cold storage plants, to be operated by co-operative associations, in various parts of the country, with the idea of having a chain of storages to supply the Montreal cold storage and thus have all under Government control. The Cold Storage Act, as approved by the agriculture and colonization committee, provides that subsidies be paid only on account of municipal and co-operative cold storages, and not to private individuals or corporations. No provision has been made for the continuance of a subsidised cold storage, in case of disorganization of the co-operative societies, but the act will provide that the Government shall hold a lien on the cold storage for the full amount of the subsidy. There is no likelihood whatever of the rates in the Montreal Harbor Commissioners' cold storage plant being increased, if other cold storages become closed as a result of competition, the Commissioners' intention being to make charges for this service as low as they possibly can, having regard to revenue requirements.

The Manitoba Legislature and Great Lakes Shipping.—Prior to the prorogation of the Manitoba Legislature, May 5, a discussion took place on Great Lakes grain rates. The Premier is reported to have stated that the restoration of the Crownst agreement, in connection with railway, had saved western farmers \$20,000,000, which had been lost through increased lake rates, brought about by a combination of three shipping concerns, lack of competition, and the Canadian coasting regulations. The House passed a resolution unanimously, calling on the Dominion Government to suspend the coasting regulations, and to take steps to ensure fair and equitable lake freight rates. The establishment of a body, similar to the Board of Railway Commissioners, was urged to control lake and ocean freight rates.

Another Elevator for Port Arthur.—James Stewart, of the James Stewart Grain Co., President, Maple Leaf Milling Co., and a director of Canadian National Rys., is reported to have placed a contract for the construction of a grain elevator of 1,500,000 bush. capacity, at a cost of approximately \$1,000,000, at Port Arthur, Ont., with the Carter Halls Aldinger Co., construction to be completed by September.

House of Commons Committee Alleges an Atlantic Steamship Combine.

The special committee appointed by the House of Commons to enquire into agricultural conditions, and of which A. R. McMaster, Brome, Que., is chairman, presented a report on April 24 as follows: "Your committee beg to submit the following resolution which they have unanimously adopted, viz.: Among the various subjects which have been investigated by your committee, they desire to make a report on the question of ocean freights. It is not easy to over-emphasize the importance of cheap ocean transportation to the Canadian farmer. Whatever advantage may have accrued to the Canadian people by the millions of money spent on the development of our internal transportation system—the building of railways, digging of canals, deepening of rivers—such advantage may be in a large measure nullified if freight rates from our ocean ports to foreign countries are fixed at such figures as to absorb the savings which these expenditures have obtained.

"Your committee are of the opinion that upon the regular steamship lines trading from Canadian ports the price of transportation service is determined neither by the law of supply and demand, nor on the basis of cost plus a reasonable profit, but that a combine exists among the various shipping companies, which combine is known as the North Atlantic and U.K. Conference Eastward-bound. The headquarters of this organization are at 8-10 Bridge St., New York, and it includes in its membership a very great number, if not all, of the principal steamship companies operating regular lines out of North Atlantic ports. According to the witness, W. H. Chase, Atlantic freight rates are made in New York the first Thursday in every month. To this North Atlantic Conference belong nearly all, if not all, of the regular steamship lines running from Montreal, including the Canadian Government Merchant Marine. It will be remembered that the C. G. M. M., as well as the Canadian National Rys., is operated under the control of a board, and not by a minister of the Crown.

"Subsidiary to this conference there exists a smaller association of steamship men, connected with steamship lines trading out of Montreal. This association is called sometimes the Canadian Liner Committee, and sometimes the Weekly Liner Committee. They hold meetings as a rule every Tuesday afternoon at the offices of the companies whose representatives act for the association. The minutes of various meetings of this association, produced before your committee, show that the lines or transportation companies constituting the association are as follows: Cunard, Anchor, Donaldson and Thomson Lines; Canadian Pacific Ocean Services, Ltd., White Star Dominion Line; Intercontinental Transports, Ltd. (with which certain ships of the Canadian Steamship Lines, Ltd., are associated); Furness Withy Co., McLean, Kennedy & Co.; and the Canadian Government Merchant Marine, Ltd. The object of these meetings was very neatly characterized by L. A. W. Doherty, the representative of one of these lines, as being 'to stabilize or keep uniform the situation of ocean transport.' It was contended by the gentleman who represented the Canadian Government Merchant Marine before the committee that the line merely 'sat in' with the rest of the steamship lines at the weekly conference, and

that it was not bound in the same manner as the others were bound to maintain rates. A careful consideration of the evidence hardly supports this contention. It would appear that during the several years the C. G. M. M. has been in existence, it has departed from rates so established on four different occasions—one departure, however, covering more than one shipment.

"The manner in which the Liner Committee operated was as follows: The general rates were set at the North Atlantic and U. K. Conference in New York, but for the purpose of united action in regard to these and other matters, a weekly meeting was held, at which representatives of all the steamship lines attended. At this meeting, rates were agreed upon, and no member of the line had the right to depart from the rates so established without conferring with and warning his competitors of his intention so to do. An earnestly-worded expostulation would be directed by one member to another if this line of conduct was not followed. This state of affairs brought about the following extraordinary result. The United States Government forced the Shipping Board of that country which manages the U.S. governmentally-owned steamers, to make a very low rate for the transportation of flour to Europe—a rate stated by the shipping companies to be below a commercial rate. This rate applied only to flour ground in the U.S. To meet this rate, the North Atlantic Conference Lines established, at a given moment, a rate of 15c per 100 lb. on flour ground in the U.S., while they maintained a rate of 19c per 100 lb. on Canadian flour—a very substantial differential against Canadian millers. To this agreement, as a member of the North Atlantic Conference, the Canadian Government Merchant Marine was a party. The committee feel in this regard that the vast sums spent by the Canadian people on the development of a merchant marine were never intended to bring about this result. The committee desire to bring the facts in this regard to the earnest attention of the House, and would respectfully suggest that the Minister of Railways and Canals should take the matter up with the Canadian National Rys. board for consideration and appropriate action.

"It would appear that the shipping combine referred to does not include tramp steamships, which can be chartered from time to time, and among which there exists keen competition. These, however, are only available to those shippers who can load a whole steamship; neither do they take the place of regular lines which are able to effect transportation almost with the regularity of express trains, and which, therefore, offer much greater advantages to those who have to ship perishable articles to a market which wishes to have a regular supply.

"The Canadian Government Merchant Marine ships are not of such construction as permits of their being used as cattle ships, and to convert them for this purpose would be both costly and impracticable. Evidence was produced showing that since the commencement of the war, ocean rates on cattle had increased by 300%, while the price of beef in the British market had only increased 66% during the same period. Your committee is of the opinion that the continuance of the rates now charged inevitably must

have a detrimental effect upon the export cattle trade.

"Your committee were also struck with the fact that many of the witnesses connected with trans-Atlantic steamship lines testified that, as a rule, small cargoes were brought from Great Britain to this country, and that this fact tended to increase freight rates on Canadian eastward-bound traffic over what would be the case if a fair amount of traffic were coming westward as well as going eastward. Thus any policy which diminishes the volume of trade coming from Europe to Canada, tends to increase the cost of transportation from Canada to Europe. The attention of the House is respectfully invited to this fact, and the attention of the Government directed to the situation so created."

The finding of the House of Commons committee, composed of men who know nothing about the shipping business, is in marked contrast to the final report of Imperial Shipping Committee appointed by the Lloyd George Government in 1920 to enquire into the deferred rebate system, regarding which complaints had been received by the Imperial Government from the governments of the Commonwealth of Australia and of other parts of the British Empire. The committee was composed of 14 members, with Sir H. J. Mackinder, M.P., as chairman, eight members being nominated respectively by the Secretary of State for the Colonies, the Board of Trade of Great Britain, and the Governments of Canada, Australia, India, New Zealand, South Africa and Newfoundland, and five members at large being chosen for their experience in shipping and commerce. Canada's nominee was Sir George Perley, who served until the change of High Commissioners, being replaced on the committee on April 15, 1922, by Hon. P. C. Larkin, whose signature was attached, with those of his fellow-members, to the final report, which was published in February last, and from which the following is reproduced:—

"It appears now to be a universal condition of the larger industries in all progressive countries that there should be a high degree of organization among the chief companies, firms, or other units, and this condition is especially marked in industries which have to deal with transport. The necessity for such organization obtains clearly in the case of liner services. They have to provide for the distribution, all over the world, of heterogeneous classes of goods, the circulation of which to an ever-increasing extent constitutes an essential part of the world's economy. The requirements for this part of commerce are in marked contrast to those of bulk cargo in general, where large quantities of the same kind of goods have to be carried at irregular intervals. The ships which cater for this trade are in the main separate units, but the liner service requires fleets of ships operating in unison, and consequently large capital resources and a carefully perfected central organization. It is clear that competition between individual liners or lines in the same trade would be quite incompatible with stability of rates, and that the trade would in fact tend to return to the disturbed conditions which prevailed before the introduction of the conference system, or to those characteristic of the tramp market. The shippers might for a time secure the

benefit of low cut rates, but there would inevitably be a strong tendency to abandon regularity in sailings, and there would be no guarantee, such as obtains at present, of any general progress in the type of ship plying and the nature of the facilities afforded. We consider, therefore, that the conference system must be accepted as a necessary concomitant of modern commerce."

It may be explained that the word "liner" is used in the report in the shipper's sense of any steamship having a regular route and schedule, as distinct from a tramp steamship, and not in the limited and popular application of the term to passenger ships only.

United States Merchant Marine.

E. P. Farley, formerly Vice President, Emergency Fleet Corporation, has been appointed Chairman, U.S. Shipping Board effective June 12, vice A. D. Lasker, who retires after two years service.

After several meetings with representatives of the International Seamen's Union, with reference to wages and working conditions on U.S. Shipping Board's ships, the Board has increased wages as shown below, with certain changes in working conditions, such as the inauguration of the 3-watch system, instead of the 2-watch system, and the observance of an 8-hour day in ports, effective, May 14,—

	Old scale	New scale
Carpenter	\$70.00	\$80.00
Carpenter's mate	60.00	70.00
Boatswain	65.00	75.00
Boatswain's mate	60.00	70.00
Quartermaster	60.00	70.00
Able seaman	55.00	62.50
Ordinary seaman	40.00	47.50
Storekeeper	60.00	70.00
Deck engineer	70.00	80.00
Pump man	70.00	80.00
Donkey man	65.00	75.00
Storekeeper	65.00	75.00
Oiler	65.00	72.50
Fireman, oil burner	57.50	65.00
Fireman, coal burner	57.50	67.50
Coal passer	50.00	60.00
Wiper	50.00	57.50
Water tender	65.00	72.50

A circular issued by the Board states that in considering the matter due weight had to be given to the cost of living, the supply and demand of U.S. labor, and the establishment of such wages and working conditions as would make for stabilization, efficiency and economy. It is claimed that the "Americanization" of the U.S. merchant marine ships' crews is highly desirable; that improvement in the morale and maintenance of efficient crews to man and care for the ships should increase efficiency and keep repair bills at a minimum; that the co-operation and loyal support of real American seamen are necessary; and that the riff-raff element and the disloyal radical have no place in the service. A New York press report states that at the American Steamship Owners' Association, decided May 15, after careful consideration, that it had come to the conclusion that conditions in the shipping business do not make it possible for the Association to meet the increase in wages put into effect by the U.S. Shipping Board. It was also stated that it was admitted that because of larger wages being paid in land occupations, seamen were leaving the sea, and that eventually the shipowners would be forced to adopt the new schedule on account of desertions.

White Star Towing Co., Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital and office at Victoria, to carry on a general towing, chartering and lighterage business, and to own and operate ships.

Cattle Shipments to Great Britain.

In the article on this subject, in Canadian Railway and Marine World for May, pg. 245, the Minister of Agriculture was quoted as stating in the House of Commons, on April 16, that the Deputy Minister was preparing a statement covering the whole question. It was issued on April 26, as follows: "Many comments, unfavorable to the Dominion Government, have appeared in the daily press re the lack of ocean transport accommodation for cattle ready for export to Great Britain, and possibly some reason for such criticism has existed, inasmuch as the demand for space would appear to be slightly greater than the supply. Apparently, however, most of the complaints and much of the talk have been by men who were unfamiliar with practical conditions as they exist in this country, and as they might be expected to exist in any country where ocean transportation is necessary in forwarding cattle to their ultimate destination. By far the largest percentage of cattle going forward in the past few weeks, being shipped at present, or that will, it is anticipated, go forward during the spring shippings, are being handled by British buyers. Some of these men have come over here, apparently expecting to find cattle waiting around in blocks to be picked up, and anticipating that ships would be waiting to carry this stock across. Some of these men also seem to have expected that the Government would have all the cattle in the country under control, and likewise the shipping space, so that all that would be necessary for them to do would be to give their orders and await events. Some buyers, however, came over, knowing conditions as they exist here, and are quietly buying and shipping, and making money for themselves and for the Canadian cattleman. The ocean space available in May and June for cattle sailing from Montreal is approximately as per list attached. This matter of space and the demand therefor has been discussed with the two principal brokers handling this space in Montreal, and, therefore, in the whole of Canada, viz., D. A. Campbell and Donald Munro. They were quite in agreement in stating that for the first and second weeks in May the space available for cattle from Montreal would be not quite equal to the demand, for the third week in May the space available and the demand for the same would be about equal, while for the last ten days of the month the space was now and probably would continue to be greater than the demand. For June, the demand is as yet, of course, practically non-existent, the space in prospect, however, is as per list attached, plus sailings for Manchester, which will probably amount to between 1,600 and 1,700, making a total for the month of about 7,500, the chances being that a considerably less amount of space than this will be required, since the stocker trade season usually ends with May or soon after June 1. During April and late March, when the shipping of stockers began, the demand was somewhat greater than the supply, but up to the end of March the demand had been less than 200 over the supply of space available. As to the situation in this respect in April, it has not been possible to get any accurate figures, although undoubtedly the demand has been somewhat greater than the supply of space. Nevertheless the voiced demand has been very considerably greater than the actual demand, as witness one case where a

shipper proclaimed aloud that he wanted 20,000 spaces, and when offered 1,400 spaces was content to close on 400 and let the rest go elsewhere, although this space was at \$22.50 and he had had options on space at \$25.00."

Estimated Sailings from Montreal With Canadian Cattle to Great Britain.

A London, Eng., press cable of May 8, said that several questions had been asked in the House of Commons regarding the alleged unsanitary condition of ships carrying Canadian store cattle to Great Britain. Viscount Wolmer, Secretary to the Board of Trade, said that when the ships left the United Kingdom it was not anticipated that they would engage in his trade, and temporary accommodation for the cattlemen had been fitted up under the inspection of the Canadian Department of Agriculture.

R. Forke, Brandon, Man., Progressive leader, said in the House of Commons, May 9: "I wish to ask the Minister of Agriculture if he noticed the statement in today's newspapers that the unsanitary conditions on boats carrying Canadian cattle to Great Britain had been the subject of discussion in the British Parliament. The dispatch said that an inspection had been made necessary by the Canadian Department of Agriculture owing to these conditions. Has the Minister any knowledge of the matter? It is very necessary that this service should be carried out under the very best auspices and, if unsanitary conditions prevail on these boats, that steps should be taken to remedy them."

The Minister of Agriculture, Mr. Moth-erwell, replied: "I do not know that we should attach too much importance to these dispatches, because of the confusion that exists between the authorities over there and ourselves, with respect to the proper conception of the arrangement that was made last autumn as to the class of animals that were eligible to be shipped. As I understand the situation, nothing but stockers, that is, non-breeding cattle and fat cattle, are eligible to go over; breeders are not eligible. With respect to the sanitary conditions on the ships engaged in carrying cattle, I understand that when the embargo first came off, some ships were put into commission rather hastily and were not up to the requirements. I expect, however, that will be remedied when these ships take on board their second load."

The Ship Quest, which was used on Sir Ernest Shackleton's last trip to the Antarctic Ocean, has not, it is stated, been bought by the Dominion Government, for exploration or any other purpose, as was reported recently.

Canadian National Railways Annual Report for Year Ended December 31, 1922.

Introductory: The present Board was appointed in October and was therefore in office for less than three months of the year under review. It has been considered desirable to include in this report only the operations of those lines which were generally recognized as constituting the Canadian National Railways during the year. The three groups then so designated were the Canadian Government Railways, the Canadian Northern Railway Lines and the Grand Trunk Pacific Railway. Separate reports will be prepared for the Grand Trunk Lines.

The results of operation are those of what may be termed the fourth year of the Canadian National Railways—that collective title having been authorized for use in December 1918.

Digest of Operations: Operations for the year show an improvement of \$6,484,017.87, the operating deficit being reduced by that amount as compared with 1921—and being an improvement of over twenty-seven million dollars compared with 1920.

The improvement in the net situation (or reduction of deficit) referred to, as compared with 1921, was achieved in the face of a reduction in gross revenue brought about by reduced passenger and freight rates and also in the face of a greater tonnage movement, which, while requiring a considerably greater operating performance produced no increase in gross returns.

Earnings and Expenses compare with the two preceding years as follows:

	1922	1921	1920
Gross Earnings			
Canadian Northern Railway.....	\$ 60,679,033.37	\$ 69,088,474.16	\$ 66,695,398.80
Canadian Government Railways.....	40,939,945.76	41,275,314.84	44,803,045.84
Grand Trunk Pacific Railway.....	18,516,977.58	16,638,677.64	14,408,549.66
Total.....	\$120,135,956.71	\$127,002,466.64	\$125,906,994.30
Operating Expenses			
Canadian Northern Railway.....	\$ 63,625,763.09	\$ 75,564,385.30	\$ 82,953,978.60
Canadian Government Railways.....	43,436,667.67	46,990,047.74	55,445,651.29
Grand Trunk Pacific Railway.....	22,809,843.99	20,668,369.51	24,543,063.60
Total.....	\$129,872,274.75	\$143,222,802.55	\$162,942,693.49
Operating Deficit			
Canadian Northern Railway.....	\$ 2,946,729.72	\$ 6,475,911.14	\$ 16,258,579.80
Canadian Government Railways.....	2,496,721.91	5,714,732.90	10,642,605.45
Grand Trunk Pacific Railway.....	4,292,866.41	4,029,691.87	10,134,513.94
Total.....	\$ 9,736,318.04	\$ 16,220,335.91	\$ 37,035,699.19

Note: In considering comparative statistical data for the last three years it should be remembered that as regards traffic conditions on Canadian railways as a whole 1920 was an exceptionally good year and 1921 an exceptionally bad one. The improvement over 1921 which 1922 shows should therefore not be regarded as an advance, but merely as indicating that recovery is under way. Failure of 1922 traffic figures to equal those of 1920 is not of itself significant on account of the extraordinary conditions of 1920 which made that an exceptional year.

Earnings: Gross earnings for the year 1922 decreased by \$6,866,509.93. Freight, passenger and express earnings were all less than in 1921.

As the loss in revenue due to the Crowsnest Pass agreement rates is estimated to be six and a half million dollars, that reduction stands out as the most important railway event of the year. Notwithstanding the reduction referred to, freight revenue increased its percentage to total revenue providing 76% in 1922 as against 74% in 1921.

The decrease in passenger traffic is discouraging, particularly as the quality of the service given has improved and because the rate for passenger travel in Canada is relatively low, being generally slightly below the prevailing rates in United States. A good year was expected, but the traffic did not materialize. Passenger revenue declined 11 1-3% and passenger travel measured by "passenger miles" declined 3.55%.

Operating Expenses and Performance: The results for the year show that working expenditures were well controlled, as there were reductions in expenses in the maintenance and transportation accounts. The condition of the physical properties was improved during the year, and yet maintenance of way expenses were reduced by \$2,656,340.92 and maintenance of equipment expenses by \$1,225,612.86. As already pointed out, more business was moved and yet \$11,299,471.65 less, in addition to the maintenance saving, was spent to move it.

There were small reductions in pay for certain classes of employees, and reduced cost of material had its effect in bringing about this result, but in the main the advance may be credited to greater efficiency of operation. The average freight train load of the system increased by 65.68 tons or by 13.61%, whereas on a mile of road basis the increase in density of freight traffic was only 9.43%. This average increase in train load was accomplished by obtaining in every month a substantial increase over the corresponding month in the previous year, 22.4 tons being the lowest recorded, and the highest increase in any one month was over 100 tons. Other measures of increased efficiency may be mentioned, such as more miles obtained per car per day and a small increase in load per car mile. The cost of yard operation was also considerably reduced, measured on the basis of the number of cars handled.

Mileage: The operated mileage as at 31st December, 1922, was made up as follows:—

	Miles
Canadian Northern Railway System.....	9,752.86
Canadian Government Railways.....	4,649.44
Grand Trunk Pacific Railway.....	2,695.61

Total Railway—steam operated.....	17,097.91
Electric Lines of Canadian Northern Ry. System.....	126.13

Total mileage operated..... 17,224.04

The following main line mileage was put into operation during the year:—

	Miles
In Manitoba—	
From Amaranth to Alonza.....	17.84
In Saskatchewan—	
From Lintlaw to Kelvington.....	13.84
" Turtleford to St. Walburg.....	22.10
" Melfort to Ridgedale.....	22.69
" Demain to Beechy.....	6.11
" Gravelburg to West of Hodgeville.....	28.99
In Alberta—	
From Red Deer Junction to Red Deer....	6.10
In British Columbia—	
From Victoria to Koksilah.....	52.50

Total..... 170.17

Finance: During the year, an issue of \$11,000,000 Canadian Northern Railway Company 5% Three Year Notes, guaranteed by the Dominion Government, was disposed of at 99.03%. The proceeds, together with accrued interest and New York ex-

interlocking plants, machinery in shops and round-houses, and the heating and lighting of stations, freight sheds, etc.

A most important group of improvements includes the extension of sidings and other yard and station trackage, 315 such improvements were undertaken aggregating 408,928 feet of track.

Construction: The work under this head was largely confined to ballasting and surfacing branch lines in the Prairie provinces. No grading or track-laying on new lines was undertaken. Fencing and telegraph lines were built and stations and other structures required for new lines. The mileage turned over for operation is shown above.

Co-ordination: The betterment work undertaken during the year included a number of track connections and re-arrangement of facilities to enable the properties under consolidated management to be co-ordinated. This work will be continued as plans for the complete co-ordination of the various lines are developed.

Under this head reference may be made to the improvement known as the Long Lake Cut-Off, a connection between the National Transcontinental and Canadian Northern main lines east of Long Lake, Ontario (north of Lake Superior). This line had been under consideration for some time. Your present directors convinced of its value to the National system could see no justification for delaying action in the matter, and a contract for grading, bridging and culverts was let on December 30th, 1922. The work is progressing favorably. The line will be 29.5 miles in length, but reduces the mileage between Toronto and other eastern points and Winnipeg by 102 miles as compared with the shortest route now available to the National system not involving use of other railways. Besides reducing mileage, it has many economic advantages.

Rolling Stock: The detailed statement of rolling stock appearing as an appendix shows the following deliveries during the year 1922:—

2 Locomotives,
26 Passenger train cars,
561 Freight cars,
874 Cars for road and other work.

Wages: During the year 1922 wage adjustments were effected with various groups of employees which brought the general level slightly down. There were no strikes among the railway employees in Canada.

Lands: Land sales for the years ending 31st December, 1920, 1921 and 1922 were as shown in the following table. This table also shows the sales which had previously been entered into and which were, by mutual arrangement, cancelled during corresponding periods.

Year	Actual sales	Average
1920	84,002.172 acres.....	\$1,738,801.46 \$ 20.70
1921	17,031.15 "	321,042.08 18.85
1922	9,025.53 "	150,531.14 16.67
Year	Cancellations	Average
1920	31,188.76 acres.....	\$ 412,457.19 \$ 13.22
1921	17,032.08 "	273,720.56 16.07
1922	114,056.663 "	1,599,278.69 14.02

It will be seen that the actual sales for 1922 were considerably less than the sales for 1921 and that the acreage cancelled during the same period was greatly in excess of the cancellations for the previous year. This is a reflection of the very unsatisfactory conditions which prevailed during the year resulting in a large number of purchasers quit claiming their lands back to the company.

During the year it was also necessary to adjust some wholesale deals which had previously been entered into.

As at December 31st, 1922, there remained unsold 825,008 acres, the increase being caused by the cancellations previously referred to. It was considered advisable in view of the lower prices being realized for the company's lands, to reduce the value at which these unsold lands are carried in the balance sheet, and this has been done.

Conclusion: Due to the consolidation of the Grand Trunk System with these lines there will not be published any additional reports grouping only the operation of those lines which are covered by this report. The report of the previous Board of Directors for the year 1921 was in the nature of a three year survey of the operations and development of these lines as a Government owned system. 1922 completes the four year period of unified management of the former Canadian Government Railways and the Canadian Northern Railway System. The operations of the Grand Trunk Pacific, while only under complete co-ordination since October, 1920, or 2 1/4 years, have been included for the full period for comparative purposes.

During the period the Government has provided large sums of money for the physical improvement of these properties, for co-ordination facilities, for additional rolling stock and for branch line construction.

On behalf of the board, I would like to state that after inspection of the main arteries of the system, we find that the work undertaken has been well performed, and that the expenditures have been well applied. While the demands for capital expenditure on a system of such extent in a growing country, as the former board stated, are never ending, yet it may now be said that the

three groups of lines, until recently the Canadian National Railways, enter the consolidation in excellent physical condition and operating at a high mark of efficiency as regards actual performance or movement of traffic and other factors controllable by management. Apart from certain well known cases of duplication the lines are well lo-

cated and in exceptional position to successfully perform the transportation demands of the country. The problem as far as the lines covered by the report is concerned, is how sufficient traffic may be developed to carry the overhead and maintenance expenses. As far as transportation costs go, an economical performance is being made.

Under these circumstances the margin for improvement with the present light volume of traffic is largely dependent on circumstances beyond the control of the management.

On some of the older sections there are still improvements that should be undertaken, but in the main the lines are modern in character and were built or have been brought up to standards which are ahead of actual traffic requirements, except under stress of seasonal movements.

The success of the National System in respect to these three groups is not entirely to be obtained by methods generally applied to railways which are not producing returns, viz.: improving the physical condition and operating methods—it is a matter of building up the country to support the railways.

On account of the situation outlined with reference to the lines previously comprising the Canadian National Railways, and to the fact that some time will necessarily be required to develop plans for improving the situation as it is now affected by the inclusion of the Grand Trunk Lines, and having in mind other conditions which the re-organization of so vast a system involves, your directors feel it necessary to warn the owners of the system that the present year is not likely to show any great advance in operating performance, except as the situation may be improved by increased traffic, and while there may be an improvement in the traffic returns in the months prior to the crop movement, it is rather optimistic to expect a greater seasonal movement than took place in the last quarter of 1922. As the rates over the entire year will be at a lower level, expectations of improved net are not likely to be realized. The present year then is to be regarded as one of transition in which the new machine will get down to its bearings and be ready for the greater effort which it is hoped traffic will demand of it in future years. The organization is new. Officers have been re-arranged and have much new territory and new conditions to consider. This, however, is expected to prove a feature of value inasmuch as experienced railway men will view situations from new angles.

The whole reorganization has been accomplished with the best of good feeling generally prevailing, and I feel sure that the splendid loyalty which I found existing among the employees of the various lines now brought together is being rapidly transferred to the new administration and that enthusiastic and constant team work will be forthcoming from the great army of men in the system's employ.

For the Directors,
H. W. THORNTON,
President and Chairman.

Montreal, April, 1923.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal.—Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Tenders for Railway Construction. The Nipissing Central Railway Company.

North Bay, Ont.,
May 23, 1923.

SEALED TENDERS for the works (other than steel work for bridges) necessary to the complete construction of the roadbed, ready for the ties and rails, and the tracklaying, ballasting and fencing, upon approximately twenty-five miles of a branch of the Nipissing Central Railway, extending from Swastika on the Timiskaming & Northern Ontario Railway, to a point at or near Larder Lake, will be received at the office of the Secretary-Treasurer of the Company, North Bay, until twelve o'clock (noon) of the 12th day of June, 1923.

On receipt of a request in writing, a copy of each of the following documents:

Instructions for Bidders,
Form of Tender,
Specifications,
Form of Contract,

will be furnished to intending bidders, at the office of the Chief Engineer of the Company, North Bay, where plans and profiles pertaining to the work may also be seen.

The right is reserved to reject any or all bids.
S. B. CLEMENT,
Chief Engineer.

Shore Position Wanted.

Well educated ex-Merchant Service Officer, Scotch, forty, (fully certificated, desires position of trust on shore. Reason, eyesight. Twenty-six years sea experience, steam and sail; well versed in all matters pertaining to ships, cargo work, drydocking, etc.; accustomed to directing oriental labor; speaks Hindustani and Malay. Best references. Go anywhere. Box 67, Canadian Railway and Marine World.

The Annual General Meeting of the Shareholders of The Canada Southern Railway Company, for the election of Directors, and other general purposes, will be held at the Company's Head Office, in the City of St. Thomas, Ontario, on Wednesday, the 6th day of June, 1923, at 11 o'clock in the forenoon.

No. 29 Simplex Car Jack

As Contract Car Shops exist and prosper because they can build or repair cars cheaper than a railroad can, it is evident that their management, methods and tools are the secrets of their success.

It can be truthfully and broadly stated that:

Every railroad, contract shop and industry needs the modern Simplex Jacks to insure decreased man hours and costs.

BALL BEARING MOTORS AND RAILWAY MOTOR CARS

Here's Real News

The Hydro Electric Power Commissioners of Ontario have appointed a Sales Syndicate to advantageously liquidate all the

Equipment and Supplies

which can be released from the

Queenston-Chippawa Development

The majority of this Equipment—recently released—was purchased new and used only on the above undertaking. This is a splendid opportunity to secure really high grade, modern Machinery-Accessories and Supplies at prices that are right.

Our amended Stock List is now being prepared and we will be very glad to forward your copy, upon request. Time spent consulting this list will be time well spent. Someone will profit handsomely as those who purchase any of this "special offering" which is available are going to make one of the best purchases in their career.

We give below a general idea of what class of equipment is available.

Steam and Electric Shovels—Steam and Electric Locomotives—Air Dump Cars—Air Compressors—Channellers—Conveyors—Drills—Motors—Concrete Mixers—Concrete Cars and Auxiliary Equipment—Electric and Steam Hoists. In fact—almost everything you might require.

Inspection can be made at
Niagara Falls - Ontario

Our Representatives
will give every service

DUPONT-SIMPLEX STOKER

KILL
LAST AD.

THE development of mechanical stokers for locomotives bears an important and necessary relation to fuel operating economy.

Increased economy under present conditions is a paramount issue in railroad management.

It is the purpose of the present management of this company to give users of the duPont Simplex Stoker an efficient device and expert and reliable service in the field.

The duPont Simplex Stoker merits your personal investigation.

Toronto's New Cars Successfully Sell Service

Because they are equipped to please the public.

KEYSTONE CAR SIGNS clear and legible day and night, make it easy to pick out the right car at a good distance, and to tell just where it is going.

SAFETY CAR LIGHTING makes the interior bright, cheery and inviting, and permits comfortable reading.

FARADAY CAR SIGNAL SYSTEMS offer a sure and most convenient means of signalling for a stop.

PEACOCK STAFFLESS HAND BRAKES give security against accident from failure of air brakes. They stand by with ample power to hold the car under any circumstances.

RICO ANTI-CLIMBERS by preventing telescoping in case of collision, afford an additional safeguard against injury and damages.

The steady growth in passenger receipts on Toronto lines can undoubtedly be credited in part to the favorable impression made by this equipment.

Operating costs on any Electric Railway can be kept down and efficiency kept up by the use of the Lyman Line of Equipment briefly described on the next page.

LYMAN TUBE & SUPPLY CO., LIMITED
 Montreal Toronto Winnipeg Vancouver

The LYMAN LINE

at the Toronto Convention

You will be very welcome at our Convention Booth, where, if you are interested, we can talk about

DAYTON RESILIENT TIES

They cushion traffic Shocks—save foundation, pavement and rolling stock—reduce first cost and upkeep.

RICO VACUUM OILERS

By providing a constant, controlled oil flow and entirely excluding dirt, they greatly increase the life of journals. Moreover, they save waste and nine-tenths of the work of oiling.

NUTTALL HEAT TREATED GEARS and PINIONS

"BP" Forged Gears and Pinions combine hardness with exceptional toughness and strength. They practically never break, and are guaranteed to give $3\frac{1}{2}$ times the life of untreated gears in identical service. Nuttall Helicals are "the last word."

Nuttall "BP" Gear

O.M. EDWARDS CAR FIXTURES

The window Fixtures, Trap Doors and Fixtures made by O. M. Edwards Co. have for years ranked first in design and finish.

LE CARBONE CARBON BRUSHES

The surest cure for commutation troubles.

GARTON-DANIELS LIGHTNING ARRESTERS

Give positive protection to power lines, power house equipment and rolling stock.

SEGUR REPAIR PARTS

Segur Coil Winders, Spreaders, Tapers and other tools are wonderful savers of time and expense in upkeep of motors and generators.

LYMAN IDEAL TROLLEY WHEELS

Light, perfectly balanced, low in cost, high in mileage.

SHELBY SEAMLESS TROLLEY POLES

Scientifically reinforced and tapered, they give maximum strength and elasticity, with minimum weight.

SAMSON "SPOT" TROLLEY CORD

You have only to see and handle this cord to be convinced of its superiority. Users have proved it.

Lyman "Ideal" Trolley Wheel

The "LYMAN LINE" includes no "second bests".

Automatic Means Economic

MOTOR DRIVEN MASTER CONTROLLER

The Motor Driven Master Controller can be considered as the "brains," with the contact-making voltmeter and the underload relay as the "eyes" of an Automatic equipment.

The voltmeter registers the load demand and starts the controller. The controller then fixes the sequence of events and closes or opens the various control devices in the pro-

SYNCHRONOUS CONVERTER—AUTOMATIC OPERATION

IN Electric Railway Operation the Automatic Substation effects a great saving in labor, cuts down transmission losses and raises schedule speeds.

SWITCHBOARD FOR AUTOMATIC CONTROL OF TWO SYNCHRONOUS CONVERTERS

per order and at the proper time during the starting operations. It serves at once electrically and chronologically to interlock the various breakers, contactors, relays, etc.

After the machine has been delivering load and the economical demand ceases, the underload relay acts to shut down the station and advance the controller to its initial position ready for the next start.

See our exhibit at the Canadian Electric Railway Association Convention,
Toronto, June 27, 28, 29, 30.

Canadian General Electric Co., Limited

HEAD OFFICE  TORONTO

Branch Offices: Halifax, Sydney, St. John, Montreal, Quebec, Sherbrooke, Ottawa, Hamilton, London, Windsor, Cobalt, South Porcupine, Winnipeg, Calgary, Edmonton, Vancouver, Nelson and Victoria.

*Do you want to prevent
lightning losses?*

**Protect your service and
cut down repair bills.**

Fifty electric railways having 5,000 cars equipped with C.G.E. D-C aluminum lightning arresters had only forty-three cases of damage from lightning during the past year—an average of less than one a railway and one every hundred cars.

In some cases the damages were slight—controller blow-out coils, brush-holders, etc. In some cases no damages had been suffered in two or three years, or longer.

Study these data and then study your maintenance records. If you don't know what lightning is costing you, you can't tell what these arresters will save you, but one thing is certain: the C.G.E. D-C aluminum arrester will prevent practically all damage to car equipments from lightning.

*This Mark is Your
Guarantee. Look
for it on Your
Wrenches, Taps,
and Dies.*

This "Little Giant" Is SOME Wrench!

It is the toughest, simplest, most efficient wrench ever offered to the mechanic. That sounds like a big order, but go ahead and read our story, order a few for trial, and we know you'll never be satisfied with anything else.

Barked knuckles and raw tempers have been eliminated in shops using the LITTLE GIANT Pipe Wrench.

The end opening jaw design and extra length handle give a leverage that will turn the tightest nuts, bolts and pipes with less muscular energy.

The ease with which it handles the tight-corner, and close

overhead jobs puts it far in the lead when it comes to all around utility.

There are two drop forged, heat-treated steel parts and a nut in the make up of the LITTLE GIANT. They are practically indestructible. The double sets of teeth on the smaller sizes and the quadruple sets on the larger ones assure a life of from two to four times that of any other wrench you can buy.

Service life is a big factor, but "getting it done in a hurry" is often just as important. The LITTLE GIANT gives both service and speed.

*Only
Three
Parts*

IMPROVING UNDER-BOILERED LOCOMOTIVES

The Heart of the Locomotive

LOCOMOTIVE hauling capacity is often limited by the ability of the boiler to make steam.

In removal of this limit lies the opportunity for a large increase in earning power from every locomotive.

Thermic Syphons accomplish this by increasing steaming capacity from 10 to 20 per cent. Thus, an increase in power equivalent to many new locomotives is made immediately available.

This increased power can be readily added without delaying the locomotive at its regular shopping period. Start a Syphon program now.

Consolidated Equipment Co., 263 St. James Street, Montreal.

YOU can effect a **SAVING** in Lubrication costs by using **TULC** for it will give results not to be obtained by the use of any other Lubricant.

T Will not splash over commutators.
U Will not cause short circuit or burnt armatures.
L Will not leak or rot fields.
C Will so save in brass and babbitt to pay for itself.
 Will only feed sufficient to lubricate properly.
 Will save dripping losses.
 Will make axles and journals last longer.
 Will cut down a lot of pull-ins.
 Will eliminate hot boxes and cut axles.
 Will be sent for trial on request.

It's Summer Now in the Canadian Pacific Rockies

It is summer time—but cool. The valleys are brilliant with Alpine flowers, violets and columbine, anemones, orchids and the red Indian Paint Brush. Emerald lakes mirror great snowcaps, virgin forests and scintillating glaciers.

Enjoy the social gaiety of Banff Springs Hotel, Chateau Lake Louise; the comfort of Emerald Lake Chalet, Sicamous Hotel and Glacier House; the cozy simplicity of Bungalow Camps in the Canadian Pacific Rockies.

Ride, hike, swim, fish, golf, play tennis, climb mountains amid Nature's masterpieces! Make **YOUR** reservations early this year.

“Conversation Circulation”

IN the days when “Conversation Circulation” statements were the basis on which the advertiser bought space, the advertising solicitor who put up his story in the most pleasing manner generally got the business.

In case the advertiser questioned the figures he might possibly go to the publisher's office and look over the circulation records with his own auditors. But neither he nor his auditors knew the intricacies of publishing records or the possibilities for juggling circulation figures.

Differences and arguments very often caused bitter battles between many publishers. Ingenious schemes were used by unscrupulous publishers to put up the appearance of a larger circulation than they had. The prevalence of these practices brought out the necessity for a reputable agency to audit and report on circulation matters.

The Audit Bureau of Circulations was started eight years ago by a nucleus of the leading advertisers, agents, newspaper, magazine, farm papers, and trade paper publishers. Today it has a membership of 1800. The purpose of the bureau is to make fair and impartial audits of circulation records and it is now accepted as the Standard Authority among space buyers throughout the United States and Canada. Every Publisher-Member of the Bureau is required to make semi-annual statements setting forth the actual net paid circulation. Once a year the Bureau sends an auditor to the office of each publisher to check and if necessary correct his circulation statements.

Study the A. B. C. reports of the publications you are considering and it will not be necessary to argue about competitive circulation.

Canadian Railway and Marine World is a member of the A. B. C. and would be pleased to submit a copy of the latest circulation report

Friction Negligible

**KILL
LAST AD**
IF friction bearings did not generate heat there would be no hot boxes. And if there were no hot boxes railroads would be saved millions of dollars every year.

Stafford Roller Bearings reduce journal friction 90%—consequently they do not get hot. The snow which gathered around the journal of this car (above), while it was in daily service, remained there;

it did not melt away, although the weather was between 20 and 30 degrees above zero.

Besides eliminating hot boxes, the Stafford Roller Bearing reduces lubrication cost to the vanishing point and does away with all purchase of journal box supplies.

Stafford Roller Bearings—Never run hot—Never “freeze up”—Guaranteed three years.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

HUTCHINS CAR ROOFING CO., LTD.

MONTREAL

For Repairing Broken Locomotive Frames

If a composite statement were prepared from the scores of reports received weekly from over 500 Railroad Shops and Round Houses in the United States and Canada using the Thermit Welding Process for repairing locomotive

frames and other parts, it would read as follows:

"Using lots of Thermit for welding both heavy and light frames; first class results; no failures; well pleased with your improved methods and practice which have greatly reduced the time and cost of welding."

National Trolley Guard is an inverted copper or galvanized iron wire mesh mounted above the trolley wire. It catches the trolley wheel, should it leave the wire, and, being energized, carries the car to safety.

National Trolley Guard for Every Crossing—

The illustrations on this page show several ways in which National Trolley Guard has put Safety into dangerous track crossings.

On city tracks where both local and interurban passengers are carried over main line railroad tracks—

Where city line crosses high speed interurban right of way with pantograph collection—

On a dangerous double track curve, doubly dangerous because of the acute angle intersection and the curve—

Under an elevated structure, where the guard acts as a trough and softens the approach—

ALL instances of genuine appreciation of one of the most important phases of street railway operation—passenger safety.

Street railway officials in each case took out safety insurance. They installed National Trolley Guard. Why should you take chances?

Let us send complete description of this safe-guard. It is very easily installed

Where City Line Crosses Interurban

On a Dangerous Double Track Curve

The Choice of Men Who Know

THE small user of oxygen and dissolved acetylene can take full advantage of Dominion Oxygen Service.

There are many shops where a comparatively small amount of welding and cutting is done. These shops require the same pure oxygen and acetylene in conveniently handled cylinders

and the same assurance of being able to receive their supplies promptly as the mills and factories where larger quantities are used.

We give the small order for one or more cylinders the most careful and prompt attention. Cylinders are of uniform size so that shipping becomes simply a matter of "how many?"

With a widely distributed system of plants and warehouses we are in a splendid position to give you a fresh supply when you need it. This enables you to take care of your requirements satisfactorily and economically.

Our prices show a distinct saving. Be convinced by placing your next order with us.

EYES THAT COMMAND

THE eyes that read Canadian Railway and Marine World are the eyes that command; and the hands that turn its pages are the hands that direct.

For our readers are Canada's MASTERS of land and water transportation, and their skilled subordinates. They are the men who build and equip and operate our steam and electric railways, and the men who design, build, equip and operate Canadian ships, on both salt and fresh water.

Two systems of Canadian railways alone are understood to purchase current equipment and supplies averaging \$250,000,000.00 a year — not counting extension of lines—and, the men who do the specifying, the deciding and the buying are all readers of Canadian Railway and Marine World.

Rail and Water Transportation, and the many industries related to them, are more closely interwoven in Canada than in the United States, Great Britain and other industrial countries; for the Canadian Railways

pioneered in the industrial and agricultural development of Canada, and in the creation of Canada's Merchant Marine.

So the readers of Canadian Railway and Marine World are more than railway men or steamship men; they are the moving spirits in all that makes this young nation great.

Our editors sense the responsibility of addressing this masterful audience of trained thinkers and doers; and, as a result, Canadian Railway and Marine World is a serious minded publication for serious minded men.

Puff-stuff is foreign to our columns. Inspired "write-ups," to flatter advertisers, run up against a "no admittance" sign. Even technical papers of deep interest are pared down to their vital essence.

And our oft-repeated advice to our advertisers is to remember that they are talking to busy men—and to make their business messages conform to that simplest definition of good advertising "Easy reading, worth reading."

Above All—Efficiency!

Experienced railroad executives know that the first and most important point in the selection of lubricants is efficiency—the ability to render satisfactory service under the ever-changing conditions of operating service.

The attraction of “lower price per gallon” has sometimes induced the use of lubricants that are physically incapable of bearing the strains of railway work.

The results secured are always the same—trouble, hot boxes and driving journals, carbonization in cylinders, constant renewal of cylinder packing, delays, repairs and heavy depreciation in equipment.

Compared with the small saving in the first cost of the oils, the additional expenses arising from the use of inferior lubricants makes the item insignificant—shows it in its true light in relation to actual or final cost of lubrication.

Recently a large railroad made a complete service check on refinery lubricants, claimed to be “good as Galena.” A full year’s test on locomotives and cars permitted the fairest and most thorough observance of the oil’s service qualities. At its conclusion Galena lubrication was adopted as being not only much more efficient, but for its ultimate economy.

Wherever similar tests have been made the results have been the same. Service provides the one reliable means of determining lubricating values. It registers the actual efficiency of lubricants and marks the distinction between “cost of oils” and “cost of lubrication.”

DUPONT-SIMPLEX STOKER

FUTURE locomotive progress is dependent on the development of efficient means of feeding the fire.

Railroad managements are earnestly striving for improved locomotive efficiency and economy.

Our purpose is to give the railroads of this country a locomotive stoker that is dependable in service and economical in the use of coal.

The DUPONT SIMPLEX STOKER merits the closest investigation of both mechanical and operating officials.

Foundries and Works, Erie, Pennsylvania.

A Vital Point for the Reader of this Paper

A B P STANDARD No. 1

"To consider FIRST the interests of the subscriber."

EVERY member of The A B P Inc., of which this paper is one, has subscribed to this and to *nine other* standards covering every department of publishing practice. The A B P label stands for all that is best in publishing; the things which make a business paper one of the essential working tools of the successful business or professional man.

In interpreting Standard No. 1 the constitution bars from membership papers of free circulation, publications which are owned directly or indirectly by an association or an advertiser; and in the words of the constitution itself,—member papers "must not be organs or mouthpieces of any house or combination of houses to further its or their special interest as against the joint interest of the trade or class."

This assures you of a paper without prejudice or bias; one which must be independent of any consideration other than the common welfare of its field.

Because such a paper must have a legitimate PAID circulation, its control is wholly in the hands of the sub-

scribers. The subscribers determine whether the paper shall live or die by giving or withholding their subscriptions.

This is not true of the paper with a circulation controlled by the ones who issue it; which goes to you whether or not it is needed or wanted. The obligation of such a paper necessarily is to its advertisers or whatever interests may be back of it.

The A B P type of paper *must* earn and deserve your approval,—you control its circulation, its life. It *must* render you adequate service; it *must* fight your just battles; it *must* deal fairly with every factor with due regard to the rights of other factors. Enlightened selfishness justifies the fullest support of such a publication.

Standard No. 1 is placed first because it IS first in our conception of publishing practice. Everything else is secondary to the main purpose of serving the subscriber with courage and unswerving fidelity.

The illustration above shows the famous No. 6000, the first of the great new Mountain type locomotives now being built for the Canadian National Railways. A total of 56 Mikado, Santa Fe, Consolidation and Mountain type locomotives on this road, including the No. 6000, are DUPLEX STOKER-fired.

Earning Power!

There is a marked difference between the *actual* and *potential* Earning Power of hand-fired locomotives, hauling capacity being restricted to the limited physical strength and endurance of the fireman.

This difference is wiped out when Duplex Stokers are applied.

Duplex Stoker-equipped locomotives can always be fired to capacity and consequently full potential hauling power is available under all weather and road conditions.

Hauling power determines Earning Power.

Increase your Earning Power by installing Duplex Stokers.

Mountain Type Locomotive, Canadian National Railways.

Prominent among the locomotives which the Canadian National Rys. have ordered this year, are the 16 mountain type being built by Canadian Locomotive Co., Kingston, Ont., which are the largest passenger ones in Canada. A large number of the details used in their construction are of C.N.R. standard design, and common to all of their large modern power. However, there are many new features necessarily introduced in the building of a new type with the dimensions and power of the mountain ones.

These locomotives are designated by the C.N.R. as the U-1-a class, road nos. 6000 to 6015. They have a total weight, without tender of 339,000 lb., weight on the drivers being 226,770 lb. The tractive power is 49,600 lb., and the factor of adhesion is, therefore, 4.5 The cylinders are 26 in. diameter by 30 in. stroke;

view of the size of these locomotives, and in order to take advantage of every means for efficient operation, they are equipped with mechanical stokers and feed water heaters, the boiler feed apparatus on the left hand side consisting of a pump, in connection with the feed water heater, and on the right hand side a Hancock type E. A. lifting injector of 3500 gal. capacity. The grates are of C.N.R. standard design, the rocking grate bars being of cast steel, and operated by Franklin power grate shakers.

The superheater used is the Robinson, one of the standard superheaters in England, but comparatively new on Canadian roads. It embodies many interesting features, prominent among these being the maintaining of steam in the superheater units at all times, this being calculated to lengthen the life of the

two systems, this arrangement giving a 3 point suspension. The equalization places approximately 57,300 lb. on engine truck; 226,770 lb. on drivers and 54,930 lb. on trailing truck.

The driving wheels are 73 in. diameter, with 66 in. centers of cast steel. The axles are 10 in. diameter at journals, except main journals, which are 12 in. diameter, and, due to weight consideration and in keeping with modern practice, are hollow bored.

The driving boxes are of cast steel, with bronze bearings and the boxes at the front pair of drivers are the Franklin lateral motion type, designed to compensate for the long wheel base necessary on large modern engines when taking curves. Franklin adjustable driving box wedges, and Franklin hard grease cellars are used throughout. A compara-

Mountain Type Locomotive, Canadian National Railways.

driving wheels 73 in. diameter, and boiler pressure 210 lb. The boiler is of the straight top radial stayed type, with a conical bottom, the largest course being 90 in. in diameter. The firebox proper is $84\frac{1}{4} \times 114\frac{1}{2}$ in. inside and the combustion chamber is $48\frac{1}{2}$ in. long. The boiler h.p., in percent of cylinder h.p., is 96.4%. There are $188-2\frac{1}{4}$ in. tubes and $40-5\frac{1}{2}$ in. flues; $22\frac{1}{4}$ ft. long, the flues being electric welded into back tube sheet, as per C.N.R. standard.

A feature of C.N.R. practice in crown staying, which has been followed on these boilers, is the alternation of successive groups of 4 transverse rows of crown stays, i.e., 4 rows of button head crown stays are succeeded by 4 rows of plain heads and so on alternately. This arrangement provides against the possibility of a boiler explosion, in the event of a burnt crown sheet, by reason of the sheet giving first at a point where stayed with plain head stays, and pulling down over some of these stays, at the same time, being held on either side by the button head stays, the pressure being relieved through the holes where the sheet comes over the plain heads. In

units.

The ash pans are of the C.N.R. standard hopper type, the location of the door hinges being such that the doors close of their own weight. An attachment, which is C.N.R. standard practice, and known as the ash pan sludge, is worthy of note. It consists of a $1\frac{1}{4}$ in. pipe from the delivery pipe of the inspirator to the ash pans, with valve operated from the cab, and a branch extending into each hopper. The arrangement is specially valuable, as it permits the direction of hot water into the pans to thaw them out, when the locomotives arrive at a terminal, in freezing weather, with pans partly filled.

The frames, with a single forward section, are of carbon steel, thoroughly annealed, rigidly braced with cast steel crosssties, and fitted with taper bolts throughout. The rear end is fitted with a Commonwealth cast steel cradle casting.

The equalizing system is of the usual type, the engine truck forming one system of equalization, while the 4 driving wheels on each side are equalized with the trailing truck, thus forming the other

tively new feature in connection with the driving boxes is the application of the Franklin driving box spreaders, a permanent casting fixed at the bottom of the box. It prevents any spring to the sides of the box, and makes the removal and repacking of grease cellars a very simple, as well as quick, operation.

The crosshead is fitted with the Rogatchoff adjustment, which permits the adjustment of the shoes to take up wear.

The crosshead guides and piston rods are of such length that the piston may be carried out clear of the front cylinder head, without disconnecting the piston rod from crosshead.

The engine truck is of the Commonwealth constant resistance 4-wheel type, equipped with Preston hub slip liners and Armstrong oilers. The wheels are $34\frac{1}{4}$ in. diameter, and have spoked steel centers 28 in. diameter, common to all C.N.R. modern passenger engines. The trailing truck is also of the Commonwealth constant resistance type, with 43 in. diameter wheels and 36 in. cast steel wheel centers.

Steam distribution is provided for by Walschaert valve gear, of modern de-

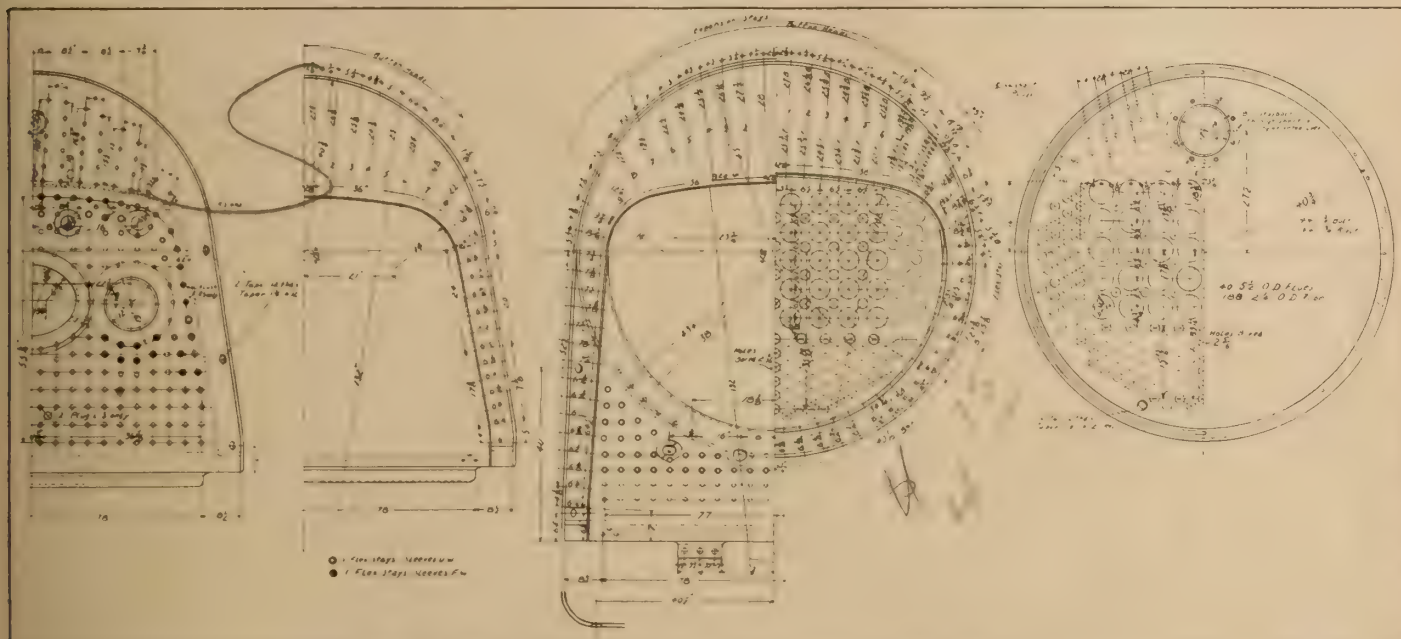

Elevation and Sections, Mountain Type Locomotives, Canadian National Railways.

sign. The diameter of the piston valve used is 14 in., and the valve setting is as follows:—Travel $6\frac{1}{2}$ in.; lap $1\frac{1}{2}$ in.; lead $\frac{1}{4}$ in.; exhaust clearance $\frac{1}{4}$ in.

The cylinders follow C.N.R. standard design, being equipped with railway standard by-pass valves, and 4 standard cylinder cocks to each cylinder, 2 being placed at the center of barrel and connected with a drain pipe from bottom of steam chest, this pipe being covered by the cylinder jacket, the 4th cock be-

lots of room for packing the operating valves, which are all of one standard design, entering the turret horizontally from the rear, with the valve seats at the front of the turret, 6 of the steam connections from the turret being taken from the front, these connections being fitted with a coupling nut, and tail piece, tapped to suit the several pipe sizes, thereby permitting the use of one size standard operating valve. These operating valves are fitted with extension

with a 14 in. Golden Glow reflector and C.M.S. focussing device, the cage body being no. 16 gauge copper, and C.N.R. standard separate number lamp case with sides oblique, this making for the maximum safety in operation, by reason of the easier and more certain identification of locomotive numbers. The water level indication is procured by the most modern method and consists of the C.N.R. standard water column, welded directly to back head of boiler and fitted

Boiler Sections, Mountain Type Locomotives, Canadian National Railways.

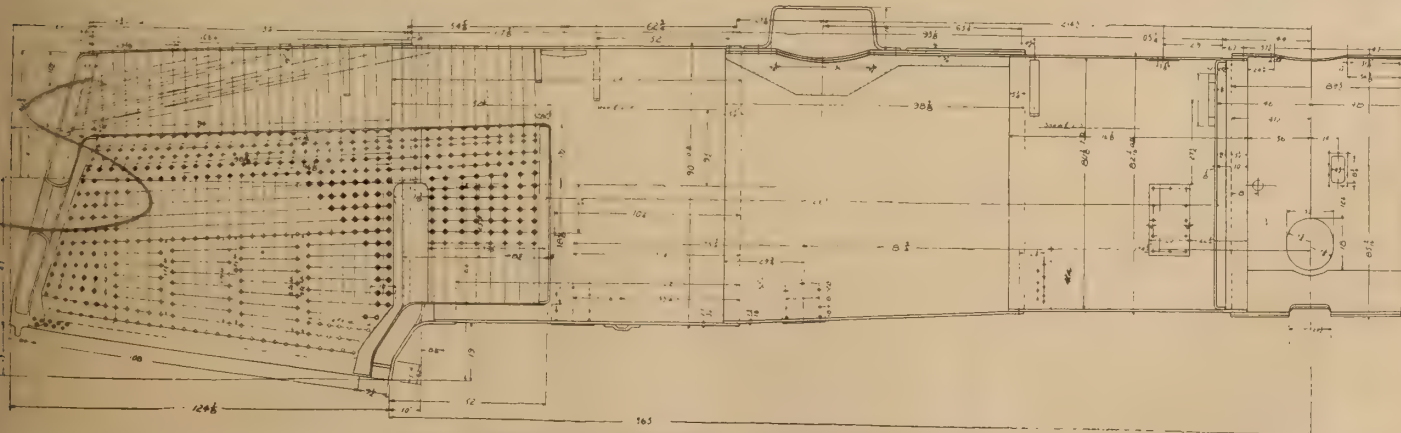

ing piped to the exhaust cavities which are drained from each quarter. All 8 cylinder cocks are operated in unison, by one set of levers. The cylinders are also equipped with the railway standard relief valve. The bottom of the cylinder casting is arranged so that the engine truck center plate is checked into it, thereby affording ample provision to withstand the thrust which this part is subjected to.

The cab is of the C.N.R. standard short

handles, carried into the cab and labelled. None of the valves are threaded into the turret, each one being secured with a cast steel flange, and 4 studs tapped into turret walls, bosses being provided inside turret, so that studs do not go all the way through. This eliminates any leaky threads in turret, as well as simplifying removal of the valves when necessary. Not only has the turret been placed outside the cab, but the inspirator, blower valves, and stoker engine valve, as well.

with C.N.R. standard try cocks and water glass fittings, the water glass being fitted with a special guard. The steamheat reducing valve is of the World Leslie type, and the piston and valve rod packing is King Metallic. The Franklin radial buffer and Unit safety bar are used between engine and tender, and Barco flexible joints are used between engine and the tender on the steam heat line.

The tender tank is of the water bottom type of C.N.R. standard design and con-

Boiler, Mountain Type Locomotives, Canadian National Railways.

vestibule type, which makes it possible to have almost all the short stays in sides of firebox, out clear of cab, the few that remain inside all being F.B.C. flexibles.

Great care has been given to the piping layout, and, as far as practical, it was laid out in the drawing room, rather than waiting for the first engine, as has usually been the case. The cast steel turret, with 8 outlets, has been placed outside 25 in. ahead of the cab, affording

This arrangement not only makes valves more accessible for packing, but removes the great danger of scalding, in case of a side-swipe, or similar accident, that would tend to burst steam pipes inside the cab.

The sand box is fitted with Hanlon sanders. Three World type safety valves are used, 1 muffled and 2 plain. The headlight equipment is made up of a Pyle National type K-2 turbo generator set, and Keystone type 1412 cage, fitted

struction, somewhat modified for the application of the Duplex mechanical stoker. The tank has a water capacity of 10,000 imp. gall. and coal capacity of 17 tons. The tender frame is of the Commonwealth cast steel type. Commonwealth 6-wheel tender trucks are used, with $5\frac{1}{2}$ x 10 in. journals. Flat side bearings are used, placed 52 in. apart both front and back.

The air brakes are Westinghouse no. 6 E.T., with $8\frac{1}{2}$ in. cross compound com-

pressor and S-5 governor. The pump is on the left side. There are 3 main reservoirs, 2 on right side and 1 on left side, with a total capacity of over 90,000 cu. in. The radiating pipe, connecting reservoirs and compressor, is so arranged as not to be visible, and is supported by cast iron brackets under the running boards. This radiating feature has been of good service in overcoming condensation, and consequent freezing, in low temperatures. The air brake piping on these locomotives has been given very careful study, which has resulted in a layout that is easy of access and of a very neat appearance.

The first of the locomotives, no. 6,000, was turned out of the works on May 31, and was taken to Montreal, where it was on exhibition for a few days, after which it was placed on exhibition in Toronto. Six of the locomotives will run between Montreal and Toronto, and 10 on the Atlantic Region.

Following are the chief details of the locomotives:—

Type	Mountain
Gauge	4 ft. 8½ in.
Type of cab	Vestibule
Fuel	Bituminous coal
Service	Passenger
Limiting height	15 ft. 3 in.
" width	10 ft. 8¾ in.
Weight in working order on drivers	226,770 lb.
" " " " " engine truck	57,300 lb.
" " " " " trailing truck	54,930 lb.
" " " " " total engine	339,000 lb.
" " " " " engine an tender	577,000 lb.
Wheelbase, rigid	19 ft. 6 in.
" engine	41 ft. 9 in.
" engine and tender	79 ft. 1¾ in.
Diameter of driving wheels	73 in.
Material of driving wheel centers	Cast steel
Leading truck wheels	34½ in. diam.; 28 in. spoked steel centers
Trailing truck wheels	43 in. diam.; 36 in. cast steel centers
Diam. and length of main driving journals	12 x 13 in.
Diam. and length of other driving journals	10 x 13 in.
Diam. and length of engine truck journals	6½ x 12 in.
Diam. and length of trailing truck journals	9 x 14 in.
Boiler, type	Radial stayed, with combustion chamber
Boiler, outside diam. first ring	90 in.
Boiler, working pressure	210 lb. per sq. in.
Tubes, number and diameter	188; 2¼ in.
Flues, number and diameter	40; 5½ in.
Length of tubes	49 ft. 6 in.
Combustion chamber, length	48½ in.
Heating surface, firebox and arch tubes	348 sq. ft.
Heating surface, tubes and flues	3731 sq. ft.
Heating surface, total	4079 sq. ft.
Superheating surface	332 sq. ft.
Firebox length and width	114½ x 84¼ in.
Grate area	66.7 sq. ft.
Valves, type	piston
Valve travel	6½ in.
Valves, diam.	14 in.
" lap and lead	Lap 1½ in.; lead ¼ in.
" exhaust lap or clearance	Clearance ¼ in.
Cylinders, stroke	30 in.
" diam.	26 in.
Tractive effort	49,600 lb.
Factor of adhesion	4.5
Boiler h.p. in % of cylinder h.p.	96.4
Special Equipment.	
Valve gear	Walschaert
Superheater	Robinson
Reverse gear	Franklin Precision
Stoker	Duplex
Injectors	Hancock type E, for 3,500 gal., right side only
Feedwater heater	Loco. Superheater Co.
Headlight equipment	Pyle National K-2 generator; Golden Glow reflector; C.M.S. focusing device
Engine truck	Commonwealth constant resistance
Trailing truck	Three World type
Safety valves	Westinghouse E.T. no. 6; S-5 governor; 8½ in. cross-compound compressor
Frames, material	Annealed carbon steel
Firedoor	Franklin clamshell
Driving box wedges	Franklin adjustable
Grate shakers	Franklin
Driving boxes	Cast Steel;
" Franklin lateral motion at leading drivers	
Oilers	Armstrong
Crosshead adjustment device	Rogatchoff
Sanders	Hanlon
Steam heat reducing valve	World Leslie
Packing	King metallic
Radial buffer	Franklin

Steam heat connections	Barco
Air bell ringer	Taylor & Arnold
Blow off cocks	Okadee
Tender	
Weight in working order	238,000 lb.
Capacity of tank	10,000 imp. gal.
Style of tank	Water bottom
Coal capacity	17 tons
Trucks, type	Commonwealth 6-wheel
Tender frame	Commonwealth cast steel
" wheels, type	
" Semi-steel center with steel tires	
" wheels, diam.	34½ in.
Journals, diam. and length	5½ x 10 in.

The Gaspé Peninsula Railway Situation.

A conference was held in the House of Commons, Speaker's chambers, recently with Sir Henry Thornton, President Canadian National Rys., with respect to the possibility of improving the service on the Quebec Oriental Ry. and the Atlantic, Quebec & Western Ry., which extend from Matapedia, on the junction of Intercolonial Ry., to Gaspé, Que. The position of the railways, details of the service at present given, and information as to the resources of the country were presented by Speaker Lemieux, who is M.P. for Gaspé, and C. Marcel, M.P. for Bonaventure. Sir Henry Thornton is reported to have said it would be best for him to discuss the matter with E. B. Reed, Chairman of the company controlling the lines, who was expected in Canada shortly thereafter.

Mr. Speaker Lemieux has advised Canadian Railway and Marine World that, as a result of the conference referred to above, W. D. Robb, one of the Canadian National vice presidents, has been instructed to survey the whole railway situation in the Gaspé district and to report thereon.

Canada Colonization Association Reorganized.—At a meeting of the re-organized directorate of the Association in Winnipeg, June 8, Sir Augustus Nanton, director, C.P.R., was elected President, and E. A. Field, Land Commissioner, Canadian National Rys., was elected Vice President. The directorate consists of members representing the Dominion Government, the Canadian Pacific and the Canadian National Railways. The C.P.R. is represented by D. C. Coleman, Vice-President, Western Lines, Winnipeg; J. S. Dennis, Chief Commissioner of Colonization and Development, Montreal; and P. L. Naismith, Manager, Department of Natural Resources, Calgary; the Canadian National Rys. are represented by W. D. Robb, Vice President, Insurance, Colonization, etc., Montreal; A. E. Warren, General Manager, Western Region, Winnipeg; E. A. Field, Land Commissioner; and A. A. Tisdale, Assistant to General Manager, Western Region, Winnipeg. The President and Vice President, with Messrs. Coleman, Warren and Field, and one of the Dominion Government directors, was appointed as an executive committee to deal with matters arising between meetings of the full board.

Disregarding Signals.—Among those who heard their country's call to "do their bit" at farming was a retired brakeman. He was ploughing up a piece of new land with a team, and had the reins fastened around his waist. Presently he saw a stump ahead, and instinctively he began waving the railway "stop" signal with both hands. The plough struck the stump and the brakeman went head over heels. Picking himself up, he shook his fist at the horses and roared: "You fools, don't you ever look back for a signal?"

Correspondence with C.N.R. Officers, Etc., Asked for.

Sir Henry Drayton, West York, Ont., moved in the House of Commons, recently, for: 1. A copy of all papers, correspondence, letters, documents, or other writings of any kind since Dec. 31, 1921, passing between (a) members of the Government or officials of the departments of the Government and the Canadian National Ry. Co., or Canadian Northern Ry. Co., or any other railway company owned by Canada or any of their officials; (b) members of Parliament and the Canadian National Ry. Co., or Canadian Northern Ry. Co., or any other railway owned by Canada or any of their officials. 2. A copy of all papers, correspondence, letters, documents, or writings of any kind between members of the Government and the late directors of the Canadian National Ry. Co., relative to the resignation of such directors. 3. A copy of all papers, correspondence, letters, documents, or writings of any kind between members of the Government or officials of the Government and the late directors of the Grand Trunk Ry. Co., relative to the resignation of such directors." The following discussion ensued:—

Hon. G. P. Graham, acting Minister of Railways: "It would take considerable time to get the returns asked for, the details of which, perhaps, my hon. friend has not fully considered. With regard to paragraphs 2 and 3 there would be no objection, but to get the information asked for in sub-section "b" of paragraph 1 would mean going into the files from every roadmaster up to the highest official. It would take a good many weeks to do this and would cost a good deal of money. My hon. friend might confine his question to something more definite."

Sir Henry Drayton: "We certainly do not want the Government to go to roadmasters or do anything of that kind. From our experience the return would not be very long."

Mr. Graham: "I cannot agree with that."

Sir Henry Drayton: "So far as I know, there was very little correspondence before the date referred to. It is only for the year. I do not want my friend, of course, to refer to the sectionmen and similar grades; his officers are quite sufficient."

Mr. Graham: "I understand my hon. friend will allow the use of the word 'officers' instead of officials. I understand from his explanation that he does not mean to go down the line."

Sir Henry Drayton: "It would be covered by using the words, 'officers and directors.'"

The Deputy Speaker: "The motion will be amended by using the words 'officers and directors' instead of the word 'officials.'"

Motion agreed to as amended.

Editor's Note:—Sir Henry was certainly astray in asking for correspondence, etc., with "the late directors of the Canadian National Ry. Co.," as there were no directors of that company until Oct. 4, 1922, when Sir Henry Thornton and others were appointed. The late directors, i.e., D. B. Hanna and his colleagues, were directors of the Canadian Northern Ry. Co., who were given power by order in council to also manage the Canadian Government Rys., and the Grand Trunk Pacific Ry.

Railway Operating Revenues, Expenses and Other Statistics for March.

The following comparative table for March, 1923 and 1922, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There has been no change in the roads operating, but the 1922 figures, given in the reports this year, include certain revisions, and are not in all cases the same as reported in 1922.

The column headed "Canadian National" gives the figures for the combined steam railways in Canada, under the

Canadian National Ry. Co.'s directors' management, including the former Canadian Northern System, the Intercolonial, Prince Edward Island, National Transcontinental and other Canadian Government Rys., the Hudson Bay Ry. and the Grand Trunk Ry. of Canada and the Grand Trunk Pacific Ry. It includes all G.T.R. lines in Canada and 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, nor lines west of the Detroit and St. Clair Rivers.

The column headed "Canadian Pacific"

includes also the Montreal & Atlantic and Esquimalt & Nanaimo Rys.

The items under side headings 1 to 6, inclusive, include rail lines only and not water lines. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, baggage, parlor cars, etc.

Operating Revenues	All Railways.		Canadian National.		Canadian Pacific.	
	1923	1922	1923	1922	1923	1922

The New Brunswick Ry. Co., which owns about 1,600,000 acres of forest land in New Brunswick, is reported to have arranged to reseed the burned over areas and so keep the lands in forest in perpetuity.

C.P.R.'s Winnipeg Telephone Exchange.—The C.P.R.'s private telephone exchange in Winnipeg, which connects all its departments, except the telegraph department, which has a separate exchange, was transferred from manual to

automatic operation, June 17. An attendant is in charge of the exchange continuously, which is reached by calling the general number N. 430 of the city system. Over 300 lines were affected by the change.

Railway Operating Revenues, Expenses and Other Statistics.

The table on the preceding page gives the gross earnings, operating expenses, net earnings or deficits, and other operating statistics for Canadian railways as a whole for March, compared with March 1922, and separately for the Canadian National and Canadian Pacific Railways. Tables on another page give the results secured by the Canadian National, Canadian Pacific and Grand Trunk Railways in April. A study of these tables bears out the statements made in our June number concerning the unfavorable results secured in March, but demonstrates that a substantial improvement was made in April.

In March, the railways as a whole experienced a decrease in gross revenue of \$188,143, compared with March 1922, and operating expenses increased \$1,453,686. The decrease in gross earnings arose from decreases in revenue from all of the chief branches of the service, except passenger, viz., freight, express and mail, the only increases being in passenger revenue and in relatively unimportant items. Operating expenses increased 4.8%; maintenance of way expenses 5% and transportation expenses 6%. The payroll for the month was 7% more than in March 1922, and the number of employees was 12.7% more. The result of the decrease in gross earnings and the increase in operating expense was a decrease of \$1,641,829 in net, and an increase in operating ratio of from 89.52 in March 1922 to 94.3, bringing about a large decrease in the operating income. The increase in tax accruals and in the hire of equipment credit are both worthy of note.

The freight traffic statistics for all roads show that while the number of tons of revenue freight carried during March 1923 was somewhat greater than in March 1922, the number of ton miles handled was somewhat less, which is explained, of course, by the large decrease in the average freight haul. The decrease in revenue from freight service, compared with March 1922, was due only partly to the falling off in ton mileage handled, however, as the average receipt per revenue ton mile was slightly less than in March 1922.

In March, as in January and February, passenger traffic was heavier than in the corresponding month of 1922. Not only was there a greater number of revenue passengers handled in March 1923, than in March 1922, but the average journey was greater, resulting in a substantial increase in revenue passenger miles. The increase, while resulting in increased passenger earnings, was not wholly reflected therein, owing to a reduction in the average receipt per revenue passenger mile.

An examination of operating statistics shows that, while the number of ton miles of revenue freight handled was smaller than in March 1922, the number of loaded freight car miles recorded was greater. While the average number of loaded freight cars per train was greater than in March 1922, the average car loading was 0.7 tons a car less, resulting in a substantial decrease in the average revenue train load. There was a gratifying reduction in the total empty freight car mileage operated, which is confirmed by the figure covering the average number of empties per train. The number of

passenger train car miles did not increase in undue proportion to the revenue passenger mileage, and increased average passenger journey served to keep down the passenger train mileage in relation to fact of there being a decrease in the number of cars per passenger train and a very slight increase only in the average number of passengers per car.

A new set of figures is introduced in the table covering March operations, viz., averages per day per mile of road operated. These figures were given formerly on a monthly basis, but on the daily basis a better unit of comparison is presented. The figures for March, taken by themselves, serve to convey quickly, an idea of the business handled by the roads during the month, and with what results.

Just how poor a month March was for the National system is shown by the figures for it alone. While in March 1922 the Government roads just about broke even, the operating ratio being 100.9, this year the March operating ratio rose to 107.66. Despite an increase in passenger traffic of 14.7%, and in passenger traffic revenue of 13.8%, the 2.5% decrease in freight revenue, and the 7.4% increase in expenses, combined to bring about the unfavorable result noted. The decrease in average car loading was 0.7 tons, but train loading was slightly heavier; a decreased movement of grain in March this year probably prevented a better trainload increase being recorded.

Although the C.P.R.'s March operating ratio was much better than in February, it was substantially larger than in March 1922. Freight traffic revenue decreased 7.7%; so that while passenger traffic revenue was 4.5% greater than in March 1922, total revenue was 4% smaller, and this, in combination with a 1.6% increase in operating expenses, caused the increased operating ratio.

There is no doubt that, for all roads, the unfavorable weather experienced in March was largely responsible for the falling off in average train loading, and the high level of operating expenses.

The April results were much more encouraging than in March. The C.P.R. gross earnings for April were \$13,651,494, or \$1,320,123 more than in April 1922; operating expenses, \$11,700,615, were but \$918,017 greater, which resulted in the net earnings for the month, \$1,950,879, being \$402,107 more than in April 1922. As was pointed out in our June number, the decreases in net suffered by the C.P.R. in February and March, compared with Feb. and March, 1922, wiped out the increase in net in January, but the increase in April places the net earnings for the first four months of the year ahead of the net secured in the first four months of 1922 by \$38,868.

The entire National system's gross revenues, for steam lines only, for April, were \$20,946,396, compared with \$15,162,081 in April 1922. Operating expenses were \$18,729,202, compared with \$16,132,644, leaving net earnings \$2,217,194, compared with an operating deficit in April 1922 of \$970,563. The G.T.R.'s gross earnings for April were \$10,838,158 compared with \$6,803,191 in April 1922, and operating expenses were \$7,763,879 compared with \$6,500,652, leaving net earnings of \$3,074,279, compared with \$302,539. The operating ratio in April

1923 was 71.63, compared with 95.55 in April 1922. In the first four months of 1923, the G.T.R. had an operating ratio of 84.28, and net earnings of \$5,909,049, while in the first four months of 1922 the operating ratio was 90.39 and the net earnings \$2,903,493.

The foregoing shows that with favorable weather conditions and a continuation of the heavy traffic movement, the railways accomplished quite a substantial improvement. Taking the C.P.R. as the standard, it is evident that returns are at least keeping up to the mark set last year. This is in itself, however, no argument for those who apparently still cherish the hope that the railways are in a position to make substantial rate reductions. It must be borne in mind that there is a lot of ground to be covered yet before railway operation is back on the same plane that it occupied before the inflation period, and rate reductions of consequence will not be in order until more progress toward a better operating ratio than yet obtained has been made.

Freight Car Conditions and Supply.

The Railway Association of Canada reports that on June 1 there were 196,419 freight cars on Canadian lines, of which 15,139 were in bad order. The A.R.A. allowance, on a 7% basis, works out to 13,748 allowable bad order cars, so that the excess number over the A.R.A. figure was 1,390. The actual bad order percentage was 7.7, compared with 7.4% at May 1. A shortage of 350 cars at June 1 was reported, compared with a shortage of 1,360 at May 1.

The American Railway Association's Car Service Division reports that on May 15 there were 2,251,813 freight cars on U.S. class 1 roads, of which 210,243 were in bad order, this representing a percentage of 9.3, compared with 9.2 on May 1. Out of 1,024,695 box cars, 90,365, or 8.8%; out of 61,098 refrigerator cars, 7,184, or 11.8%; out of 948,354 gondolas, 93,293, or 9.8%; out of 81,466 stock cars, 8,198, or 10.1%, and out of 94,272 flat cars, 8,027, or 8.5%, were in bad order. At May 23 the U.S. class 1 roads reported a shortage of 3,973 box cars, 14,620 coal cars, and 20,585 freight cars of all kinds, including box and coal cars.

Adjustment of Brake Power on Tank Cars.—The American Railway Association, Mechanical Division, has issued the following circular:—Request has been received from a majority of the owners and operators of tank cars for an extension of the effective date for complying with the provisions of circular S. III-11, issued May 15, 1919, and the tank car specifications for the adjustment of brake power on existing cars. It is stated that this request is due to the general business conditions prevailing for some time, and also to the fact that so many of the cars were scattered throughout the country, many of them having been stored on railway sidings, making it difficult, if not impracticable, for the owners to complete the work in the time limit set, which is July 1, 1923. This request has been granted by the general committee. The effective date for complying with the requirement of the tank car specifications in the matter of adjustment of brake power on existing tank cars is extended to July 1, 1924.

Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allen, Vice President, The Holden Co., Montreal, formerly Master Mechanic, Timiskaming & Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. M. Bannerman, Superintendent of Investigation, Western Region, Canadian National Rys., Winnipeg, born at Poplar Point, Man., July 16, 1870.

W. E. Barnes, Superintendent of Motive Power, Maritime District, Canadian National Rys., Moncton, N.B., born at Shediac, N.B., July 24, 1879.

J. H. Black, ex-Superintendent, Timiskaming & Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

C. E. Brooks, Chief of Motive Power, Canadian National Rys., Montreal, born at Constantinople, Turkey, July 3, 1886.

D'Alton C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

G. C. Conn, ex-Freight Traffic Manager, Pere Marquette Rd., Detroit, Mich., now Director of Traffic, Buick Motor Co., Flint, Mich., born at Woburn, Mass., July 1, 1867.

C. D. Cowie, Assistant to Vice President of Finance, Canadian National Rys., Montreal, born at Insh, Aberdeenshire, Scotland, July 25, 1887.

A. R. Curran, Paymaster, Central Region, Canadian National Rys., Toronto, born there, July 3, 1877.

H. Darling, Locomotive Foreman, Canadian National Rys., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

A. H. Eager, General Superintendent, Motive Power and Car Equipment, Western Region, Canadian National Rys., Winnipeg, born at Waterloo, Que., July 15, 1868.

Otis Grant, Superintendent, Leaside shops, Canadian National Rys., Leaside, Ont., born at McAdam Jct., N.B., July 13, 1869.

F. E. Hartshorn, Assistant Superintendent, Montreal Division, Quebec District, Canadian National Rys., Montreal, born at West Stewartstown, N.H., July 21, 1877.

S. J. Hungerford, Vice President, Operation and Construction Departments, Canadian National Rys., Montreal, born at Bedford, Que., July 16, 1872.

C. W. Johnston, Passenger Traffic Manager, Canadian National Rys., Montreal, born at Actonvale, Que., July 27, 1879.

M. Kelly, Division Engineer, Toronto Terminals, Ontario District, C.P.R., Toronto, born at Thamesville, Ont., July 6, 1878.

T. King, Superintendent, Detroit Division, Michigan District, Canadian National Rys., Durand, Mich., born at Dunbarton, Ont., July 18, 1869.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

W. B. Logan, General Storekeeper, Atlantic Region, Canadian National Rys., Moncton, N.B., born at Amherst, N.S., July 30, 1869.

G. A. McNicholl, General Passenger Agent, Jasper, Alta., and west, Western Region, Canadian National Rys., and Grand Trunk Pacific Coast Steamship Co.,

Vancouver, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, Master Mechanic, Canadian National Rys., Edmundston, N.B., born at Churchville, N.S., July 22, 1864.

M. H. MacLeod, Consulting Officer to the Executive, Canadian National Rys., Toronto, born in Skye, Inverness-shire, Scotland, July 13, 1857.

R. G. McNeillie, General Passenger Agent, Field, Kootenay Landing and east, Western Lines, C.P.R., Winnipeg, born at Lindsay, Ont., July 1, 1883.

J. M. Macrae, Assistant General Freight Agent, Western Region, Canadian National Rys., Winnipeg, born at Stornoway, Scotland, July 31, 1884.

W. G. Manders, Freight Traffic Manager, Western Region, Canadian National Rys., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

Neil Marple, Foreman Blacksmiths and Iron Machines, Michigan Central Rd., St. July 1, 1860.

J. E. Morazain, General Superintendent, Thomas, Ont., born in McKillop Tp., Ont., ent, Quebec District, Canadian National Rys., Quebec, born at Wheatland, Que., July 31, 1875.

P. C. Perry, Division Engineer, Canadian National Rys., Regina, Sask., born at Fort William, Ont., July 27, 1889.

R. E. Perry, Manager, Traffic Bureau, Atlantic and Central Regions, Canadian National Rys., Montreal, born at Drayton, Ont., July 5, 1876.

R. Preston, Superintendent of Motive Power, Eastern Lines, C.P.R., Montreal, born at Toronto, July 28, 1863.

C. J. Quantic, Superintendent of Motive Power and Car Equipment, British Columbia District, Canadian National Rys., Vancouver, B.C., born at Erin, Ont., July 18, 1882.

Gerard Ruel, K.C., Vice President and General Counsel, Canadian National Rys., Montreal, born at St. John, N.B., July 5, 1866.

Capt. J. Springett, Agent for Holland, C.P.R., Rotterdam, born at Eastbourne, Eng., July 20, 1879.

George Stephen, Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Montreal, July 5, 1876.

Sir Thos. Tait, President, Fredericton & Grand Lake Ry. & Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

M. M. Todd, Vice President and Treasurer, Grand River Ry. and Lake Erie & Northern Ry., Galt, Ont., born there, July 22, 1891.

H. B. Walkem, ex-Assistant Engineer, C.P.R., Vancouver, now at Port Haney, B.C., born at Montreal, July 31, 1858.

G. A. Walton, General Passenger Agent, Eastern Lines, C.P.R., Montreal, born there, July 17, 1881.

N. B. Walton, Assistant General Superintendent, Smithers Division, British Columbia District, Canadian National Rys., Prince Rupert, B.C., born at Palmerston, Ont., July 27, 1884.

S. B. Wass, Construction Engineer, Neebing terminal yard, Canadian National Rys., Fort William, Ont., born in Perth County, Ont., July 11, 1880.

Railway Lands Patented.—Letters patent were issued during May for Dominion railway lands, in Manitoba, Saskatchewan, Alberta and British Columbia, as follows,—Canadian Northern Ry. 22,279.96 acres; and Nicola, Kamloops and Similkameen Ry., 8.71 acres.

Transportation Events of Twenty-five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for July 1898.

Sir Wm. Van Horne returned to Montreal from Europe.

Wheat carried from Fort William to Prescott, Ont., at 2½c a bushel.

Survey completed for C.P.R., Toronto-Sudbury line, by H. D. Lumsden.

Combined dining and restaurant cars on Intercolonial Ry., proved unsuccessful.

Yarmouth Steamship Co. placed s.s. Express on Halifax-Yarmouth, N.S. route.

G.T.R. competed with C.P.R., in harvesters excursions to the northwest, for the first time.

T. H. White appointed Chief Engineer, Ontario and Rainy River Ry., by Mackenzie & Mann.

Alfred Price, Chief Dispatcher & Car Distributor, C.P.R., Toronto, appointed Superintendent there.

Newfoundland Transinsular Railway completed. First through train made the 548 miles in 24 hours.

Position of Traffic Manager, Canadian Government Rys., at Montreal, held by A. H. Harris, abolished.

C.P.R. let contract for standardizing Columbia and Western Ry. gauge, between Traill and Leroy, B.C.

A majority of Manitoba and Northwestern Ry. bonds bought by syndicate, headed by E. B. Osler, Toronto.

Richelieu & Ontario Navigation Co's steamship Toronto, to run between Toronto and Prescott, Ont., launched at Toronto.

St. Catharines and Niagara Central Ry. from St. Catharines to Clifton, Ont., sold to G. M. Neelon, for \$35,000, subject to liens.

Semi-Centennial of G.T.R., from Portland to Yarmouth, Me., originally Atlantic & St. Lawrence Ry., celebrated at Portland, July 4.

G.T.R. appointments:—J. M. Herbert, General Superintendent, Eastern Division, Montreal; W. Cotter, General Superintendent, Western Division, Detroit, Mich.; J. E. Dalrymple, Assistant to General Traffic Manager, transferred from Montreal to Toronto, temporarily, to act as Divisional Freight Agent during Arthur White's absence owing to illness.

Ontario Traffic Service Co. Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital, and offices at Windsor, Ont., to act as general traffic manager; to advise in all matters relating to railway freight bills, rail and other shipping rates, classification of matter, manner of packing and shipping, and all other matters pertaining to the transportation of freight; to audit freight bills and demurrage accounts; to adjust claims for loss or damage of freight, and to do any other work incidental to the transportation of freight. The provisional directors are: W. E. Addyman, Herbert Baker, Windsor, Ont.; R. Wood, Detroit, Mich., described as traffic managers; and G. A. Scott, accountant, Windsor.

Great Britain's Fast Trains.—A London, Eng., cable states that the British railway companies have speeded up their trains for the summer traffic, and that several 80 miles an hour trains are being operated. Pullman car service is being extended, and other improvements are being introduced.

Railway Wages and Working Conditions in Canada and the United States.

The Railway Association of Canada has received notice from the American Federation of Labor's Railway Employees' Department, Division 4, the membership of which is made up of shopmen employed on Canadian railways, of a desire to re-open wage and working condition negotiations with the Association's wage committee. Wage and working condition disputes between the railways and their shop employees were prominent last summer, and full details of them were given in Canadian Railway and Marine World and of the formation of conciliation boards under the Lemieux Act, and the final settlement. The shopmen's agreement provides that negotiations may be re-opened on 30 days notice being given by either the railways or the shopmen; and such notice was given by the latter about June 10, simply stating that it was desired to discuss the revision of certain rules, and wage rates, the exact demands to be presented not being mentioned. It is expected, however, that the shopmen will want changes in the present rules governing overtime and Sunday work, in addition to increases in wages. Some 35,000 men are affected. The shopmen's wage schedule committee was summoned to Montreal on June 12, to formulate the demands to be presented to the Association.

As stated in our June issue, the maintenance of way employees on Canadian railways gave the required 60 days notification of their desire to re-open wage and working condition negotiations with the Railway Association. Discussion on this application will begin in the near future.

Delegates from numerous local lodges of the Railway Carmen of America, and general officers of that organization, met in Montreal during the latter part of May. Schedule negotiations of the past few years were reviewed and future policies discussed. Frank McKenna, Vice President of the organization, and also Vice President of the American Federation of Labor's Railway Employees' Department, Division 4, was re-elected Chairman of the C.P.R. carmen's joint protective board.

U.S. Situation.—B. W. Hooper, former Governor of Tennessee, has been re-elected Chairman of the U. S. Railroad Labor Board, and G. W. W. Hanger has been re-elected Vice Chairman. Both are members of the public group of the Board, which is composed of three railway members, three public members, and three members representing railway labor.

Proceedings in the maintenance of way employees' application for increased wage rates began before the U.S. Railroad Labor Board in Chicago on June 11. The increases asked range from 8c to 15c an hour, and are as follows per hour: shop foremen and assistant foremen, 15c; section foremen and assistants, 11c; mechanics, 14c; mechanics' helpers, 8½c; trackmen, 15c; track and shop laborers and watchmen, 11½c. The application affects over 100,000 employees, and, if granted in full, would increase the annual payroll over \$25,000,000. When the petition was first filed with the Board, 30 roads were concerned, but, prior to June 11, six of them had come to direct settlement with their men, viz., Chicago &

Northwestern; Chicago, Milwaukee & St. Paul; Missouri Pacific; Illinois Central; Kansas, Oklahoma & Gulf; San Antonio & Aransas Pass. Most of the lines granted wage increases averaging 3c to 4c an hour; on the C. & N. W., for example, bridge and building foremen received increases ranging from \$2.50 to \$12.50 a month; section foremen \$5 a month; assistant foremen, 5c an hour, and mechanics and laborers, from 1c to 4c an hour. Among the 24 remaining roads which appeared as defendants at the June 11 hearings, were the Chicago Great Western; Chicago, St. Paul, Minneapolis & Omaha; Denver and Rio Grande Western; Pennsylvania; Southern Pacific; Louisville & Nashville, and the Western Pacific. The employees' representatives were first heard, their argument being to the effect that living costs were increasing, that employees in outside industries had received wage increases, and that therefore maintenance employees should receive increases. They also brought up the "living wage" theory, which has figured prominently in past proceedings before the Board.

Numerous roads in the U.S. have recently granted small increases to various classes, the most notable being the Northern Pacific's increases to maintenance men, as follows: bridge and building foremen and assistants, \$10 a month; fence gang foremen, section foremen and assistants, \$6.84 a month; mechanics, 3¼c an hour; track laborers, 2c an hour, and track, bridge and tunnel watchmen, 2c an hour. The Philadelphia & Reading has granted clerical employees an increase of 3c an hour, and the Wabash has granted increases as follows: section foremen, \$4 to \$17 a month; mechanics, 4c to 9c an hour, and laborers, ½c to 4c an hour.

Freight Car Location on Canadian Railways.

The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on June 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, as follows: number of cars owned, 210,339; home cars on Canadian foreign lines, 11,696; home cars on U.S. lines, 46,627; home cars on home roads, 151,816; Canadian owned foreign cars on home lines, 8,451; U.S. owned foreign cars on home lines, 36,152; total cars on lines, 196,419; per cent on lines to total owned, 93.4; deficiency on lines to total owned, 13,920; home cars in bad order, 15,597; foreign cars in bad order, 542; total cars in bad order, 15,139; per cent in bad order, 7.7; privately-owned U.S. cars on lines, 2,563; privately-owned Canadian cars on lines, 987.

The C.P.R. ticket and telegraph offices in the Y.M.C.A. Building, Moncton, N.B., will, a press report states, be moved on July 1, to the Empress Block.

British Columbia and Alberta Freight Rate Equalization.

Full information about British Columbia's, and, latterly, Alberta's, appeal to the Dominion Cabinet from the Board of Railway Commissioners' judgment in the freight rates equalization case, was given in preceding issues of Canadian Railway and Marine World, to the point where the Government decided to postpone the hearing until the termination of the present parliamentary session. A Winnipeg press report of June 11 quoted G. G. McGeer, counsel for British Columbia, as authority for the statement that July 9 has been tentatively set as the date for the hearing at Ottawa, and went on to say: "Something in the nature of a surprise was the receipt of an amended appeal in which British Columbia and Alberta, through their Attorneys General, petition the Government jointly for equalization. It had been understood previously that the Alberta Government was supporting British Columbia in some phases of its application, but it was never anticipated the two governments would issue a joint appeal. Alberta goes even further than British Columbia in its application, and asks for equalization, on a mileage basis, of all commodity rates between the east and the west. British Columbia has always enjoyed lower rates on certain commodities shipped across Canada in competition with water transportation, and Alberta is now asking that these rates be equalized.

If the last part of the report quoted is correct, it would appear that the Alberta Government is asking the Dominion Cabinet to abrogate a principle on which the Board of Railway Commissioners has based many decisions, i.e., that a railway may put in lower than standard rates, to meet water competition, without being guilty of discrimination. Rates from Eastern Canada to the Pacific coast, to meet water competition, are such, and a demand for equalization of westbound rates as between B.C. coast and interior points is that the introduction of a water-compelled rate be considered discriminatory, and is, further, one that could not be granted without producing a real upheaval in rate structures, if the principle necessarily introduced were applied throughout the country. The more one considers the possibilities in connection with sectional rate reduction demands and appeals to governments, the more is one seized of the importance of leaving rate regulation where it belongs, viz., with the Board of Railway Commissioners.

Flood Damages in Manitoba and Alberta.—Further heavy rainstorms are reported to have done considerable damage to the Canadian National Rys. in Manitoba, the most serious damage being on the Winnipeg-Verdun line, where 12 bridges are reported to have been carried away on June 2, between Dunrea and Margaret, a distance of 6 miles. The rainfall appears also to have been exceptionally heavy at the end of May and the beginning of June in Southern Alberta, and to have caused washouts on the C.P.R. Crowsnest pass line, bringing about the suspension of traffic for several days. The flooding and damage in other districts of southern Alberta, is reported have caused the Trans-Canada and Imperial Limited trains to be detoured through Lethbridge on June 1.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Tracks.—The question of the C.P.R. tracks on Germain St. West, St. John, N.B., came before the city council there, June 9, J. M. Woodman, General Superintendent, and C. C. Kirby, District Engineer, being present. It was stated that under an agreement between the Dominion Government, the city and the C.P.R., the Government planned certain reclamation work which would have enabled the C.P.R. to remove the tracks from Germain St. West, but this work had not been done. The tracks could not be removed without doing a considerable injury to the business of the port, and the property owners were entitled to consideration. The only solution of the difficulty, it was stated, was to press the Government to complete the reclamation work. The matter will be looked into to see if some temporary relief can be provided for the property owners.

Fredericton Station.—A press report states that a contract has been let to Rhodes, Curry & Co., Amherst, N.S., for the erection of a new station at Fredericton, N.B.

Shawinigan Falls Embankment Protection.—We are officially advised that a contract has been let to the Grenville Constructed Rock Co., Montreal, for putting in rip-rap near Shawinigan Falls, Que., between miles 13 and 15, on the St. Maurice Subdivision, Quebec District. The object is to reinforce the embankments and to protect the railway's property from the action of water, which, on the completion of a power development project in the vicinity of La Gabelle, will be raised so that it will back up against the railway embankments. About 90,000 cubic yards of rock will be used in the work, which is expected to be completed by Sept. 30.

Interprovincial & James Bay Ry.—The Board of Railway Commissioners has authorized the building of bridge 62.5 over Windfall Creek, Baby Tp., Que., on the line under construction to the Quinze River and that grading has been done considerably farther.

Rouyn Goldfields.—A press report states that, as a result of a conference between members of the Quebec Government and C.P.R. officials, an investigation will be made of the Rouyn gold mining area, to decide whether it would be advisable to extend the Interprovincial & James Bay Ry., now nearly completed, to the Quinze River, a further distance of 40 miles to the center of the Rouyn district. The Quebec Government is building highways into the district, and is said to have promised to co-operate in building a railway if investigations show that it would be justified. As stated in Canadian Railway and Marine World for May, we were officially advised in April that there was no foundation for press reports that the C.P.R. was making a survey for a branch, from some point on the extension of the Interprovincial & James Bay Ry. to the Quinze Falls, into the Rouyn mining area, and that we were advised that the terminus of the line would be at the Quinze River, from which point it was expected that a connection will be given to the Rouyn area by steamboat via Lake des Quinze, Lake Expance, Ottawa River and Kenogewis River, also that this steamboat service would be operated from Gillis Bay, instead of from the outlet of Quinze Lake,

and would be independent of the railway.

Buells Creek Bridge.—The Board of Railway Commissioners has authorized the replacement of the skew half-deck plate girder span at bridge 1.3, Buells Creek, Brockville Subdivision, Ontario District.

Timiskaming Subdivision Bridge.—The Board of Railway Commissioners has authorized the removal of the timber trestle at bridge 26.5, Timiskaming Subdivision, Algoma District, and replacing it by a second hand 40-ft. deck plate girder span, removed from another point.

Rosetown Southeasterly Branch.—In 1919 the Dominion Parliament authorized the construction of a branch southerly from Rosetown, Sask., for 50 miles, and thence easterly for 30 miles, and a location survey was made in the same year. Grading was started in 1920, about 20 miles south of Rosetown, and was completed for 45 miles by the end of 1921, a portion of this being on a revised location. The section of the former location from Rosetown to mile 20.2 is to be abandoned, and the line will be linked up with the Mildren-Empress line, now under construction. The section from mile 20.2 southerly, which has been graded, is to be completed this year. The revised location joins with the originally approved location at mile 59.8, which is continued easterly to the bank of the South Saskatchewan River.

Kipp-Retlaw Line.—The location survey of this projected line from Kipp, Alta., 8 miles west of Lethbridge, northerly and easterly to Retlaw, mile 57 on the line from Suffield to Lomond, shows a total length of 39.71 miles. Some grading has been done, and it is proposed to carry the work on to the crossing of the Little Bow River, about mile 26, this year.

Wymark-Archive Line.—The location surveys for the line from Wymark to Archive to link up the Swift Current Southeasterly Branch, with the Moose Jaw Southwesterly Branch, authorized by the Dominion Parliament in 1919, shows a total length of a little over 100 miles. About 25 miles of grading have been completed, and work is reported to be in progress on a second 25 miles.

Tuffnell-Prince Albert Line.—This is an extension of the Manitoba & Northwestern Ry., and the location surveys show a line running about due northerly from Tuffnell, Sask., for 140 miles, and then westerly and southerly into Prince Albert, a further distance of 70 miles. A contract for grading the first 50 miles is reported to have been let to Grant Smith & Co. and McDonnell Ltd., Vancouver, B.C. (June, pg. 277.)

Leancoil Grade Revision.—A press report states that orders have been given for the installation of a 3-position, upper quadrant, 10-volt automatic block signal between Leancoil and Golden, B.C. The order includes 32 mechanisms, 70 relays, 18 switch boxes, relay and battery housing, etc.

Victoria, B.C., Terminal Building.—A press report states that the company proposes to go ahead shortly with the construction of a marine terminal building at Victoria, B.C. The building will, it is stated, front on Belleville St., will be 4 stories high, and will provide accommodation for all the company's offices there, including the B.C. Coast Steam-

ship Service. F. M. Rattenbury is mentioned as the architect.

Electrification in Western Mountains.—A Winnipeg press report of June 19 credits D. C. Coleman, Vice President, Western Lines, with having stated that surveys are being made of the water power available on the Columbia River, in British Columbia, in the vicinity of the main transcontinental line, and that, if traffic demands and financial conditions warrant it, a start may be made next year in electrifying sections of the main line through the mountains.

United States Railways' Financial Results.

An article in Canadian Railway and Marine World for June, concerning the U.S. class 1 railways' earnings, pointed out that in March they had the best month for a long period, and, for the first time since the Interstate Commerce Commission had fixed the fair annual return at 5½%, had exceeded it. In April, the results were still better, the net operating income being \$83,197,800, equivalent to an annual return of 6.5% on the valuation. The March earnings represent an annual rate of 5.84%. In April 1922 the net operating income was but \$49,979,000, or at the annual rate of 3.99%. Operating revenues for April were \$522,955,700, an increase of more than 25% over April 1922; operating expenses, \$403,869,000, were about 20% greater than in April 1922. Although gross earnings increased only about 25%, freight traffic, as expressed in terms of net ton miles handled, showed an increase of over 50%, the proportionately smaller increase in gross revenues being due largely to lower prevailing rates in April of this year. The extraordinary increase in freight traffic is due largely to the miners' strike being in progress in April, 1922, resulting in a large decrease in coal traffic.

For the first four months of 1923, U.S. class 1 roads secured a net operating income of \$266,246,000, representative of earnings on an annual basis of 5.49%. For the first four months of 1922 net operating income was \$210,842,900, equivalent to an annual earning rate of 4.44%. Gross earnings for the first four months of 1923 were 18.8% greater than in the first four months of 1922, and operating expenses were 18.15% greater. Traffic is still heavy on U.S. roads, with every prospect of continuing so, and continued favorable earnings seem assured.

English Channel Tunnel.—A Paris, France, cable states that plans for the tunnel under the English Channel from Dover, Eng., to Calais, France, are being completed rapidly. In a bulletin issued by the France-Great Britain Association, which is doing the propaganda work, M. Tempest, Chief Engineer of the project, discusses methods of construction, and approves of Colonel Lynde's suggestion, which has been endorsed by M. Javary, the engineer of railways in France, which will connect with the tunnel, for the opening of shafts in the middle of the channel, and working in both directions, disposing of the excavated material by deporting it in the tideway. The estimated time for the construction of the tunnel is put at anything between 5 and 8 years.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—A press report states two ballast trains are operating from the gravel pit at mile 151, and reballasting the line between Lac la Biche, mile 113, and mile 170. During 1922, a total of 179,000 cubic yards of ballast was distributed along the line, after 53,000 new ties had been put in. (May, pg. 205.)

Alma & Jonquiere Ry.—We are officially advised that the Alma & Jonquiere Ry., which is being built by the Quebec Development Co., in connection with its power development plans, at the Grande Descharge of Lake St. John, Que., starts from about a mile east of Hebertville station on the old Quebec & Lake St. John Ry., now Canadian National Rys., and will run thence northerly to Isle Maligne, about 10 miles. There will be three bridges, one across the Bedard River, between miles 9 and 10; and two to cross the Little Descharge, between miles 1 and 2, which at the point of crossing is divided into two arms separated by a considerable island. The mile-posts start at Isle Maligne, and run to the junction with the C.N.R. These bridges, which will be single track, will consist of steel superstructures resting on concrete substructures. Their dimensions will be as follows: Bedard River bridge, between stations 428+76 and 429+38; one 60 ft. deck plate girder span resting on 2 abutments, with wing walls containing 90.2 cubic yards of concrete. Little Descharge, right channel, between stations 125+45.5 and 128+85.5, three 60 ft. deck plate girder spans, resting on 3 piers and 2 abutments, with wing walls, containing 948.7 cubic yards of concrete. Little Descharge, right channel, between stations 114+76.25 and 118+03.75, four 80 ft. deck plate girder spans, resting on 3 piers and 4 abutments, without wing walls, containing 610.3 cubic yards of concrete. These three bridges are being erected as part of the railway, but a fourth bridge is being erected across the Grande Descharge as a part of the power plant. It will be double track from station 7+18 to station 11+30, with a total span of 412 ft. It will consist of two 90 ft. and one 220 ft. through truss spans resting on 2 piers and 2 abutments, with wing walls, containing 2,828 cubic yards of concrete. The contractors for grading are Gagne & Gagne, St. Felicien, Que.; the steel for the Bedard River bridge is being supplied and erected by Dominion Bridge Co., Montreal; and that for the other bridges by Canadian Bridge Co., Walkerville, Ont. (June, pg. 279.)

Burrard Inlet Tunnel and Bridge Co.—A press report states that the C.P.R. has entered an objection to the passing by the Dominion Government of the plans for the proposed bridge across the second narrows of Burrard Inlet, Vancouver, B. C., in so far as its approach over the C.P.R. tracks is concerned. The plans provide for a 22 ft. clearance overhead, on columns 60 ft. apart, and it is said that the C.P.R. asks that the supporting columns be placed 99 ft. apart, so as to clear its right of way entirely. (May, pg. 205.)

Duluth to Port Arthur.—Robert Waldron, Duluth, Minn., who is promoting the construction of a railway from Duluth to Port Arthur, Ont., using the abandoned Duluth & Northern Ry. as a foundation, was in Port Arthur, June 18, and

is reported to have discussed the project with the city council, and the chamber of commerce. It is proposed to form the Duluth & Ontario Ry. Co., with the following officers and directors: President, R. Waldron; Vice President and Superintendent, D. W. Owens, Biwabik; Secretary and Auditor, H. W. Conrad, Duluth; Treasurer and Purchasing Agent, W. L. Allerton, Duluth; director, J. S. Sabrer, Pierre, S.D. F. W. Grassweller, Duluth, is the company's Attorney, and R. M. Hunter is Right of Way Agent. Mr. Waldron is reported to have stated that trains will be operated on the existing line, which runs from Knife River, northerly towards the Canadian boundary, for 102 miles, by Aug. 1, and that financial arrangements were in progress for the construction of an extension of the line from the present end of track towards the International Boundary at Pigeon River, to be started this year. Nov., 1922, pg. 568.)

Edmonton, Dunvegan & British Columbia Ry.—A press report states that a survey party under Major Crysedale of Vancouver, has started work on a general survey of the country between Spirit River, Alta., which is at present reached by the E. D. & B.C. Ry., and the British Columbia boundary at Pouce Coupe, and thence across to Pine Pass, B.C., also that the survey is being made in the interests of the C.P.R., which is operating the E. D. & B.C. Ry., and that the C.P.R. has eyes on the Pacific Great Eastern Ry., which is being operated to Quesnel, is practically fully graded to Prince George, and has an extension located through the Pine River Pass to Pouce Coupe. Another press report states that a survey party was working westerly from Hudson's Hope, on the Peace River, May 31, having started from Spirit River, and expected to cover about 250 miles farther west during the season. (June, pg. 279.)

Esquimalt & Nanaimo Ry.—The Canadian Bridge Co., Walkerville, Ont., is reported to have started work on the erection of the final section of the steel work of the Johnson St. bridge at Victoria, and to expect to have it completed by Aug. 30. The section now being built will carry the permanent railway tracks, the southern half of the bridge on which the railway tracks are laid temporarily, being intended to carry general traffic only. (June, pg. 279.)

Fort Alexander Ry.—The Manitoba Pulp & Paper Co., which controls the Fort Alexander Ry. Co., incorporated recently by the Manitoba Legislature to build a railway from near Beaconia, on the Canadian National Rys. Grande Beach line, to Fort Alexander, where it is proposed to erect a pulp mill, is reported to have arranged for placing a \$3,000,000 issue of bonds on the market for railway construction purposes. (May, pg. 205.)

Michigan Central Rd.—Preliminary work is reported to be in progress for the construction of the substructure of the new bridge at Niagara Falls. The work includes the scaling of the cliffs on both sides of the gorge, making them practically perpendicular, and the placing of a concrete face thereto. The work on the New York side of the river is being done by the Gass Thurston Co., Detroit, Mich., and that on the Ontario side by

Federal Construction Co., Toronto. The existing bridge is to be removed, and a project is reported to be under consideration for purchasing it, and re-erecting it as a general traffic bridge.

A contract is reported to have been let to the Dominion Construction Co., Toronto, for a considerable portion of the work of constructing new yards at St. Thomas, Ont. (June, pg. 279.)

North Sydney to Baddeck, etc.—A press report states that V. MacFadden, engineer, Dominion Coal Co., North Sydney, has submitted to the Nova Scotia Government a project for building a railway, to be operated by electricity, from North Sydney to Baddeck, and thence to English Harbour in one direction, and to Iona, on the Canadian National Rys. in another.

Pacific Great Eastern Ry.—The British Columbia Minister of Railways is reported to have announced recently that construction work had been suspended during the past 8 or 10 months. Grading has been completed to Cottonwood Creek, and track has been laid to 14 miles beyond Quesnel. Plans for further construction had not been decided upon. Another press report, which is unconfirmed, states that the C.P.R. has some idea of taking hold of the line and extending it to a connection with the Edmonton, Dunvegan & British Columbia Ry. (June, pg. 279.)

(See also Edmonton, Dunvegan & British Columbia Ry.)

Quebec and Chibougamou Ry.—G. R. Hall Caine, a member of the Imperial Parliament, who arrived in Montreal from England, June 12, is reported to have stated prior to sailing that he would negotiate with the Dominion Government respecting the construction of about 200 miles of railway to open up new areas for settlement. He is reported to have referred, at Montreal, to the development of pulp wood areas for the supply of the British market, and to have stated that it is proposed to build a railway from Port Alfred, Que., by the Peribonka River, for 120 miles in three sections of 40 miles each. The district through which the line would run is said to be suitable for agricultural settlement. Port Alfred is at mile 18, from Ha Ha Bay Jct., on the Roberval-Saguenay Ry., on the navigable waters of the Saguenay River, and the Peribonka River flows from the north in to Lake St. John. The Mistassini River flows northward, into Lake Chibougamou. The charter of the Quebec and Lake Chibougamou Ry. Co., which was granted by the Quebec Legislature in 1919, covers this construction. Full details of this project, and of surveys of the projected railway from Quebec to Lake Chibougamou were given in Canadian Railway and Marine World for Dec., 1920. pg. 655. (Nov. 1922, pg. 568.)

St. John & Quebec Ry.—A resolution was passed in the House of Commons, June 1, authorizing an extension of time to Dec. 31, 1925, for the construction of the St. John & Quebec Ry., now terminating at Centerton, N.B., northerly to Andover, about 26 miles. The passing of the resolution, the Minister of Railways explained, was necessary owing to the fact that a subsidy was involved. The railway is owned by the New Brunswick Government, and is operated by the

Canadian National Rys., under an agreement for 60% of the gross receipts. A bill to carry into effect the terms of the resolution was passed through its various stages the same evening. (June, pg. 279.)

Theodosia Arm, B.C.—A press report states that a logging railway is being built at Theodosia Arm, B.C., by Merrill & King Logging Co.

Timiskaming & Northern Ontario Ry.—We are officially advised in connection with the Swastika-Larder Lake line, which the Timiskaming & Northern Ontario Railway Commission is about to build under the Nipissing Central Ry's charter that the route selected starts from the T. & N. O. Ry., at Swastika station, mile 165.8 from North Bay, and extends easterly through Teck, Lebel, Gauthier, and McVittie Townships, passing through the heart of the Kirkland Lake mining district. It is not probable that the line will be built farther east than McVittie Tp. at present, and a terminus will be laid out there temporarily convenient to the Larder Lake gold mining properties. Maximum gradients of 1.5 or 2% and maximum curves of 10° will be used in order to reduce the cost of construction. The grading quantities will be approximately 12,000 cubic yards a mile, and there will be no large steel bridges. We are also officially advised that a contract for the construction of this line has been let to R. A. and I. A. Sinclair, Toronto. The contract will be carried out by Sinclair Construction Co., Ltd., successors to the late Angus Sinclair, which has its head office in Toronto. The construction headquarters on the work will be at Swastika, and the work will be under R. A. R. Sinclair's direct supervision. He will be assisted by A. T. Connacher, General Superintendent, who held the same position with Angus Sinclair on all his construction work. The general contractors will sublet the grading, concrete and bridge work, also the fencing, but will do the track laying and ballasting with its own force.

Vancouver Harbor Railway.—A recent press report stated that tenders were under consideration for the supply of steel rails, fastenings, frogs, switches, switch stands, etc., for the terminal railway being built by the Vancouver Harbor Commission, in connection with the Ballantyne Pier, Vancouver. (Nov. 1922, pg. 568.)

Welland to Port Colborne, Ont.—We are officially advised that Port Colborne, Ont., residents want to secure the construction of a spur line from Welland into that town, and that a conference was held recently at which the matter was discussed with representatives of the Michigan Central Rd. and the Toronto, Hamilton & Buffalo Ry. The C.P.R. would be interested in the construction of such a line, through its share in the ownership of the T.H.&B.Ry. The matter is being dealt with by J. N. Beckley, President, T.H.&B.Ry.

Grant Hall Prize.—The medal offered for competition at the Bishops College School, Lennoxville, by Grant Hall, Vice President, C.P.R., and chairman of the school directors, for proficiency in speaking at the meetings of the school debating society, during 1922-3, has been awarded to G. N. Moxley.

During a heavy wind and hail storm in Saskatchewan, June 6, the roofs of six freight cars in a moving C.P.R. train were blown off.

Exemption of Government Railways, Etc., from Sales Tax.

In the article on this subject, in Canadian Railway and Marine World for April, on pg. 160, it was stated that a letter had been received from the Customs and Excise Department, which read in part as follows:—"On account of the changed status of the Canadian Government railway group, which took place on Jan. 20 last, the Department has ruled that, with effect from that date, the exemption enjoyed prior to that date by certain lines of the Canadian National Rys. would become non-effective, and that goods purchased by the Canadian National Rys. for all lines are taxable. This ruling does not alter the exemption in respect of goods purchased by the Timiskaming & Northern Ontario Ry., and the Hydro Electric Power Commission of Ontario, when such goods are for their own use."

It was pointed out that the Customs Department letter quoted showed that the Minister of Customs was misinformed, when he sat in the House, a short time before, that, "the sales tax is being collected from or paid by all railways."

Early in April, Canadian Railway and Marine World was advised by the Customs Department that the question of sales tax on purchases by railways operated by the Hydro Electric Power Commission of Ontario was receiving attention, and that the question whether or not the railways were owned by the Commission was the point which the Department was determining. Canadian Railway and Marine World was advised on April 24 that "Sales to the Toronto & York Radial Ry. Co., whether for the sole use of that railway, or for the purpose of resale, are held to be properly subject to payment of sales tax." We have no information as to whether sales to the Guelph Radial Ry., which is operated by the Hydro Electric Power Commission for the City of Guelph, and to the Hydro Electric Railways, Essex District, comprising the lines formerly owned and operated by the Sandwich, Windsor & Amherstburg Ry., and now operated by the Commission for various border municipalities, are held to be subject to payment of sales tax.

Canadian Railway and Marine World has been further advised that goods bought by the Timiskaming & Northern Ontario Ry. and by the Hydro Electric Power Commission of Ontario for their own use, and not for resale, are exempt from sales tax. We presume that this reference to the Hydro Electric Power Commission of Ontario applies to its purchases other than for railways which it operates.

Since the foregoing matter was put in type, the following information has been received from the Customs and Excise Department:—"Sales to electric railway lines, formerly operated by the Toronto and York Radial Ry. Co., are held to be subject to sales tax. Sales to electric railway lines operated by the Hydro Electric Power Commission of Ontario, but which are owned by the cities of Guelph, Walkerville and Windsor, are subject to payment of sales tax. As a result of an investigation, it has been definitely established that the electric railways operated by the Hydro Electric Power Commission are not entirely owned by the Commission. The Hydro Electric Power Commission of Ontario is a Provincial Government institution. Sales made to this Commission,

for its own use, and not for resale, are, therefore, held to be exempt from sales tax."

The resolution of which the Finance Minister gave notice in the House of Commons on May 11, contains the following: "(4) The taxes imposed by sections 16A, 19B, 19BB and 19BBB of the Special ar Revenue Act shall apply to goods sold or imported by: (i) His Majesty in the right of His Majesty's Government of Canada; (ii) His Majesty in the right of His Majesty's Government of any province of Canada, for the purpose of resale; (iii) Any railway operated by or under the authority of the Legislature or the Lieutenant Governor in council of any province; (iv) Any commission, board or public utility which is operated by or under the authority of the Legislature or Lieutenant Governor in council of any province." The foregoing amendments are to go into force on Jan. 1, 1924.

The Customs & Excise Department has further advised Canadian Railway and Marine World as follows:—"The amendments respecting tax on sales go into effect on Jan. 1, 1924. The ruling exempting sales to the Hydro Electric Power Commission of Ontario, for its own use and not for resale, remains in force until that rate."

Freight and Passenger Traffic Notes.

The Canadian National Rys. have changed the starting time of the Continental Limited from Vancouver, from 7.45 p.m. to 9.50 p.m.

The Canadian National Rys. inaugurated a direct train service from Montreal to Murray Bay, Que., June 11. Formerly passengers had to change at Quebec.

The rate for transporting automobiles between New Brunswick and Prince Edward Island, and vice versa, by the car ferry Prince Edward Island, is reported to have been reduced from \$6 to \$4.

Canadian National Rys. freight officials at London, Ont., are reported to have stated that during May over 30,000 freight bearing cars passed through the yards there, the largest number ever recorded in one month.

The C.P.R. is reported to have made a new rate for transfer of automobiles by boat between various points in British Columbia, such as Kuskanook and Nelson; Robson West and Arrowhead; Nelson and Kaslo, and other points.

The Canadian National Rys. started a fast week day train between Lindsay, Peterborough and Toronto, on June 23. Its schedule is, leave Peterborough 7.10 a.m., reach Toronto 10.15 a.m.; leave Toronto 7.05 p.m., reach Peterborough 10.30 p.m.

The Canadian National and Canadian Pacific Rys. are reported to have put into effect on June 15, a 33½% reduction on through carload lots of settlers' effects from St. Paul, Minneapolis and Duluth to the prairie provinces. This reduction follows a similar one on carload lots of settlers' effects from border points which became effective May 1.

C.P.R. Colonization Work.—Since 1881 the C.P.R. has expended over \$60,000,000 for colonization, land settlement, irrigation and similar work, directly accounting for the occupation of over 20,000,000 acres of farm land in western Canada.

Neebing Terminal, Canadian National Railways.

It is axiomatic in the science of railway operation that congested and inadequate terminal facilities render impossible the handling of traffic with the maximum efficiency and economy, and, conversely, that well planned and adequate terminal facilities go a long way in promoting the variety of railroading which is successful in reducing transportation costs to the public.

Owing to the development in the western provinces and the annual increase in the acreage seeded in the prairie provinces, the traffic passing through the gateway at the head of Lake Superior has been steadily growing larger each year, with the result that railway and terminal facilities at Port Arthur and Fort William would soon be heavily taxed to properly meet the traffic requirements, particularly during the busy autumn months. In the case of the Canadian National Rys., it became evident to the management that larger and improved terminal facilities would soon be required to efficiently and expeditiously handle the heavy grain and general traffic passing through the twin ports, through which, in addition to a large westbound traffic in coal and merchandise, the great bulk of the prairie grain passes on its way to eastern and Euro-

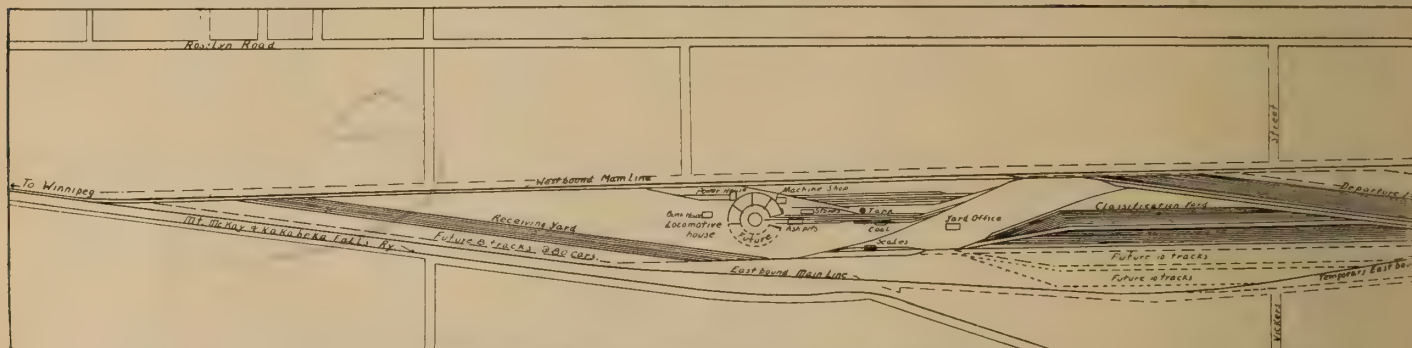

pean markets. Realization of the impending need for enlarged terminal facilities resulted in the C.N.R. management undertaking the construction of a large terminal near West Fort William, location and layout plans of which are given herewith.

tions taken by the two routes in leaving Fort William. The former Grand Trunk Pacific line from Mission terminal to Sioux Lookout is now known as the Graham Subdivision, Fort William Division, Manitoba District, Canadian National Rys., while the Canadian Northern line from Port Arthur to Atikokan, the first divisional point west of Port Arthur on the way to Winnipeg, is known as the Kashabowie Subdivision, Rainy River Division, Manitoba District, Canadian National Rys. From Mission terminal to Sioux Lookout is 189.4 miles, and from Port Arthur to Atikokan 142.6 miles. From Mission terminal to Winnipeg, via Sioux Lookout, is 441.5 miles, and from Port Arthur to Winnipeg, via Atikokan, is 438.7 miles.

As stated in Canadian Railway and Marine World for Oct., 1922, p. 516, the Canadian National Rys. are building a line diversion on the Kashabowie Subdivision between mile 35.65 and 38.59 west of Port Arthur, and also a connection between the Graham and Kashabowie Subdivisions, the latter connection leaving the Graham Subdivision at mile 30.52 west of Fort William and entering the revised Kashabowie Subdivision line 4,589 ft. west of mile 35.65 west of Port Arthur. The connection will be 0.66

to build the new terminal and the connection as outlined above, and it is felt that this disposition of the problem will result in future traffic being handled with maximum efficiency and economy.

The land secured for the new facilities, which will be known as the Neebing terminals, is in Neebing Township, the area being about 3 miles long and $\frac{1}{4}$ mile wide. All street and road allowances were closed upon acquisition of the property by the railway. On the location plan the new facilities are shown at the northwest side, between the diamond crossing made by the intersection of the Canadian National Kashabowie Subdivision line with the C.P.R. double track line, and Twin City Jct., where the Canadian National Rys. North Lake Subdivision line leaves the Kashabowie Subdivision. The new terminals are shown in larger scale on the layout plan, on reference to which it will be seen that in the immediate future there will be provided an eastbound receiving yard with 8 tracks, each track having capacity for 80 cars, making a total capacity of 640 cars; an eastbound classification yard with 20 tracks, 50 to 75 cars capacity each, making the total capacity 1,250 cars, and a westbound departure yard of 13 tracks, each having capacity

Layout Plan, Neebing Terminal, Canadian National Railways.

mile long, and will be carried over the Mattawin River, and the C.P.R. double track line to Winnipeg, which parallels the river between the Canadian National Graham and Kashabowie Subdivisions at that point, on a plate girder bridge 700 ft. long. This connection is intimately related to the terminal development scheme at West Fort William, as, when the connection and the terminal development are both completed, eastbound traffic on the Graham Subdivision will be diverted to the Kashabowie Subdivision, via the new connection, and operated via the Kashabowie Subdivision to the head of the lakes, while westbound traffic destined for movement via the Graham Subdivision will be operated over the Kashabowie Subdivision to the connection. The Graham Subdivision mileage between Fort William and the point of the new connection's entry, on which are several temporary trestles, will be abandoned.

The two routes, that furnished by the original Canadian Northern Ry., and that by the original Grand Trunk Pacific branch, were built to operate in competition, and not as co-ordinated lines of one railway, and the situation is but one of a large number of similar ones facing the C.N.R. management, where duplicated facilities have to be co-ordinated as well as possible. Careful studies of the situation resulted in the decision

for 80 cars, making a total capacity of 1,040 cars. There will also be a car repair yard with 6 tracks, and a total capacity of 108 cars, so that the total standing capacity of the yardage to be constructed immediately will be a little over 3,000 cars. Provision for future extension of the yard facilities is shown in the layout plan. The yard track to be laid in the immediate future, together with locomotive house and other trackage, will require the building of 43.8 miles of track. The yard tracks will be laid with 80 lb. steel.

The chief unit in the locomotive terminal facilities to be provided will be a 24-stall locomotive house, 22 of the stalls to be 100 ft. long and the remaining two, 130 ft. long, drop pits to be installed in the two long stalls to handle locomotive truck and tender wheels. The house will have concrete foundations on piling, brick walls, timber frame and mill type roof, with 5-ply tar and gravel covering, and will be divided into 4 bays of 6 stalls each, by fire walls equipped with fire doors. In general construction, the new house will greatly resemble that built in 1921 at Moncton, N.B., as described and illustrated in Canadian Railway and Marine World for Dec. 1921, pg. 625. Provision for future extension, by completing the southern side of the house circle, is shown on the layout plan. The ashpit, near the locomotive house,

The Canadian National Rys. have two routes from the head of Lake Superior to western Canada. The southern route, via the original Canadian Northern line, has Port Arthur for its eastern terminus, the terminal facilities consisting of yards, locomotive maintenance facilities for somewhat more extensive locomotive repairs than those commonly classed as running repairs, a large terminal elevator, coal and ore dock, freight sheds for interchange of freight with steamship lines, and trackage serving these facilities. The northern route is by what was formerly the Grand Trunk Pacific Ry., Fort William Branch, from Fort William to Sioux Lookout on the National Transcontinental Ry., and thence via the latter railway to Winnipeg. This G.T.P. Fort William Branch has its eastern terminus, known as the Mission terminal, at West Fort William, there being yards, locomotive house, a large G.T.P.R. elevator, coal docks and freight sheds. The Canadian Northern Ry. Port Arthur terminals, and the Grand Trunk Pacific Mission terminal are shown on the location plan, which also shows the direc-

will be arranged to serve 4 tracks. The house will be equipped with pipe lines, for steam, water and compressed air, and the steam line branches will be equipped with flexible joints for locomotive connections. Provision has been made for adequate artificial lighting and for the installation of equipment for carrying on running repairs. It is not anticipated that locomotive work heavier than running repairs will be carried on, due to the proximity of the back shop facilities at Port Arthur. The turntable serving the locomotive house will be 85 ft. long, twin span, the concrete turntable pit being on piling, and the table will be operated by electric motor.

The machine shop, at the north side of the locomotive house, and connected thereto, will be of the same type of construction as the locomotive house, and will be 80 x 50 ft. It will be equipped with the usual machines necessary for the efficient handling of running repairs, with modern sanitary arrangements, and will contain a thoroughly equipped first aid room.

The power house, of similar construction to the locomotive house, and connected thereto as shown, will be 60 x 40 ft. The boiler room portion will be 40 x 40 ft., and will have its floor depressed 6 ft. below the base of rail level in the locomotive house. The primary installation will consist of two 150-h.p.

tracks, and will be of 350 tons capacity, electrically operated. The sand supply equipment will be constructed as a part of the coaling plant, with separate structures for wet sand storage and for drying. The sand will be elevated to the dry sand bin by compressed air.

Track scales, of 150 tons capacity, will be located, as shown by the layout plan, in the neck between the receiving and classification yards.

A yard office, 85 x 30 ft., of brick construction, on concrete foundation, will be located as shown, and will provide offices for the yardmaster and his staff, and for the grain inspection staff, and will also contain a conductors' registration room and a room for switchmen.

A bunk house, with sleeping accommodation for 20 men, will be located at the west side of the locomotive house.

Water for the terminal will be supplied by the City of Fort William, from its Loch Lomond plant, from which the water, of exceptionally high quality for both domestic use and locomotive boiler supply, is piped by gravity. A 150,000 gall. steel tank will be erected to the east of the stores building and will be served by an 8-in. cast iron main, 2.36 miles long, connected to the city's high pressure main at Neebing Ave. Connections will be run off direct from the main, to serve the locomotive house for washout purposes, and to serve fire hydrants,

line from the locomotive compressor before the terminal test of the brakes can be made.

The layout plan shows that the westbound main line runs to the north of the yard area, while the eastbound main line is located to the south. The areas bounded by the broken lines indicate the provision made for increasing the yard trackage when such becomes necessary. The westbound and eastbound main lines converge at the east end of the property before the crossing with the C.P.R. double track line is reached, while at the west end convergence is secured but a short distance west of the eastbound receiving yard. In locating the yards, the layout was planned to fit the topography of the ground as much as possible, no drainage facilities being required, with the exception of several ditches and a few small culverts. The grading for the initial units will amount to about 175,000 yards.

In operating these new facilities, grain trains from the west, whether coming from Winnipeg via the southern route, or via the Graham Subdivision and the connection to the Kashabowie Subdivision, will stop at the eastbound receiving yard, from whence the cars will be switched over a hump, or by flat switching, into the classification yard, where they will be classified for the various elevator and other terminal

Layout Plan, Neebing Terminal, Canadian National Railways.

locomotive type boilers, and provision will be made for doubling the boiler plant capacity when necessary. The power house will have a 125-ton capacity coal hopper in the rear, served by trackage as shown in the layout plan, the hopper track to be 13 ft. above the boiler room floor. The power house compressor room will be 20 x 40 ft., and the initial installation will be an electrically driven air compressor of sufficient capacity to meet the locomotive house, machine shop and other requirements. The heating system for the power house, locomotive house and machine shop will include low pressure steam coils in the pits and along the walls in the locomotive house, with vacuum returns.

The stores building, to the east of the locomotive house and north of the locomotive house entry and exit tracks, will be of brick construction, 100 x 30 ft. The main room in this building will be for miscellaneous stores, 30 x 40 ft., and in addition the building will contain the locomotive foreman's, clerk's, storekeeper's and timekeeper's offices, and locomotive crews' registration room, locker room and rest room. A modern oil storage tank installation will be made in the basement, with a complete set of pumps for handling oil.

The coaling plant, to the south of the tracks serving the locomotive house, will supply coal to locomotives on three

standpipes, ashpit, and other facilities, although cross connections, by-passes and valves will be installed, so that in case of damage to a portion of the main, water can be secured from the tank.

A sewer system will be installed, with an outflow into the Kaministiquia River, the location of which, in relation to the terminals, is shown in the location plan. This system will supply drainage from the locomotive house, turntable, ash pit, stand pipes, etc. Septic tanks and filtration system will be installed to take care of the sewage from the lavatories in the various buildings.

Electric current for power and lighting will be bought in Fort William, and will be received at 22,000 volts. This will necessitate the construction of a power line to the yard. Transformers will be located at strategic points within the terminal area, to step down the current as required for serving the various units. The locomotive house and other buildings, the area in which hump switching operations will be carried on, and the west ladder of the westbound departure yard, will be lighted electrically. An electrically operated compressor, with tripping system, will be installed at the west end of the westbound departure yard, to charge up the long trains made up for the west before the locomotive couples on, so that no time will be lost in charging the train

tracks at Port Arthur and Fort William. The hump for gravity switching will be southeast of the locomotive house, between the eastbound receiving yard and the classification yard, and a track for flat switching will be built around the hump, for use when business through the yard is such that flat switching will be more economical than the use of the hump. From the classification yard, transfer trains will take the cars to the various yards and elevator tracks in Port Arthur and Fort William. Returning, the transfer trains will bring the empty cars, and cars loaded with coal and other freight received from lake steamships, to the westbound receiving, classification and departure yards, where they will be made up into trains for westbound movement. The routes to be followed by road locomotives, in coming to the house after cutting off from their trains, or in leaving the house to proceed to their trains, are evident from the track arrangement shown in the layout plan.

When the new terminal is completed and placed in operation, all freight trains on both routes, except through freight and way freight trains, will terminate there, instead of at the Mission and Port Arthur terminals, as at present. Passenger business, east and westbound, will not affect the new yard or locomotive house, and passenger loco-

Location Plan, Neebing Terminal, Canadian National Railways.

motives will be handled by the locomotive terminal facilities at Port Arthur. Fast freight trains will be handled at Port Arthur, as will also the way freights, and the locomotives for these trains will be handled at the Port Arthur locomotive house. The locomotive terminal facilities at Mission terminal will be abandoned, and the equipment transferred to the new locomotive house, machine shop and power house. The present yards at Mission terminal and Port Arthur will remain practically as they are, for handling business at those points.

The location plan shows clearly the relationship of the new terminals to those existing at Port Arthur and Fort William, and the strategic location obtained for the new facilities is evident. It is also evident that the new yards will round out the terminal system, and by serving as a large primary classification area for cars destined for the numerous elevators along the water front, for those containing freight other than grain for lake furtherance, and for those for industrial tracks in Port Arthur and Fort William, will create smooth and efficient handling of eastbound traffic. Similarly, for westbound traffic, the new terminal will serve as a large final classification area for empty cars, and cars containing coal and other freight from lake steamships, which moves through these ports in large volume. The construction of these large yards, together with the provision of adequate locomotive handling facilities, constitutes an assurance that the rapidly growing traffic through Fort William and Port Arthur will not bring about a state of terminal congestion, and is thus an assurance that the inefficiency and expensiveness invariably caused by terminal congestion will be avoided.

As stated above, the construction of these terminal facilities is directly correlated to the building of the cut-off connecting the Graham and Kashabowie Subdivisions, and it is evident that this work, which will obviate the necessity for operating the portion of the Graham Subdivision to be abandoned, and which will consolidate the terminal handling work for both the southern and northern routes, will produce important operating economies. The co-ordination of line and terminal facilities, which were planned originally to operate in competition, constitutes a problem which is difficult of solution, in the very nature of things, but there can be no doubt that the solution worked out by the C.N.R. management in this particular case will bring about all the economy possible in the operation of the two routes from the head of the lakes to Winnipeg.

At the time of writing, good progress is being made with the work, and although construction was necessarily slowed down to some extent during the winter, it is the intention to have the new terminal ready to begin operation in time to handle the 1923 grain crop. Work is also proceeding on double tracking the line from Twin City Jct. to Port Arthur, and also on the grading for the connection between the Graham and Kashabowie Subdivisions, the latter work being done by contract. Tenders have been called for on the steel work for the 700 ft. plate girder bridge which will carry the connecting line over the C.P.R. double track line and the Mattawin River. All work at the terminal is being done by railway forces, with the exception of the pipe line con-

struction and the water tank erection, which are being done by contract.

The work is being carried on under the direction of C. B. Brown, Chief Engineer, Operation Department, C.N.R., by the Canadian National Rys. Western Lines engineering organization, under the supervision of H. A. Dixon, Chief Engineer, Western Region. S. B. Wass, Terminal Engineer, who was also in direct charge of the terminal development work at Moncton, N.B., is in direct charge of this work.

Traffic Orders by Board of Railway Commissioners.

Express Rates on Fish from Northern Alberta.

33,692. May 25. Re application of Alberta Fish Co., for the same express rates from fish shipping points north of Edmonton, Alta., to Chicago as are applied from British Columbia points. Upon hearing the matter at Edmonton, Sept. 11, 1922, the Alberta Fish Co. and the Dominion and the Canadian National Express Companies being represented, and what was alleged; and upon the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that, effective on or before July 1, 1923, the following rates, in cents per 100 lb. by express, be published on fish (except live fish), in carloads, minimum weight, 20,000 pounds, on classification weight basis, to Chicago, Ill., viz., from Caslan and Lac la Biche, Alta., 415. From Assineau, Driftpile, Faust, Indiana, Kinuse, Sawridge, Wagner, Wide-water, Alta., 435.

Maine Central Railroad Tariffs.

33,709. May 31. Re application of Maine Central Rd. Co., under the Railway Act, 1919, sec. 323, for approval of bylaws passed May 9, 1923, authorizing G. H. Eaton, Freight Traffic Manager, to determine and fix tolls to be charged for freight and milk traffic carried by the company, and M. L. Harris, General Passenger Agent, to determine and fix the tolls to be charged for passenger traffic carried by the company, and to specify the persons to whom, the places where, and the manner in which such tolls shall be paid; and authorizing L. Snow, Chief of Tariffs, and said M. L. Harris, to prepare and issue such tariffs. Upon the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said bylaws be approved, and that order 25522 and 26122, dated Oct. 10, 1916, and May 16, 1917, made herein, be rescinded.

C.P.R. Ambulance Classes.—The prizes and certificates awarded, following the examinations in first aid work, to the classes conducted for employees of the C.P.R. Angus shops, Montreal, were presented to the successful competitors by J. Burns, Works Manager, June 1. The classes were conducted by W. Mansell, a member of the team which in 1918 and the two following years won Lord Shaughnessy's shield for efficiency in first aid work, against teams from all over the Dominion. Of the awards, 28 were for first year work; 27 for second year work; 4 for third year work; and 7 for the work of subsequent years. One of the men, who received the bar for passing more than 4 years' work, has 14 of them.

The Newfoundland Railway Situation.

The Newfoundland Legislative Assembly as constituted at the general election in May, when Sir Richard Squires' government was sustained by 23 to 13, met on June 6. The chief business of the session is the agreement made between the Newfoundland Government and the Sir W. G. Armstrong Whitworth & Co., London, Eng., the Imperial Government being a party as guarantor of bonds, for the development of a power plant on the Humber River, and the establishment of pulp and paper mills on a large scale, with the carrying through of which it is understood that a complete settlement of all outstanding matters connected with the Newfoundland Ry., will be effected with the Reid Newfoundland Co.

The Humber River development project will, it is reported, involve the expenditure of from \$20,000,000 to \$25,000,000 and to aid in raising the necessary capital the Imperial Government is guaranteeing £2,000,000 of 25-year bonds, and the Newfoundland Government agrees to guarantee \$9,000,000 of 20-year sinking fund bonds. The proceeds of the Newfoundland guaranteed bonds are to be expended in construction in the Humber River Valley, and the proceeds of the Imperially guaranteed bonds are to be expended in Great Britain, on plant and machinery. Work has been started on the construction of a spur line to the site of the development, and a contract is reported to be in process of arrangement, with Major General J. W. Stewart, Vancouver.

A press report stated that in connection with the introduction of the legislation confirming the agreement for the power plant construction, on June 14, it was announced that the Government and the Reid Newfoundland Co. would withdraw all claims against each other in respect to the Newfoundland Ry., and that in consideration of the payment by the Government of \$2,000,000 the company would transfer to the Government all its rights in the railway, its 8 coastal steamships and its drydocks at St. John's, together with other property.

Transportation of Explosives, Etc., by Freight.

The Board of Railway Commissioners passed general order 382, May 11 as follows:—Amending Rules and Regulations for Transportation of Explosives and Other Dangerous Articles by Freight, by striking out rule 1685 and substituting therefor the following:—"1685. (1) On lines where regular trains are operating in freight service only, cars containing explosives must not be hauled in a train that carries passengers.

(2) Where only a mixed train service is operated, or where passengers are carried in a caboose car of a freight train—“(a) a car containing a shipment of explosives (not exceeding 5,000 lb.) may be hauled, provided the explosives are contained in but one car, the said car to be so placed in the train that not less than 6 freight cars are between it and the car carrying passengers, and not less than 2 freight cars between it and the locomotive hauling the train.

“(b) a car containing a freight shipment of explosives (not exceeding 1,000 lb.) may be hauled, provided the said car

be so placed in the train that not less than 3 freight cars are between it and the car carrying passengers and not less than 1 freight car between it and the locomotive hauling the train.

“(c) Provided, further, that in the case of a shipment exceeding 5,000 lb., or should there be 2 or more cars containing explosives at any one time, a special train must be run to carry such shipments over the branch or mixed train run.

“(d) Whenever it is practicable to do so, cars containing explosives must be placed between freight cars not bearing 'acid' or 'inflammable' placards. Cars containing explosives must have air and hand brakes in service.”

Greater Winnipeg Water District Railway Operation, Etc.

In addressing the members of the Greater Winnipeg Water District Board, the Mayor of Winnipeg referred to the position and future prospects of the railway from St. Boniface to Shoal Lake. He is reported to have stated that the line was only saved from being scrapped in 1921, after very long and careful deliberation. As a result of the economies made in its management and operation, the loss in operation would be reduced from \$77,000 to \$40,000. It was anticipated that in a year or two the railway would pay its way. The successful operation of a railway line depends on colonization of the country, and a real and permanent improvement cannot be made in the revenues of the line until the land through which it runs is under the Board's authority. The Board should try to obtain a land grant. An effort was made to obtain one land grant from the Dominion Government, but it was unsuccessful. If the railway is to be made of real service, the Board must have the land under its own direction, and so be in a position to encourage dairying and other industries.

Timiskaming & Northern Ontario Railway Finances.

In reply to questions asked in the Ontario Legislature recently, by W. F. Nickle, Kingston, Premier Drury said that the amounts received by the province from the T. & N. O. Ry. Commission on account of interest were as follows: 1912-13, \$250,000; 1913-14, \$225,000; 1914-15, \$225,000; 1915-16, \$1,000,000; 1916-17, \$250,000; 1917-18, \$300,000; 1918-19, nil; 1919-20, \$100,000; 1920-21, \$200,000; 1921-22, \$600,000. The province had provided on account of capital, as follows: 1912-13, \$950,000; 1913-14, \$550,000; 1914-15, \$236,000; 1915-16, \$950,271.82; 1916-17, \$410,182.40; 1917-18, \$228,874.14; 1918-19, \$346,587.35; 1920-21, \$917,986.55; 1921-22, \$304,182.82; 1922-23, \$1,750,000, including 10 new locomotives and \$2,054,182.82 on account of the James Bay extension. The railway property was carried on the books of province as an asset valued at \$25,653,675.02; no amounts had been written off for depreciation in any of the above years; the railway was kept up-to-date from earnings. The Commission and the Government proposed to extend the railway northward to James Bay, of which extension 70 miles were under construction, at an estimated cost of \$3,500,000.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 382, May 11.—Amending rules and regulations for the transportation of explosives and other dangerous articles by freight. This order is given fully on another page of this issue.

33,642. May 8.—Authorizing Michigan Central Rd. to rebuild its gates at places where it and Pere Marquette Ry. cross Main St., Dutton, Ont.

33,643. May 9.—Approving location of C.P.R. A-3 standard station at Oxbow, Sask.

33,644. May 9.—Ordering Canadian National Rys. to provide station facilities at Bruderheim, Alta., by Sept. 15.

33,645. May 9.—Declaring that for the present, C.P.R. crossing near Milton station, Ont., is protected to Board's satisfaction.

33,646. May 9.—Declaring that for the present, Canadian National Rys. crossing near Cooking Lake, Alta., is protected to Board's satisfaction.

33,647. May 9.—Ordering C.P.R., within 60 days, to install improved type of automatic bell with wigwag signal at crossing of Pembroke St., Pembroke, Ont.

33,648. May 11.—Rescinding order 33,366, Feb. 8, suspending rule 5-A in supplement 4 to C.P.R. tariff C.R.C. no. W-2 658.

33,649. May 9.—Authorizing C.P.R. to build across Macleod-Pincher Trail, Sec. 3, Tp. 9, Range 26, West 4th Meridian, Alta.

33,650. May 11.—Declaring that for the present, C.P.R. crossing at Blackie, Alta., is protected to Board's satisfaction.

33,651. May 11.—Authorizing Millet Village, Alta., to make highway across C.P.R.

33,652. May 12.—Declaring that for the present, Canadian National Rys. crossing near Concord station, Ont., is protected to Board's satisfaction.

33,653. May 12.—Authorizing Michigan Central Rd. to install wigwag signal in addition to electric bell, at crossing of Talbot Road, near Shedden, Ont.

33,654. May 12.—Authorizing Canadian National Rys. to cross and divert highway at mile 1395.6, Nechako Subdivision, s.e. ¼ Lot 3832, R. 5, Coast District, B.C.

33,655. May 12.—Authorizing Canadian National Rys. to build spur for E. J. Shepard, Ltd., Hamilton, Ont.

33,656. May 12.—Authorizing use of subway under Toronto, Hamilton & Buffalo Ay. on Hamilton and Ancaster Road, Ancaster Tp., Ont.

33,657. May 14.—Approving Halifax & Southwestern Ry. (C.N.R.) plan and profile of 4 ft. arch and two 5 by 3 ft. culverts on Chester Subdivision, N.S.

33,658. May 14.—Authorizing Canadian National Rys. to extend second track across single track of Fort William Municipal Ry. on Frederica St., Fort William, Ont.

33,659. May 14.—Approving Canadian National Rys. location and detail plan of combination station and agent's house, at Summerstown, Ont.

33,660. May 14.—Approving C.P.R. location and detail plans of no. 10 station, to be erected at Erickson, B.C.

33,661. May 15.—Declaring that for the present, Niagara, St. Catharines & Toronto Ry. crossing of 4th Ave., Niagara Falls, Ont., is protected to Board's satisfaction.

33,662. May 15.—Authorizing Winnipeg Electric Ry. and Canadian National Rys. to operate over crossing at Pembina Highway, Winnipeg, without previously stopping.

33,663. May 16.—Authorizing Canadian National Rys. to cross Mount McKay and Kakabeka Falls Ry. on Yonge St., Fort William, Ont.

33,664. May 14.—Amending order 32,132, Feb. 27, 1922, authorizing C.P.R. to build crossing 50 ft. east of line between Lots 6 and 7, Con. 1, Etou Tp., Ont., by providing that cost be paid by Ontario Lands and Forests Department, instead of by C.P.R.

33,665. May 15.—Authorizing C.P.R. to erect portable station at Hosmer, B.C.

33,666. 33,667. May 17.—Authorizing Canadian National Rys. to rebuild bridges over l'Achigan River, mile 26.22 from Joliette, Que.; and Midway Creek, mile 147.3 from Capreol, Ont.

33,668. May 17.—Dismissing application of Ontario Public Highways Department for a level crossing of Canadian National Rys. over Bloor St. East or Danforth Ave. extended, in Scarborough Tp., Ont. Bloor St. or Danforth Ave. to be carried under C.N.R. by a subway 60 ft. wide by 16 ft. high.

33,669. May 17.—Ordering that cost of maintenance of subway at Station Ave., Shawinigan Falls, Que., under Canadian National Rys., be paid 75% by town and 25% by C.N.R.

33,670. May 16.—Authorizing Town of Victoriaville, Que., to build crossing over Canadian National Rys. at St. Paul St.

33,671. May 17.—Authorizing Canadian National Rys. to rebuild bridge over Ouatahouaniche River, mile 13.09 from Chambord Jet., Que.

33,672. May 17.—Rescinding part of order 32,913

in so far as it requires installation of wigwag signal at crossing of Milford St., Fairville, N.B., by C.P.R., and ordering, in lieu thereof, that C.P.R. provide a standard illuminated danger sign on bell post.

33,673. May 16.—Ordering that brush obstructing view at crossing of C.P.R., 2 miles west of Oakbank station, Man., be cleared away before June 1 in each and every year.

33,674. May 17.—Ordering Canadian National Rys. to erect 3rd class station building at Mecheche, Alta., by Sept. 1, 1924.

33,675. May 21.—Approving map showing general location of Nipissing Central Ry. proposed line from Liskeard to Wendigo Lake, thence to a point in McGarry Tp., and from Wendigo Lake to Swastika, Ont.

33,676. May 14.—Authorizing New Brunswick Public Works Department to divert highway over C.P.R. at Arthurette.

33,677. May 21.—Declaring that for the present, the Canadian National Rys. crossing west of Carp station, Ont., is protected to Board's satisfaction.

33,678. May 21.—Authorizing Michigan Central Rd. to enter J. E. Willbrod's lands in Wainfleet Tp., Ont., to remove obstructions to view at crossing between Lots 19 and 20, Con. 6.

33,679, 33,680. May 18.—Approving supplements to Bell Telephone Co.'s agreements with Kawartha Telephone System, Durham County, Ont.; and Wright & Pontiac Telephone Co., Ottawa and Pontiac Counties, Que.

33,681, 33,682. May 21.—Authorizing Canadian National Rys. to build bridges over Indian River, north branch, Fraser Tp.; and Shekak River, Algoma District, Ont.

33,683. May 18.—Approving agreement between Bell Telephone Co. and Seabright Telephone Co., Victoria and Ontario Counties, Ont.

33,684. May 17.—Authorizing Canadian National Rys. to rebuild bridge over Apishkanogama River, Sudbury District, Ont.

33,685 to 33,687. May 18.—Approving Bell Telephone Co. agreements with Woburn Telephone Co., Frontenac County; Albert Hill, St. Maurice County; and Wakefield & Masham Telephone Co., Ottawa and Pontiac Counties, Que.

33,688. May 16.—Authorizing Toronto, Hamilton & Buffalo Ry. to enter lands of Thomas Kelly and Stanley House and remove trees, etc., obstructing the view at crossing of Red Hill Road, Saltfleet Tp., Ont.

33,689. May 21.—Authorizing Canadian National Rys. to rebuild bridge over Muskego River, Sudbury District, Ont.

33,690. May 23.—Authorizing C.P.R. to build spur for N. Vermilyea, Winnipeg.

33,691. May 14.—Authorizing New Brunswick Public Works Department to divert highway over C.P.R. at Muniac, N.B.

33,692. May 25.—Prescribing express rates on fish in carloads, from points in Alberta to Chicago, Ill.

33,693. May 25.—Extending until July 1, time within which Canadian National Rys. may build roadway to station and loading track at Sprague, Man., as required by order 32,874, Sept. 20, 1922.

33,694. May 25.—Declaring that for the present, C.P.R. crossing near Whitby station, Ont., is protected to Board's satisfaction.

33,695. May 25.—Approving supplements to Bell Telephone Co. agreement with Glengarry Telephone Co., Glengarry and Prescott Counties, Ont.

33,696. May 25.—Approving clearances at Canadian National Rys. siding for Growers Cold Storage & Ice Co., Grimsby, Ont.

33,697. May 26.—Amending order 33,610, April 30, authorizing Canadian National Rys. to build spur for Northern Forest Products, Ltd., at Giscome, B.C.

33,698. May 26.—Extending to Aug. 1, time within which Canadian National Rys. may regrade 5% approaches to crossing at Ross Jet., Sask.

33,699. May 26.—Authorizing Canadian National Rys. to build spur for Ideal Coal Co., Wayne, Alta.

33,700. May 28.—Authorizing C.P.R. to replace skew half-deck plate girder span at bridge 1.3 over Buell's Creek, Brockville Subdivision, Ont.

33,701. May 28.—Authorizing Canadian National Rys. to rebuild bridge carrying highway over its tracks at Lots 18 and 19, Con. 1, Blenheim Tp., Ont.

33,702. May 26.—Authorizing C.P.R. to build spur for C. B. Allison & Co., Rochester Tp., Ont.

33,703. May 29.—Authorizing Canadian National Rys. to rebuild bridge carrying highway over its tracks at Maple Ave., Lincoln County, Ont.

33,704 to 33,706. May 28, 26, 31.—Authorizing C.P.R. to build spurs for St. Maurice Power Co., La Gabelle, Que.; Berry Growers Co-operative Union of British Columbia, Port Haney, B.C.; and John Carroll, Peterborough, Ont.

33,707. May 31.—Authorizing opening for traffic of connection between G.T.R. and Canadian Northern Ontario Ry. at Napanee, Ont.

33,708. June 1.—Amending order 32,987, Oct. 11, 1922, relieving C.P.R. from speed limitation of 10 miles an hour at crossing near Wingham station, Ont., by showing mileage as 2.45, instead of 2.94.

33,709. May 31.—Approving Maine Central Rd. bylaws authorizing G. H. Eaton, Freight Traffic Manager, and M. L. Harris, Passenger Agent, to issue tariffs of tolls.

33,710. May 31.—Authorizing Canadian National Rys. to rebuild bridge between Lots 2 and 3, Con. 4, Blenheim Tp., Ont.

33,711. June 1.—Declaring that for the present, C.P.R. crossing near Wingham station, Ont., is protected to Board's satisfaction.

33,712, 33,713. May 29.—Approving supplements to Bell Telephone Co.'s agreement with South Norfolk Telephone Co., Norfolk County, Ont.; and Brighton Municipal Telephone System, Northumberland County, Ont.

33,714. June 1.—Authorizing Canadian National Rys. to rebuild bridge at highway on Lot 7, Stamford Tp., Ont.

33,715. May 29.—Authorizing Canadian National Rys. to build drainage scheme for Ranfurly station grounds, Edmonton Division, Alta.

33,716. June 1.—Authorizing Interprovincial & James Bay Ry. (C.P.R.) to build bridge 62.5 over Windfall Creek, Baby Tp., Que.

33,717. May 29.—Amending order of Railway Committee of the Privy Council, 9,528, May 21, 1901, to provide that Canadian National Rys. crossing of Charlotte St., Peterborough, Ont., be protected by gateman between 6.30 a.m. and 10.30 p.m., daily, during January, February, March and April.

33,718. June 5.—Authorizing C.P.R. to replace timber trestle at bridge 26.5, Timiskaming Subdivision, by a second hand 40-ft. double plate girder span.

33,719. May 29.—Authorizing Canadian National Rys. and Peterborough Radial Ry. to operate over crossing at Charlotte St., Peterborough, Ont., without first stopping.

33,720 to 33,723. June 5.—Authorizing Canadian National Rys. to rebuild bridges across the Burnt River, at four points, viz., mile 36.7, 35.4, 37.1 and 41.1, from York River, Glamorgan Tp., Ont.

33,724. June 5.—Authorizing Oshawa Ry. to build spur for Pedlar People, Ltd., Oshawa, Ont.

33,725. June 5.—Ordering Canadian National Rys. to provide a one-pen stock yard at Entwistle, Alta.

33,726. June 5.—Ordering C.P.R., within 60 days, to install a wigwag signal and electric bell at crossing of Brock Road, Puslinch station, Ont.

33,727. June 5.—Authorizing Canadian National Rys. to open for traffic, line from mile 3.9 Riverhurst Subdivision to mile 5.5 Craik Subdivision, 3.67 miles, in Tps. 17 and 18, Range 20, west 2nd meridian, near Regina, Sask.

33,728. June 7.—Authorizing Kettle Valley Ry. to build spur for Union Oil Co. of Canada, Peniticon, B.C.

33,729. June 6.—Authorizing C.P.R. to replace Howe truss span at bridge 51.86, New Brunswick Coal & Ry., over Coal Creek, by 85 ft. pony span.

33,730. June 6.—Authorizing C.P.R. to build spur for City of Montreal, near Papineau Ave.

33,731. June 7.—Ordering that cost of installing half-interlocking plant at crossing of British Columbia Electric Ry., and Vancouver, Victoria & Eastern Ry. on Georgia Ave., Vancouver, B.C., be paid by V.V.&E.Ry., the cost of changes in location of signals governing movements on B.C.E.R. to opposite sides of the street to be paid 75% by B.C.E.R. and 25% by V.V.&E.R.

33,732. June 7.—Authorizing Canadian National Rys. to rebuild bridge carrying highway between Lots 74 and 76, Stamford Tp., Ont., across railway at milepost 1.30, London Division, Ont.

33,733. June 6.—Authorizing Brantford Municipal Ry., and Lake Erie & Northern Ry. to operate without first stopping cars over crossing on West Mill St., Brantford, Ont.

33,734. June 9.—Authorizing Canadian National Rys. to build spur for Welland Cotton Mills, Ltd., Welland, Ont.

33,735. June 6.—Further extending to June 30, time within which Canadian National Rys. may build spurs for Carroll Bros., near Sherkston, Ont.

33,736. June 8.—Approving supplements to agreement between Bell Telephone Co. and Ingersoll Telephone Co., Oxford County, Ont.

33,737. June 11.—Approving proposed addition to Montreal & Southern Counties Ry. station on McGill St., Montreal.

Canadian National Rys. Operating Results.—R. B. Hanson, York-Sunbury, N. B., asked in the House of Commons recently:—"What were the earnings and expenses for the fiscal year, or last accounting period, of the following divisions of the Canadian Government Rys.: From Montreal to St. Flavie; from St. Flavie to Moncton; from St. John to Halifax and from Truro to Sydney?" The acting Minister of Railways, Mr. Graham replied "As pointed out by a former Minister of Railways on March 21, 1922, railway accounting methods do not provide for the presentation of receipts, expenses, surplus or deficits by operating divisions".

American Railway Association, Mechanical Division, Annual Meeting.

The American Railway Association, Mechanical Division, annual meeting was held at Orchestra Hall, 220 South Michigan Ave., Chicago, June 20, 21 and 22, J. Coleman, General Superintendent of Car Equipment, Central Region, Canadian National Rys., Toronto, and chairman of the general committee, presiding. The programme was as follows:—

June 20.—Addresses by chairman, J. Coleman; R. H. Aishton, President, American Railway Association; and W. J. Storey, President, Atchison, Topeka & Santa Fe Ry. Message from W. W. Atterbury, Operating Vice President, Pennsylvania System. Reports of following committees: General; nominating; locomotive design and construction; locomotive

and car lighting; electric rolling stock. Individual papers on the development of the locomotive, by S. Vauclain, President, Baldwin Locomotive Works; and on the training of apprentices, by J. Purcell, Assistant to Vice President, Atchison, Topeka & Santa Fe Ry. Discussion on possibilities for increasing efficiency of modern locomotives.

June 21.—Address by C. H. Markham, President, Illinois Central Rd. Reports of following committees: Car construction; arbitration; prices for labor and materials; brakes and brake equipment. Individual papers on the development of railway cars, by E. F. Carey, President, Pullman Co.; and on increasing of locomotive mileage, by C. F. Giles, Superin-

tendent of Machinery, Louisville & Nashville Rd. Discussion on co-operative research. Election of officers.

June 22.—Sir Henry Thornton, President, Canadian National Rys., was to have made an address, but was unable to do so, owing to prior engagements and asked Mr. Coleman to give a message on his behalf. Reports of following committees: Safety appliances; wheels; specifications and tests for materials; loading rules; tank cars; design of shops and engine terminals. Discussions on shop management problems of today; economies from modern shop machinery; modern repair track facilities; and handling of miscellaneous material on car repair tracks.

Specifications and Tests for Materials Committee.

The committee on specifications and tests for materials, of which F. M. Waring, Engineer of Tests, Pennsylvania System, was chairman, reported that sub-committees are working on specifications for the following: Reports to be ready next year; mechanical rubber goods; welding wire; water gauge and lubricator glasses; wrought iron; steel sheets for passenger equipment; paints.

Since no action had been taken by the Association toward promulgating the tentative specifications submitted in the committee's report of 1921 for revision of standard specifications for carbon steel axles for cars, locomotive tenders and engine trucks, and for revision of standard specifications for carbon steel castings, the committee withdrew their recommendations, and submitted new revisions of the axle and steel casting specifications for approval. The recommendations for the revision of standard specifications, dealt first with specifications for galvanized sheets, recommending some changes, and that the specifications be considered as recommended, rather than standard practice. These specifications have been revised with the co-operation of the manufacturers, and had been changed in form; in providing for a copper bearing base metal when specified; in varying requirements for weight of coating for different gauge sheets; in reducing requirements for bend test of coatings, because of heavier coatings specified, and including permissible variations in weight, size and gauge.

The report dealt with specifications for carbon steel axles for cars, locomotive tenders and engine trucks; steam heat hose; and mild steel bars, and recommended that the new specifications proposed be changed from standard, to recommended, practice. The specifications for carbon steel axles for cars, locomotive tenders and engine trucks have been revised to remove requirements for annealing, because the standard practice is to use unannealed axles; the carbon range was raised slightly, in the interest of securing a stiffer axle in the larger sizes; the addition of a requirement for calipering actual diameter of test axle; the removal of engine truck axles from the title, as the majority of such axles are bought under annealed forging specifications, and the requirements of these specifications are intended for tapered axles; one drop test formula is given for all lengths of axles; revision of permis-

sible variations allowing somewhat wider tolerance on over-sizes on account of difficulties in forging; and the addition of a table of maximum weights for both smooth forged and rough turned axles. Weights specified were obtained from actual weighing of a large number of axles at the manufacturers' and represent current practice. The form of the specifications for steam heat hose has been changed and long length, as well as car heating, hose is covered; the rack steaming test is substituted for the digester test and hydrostatic and deflection tests added; tolerances are given for outside and inside diameters; the physical test requirements for tube and cover and friction have been changed slightly to agree with standard practice, but the quality of hose has not been affected. The specifications for mild steel bars as set forth were shown combined, into one specification, with revised specifications for structural steel for passenger equipment, and structural steel for freight equipment, the report stating in this connection: "Since these materials are of the same grade, it seems advisable to combine the specifications into the prevailing form in use by other associations."

Revisions in Specifications for Materials were recommended as follows: Annealed carbon steel castings for locomotives; annealed carbon steel castings for passenger and freight equipment cars—specifications revised and combined into one specification. The proposed specifications are the same as those reported as information in the committee's report of 1922, and represent the recommendations of the joint committee of the Association and the American Society for Testing Materials. They have also been approved by the A.R.A. car construction and coupler committees. The principal changes are in the method of expressing the requirements; limits for carbon have been omitted, and the form of the physical requirements changed, so that minimum yield point is specified, while tensile strength is not. The tensile strength is required to be reported, however, as it is necessary that it shall be obtained, as the elongation and reduction of area are made a function of the tensile strength. The committee feels that the specifications represent the best that have yet been offered and recommends that members of the association put them into force for the purchase of steel castings

at the earliest opportunity.

Lap-welded charcoal iron boiler tubes for locomotives. The principal changes were revision of the tolerances for gauge, so that the tubes shall be not less than the thickness specified. Some changes were made in the physical test requirements so as to bring the specifications into harmony with those of the American Society for Testing Materials.

Lap-welded and seamless steel boiler tubes for locomotives. The changes were of the same nature as those for charcoal iron tubes.

Rivet steel and rivets for steam boilers and other pressure vessels. The principal changes were the inclusion of chemical requirements, the omission of tensile requirements for rivets, and the addition of a table of permissible variations for bars.

Lined journal bearings. The number of compositions specified was reduced to one, for both the back and the lining metal. It was pointed out that the compositions selected are those in most general use and demonstrated as satisfactory.

Engine bolt iron. The principal change concerned form, and variations in tensile requirements, with variations in the sizes of bars.

Solid staybolt iron. The principal changes were in the form and wording of some sections; also, in the reduction of manganese permitted from 0.10% to 0.05%.

Hollow staybolt iron. The principal changes were the reduction in manganese permitted, from 0.10% to 0.05%; revision of the tensile test requirements to include elongation measured in 4 in., yield point changed from 0.55 to 0.60 tensile strength, and the addition of a splitting test.

Tender tank hose. While there was no change in the quality of hose required, there were some changes in form, and as concerns friction and the physical requirements in tube and cover.

Bronze bearings for locomotives. The revision applied only to sec. 2 of the existing specification, changing the phosphorus quantity from 0.2-0.6 to 0.1-0.25. The change was made because the existing specification was rather high for a so-called medium bronze, the new percentage being more in line with common practice.

New Recommended Practice Specifications were suggested as follows: Specifications for glasses for reflex type water

gauges have been drawn up so as to require a high grade of glass, and the committee requests that the members put them into effect and give their experience.

General instructions on standard methods of tests for mechanical rubber goods. Separate specifications for each of the following: wrapped cold water hose; wrapped air hose; braided air hose; fire hose; axle light belting. The general instructions on standard methods of tests for mechanical rubber goods and the individual specifications for hose and for axle light belting were prepared by a sub-committee working in co-operation with representatives of the Rubber Association of America. The committee requested that the members put these specifications into effect and give the benefit of their criticisms. The individual specifications do not contain any methods of tests. All of these have been transferred to the general instructions.

The committee recommended that the revisions and new specifications submitted to letter ballot of the Association.

Car Construction Committee's Report.

The committee on car construction, of which W. F. Kiesel, Jr., Mechanical Engineer, Pennsylvania System, was chairman, reported on car door fasteners, the proposition of permanently fastening end doors on box cars, needed improvement in side door conditions, journal box gauges for bolt holes, dust guard opening, lid lug and wedge seats, center sill area, limiting outline for freight cars, and maximum loaded weight of cars equipped with F axles. By far the greater part of the committee's report was taken up with designs for standard single and double sheathed cars, and most complete drawings were submitted. The following specifications for A.R.A. box cars were presented:

General Requirements. Cars, when delivered, shall be complete in all parts ready for service, shall conform to A.R.A. standards, recommended practice and to the following specifications. Where the A.R.A. standards, recommended practice, design, and these specifications permit option, there shall be a definite agreement between the builder and purchaser as to which of the optional details shall be used. They shall also agree as to method of place of inspection of cars and of material. The purchaser shall furnish the builder all necessary information relating to paint, marking, lettering, and stamping, in addition to that covered by A.R.A. requirements, for both material and completed car. All lumber used shall be kiln dried. All steel plates $\frac{1}{4}$ in. and less in thickness, pressed parts made therefrom, and channel side sills, shall include a content of copper of not less than 0.20%.

Axles. Journals and wheel fits shall be finished smooth and true to gauge. Journals shall be burnished. The heat number of the axle shall be transferred from the back collar to the other end of the axle in the presence of the inspector.

Side frames. The size of journal shall be cast on outer side of each steel frame, in numbers not less than 1 in. high.

Truck bolsters. The owners' initials and the car number shall be stencilled in letters and numbers not less than 1 in. high on one side of each bolster.

Center plate bearing surface. For cen-

ter plates cast integral with truck bolster, the center plate bearing surface shall be machine finished or ground. All center plate contours shall conform to limiting gauges.

Fundamentals governing areas of sections. Where such fundamentals are specified in A.R.A. standards, or recommended practice, they refer to grade A material in proposed specification for carbon steel castings, which require a yield point not less than 29,250 lb. per sq. in., with an elongation, per cent. in 2 in., of not less than 1,450,000 divided by tensile strength. If grade B material, having a yield point of not less than 36,000 lb. per sq. in., with an elongation, per cent. in 2 in., not less than 1,600,000 divided by tensile strength, is used, a reduction of area of $12\frac{1}{2}\%$ will be allowed. Rolled or forged steel which meets the same yield point and elongation requirements shall have the same allowance for reduction of area.

Draft gear keys shall be quenched and tempered carbon steel forgings.

Rivet holes shall match, and drifting shall not be allowed. Holes which do not match shall be reamed. Rivets, after they are driven, shall completely fill the holes, and shall have heads of the proper shape lying tightly against the sheets or castings.

Flanging of sheets must be true to shape, to provide close contact with contiguous parts.

Joints in superstructure and roof must be water tight. Asphaltum paper about $\frac{1}{16}$ in. thick shall be placed between riveted joints of all-steel roofs.

Brake pipes shall have smooth edges free from fins and burrs. A thin coat of graphite grease shall be applied to the male threads only, and care shall be taken to keep the grease from the inside of pipe and fittings. Connections shall be tested under 100 lb. gauge pressure, using soapsuds to determine leaks. The completed brake installation shall be finally tested to determine proper working and absence of interferences.

All metal parts shall be free from scale and rust, and thoroughly clean, before they are painted.

Metal in contact with wood or metal, and where not accessible after assembling, must be covered with one coat of thick paint, red lead lute or lamp black lute.

Trucks (except wheels, axles and parts contained in journal boxes) and underframes shall have two coats of paint, the first preferably of freight car color and linseed oil, and the second A.R.A. black paint.

Two coats of approved paint shall be applied to the outside of superstructure and one coat to the inside of steel sheets. All-steel roofs shall have two coats of paint on each side.

The joints between floor boards and sheathing or lining shall be carefully filled with asphaltum, or similar compound, which will not be brittle at 0 deg. F., and will not flow at 150 deg. F.

White lead paint shall be used for all stencilling.

The committee also submitted designs for three types of standard trucks, with bolster designs, for cast steel bolsters with integral and separable center plates, also pressed steel bolsters. Concerning all the designs submitted, the report said: "The committee's intent is to make designs that will establish fixed conditions, permitting the use of detail designs standardized by the Association, or the substitution of other parts preferred by

the individual railway, singly or in groups, provided these parts, or group of parts, are the equivalent in strength, service and safety of, and interchangeable with, the standard part, or group of parts, replaced." The report recommended that one or more cars of each of the types covered should be built in the near future.

Brakes and Brake Equipment, Committee's Report.

The committee, of which G. H. Wood, General Air Brake Instructor, Atchison, Topeka & Santa Fe Ry., was chairman, reported as follows:—

Since the last report rendered by the committee their time has been almost wholly occupied in assisting the safety appliance committee and taking care of conditions due to labor troubles. A number of subjects, which were on the docket, have been of such a nature as to require considerable time of the members to adequately care for them. The conditions enumerated made it impossible, therefore, for the committee to cover the subjects sufficiently to enable them to render a report of any value and the subjects have, therefore, been continued on the docket for future consideration. The committee has been able to cover one or two subjects which are being submitted.

In the committee's report for last year attention was called to having appointed a sub-committee from committee on train brake and signal equipment to work in conjunction with committee from operating division in revising the latest code of Air Brake and Train Signal Rules. This committee has performed the duty for which it was appointed. Meanwhile, the Mechanical Division's Standard Rules and Instructions Governing the Testing, Inspection, Maintenance and Operation of Brakes and Signal Equipment have been carefully reviewed and the following recommendations are submitted:—

Rules and regulations for testing, inspection, maintenance and operation of power brakes (freight and passenger):

Replacing the air brake and train air signal instructions, shown in Manual of Standard and Recommended Practice, section E, pgs. 65 to 74, with a suitable code of rules governing the operation of this equipment. The committee has, therefore, prepared a proposed set of rules governing the operation of brake and train air signal equipment. These were appended to the report and were recommended for adoption as standard.

A set of proposed rules governing the maintenance of brakes and air signal equipment on passenger cars was also given, similar to the standard rules governing the maintenance of freight brakes, and the same was recommended for adoption as standard.

The committee has carefully reviewed the rules and instructions in the Manual of Standard and Recommended Practice on the maintenance of freight brakes, and while it does not find that these rules and instructions are subject to important fundamental revision there are a number of cases in which the rules can be clarified. It is, therefore, recommended that they be revised to conform to an appendix. In view of there being no important changes involved, no attempt has been made to enumerate the revision in detail.

The general arrangement and details of the air brake parts, shown in the

manual on pages 3-9 and 11-13, and the details for high speed foundation brake gear, shown on pages 20-31, are not suitable in so far as dimensions are concerned for cars of present day construction. In fact, owing to the many different types of cars in use and being constructed, it would be very difficult to prepare complete detail drawings for the various parts of the brake rigging that would be suitable for the many types of cars involved. It is, therefore, recommended that the details shown on pages 3-9, 11-13, 20-31 and the six paragraphs appearing on page 19 under Designation of Rods and Levers be struck out of the list of standards and recommended practices and supplemented by specifications covering fundamental requirements for foundation brake gear and application of brake equipment to the car. If this recommendation is adopted the Committee will prepare specifications to cover.

Wheels Committee's Report.

The committee on wheels, of which C. T. Ripley, Chief Mechanical Engineer, Atchison, Topeka & Santa Fe Ry., was chairman, and of which L. K. Silcox, General Superintendent, Motive Power, Chicago, Milwaukee & St. Paul Ry., was a member, presented new specifications for cast iron and solid wrought carbon steel wheels, and reported in part as follows: "In 1917 the new arch plate 700 lb. design for cast iron wheels for use under cars of 80,000 lb. capacity was made recommended practice. In 1920 the new design of wheels of weights 650 and 750 lb. was made recommended practice. No change has been made in the cast iron wheel specifications, to provide tests which are proper for these additional weight wheels. Furthermore, investigations of failed wheels, which have been made by various railways, have indicated that the chemistry of the wheel has a bearing on its serviceability; therefore, a demand has arisen for a chemical clause in cast iron wheel specifications. Your committee has prepared a new cast iron wheel specification to take care of these new features, and also to clear up certain clauses which have been subject to criticism because of their being indefinite. A meeting was held with representatives of the Association of Manufacturers of Chilled Iron Wheels, at which they were given an opportunity to criticize the proposed specifications. We wish to acknowledge the assistance and support which these representatives gave us in our attempt to improve the quality of cast iron wheels."

The chemical composition for cast iron wheels, specified by the committee, is as follows: Combined carbon, max., 0.90%; sulphur, max., 0.17% for 1923-24 inclusive, 0.16% 1925-26 inclusive, 0.15% 1927-28 inclusive, and 0.14% 1929 and after; manganese, minimum, 0.50%; total carbon desired, minimum, 3.35%; phosphorous desired, max., 0.35%.

The report stated that the committee had received a request from manufacturers of cast steel wheels that the flange thickness limitations be reduced to the same as those for wrought steel and steel tired wheels, instead of the cast iron wheel limit. The committee felt that the manufacturers' claim was a valid one, and recommended that the limit be made $\frac{1}{8}$ in. for all cast steel wheels under both freight and passenger cars, and that the code of rules be changed accordingly.

The specifications presented for wrought carbon steel wheels contained the following chemical requirements: carbon, 0.65 to 0.85%; manganese, 0.60 to 0.85%; silicon, not less than 0.15%; phosphorous, not over 0.05%; sulphur, not over 0.05%.

The committee also presented a new gauge for steel wheels, and stated as follows: "The present gauge for gauging steel wheels has not been found satisfactory by the various railway companies, as it is too complicated for the average inspector, or wheel lathe hand, and there has been a demand for a simpler gauge to answer all the requirements, and at the same time a revision of the code of rules governing billing for metal in rolled steel wheels through the use of such a gauge. The limit of wear line which has been placed on wheels has been found to be a very unsatisfactory method of gauging the wheels, because the threads wear hollow, and no way is provided to take care of this measurement. Furthermore, the rules governing the maintenance of locomotives, issued by the Interstate Commerce Commission, place the limit on the dimensions from the throat to the underside of the back rim. This latter dimension is really the correct dimension for limiting the wear of steel wheels, inasmuch as this is the danger point, and not the front rim. The gauge presented by your committee takes care of the measurement of the amount of metal to be turned off the tread to restore full flange contour as well as the limit of rim thickness."

Arbitration Committee's Report.

The arbitration committee, of which T. H. Goodnow, Superintendent, Car Department, Chicago & Northwestern Ry., was chairman, and of which J. Coleman, General Superintendent, Car Equipment, Central Region, Canadian National Railways, was a member, reported that during the year cases 1233 to 1286 had been decided, and that, with the general committee's approval, it had discontinued the rendering of interpretations of questions under the rules of interchange, and would consider only disputes presented in the form of arbitration cases in accordance with rule 123. Changes in the interchange rules were recommended as follows: Rule 2, sec. (b), par. 3, changed to improve the rule in the handling of tank cars by requiring specified stenciling to be on both sides of car; addition to sec. (f) of rule 2, in connection with inside door protection; change in sec. (h) of rule 2; recommendation that rule 3, sec. (b), par. 2, be extended to Jan. 1, 1925; extension of rule 3, sec. (d), par. 2, till Jan. 1, 1926; change in rule 3, sec. (f), to prevent the transfer of lading en route and to enable car owner to apply device which has been adopted as standard for his cars; that effective date of sec. (i) of rule 3 be extended to Jan. 1, 1925, and also that rule be modified as specified to prevent transfer of lading en route; extension of effective date of rule 3, sec. (l), second sentence, to Jan. 1, 1925, and modification of section to prevent transfer of lading en route and to force the car owner to comply with the rules; addition of new paragraph to rule 9, providing that when charge is made for adjusting safety valves on tank cars, the billing repair card must specify the pounds pressure at which the valve opened before adjusting; application of a new section to rule 17, to provide that the application of cast iron wheels after June 30, 1924, of nominal weight of less

than 650, 700 or 750 lb., shall be considered as improper repairs; change in interpretation no. 7 of rule 17; modification of rule 30, sec. (c), to improve the rule and remove the inconsistency which has heretofore existed; recommendation that new item "discharge valve caps" be added to the first paragraph of rule 32; modification of rule 32, sec. (d), item 4; modification of rule 33, first paragraph; specifying interpretation of rule 58; modification of rule 72 in connection with longitudinal seams in wheels; addition of a paragraph to rule 98, to create incentive to apply new material and to put rule in line with rule on wrought steel wheels; addition of note to rule 111, to make it clear; correction of misprint in rule 112, note 1, and addition of a new paragraph to rule 112 to provide that second hand trucks used under new car bodies or new trucks used under old car bodies shall be considered of the same age as the car body in figuring depreciated value.

The committee stated that all recommendations for changes in the interchange rules submitted by members, railway clubs, private car owners, etc., were carefully considered, and, where approved, were recommended.

Locomotive Design and Construction Committee's Report.

The committee on locomotive design and construction, of which H. T. Bentley, General Superintendent, Motive Power and Machinery, Chicago & Northwestern Ry., was chairman, and of which C. E. Brooks, Chief of Motive Power, Canadian National Railways, was a member, reported that during the year it had given consideration to the following subjects: tractive power of Mallet locomotives; locomotive rods for heavy power; use of extended piston rods on locomotives and minimum size of piston on which they shall be applied; comparable methods of hydrostatic and force feed lubrication for locomotive cylinders and steam chests, and best method of application; standardization of taps and dies used by railways; rail stresses under locomotives; best means of taking up driving wheel lateral; mechanical stokers; feed water heaters and exhaust steam injectors; study of crosshead connection of piston rods.

The formulae developed for Mallet locomotive tractive power were as follows:

$$T = \frac{1.7 P c^2 S}{(R+1) D} \text{ for locomotives with approximately 90\% cut-off, and } T = \frac{1.5 P c^2 S}{(R+1) D}$$

for locomotives with approximately 50% maximum cut-off, where c is diameter of low pressure cylinder in inches; S is stroke in inches; P is boiler pressure in pounds; D is diameter of driving wheels in inches; R is ratio of cylinder volumes, and T is tractive power in pounds.

Concise recommendations were given for rods to be used with heavy power, and the matter of extended piston rods was dealt with very thoroughly, as were also the subjects of lubrication methods, driving wheel lateral, and mechanical stokers. A questionnaire, concerning feed water heaters and exhaust steam injectors, with indications from answers received from various roads, was detailed in the report, and it was stated that there are 319 feed water heaters in service on member roads and 678 on order. The study of the key vs. the nut connection, between crossheads and piston rods, ap-

parently demonstrated the key connection best, as 61 roads reported that they considered it more desirable, for the following reasons: more reliable; saving of weight of reciprocating parts; more readily applied; easier to maintain; more secure; less trouble in locomotive house maintenance; firmer hold; more accessible; simpler construction; less parts; easier to remove; nut cannot be properly tightened; difficult to fit and keep nut tight; permits smaller crosshead and shorter guides; no trouble with key becoming loose; cheaper to repair; key will shear in case of water in cylinder, thereby saving cylinder head. Seventeen out of 18 roads using both key and nut stated their reasons for using the nut as follows: easy to detect looseness and rarely breaks rod in crosshead; fractures develop in key slot; nut less liable to injure rod; rod is stronger with nut as key slot weakens the rod; keys shear; easier to turn piston head with nut, in order to equalize water. Three roads stated they had no preference.

Loading Rules Committee's Report.

The committee on loading rules, of which R. L. Kleine, Assistant Chief of Motive Power, Pennsylvania System, was chairman, reported in part as follows: "During the past year, your committee as a whole, as well as sub-committees, have held meetings with shippers concerning recommendations for changes and additions to loading rules. A number of suggestions for changes were also received from the members. Trial loads, embodying new forms of loading, were sent out and carefully followed to destination, in order to determine the safety and practicability of such loadings. Your committee has had the hearty co-operation of the steel and automobile industries, and is indebted to their representatives for able assistance.

The committee submitted recommendations for changes in the rules as follows: addition of note to rule 5 to make clear what weight of lading may be placed on cars; revision of rule 9 (a) to clarify the meaning; change in rule 9 (e) so as to omit reference to fig. 68; revision of rule 19 to take care of special material, such as bridge girders, columns, etc.; revision of rule 21 to permit securing lift lever where same cannot be readily disconnected from the coupler lock lift; change in rule 27 to omit reference to fig. 48; revision of rule 28 to overcome the difficulty experienced by shippers in obtaining the required 4 in. clearance between lading and floor of car with flexible material; revision of rule 155, second paragraph, to permit loading of material at doorway to the inside line of car; change in fig. 39 to conform with proposed change in rule 155; change in rule 207 to omit reference to form of loading shown in figs. 47 and 48 and introduce reference to fig. 49; omission of figs. 47 and 48, which are obsolete; change in fig. 49, omitting latter portion of note; revision of rule 208 to permit loading girders and half-roof trusses (single loads) without bearing pieces where they can be so loaded without damage to the material; revision of rule 223, to permit increased length of overhang where cars with long wheelbase are used; change in rule 224, last paragraph, since reference to rule 207 is no longer applicable; revision of rule 225 to conform with proposed revision of rule 28; change in rule 227-B, par. (g); change in rule 227-D, 3rd par. to conform with change in par.

(g); change in fig. 61 to conform with requirements of rule 229; change in sketch A; inclusion of general rule 15 with rules for loading rolled material of small sectional area on open cars; change in rule 302 re loading of boiler shells; introduction of new rule 400-A to cover straight and concrete pipe loaded on flat cars; changes in figs. 115 and 117 to line up with present practice; revision in table of woods under rule 508; revision of note under rule 519, and revisions in rule 532, to permit use of certain decking and in rule 533 to conform with that proposed in rule 532.

Locomotive and Car Lighting Committee's Report.

The committee on locomotive and car lighting, of which W. E. Dunham, Assistant to General Superintendent, Motive Power and Machinery, Chicago & Northwestern Ry., was chairman, reported in part as follows: "Your committee has kept in touch with lamp manufacturers, following the lines of lamp improvement that have been developed during the year. The suggestion has been made to lamp manufacturers that it would be very desirable to maintain a definite mechanical difference in the headlight lamps, for the primary purpose of identification. A possible change from the present G type of bulb, to the PS type of bulb, is reported. This will very likely permit the maintaining of a separate sized bulb for each size of lamp required, and will also permit of improved focusing of the light."

The report recommended that member lines should try the 15 watt 33 volt S-14 lamp now available, as many complaints had been received that the 15 watt 33 volt S-17 lamp in general use for locomotive cabs is unnecessarily large. A proposed table of dimensions for axle pulley bushings for designated A.R.A. car axles was also given, together with a table governing the range of pulley locations. Information concerning the progress made with the axle generator drive was also presented.

Nominating Committee's Report.

The terms of office of the chairman, vice chairman and seven members of the general committee expire June, 1923. In accordance with action taken by the general committee and recommended in its report to the Association this year, as result of a resolution adopted at the 1922 annual meeting, the term of chairman and vice chairman of the division is changed from two years to one year, which will make it necessary to elect both a chairman and vice chairman of the division at the 1923 annual meeting. The committee nominated the following for chairman, John Purcell, Assistant to Vice President, Atchison, Topeka and Santa Fe Ry. For vice chairman, T. H. Goodnow, Superintendent Car Department, Chicago & North Western Ry. Both terms expiring June 1924.

As the terms of seven members of the general committee expire in June, 1923, the committee nominated the following to serve until June, 1925, C. E. Fuller, Superintendent Motive Power and Machinery, Union Pacific Rd.; H. L. Ingersoll, Assistant to President, New York Central Rd.; W. Kells, Superintendent Motive Power, Atlantic Coast Line Rd.; J. S. Lentz, Master Car Builder, Lehigh Valley Rd.; H. C. Oviatt, General Mechan-

ical Superintendent, New York, New Haven and Hartford Rd.; J. J. Tatum, Superintendent Car Department, Baltimore & Ohio Rd.; W. J. Tollerton, General Superintendent Motive Power, Chicago, Rock Island & Pacific Ry.

The committee nominated J. Coleman, General Superintendent of Car Equipment, Central Region, Canadian National Rys., for member of the general committee to fill unexpired term of T. H. Goodnow, who is nominated for vice chairman and whose term as member of the general committee expires June, 1924. The committee also nominated C. H. Temple, Chief of Motive Power and Rolling Stock, Canadian Pacific Ry., to fill the unexpired term of W. H. Winterrowd, who has left railway service and whose term expires in June, 1924.

Electric Rolling Stock Committee's Report.

The committee on electric rolling stock, of which G. C. Bishop, Superintendent Motive Power, Long Island Rd., was chairman, and of which L. K. Sillcox, General Superintendent Motive Power, Chicago, Milwaukee & St. Paul Ry., was a member, submitted a complete list of rules and instructions for the maintenance of electrical equipment, both locomotives and cars. The committee framed the rules in such general terms that, as pointed out in the report, rules governing local conditions could be added to them, and the report stated: "These instructions are based, in general, on the experience and actual practice of those roads having electrically equipped rolling stock. They are offered as suggested practice for other roads having equipment of this character. It should be understood, however, that the requirements are not binding and may be modified in any respect to suit the local conditions on the roads adopting them. In as much as these instructions necessitate the performance of work on electrical apparatus and circuits, attention is called to the fact that such additional instructions as may be necessary must be issued to ensure that the work is performed in such a manner as to avoid personal injury to the workmen."

The instructions given are very complete, and cover the maintenance of main motors, wiring, rheostats, circuit breakers, reversers, contactors, transformer and impedance coils, pantograph and connections, line equipment, electrical connections to the air brake system, and all other electrical equipment of railway rolling stock.

Designs of Shops and Locomotive Terminals Committee's Report.

The committee on design of shops and locomotive terminals, of which A. R. Ayers, Assistant General Manager, New York, Chicago & St. Louis Ry., was chairman, reported in part as follows: "A vast amount of information was collected by previous committees, which is scattered through various reports in such a way that it is not readily available. It was felt that the committee, this year, could be of most service by condensing and co-ordinating the work of previous committees, which it has endeavored to do in this report, together with presenting some data taken from reports of other associations and information developed by previous committees but not

published. The report is divided into four divisions, as follows: 1. Locomotive terminals; 2. power houses; 3. car shops; 4. locomotive shops."

The part of the report dealing with locomotive terminals was a summary of the data gathered in 1922 by the A.R.A. committee on design and operation of such terminals, with certain information on the subject published by the American Railway Engineering Association, under the following heads: 1. general layout of terminal; 2. engine house design; 3. turntable, tractor and pit; 4. cranes, tractors and hoists; 5. locomotive pits and drop pits; 6. shops and tool equip-

ment; 7. boiler washing system; 8. ash handling facilities; 9. coaling stations, sand storage and water cranes; 10. inspection pits and washing platform; 11. buildings and offices; 12. storehouse and oil house.

The part of the report dealing with power houses was a summary of previous reports of the committee on modernization of stationary boiler plants, condense and brought up to date. It dealt with power houses under the following heads: 1. location; 2. construction; 3. power house equipment, including both boiler and engine room equipment; 4. power transmission; 5. piping,

lighting and heating of power houses.

The portion dealing with car shops called attention to the plan of the 4-unit shop presented in 1920 and certain details of it. In dealing with locomotive shops it said:—"The committee finds that very little data has been collected on the design of locomotive shops by previous committees, and about the only information available is found in technical publications. The committee feels that the time available to collect data and submit a comprehensive report is too short, and recommends that this important subject be given consideration by future committees."

The Development of the Locomotive.

By S. M. Vauclain, President, Baldwin Locomotive Works.

The following paper was read before the American Railway Association, Mechanical Division, at its meeting in Chicago, June 20:—

I have been invited to deliver an address on the development of the locomotive, the necessity for its development, and the improvements necessary to assist in the transportation problems of this country. This is quite a large subject to be disposed of in a very short space of time, and I know that most of those present are thoroughly familiar with the history of the locomotive and the necessities which led to its conception, as well as some of the difficulties that were surmounted in its introduction as a public servant. This it has continued to be for more than 100 years, with an ever increasing intensity in its devotion to the business world.

Transportation, however, has been and always will be a governing factor of prosperity. Those countries favored with superior transportation facilities will, other things being equal, prosper to a much greater extent than those where such facilities are more or less limited. Railway transportation has made the United States what it is today. Practically all other forms of transportation have been superseded, and many of the water systems of transportation formerly in use have been abandoned. Quantity and quality are the constant cry, and can only be met by superior equipment which the science of railway engineering has made possible for the great railway systems of our country to employ.

As far as is known, the first vehicle to be actually propelled by steam was a gun carriage built by Nicholas Cugnot, in Paris, in 1771, while the first locomotive designed to run upon rails was built in 1803 by Richard Trevithick, a name that is still associated with the locomotive industry in England; and that has received distinctions as well in other countries, principally Egypt and Japan. Strange to say, the first successful effort in locomotion by steam in America was the Oructor Amphibolis, constructed by Oliver Evans in Philadelphia in 1804. Mr. Evans' shops occupied the ground on which the U.S. mint now stands; a site now surrounded by the buildings of the present Baldwin Locomotive Works, operating night and day, continuing the industry originated by Evans on this very spot. This locomotive was really a dredging scow, designed to run on land or water, but principally to navigate the rivers between which Philadelphia lies. In order to get it from the factory to the river it became necessary to use it

as a locomotive that would operate on the streets, and without rails to guide it. Its performance was successful, but its utility questionable. Even at that time, Mr. Evans realized the advantage of using a high steam pressure, and expanding it in the cylinder, so as to obtain some greater economy in its use.

It would be useless to attempt to trace the development of the locomotive in foreign lands, as a more complete understanding can be had in this short time by reviewing briefly the progress made in the development in this country, of this very wonderful power house for locomotion. Mention should be made, however, of the first locomotive with a horizontal multitubular boiler, built by Seguin in France in 1827; and also of the famous Rocket, constructed in England by Geo. Stephenson in 1829. This locomotive was awarded the prize in a contest on the Liverpool and Manchester Ry. It was the first locomotive to combine three basic features which are still universally employed, viz.; a horizontal multitubular boiler, pistons directly connected to the driving wheels, and the use of the exhaust steam, which was discharged up the stack, to furnish a draft for the fire, and thus make possible the generation of large quantities of steam in proportion to the size of the boiler and draft intensity.

The various experiments and attempts in this early period to apply steam locomotives to the use of transportation in the U.S. were more or less successful. Those of foreign construction imported for the purpose gave results that were sufficiently satisfactory to interest the brightest engineering minds in the country and influence them to attempt the construction of American built locomotives. The first locomotive to be used in the U.S. however, was built in England and was named the Stourbridge Lion. It made a few trips on the Delaware and Hudson Canal Co's road at Honesdale, Pa., in 1829, but was considered too heavy for the track and bridges, and was soon withdrawn from service.

The first locomotive actually built in America was the Tom Thumb, designed by Peter Cooper, a merchant of Baltimore, and used experimentally on the Baltimore and Ohio in 1830. It was about the size of a hand car, but it demonstrated the practicability of steam as a motive power. Then came the Best Friend, the first locomotive built for commercial purposes in this country, constructed in 1830 at the West Point Foundry in New York for the South Carolina Rd. This engine was very suc-

cessful for about seven months, when its boiler unfortunately exploded, because the fireman became annoyed at the blowing off of steam at the safety valve, and weighted down the lever to ease his mind.

Old Ironsides was built by Matthias Baldwin and put in service in 1832 on the Philadelphia, Germantown & Norristown Rd. Its weight was 5 tons. It was built under great difficulties. Its operation, all things considered, was very successful. It was quite a while before the officers of the company would permit this locomotive to go out in the rain; on rainy days horses were used, but one day it was caught out on the rails when the rain descended, and proved its utility to operate under such discouraging circumstances. The American locomotive has been out in the rain ever since. Old Ironsides had its driving wheels ahead of the firebox, with one large pair of carrying wheels supporting the front end of the engine. This added greatly to its adhesive qualities. The further development of the locomotive by Mr. Baldwin led him to introduce a 4-wheeled truck, and in this design the driving wheels were placed behind the firebox, which materially reduced the adhesion for traction purposes. The truck had first been used by J. B. Jervis in 1831, and it provided the flexibility of wheel base so essential to locomotives that operated on the sharp curves and uneven tracks of that period. The engineers of that day seem to have realized the benefit to be derived from high pressure steam, and when Mr. Baldwin introduced ground metallic joints, in place of canvas and red lead joints for steam pipes, he opened the way for those who were to follow him in future and employ still higher steam pressure.

About this time the Norris Locomotive Works were established. Mr. Norris succeeded in building a locomotive of the same total weight as Mr. Baldwin's engine but of greater hauling power, by using a 4-wheeled truck and placing the driving wheels in front of the firebox, so that a greater portion of the weight of the engine was utilized for traction. The next logical step in locomotive development, in order to gain power, was to use two pairs of driving wheels, placing one pair in front of the firebox and one behind it. This was done by Henry R. Campbell in 1836, who designed the first American (4-4-0) type locomotive, and had such a machine built by James Brooks of Philadelphia. This locomotive had no equalizing beams between the two pairs of driving wheels, and there-

fore, did not perform very satisfactorily. In 1837, however, Garrett & Eastwick of Philadelphia built a locomotive for the Beaver Meadow Rd., and introduced an equalizing bar between the two pairs of drivers, which device was patented by Jos. Harrison, Jr., who later became a member of the firm of Eastwick & Harrison. Quick to perceive the value of this device, Mr. Baldwin was so pleased with it that he purchased from Eastwick & Harrison the right to use and apply it to all the locomotives he might thereafter build.

Mr. Baldwin, ever aggressive, felt that for moving the heavy traffic which the railways then were called upon to handle required locomotives of greater power than any previously built. He conceived the idea of a flexible beam truck which would enable him to build locomotives with 6 coupled wheels. Such locomotives were put in service in 1842, and in the year 1846 had grown into a design using 8 coupled drivers, the first two pairs being combined in a flexible truck. The largest locomotives of this type weighed about 30 tons. Ross Winans, of Baltimore, in this same year produced a locomotive with 4 pairs of drivers coupled, but very compactly grouped, and held in a rigid frame. It is therefore doubtless due to his courage that there was introduced and generally adopted the rigid frame construction now employed in our most powerful locomotives. The most notable of these Winans locomotives were the famous Camel engines, which were among the most powerful freight haulers of their day and were built in large numbers up to 1860.

In the late '40's and early '50's, the public desire for more rapid passenger service led to the employment of large driving wheels for this class of transportation. Mr. Baldwin, first in the field with the Governor Paine, gave great impetus to the desire for better passenger locomotives. James Milholland, of the Philadelphia & Reading Ry. Co., whose work in the development of the locomotive will pass down into history, in 1852 constructed for that railway, passenger engines having driving wheels 7 ft. in diameter. In detail of design, the Milholland engines were undoubtedly among the finest of their time. The Tiger, built by Mr. Baldwin in 1856, for the Pennsylvania Rd., was one of the most successful passenger locomotives of that period. It used wood for fuel and its total weight was some 28 tons. In the same year an engine of this type was built for service in the south and is still working every day at Valdosta, Ga., being in its 68th year. It may be worth while to mention that this locomotive was born the same year as the speaker, and like your humble servant, while showing somewhat the ravages of time, is still able to make some smoke.

During the Civil War almost anything that would run on wheels in the shape of a locomotive was acceptable. Many remodelings were made of antiquated structures, and locomotive designers became quite as numerous as the locomotives themselves. J. P. Laird, at the Altoona Shops of the Pennsylvania Rd. was most active, and some of his improvements, as for instance the Laird guide, exist today. Much was accomplished, and during the years intervening some of our railway systems began to consider standardization of their power. This was most consistently and determinedly put in force by the Pennsylvania Rd., and the changes of types on

that system, while made regularly in order to keep abreast of the times, have always been given the most conservative consideration before adoption.

It was not until 1877 that interest was taken by the Philadelphia and Reading Ry. in locomotives to burn the refuse anthracite coal then produced in large quantities at the mines, and for which no market was available. The first locomotive of this character was designed by J. E. Wootten, of the railway, and was quite successful. It was at that time considered quite an innovation; but owing to the increased demand since made upon the steam generators of locomotives, the use of the Wootten boiler has developed the wide firebox boiler, now used with all kinds of fuel and in all classes of service. The Wootten design was a great departure, and, in my opinion, did more for development and increased locomotive power than any other improvement of that period. It was quite a while before the merits of this construction were acknowledged, but it is now universally used.

The desire for high speed with large trains where great tractive power was not necessary, led to the introduction, in 1894, of the Atlantic type locomotive, built to meet the requirements of the Atlantic Coast Line. This type was so successful that it became almost universally employed in passenger service, though under various names, such as the Central Atlantic, Chataqua, etc. The underlying principle in each case was the same, viz., the use of the trailing wheel to carry the excess load involved by the employment of a boiler of exceptional steaming capacity and having a deep firebox suitable for burning bituminous coal.

The increased requirements of transportation, i.e., sustained high speeds with heavy trains, produced what is now commonly known as the Pacific (4-6-2) type locomotive, which is in general use throughout the country for heavy passenger service. For the heaviest class of service on steep grades, the Mountain (4-8-2) type is being successfully employed. The first so called consolidation type locomotive, built by the Baldwin Locomotive Works in 1866, was named in honor of the consolidation of the various small railway lines now comprising the Lehigh Valley System. It was a great success, and upon the same principles, consolidation locomotives of enormous size and great efficiency have continued to be built.

About 1889, American locomotive designers became deeply interested in the compounding of locomotives. A considerable number of compounds of various types had been built and operated abroad. Almost any single expansion type then constructed was capable of having compound cylinders of some design applied, resulting in a more economical performance. Among the various types in use abroad were 4-cylinder Mallet locomotives, originally designed for light service, and later built in large sizes for use in Russia. The first locomotive of this type built in the U.S. was purchased by the Baltimore & Ohio Rd., and had two 6-coupled units. It was exhibited at the St. Louis exposition in 1904, and later operated very successfully in mountain service. But inasmuch as this was a single locomotive, the type did not receive the attention or create sufficient interest among railway managers to come quickly into general use; and it was not until 1906, when J. J. Hill, of the Great

Northern Ry. purchased five of these engines on my recommendation, that wide-spread interest in the type was created. In order to get a proper estimate of their value, he isolated them and placed them on one section of the road, removing the locomotives of all other types. These locomotives were equipped with leading and trailing trucks, but in other respects were of the same type as the locomotive that had been previously constructed and put in use on the Baltimore & Ohio Rd. The experiment was successful, and Mallet locomotives for steep gradients or extreme conditions of traffic became popular and are still in general use.

Notwithstanding the fact that compound locomotives proved their economy and gave wonderful results, so far as economical consumption of fuel in freight service and high speed hauling power in passenger service were concerned, owing to the clearance limits prescribed, the constantly increasing size of locomotives made the use of compound cylinders more and more difficult. The use of superheated steam about this time, however, enabled engineers to produce locomotives almost, if not quite, as efficient as the compound locomotives had proved themselves to be, and to still further enlarge the size of units, increase their power and maintain a most satisfactory performance. In this connection, mention should be made of two types of locomotives which have proved particularly successful in heavy freight service. These are the mikado (2-8-2) and the Sante Fe (2-10-2). In both of these the trailing wheel principle, as originated in the Atlantic type, has been applied for the purpose of providing increased boiler capacity. Furthermore, in freight and pushing service there is an added advantage in the trailer, as it provides a guide when running backward. Largely for this reason, the mikado type has proved a great success in meeting the special conditions found in logging and certain other classes of service where it is frequently necessary to back into sharp curves and switches.

The standardization of locomotives by the U.S. Railway Administration was of great benefit, as the consideration of the designs resulted in a much closer intercourse and exchange of thought among motive power men than could have been obtained in any other way; and while none of the classes then developed will be continued in their entirety, many of the more recent locomotive designs have as their bases the Administration locomotives.

There has at all times been an unceasing effort on the part of railway managers to use locomotives not only of greater capacity, but also of greater economy. Determined and loyal support has been given to every invention or contrivance intended to improve the efficiency of the locomotive and thus enable it to accomplish more work. To one who has given his whole life to this work and who has had opportunity to note the changes made from time in locomotive designs and appliances, the modern locomotive may be looked upon with some satisfaction; but also with a realization that the end has not been reached, and that the inventive genius of the future motive power experts will considerably change its form and increase its durability, efficiency and economy.

When the Giffard injector supplanted the pump for forcing water into the boiler, it proved a feed-water regulating de-

vice that enabled an engineer to operate his locomotive with absolute confidence. Now these same wonderful devices are being replaced by feed-water heaters and purifiers operated by exhaust steam. Can we not expect in the near future an improvement that will purify the water before it enters the pump and thus prolong the life of flues and fireboxes?

When the size of locomotives had grown beyond the endurance power of the fireman to supply the coal in proper quantity, the mechanical stoker came into play, not only to relieve him of this back-breaking recreation, but also to supply the requisite amount of fuel, and in a proper manner, mechanically to the firebox. The superheater, the mechanical stoker, the feed-water heater and the power reverse gear are now absolute requirements on the modern high duty locomotive. The American firebrick arch in its perfected form, a perfection that has required some 50 years to accomplish, is indispensable.

The trailing wheels under our large locomotives, some of them carrying as much as 60,000lb. of weight, have suggested the use of what is commonly known as the booster. This mechanical contrivance is simply a small steam engine attached to the locomotive trailing wheels, automatically controlled so that the weight carried by the trailing wheels can be utilized for starting of heavy trains or the overcoming of short grades which govern the tonnage that can be hauled over certain divisions of the road. By this means trailing wheel locomotives in many classes of service can be made much more remunerative in their operation than when not so equipped. The introduction of this device is becoming very general and it will probably be largely used in the future.

For many years the locomotive has been considered by the layman the most extravagant steam user and coal burning device in existence. This is entirely erroneous. The Pennsylvania Rd. System is having built 475 locomotives, with a tractive power of 87,000lb., equipped with mechanical stokers, fire brick arches, feed water heaters and superheaters of the most advanced type. The cylinders are operated at half-stroke cut-off when developing full tractive power, and the coal consumption per horse power by actual test is equal to that of some of our best electrical power houses where turbines and condensers are employed, namely an indicated horse power for 1.83lb. of coal. Every user of locomotives should examine carefully the construction of these engines. Notwithstanding that they carry 250lb. of boiler pressure, there are many features employed worthy of general adoption. The high boiler pressure and half-stroke cut-off are also employed in a single expansion articulated locomotive, built by the Pennsylvania several years ago for heavy mountain service, which has given most satisfactory results.

A successful effort is being made by railway managers to increase locomotive mileage by increasing the lengths of runs, and on a number of roads, notably in oil burning districts, passenger trains are being run over five, six or seven hundred mile divisions without change, except as to engine crews. One of the important factors responsible for the success of this method of operation is the use of hard grease as a lubricant, as this has eliminated much of the oiling around formerly required of the engineer.

It has not been my intention to omit

any of the wonderful achievements attained by the designers of locomotives in the various sections of the country, or to overlook the exceedingly satisfactory and high grade productions of other locomotive establishments. My effort has been to illustrate to you all as briefly as possible the rapid advancement in locomotive construction during the past 90 years, or during the life time of The Baldwin Locomotive Works: and naturally, many of the illustrations I have shown have been selected because of my greater familiarity with them.

Locomotive development during the past 90 years has been due entirely to the constantly increasing demand of business for better and cheaper transportation. The railway systems we now enjoy have been made possible by the enterprise of our pioneer railway builders of the past, who were courageously supported financially by the public as investors. The U.S. people quickly realized the prosperity that would follow the iron trail. Foreign investors were quick to absorb our railway securities and the 20th century found us far better equipped with transportation facilities than any nation in the world.

The requirements of a great nation had been met by the energy, the inventive genius, and splendid operating ability of those in command. This prosperity was naturally noticeable, and perhaps in excess of that pertaining to other industries, in consequence of which the economist proceeded to get busy. The political aspirants to fame seized upon the opportunity offered for establishing some very serious opinions among our business friends. The regulation of transportation, as to quality of service, methods of accounting, and regulation of rates, were soon paramount considerations and indulged in not only by our national legislators, but by the state governments as well. The transportation horse was well curried, but poorly fed, and soon its bones were more in evidence than before so called scientific management and regulation had been introduced. What was intended for regulation, in many instances proved to be strangulation, but by superhuman effort our great transportation lines were maintained equal to our business requirements. Terminal facilities had been perfected, the right of way made staunch and secure, by using new bridges, heavier rails and all other underlying requirements for the operation of maximum cars and locomotives, both passenger and freight. The steel passenger car and the steel freight car were absolutely necessary to provide the safety desired by the public, which in turn made it imperative to produce the modern high duty power houses or locomotives now being made, without which railway operation today would be impossible, and the general business of our country be reduced to but a fraction of what we now enjoy. We will omit the general wreckage caused by recent government control.

The large expenditure of \$1,540,000,000 this year by the railway systems of this country to perfect and provide their facilities to enable the general business of the country to proceed without interruption, is well known by all. A further reflection shows that an annual increase of 7% in our requirements, will during the next 10 years require at least a 7% increase in railway construction and equipment in order to keep abreast of the demands of an exacting public. In other words, an expenditure of approxi-

mately \$1,500,000,000 must be made annually during the next decade if we are to have dependable and proper service. Over 4,000 new locomotives will be placed in service by our railways this year, capable of developing in the aggregate over 10,000,000 horse power.

The time has arrived when public opinion regarding the railway transportation systems of this country and the operating devices employed thereon must be put straight. There should be a campaign for the dissemination of information and facts concerning terminal facilities, extension of lines, and reduction of delays, also as to the improved mechanical appliances, that are vitally necessary to safety and service, not alone applicable to locomotives but also to other equipment, and the facilities that must be employed to maintain and keep in proper repair the modern high duty rolling stock in service, so that once more the general public will have confidence in the various railway organizations and will point to their accomplishments with a great degree of pride. It is conceded by the entire world that in this country we have the highest perfection in railway transportation, but the general business of the country cannot progress faster than its transportation facilities will permit. The productiveness of our farms and workshops will go for naught if we do not have more efficient and more rapid facilities for the distribution of our products. The fundamental of prosperity is work, and work means that the producers of transportation are public servants whose business it is to serve the farmer and the producer, and those who are engaged in serving the transportation companies with all their numerous requirements, from steel spikes to locomotives, cannot expect increasing business unless transportation facilities are at least equal to or in advance of transportation requirements.

The way to increase prosperity is to increase our general business, and to promote our transportation facilities and various public utilities by confidence and financial support, coupled with the creation of more efficient and economical devices in transportation equipment. We must all do as your speaker has done, go out into the highways and byways of business, and speak to our business friends, encourage them to address their associates and workmen as to the necessity of abandoning the demagogue, political or otherwise, and to create among the general public a return of confidence in the vast army of transportation managers now responsible for the future of our country, and—to become stockholders in all public utilities that contribute to our greatness, and especially the American railway.

Tie Creosoting Contract.—Major-General Alex. McDougall, C.B., representing Calders, Ltd., London, Eng., is negotiating with the Canadian National Rys., for creosoting ties. It is proposed to establish two plants, one near Cochrane, Ont., and the other near Quebec, Que. The proposed contract would be for 10 years from Aug. 1, 1924, subject to renewal, and would provide for the treatment of a minimum of 300,000 ties a year at the Cochrane plant, and 300,000 a year at the Quebec plant. Negotiations are also said to be also going on with the Timiskaming & Northern Ontario Ry., for tie treatment at the Cochrane plant and with the C.P.R. for tie treatment at the Quebec plant.

Railway Rolling Stock Orders and Deliveries.

A. Guthrie & Co., Duluth, Minn., has bought a second hand Marion 300 full revolving steam shovel from Hydro Salvage Syndicate.

Quebec Development Co., St. Joseph D'Alma, Lake St. John, Que., has bought 36 second hand air dump cars from Hydro Salvage Syndicate.

The Belgo Paper Co., Montreal, has received a saddle tank locomotive from Canadian Locomotive Co. Details of it were given in Canadian Railway and Marine World for March, pg. 103.

The C.P.R., between May 15 and June 12, received 2 Pacific type (4-6-2) G.3 locomotives from Montreal Locomotive Works, and 1 steel baggage and express car from National Steel Car Corporation.

The Quebec Railway Light and Power Co. is converting 10 flat cars of 40,000 lb. capacity into cars of 60,000 lb. capacity, in its own shops. It has bought 3 steam locomotives for its Montmorency and the other two are expected to be in Division. One of them is in operation operation shortly.

The 10 mikado locomotives ordered by Canadian National Rys. from Canadian Locomotive Co., general details of which were given in Canadian Railway and Marine World for February, pg. 52, will be equipped with the Franklin Railway Supply Co's locomotive boosters. The locomotives, which will have 27 x 30 in. cylinders, and tractive effort of 54,600 lb., will be used on the western region.

Canadian National Rys. have ordered 44 locomotives from American Locomotive Co. for use on C.N.R. lines in the United States. They will be built at Schenectady, N.Y., and will be assigned as follows,—16 consolidation (2-8-0) type S 227, cylinders 24 x 32 in., 227,000 lb.; 8 eight-wheel (0-8-0) switching, type S 200, cylinders 22 x 28 in., 200,000 lb., for Central Vermont Ry.; 5 Pacific (4-6-2), type S 280, cylinders 25 x 28 in., 280,000 lb.; 5 eight-wheel (0-8-0) switching, type S 200, cylinders 22 x 28 in., 200,000 lb.; and 10 mikado (2-8-2), type S 300, cylinders 26 x 30 in., 300,000 lb. for Grand Trunk Western Ry.

Canadian Railway and Marine World for June stated that the following purchases had been made from Canadian Equipment Co.—Schroeder Mills & Timber Co., Pakesley, Ont., a second hand 40-ton, 4-wheeled Pennsylvania switching locomotive; Grenville Crushed Rock Co., 20 second hand 16 cu. yd. air dump cars; Northern Construction Co., second hand Marion 300 full revolving steam shovel. We are advised that these sales were made by Canadian Equipment Co., through Hydro Salvage Syndicate, which is composed of Canadian Equipment Co., and F. H. Hopkins & Co. We are also advised that the Northern Construction Co's purchase was a second hand Bucyrus 225 B full revolving steam shovel, and not a Marion one.

Canadian Salt Equipment Co's Tank Cars.

The Royal Securities Corporation offered recently \$100,000, Canadian Salt Equipment Co., Ltd., 6% equipment trust notes, maturing \$10,000 annually from March 1, 1924 to March 1, 1933. The company's capitalization is: common shares authorized \$100,000, issued \$35,000; equipment trust notes, this issue, authorized and issued, \$100,000. A letter from Sir Thomas Tait, President,

Canadian Salt Co., Ltd., is summarised in part as follows: Canadian Salt Equipment Co. owns 15 new class V liquid chlorine tank cars, modern, standard equipment in every respect, built by American Car & Foundry Co., and has 10 similar cars under construction by the same company for prompt delivery. The 25 cars now owned and under construction have been leased to Canadian Salt Co. for 10 years. Rentals will fully provide during the term of the notes for maturing instalments of principal and interest and other expenses incidental to the operations of the issuing company in connection with the equipment note issue. The notes will be secured by a fixed and specific first mortgage, pledge and charge on the lease between Canadian Salt Equipment Co., Limited, and Canadian Salt Co., and on all the right, title and interest in the 25 tank cars which the company will own. The tank cars, plus duty, have a value of \$130,000, as against \$100,000 par value of equipment notes to be issued. Approximately 23% of the actual cost of the cars is paid by the issuing company. The Canadian Salt Co., which has leased the 25 cars from Canadian Salt Equipment Co., is the largest Canadian producer of salt, and the only producer in Canada of bleaching powder, caustic soda and liquid chlorine

forge welded tanks, with capacity for 15 tons of liquid chlorine. Between the outer jacket and the inner tank is 4 in. of a cork insulation, and the jackets are designed so as to be readily removable for retesting the inner tanks at intervals, as required by the A.R.A. specifications. The tank dome is equipped with a man-hole cover, from which an eduction and an induction pipe project down into the tank, the pipes having ball check valves and connections with the required angle valves. There are also two additional angle valves in the manhole cover, and the safety valve is set to open at 200 lb. pressure. The manhole fittings are all protected by heavy cast steel dome housing and cover. The equipment includes K 2 triples, 6 x 8 in. couplers and Cardwell draft gear.

Timiskaming & Northern Ontario Railway.—The estimates passed at the Ontario Legislature's recent session, for the year ending Oct. 31, 1923, contain the following items:—Steam locomotives (revote \$13,816.17) \$17,816.17; freight train cars (revote \$651.23) \$139,615.44; passenger train cars (revote \$27,026.60), \$284,802.81; work equipment (revote \$2,747.75), \$30,546.06. We are officially advised that the item for steam locomotives is for superheating saturated steam locomotives. The item for freight train cars

Chlorine Tank Car, Canadian Salt Co.

for sale. Its plants at Windsor and Sandwich, Ont., have a capacity for salt production greater than the combined capacities of all other salt producers in Canada. During the past five years the company produced over 55% of bleaching powder and caustic soda consumed in Canada. The maximum amount required in any year for payment of Canadian Salt Equipment Co. note interest and maturing principal is \$16,000. Rentals payable to Canadian Salt Equipment Co. are an operating charge and constitute a claim against earnings of Canadian Salt Co., and consequently must be paid prior to the company's fixed charges, including bond interest. If not paid, the principal and interest of the notes become payable and the security enforceable.

The cars, an illustration of one of which is given herewith, have the following chief dimensions:

Length over all.....	35 ft. 1½ in.
" " end sills	32 ft. 5½ in.
" " striking plates	32 ft. 6¼ in.
Truck centers	22 ft. 8 in.
Width over running boards.....	9 ft. 3 in.
Height, top of rail to lower side of platform	2 ft. 11½ in.
Height, top of rail to top of platform framing	3 ft. 8½ in.
Truck wheel base	5 ft. 4 in.

These cars of steel underframe construction, are designed to comply with the A.R.A. and I.C.C. requirements for the transportation of liquid chlorine, and are equipped with 60,000 lb. capacity 4-wheel trucks of the arch bar type, and

covers 50 steel frame box cars being built by National Steel Car Corporation, particulars of which already have been published by Canadian Railway and Marine World. The item for passenger train cars is to provide for the purchase of a number of additional ones, should they be required. No orders have been placed and it is not probable that any will be placed in the immediate future. The work equipment item covers betterments to work equipment, steel draft arms, steel frames, etc.

The Commission has, we are officially advised, decided to order one or two all steel snowploughs.

Montreal Board of Trade new members include Sir Henry Thornton, President, Canadian National Rys.; S. J. Hungerford, Vice President, Operation and Construction Departments, Canadian National Rys.; Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.; and A. R. Gillham, Managing Director, Canadian Vickers, Ltd.

Rails and Accessories Orders. — The Canadian National Rys. has given the Algoma Steel Corporation an additional order for 15,000 tons of 85 lb. steel rails. During this year the C.N.R. has ordered 386,194 pairs of angle bars; 237,600 rail anchors; 2,025,500 tie plates; 2,296½ gross tons track bolts, and 3,411½ gross tons track spikes.

Mainly About Railway People Throughout Canada.

W. R. Baker, C.V.O., formerly Secretary, C.P.R.Co., has returned to Montreal from Europe. Mrs. Baker will remain abroad for some time longer.

C. S. Campbell, K.C., who died suddenly from heart failure, at his country place, Bedford, Que., June 13, aged 65, was a son of the late Sir Alexander Campbell, at one time Lieutenant Governor of Ontario. He was for some years a member of the firm founded by the late Sir John Abbott, and which has, ever since, acted as local solicitors at Montreal, for the C.P.R. He also acted for the Montreal Harbor Commissioners, and other transportation and allied interests.

Mrs. A. D. Cartwright, wife of the Secretary of the Board of Railway Commissioners, Ottawa, has gone to England for a trip.

J. Coleman, General Superintendent of Car Equipment, Canadian National Rys., Toronto, has been elected a member of the American Railway Association Mechanical Division general committee, to fill the unexpired term of T. H. Goodnow, who has been elected vice chairman and whose term would have expired in June 1924.

E. R. Decary, of Montreal, one of the Canadian National Rys' directors, has been elected a director of Canadian Industrial Alcohol Co. He is also Vice President and General Manager of the Title Guarantee & Trust Co., of Canada, and a director of the Detroit United Railways, and the Banque Nationale.

W. E. Duperow, Passenger Traffic Manager, Central Region, Canadian National Rys., Toronto, was presented with a fitted travelling bag, and Mrs. Duperow with a wardrobe trunk, by a number of friends, at Winnipeg, recently, on the anniversary of their wedding, and on leaving Winnipeg, where he had been General Passenger Agent, Western Lines, C.N.R., for some time.

Lorenzo Dow Gillett, Inspector, Board of Railway Commissioners, Toronto, died at St. Thomas, Ont., June 12, after a short illness. He was born at Lancaster, Eng., Dec. 25, 1852, and entered railway service in 1866, since when he was, to 1870, fireman, Northern Ry., Toronto; 1870 to 1877, locomotive man, same railway, and Toronto, Grey & Bruce Ry., Toronto; 1877 to 1890, locomotive man, Canada Southern Ry., St. Thomas, Ont.; 1890 to 1898, locomotive man, C.P.R., St. Thomas, Ont.; 1898 to 1903, General Foreman, Norfolk & Western Ry., Roanoke, Va.; 1903 to 1908, Master Mechanic, same railway, Bluefield, West Virginia; 1909 to 1911, Manager, St. Thomas, St. Ry., St. Thomas, Ont.; and from 1911, Inspector, Board of Railway Commissioners, with office at Toronto.

T. B. Grady, Superintendent, Island Division, Maritime District, Atlantic Region, Canadian National Rys., has returned to duty, after spending several weeks on a trip to the Pacific coast, the first holiday he had had for several years.

D. B. Hanna, ex President, Canadian National Rys., and **A. J. Mitchell**, ex Vice President of Finance, returned to Toronto early in June, after spending several weeks in Europe.

Mrs. Hays, widow of C. M. Hays, who, when he was drowned in the Titanic disaster, was President of the Grand Trunk

and Grand Trunk Pacific Railways, has left Montreal with her daughter, Mrs. Thornton Davidson, to spend the summer at Cushings Island, Me.

Peter Heenan, locomotive man, C.P.R., Kenora, has been re-elected, by acclamation, as a Labor-United Farmers member of the Ontario Legislature.

Robert Hobson, President, Steel Co. of Canada, Hamilton, Ont., and formerly one of the Canadian National Rys. directors, and Mrs. Hobson, sailed from Quebec, by the Empress of Scotland, June 9, for England, expecting to be away until September.

George Hodge, Assistant General Manager, Eastern Lines, C.P.R., has been re-elected Chairman of Canadian Railway Board of Adjustment No. 1, and **Ash Kennedy**, Assistant Grand Chief Engineer, Brotherhood of Locomotive Engineers, has been re-elected Vice Chairman.

O. W. Karn, Vice President of the Brotherhood of Locomotive Fireman and Enginemen, died at Oakland, Cal., June 13, aged 52, after three months illness.

Geo. D. LeBlanc, who has been appointed General Baggage Agent, Atlantic Region, Canadian National Rys., Moncton, N.B., was born there, Sept. 6, 1881, and entered the Government Railways service, Nov. 28, 1898, since when he has been, to Dec. 1901, clerk, General Manager's office, Intercolonial Ry.; Dec. 1901 to Oct. 1902, clerk to Advertising Agent, I.R.C.; Oct. 1902 to April 1910, clerk to General Baggage Agent, I.R.C.; April 1910 to Dec. 1915, clerk to General Passenger Agent, Canadian Government Rys.; Dec. 1915 to June 1917, chief clerk to General Passenger Agent, C.G.R.; June 1917 to Sept. 1919, chief clerk to Passenger Traffic Manager, C.G.R.; Sept. 1919 to May 1923, Assistant General Baggage Agent, Canadian National Rys., all at Moncton, N.B.

Ewen Mackenzie, who died at Toronto, June 8, aged 72, was associated with different railway and other construction companies, and at different times carried out work on the construction of the Toronto Ry. and the Toronto Suburban Ry. He was a brother of Sir William Mackenzie, President, Toronto Ry. Co., and former President, Canadian Northern Ry. Co.

M. H. MacLeod, Consulting Officer to the Executive, Canadian National Rys., Toronto, sailed from Quebec, by the s.s. Empress of Scotland, June 9, to spend about three months in Europe.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., returned to Montreal June 6, after a trip to Great Britain.

Harold McEwen, who has been appointed Division Freight Agent, Canadian National Rys., Vancouver, B.C., was born at Maxville, Ont., May 31, 1890, and entered railway service in April 1908, since when he has been, to June 1908, clerk, General Freight Agent's office, June 1908 to June 1910, stenographer, District Freight Agent's office, June 1910 to June 1911, clerk, District Freight Agent's office, June 1911 to June 1913, Soliciting Freight Agent, Grand Trunk Ry., all at Montreal; Sept. 1913 to May 1918, Train Agent, Grand Trunk Pacific Ry., Regina, Sask., Smithers, B.C., and Watrous, Sask. May 1918 to Jan. 31, 1919, Soliciting Freight Agent, G.T.P.R., Edmonton, Alta.

Feb. 1, 1919 to March 31, 1923, chief clerk to Assistant General Freight and Passenger Agent, G.T.P.R., Prince Rupert, B.C.

Fred R. Miller of Roger Miller & Sons, harbor contractors, etc., Toronto, also a member of the Hydro Electric Power Commission of Ontario, and of the Toronto Transportation Commission, who died recently, left an estate valued at \$111,826.14, and an insurance policy payable to his widow for \$61,917.17. The income on the estate is to be paid to his widow so long as she remains unmarried. If she remarries, an annuity of \$600 a year is to be paid her. The only daughter is to receive the residue, and, upon the death of her mother, the entire estate.

Alex. J. G. Murdoch, who has been appointed Roadmaster, Expanse Subdivision, C.P.R., Assiniboia, Sask., is the youngest son of the late G. S. Murdoch, Traffic Manager, Ceylon Government Rys., and was born at Colombo, Ceylon, Jan. 8, 1878. He entered C.P.R. service in 1905, since when he has been, to 1907, rodman and timekeeper, grading Kootenay Central Ry., Golden, B.C.; 1907 to 1908, timekeeper, tracklaying and surfacing, Sheho extension, Sask.; 1909, assistant foreman, tracklaying and surfacing, Regina and Colonsay, Sask., and Komarno and Arborg, Man.; 1910 to 1912, material yard foreman and clerk to Assistant Engineer of Construction, Swift Current, Vanguard and Empress; 1912, draftsman and clerk to Assistant Engineer of Construction, Bassano-Empress Line, Alberta; 1913 to 1914, general construction foreman, Gleichen, Calgary, Bassano and Empress, Alta., and Kootenay Central-Bull River-Upper Columbia Lake construction; 1915 to 1919, with Canadian Expeditionary Forces, enlisting as sapper in Canadian Overseas Railway Construction Corps, receiving promotion through various non-commissioned ranks, and being given the rank of lieutenant of the same corps, in the field, Nov. 11, 1917; 1920 to May 14, 1923, in various capacities, C.P.R. Construction and Operating Departments, on Lanigan Northeasterly Branch, Sask.

W. H. Polley, formerly City Ticket Agent, C.P.R., Toronto, died there, June 1, aged 43, after a long illness. He was born at Trenton, Ont., and commenced his transportation service as clerk, in the old union ticket office in the King Edward Hotel, Toronto. In May 1913, he was appointed Travelling Passenger Agent, C.P.R., and in Oct. 1913, Assistant City Passenger Agent, at Toronto. From Dec. 1918 to Oct. 1922, he was City Ticket Agent, C.P.R., Toronto, when he was granted extended leave of absence on account of ill health.

Clarence S. Pushie, who has been appointed Relieving Superintendent, Atlantic Region, Canadian National Rys., with headquarters at Moncton, N.B., was born at New Glasgow, N.S., Aug. 12, 1885, educated at the High School, Truro Academy and the Empire Business College, Truro, N.S., and entered railway service, May 1, 1903, since when he has been, to Nov. 1904, clerk in Superintendent's office, Intercolonial Ry., New Glasgow, N.S.; Nov. 1904 to Dec. 1915, secretary to Superintendent, I.R.C., New Glasgow, N.S.; Dec. 1915 to July 1917, chief clerk to Superintendent, I.R.C., New Glasgow, N.S.; July 1917 to Oct. 1918,

assistant chief clerk, to General Superintendent, Canadian Government Rys., Moncton, N.B.; Oct. 1918 to Feb. 1920, Supervisor of Work Equipment, C.G.R., Moncton; Jan. 1921 to April 16, 1923, chief clerk to Superintendent of Transportation, Canadian National Rys., Moncton.

Lord Shaughnessy has been elected Chairman of the National City Co., Ltd., which has been incorporated by Dominion letters patent, to take over the National City Co's Canadian business, and that of the United Finance Corporation of Montreal. Among its other directors are also the following C.P.R. directors:—C. R. Hosmer, Sir Augustus Nanton and W. N. Tilley, K.C.

G. H. Shaw, at one time General Traffic Manager, Canadian Northern Ry., and Mrs. Shaw, sailed from Quebec by the s.s. Empress of Scotland, June 9, to spend about three months in Europe.

C. H. Temple, Chief of Motive Power and Rolling Stock, C.P.R., Montreal, has been elected a member of the American Railway Association, Mechanical Division general committee, to succeed W. H. Winterrowd, formerly Chief Mechanical Engineer, C.P.R., who has left railway service, and whose term would have expired in June 1924.

W. N. Tilley, K.C., one of the C.P.R. directors sailed on the company's s.s. Empress of Scotland, from Quebec, for Europe, June 9.

Board of Railway Commissioners' Partial Jurisdiction Over Canadian Government Railways.

The Railway Act of 1919 provides, in sec. 5, as follows:—"This act shall, subject as herein provided, apply to all persons, railway companies and railways, within the legislative authority of the Parliament of Canada, whether heretofore, or hereafter, and howsoever, incorporated or otherwise, except Government railways, to which, however, it shall apply to such extent as is specified in any act referring or relating thereto."

Order in council 115, passed at Ottawa Jan. 20, and published in Canadian Railway and Marine World for April, entrusted the management and operation of the Canadian Government Railways, including the Intercolonial Ry.; Prince Edward Island Ry.; National Transcontinental Ry.; the Lake Superior Branch, leased from the Grand Trunk Pacific Ry. Co.; the Hudson Bay Ry., and certain branch lines, to the Canadian National Ry. Co. This brought into effect the provisions of the Canadian National Railways Act 1919, sec. 14, as follows:—"Notwithstanding anything in the Government Railways Act, or any other act, the provisions of the Railway Act, respecting the operation of a railway (as distinguished from the provisions of such act respecting the construction or maintenance of a railway) shall apply to such of the Canadian Government Railways as would, but for the passing of this act, be subject to the Government Railways Act, during such time as the operation and management thereof is entrusted to the company under the provisions of this act."

The Canadian Government Rys. have, therefore, since Jan. 20, been subject to the Board of Railway Commissioners' jurisdiction, with regard to matters of operation, which include freight and passenger rates, but the Board has no jurisdiction over the lines in regard to construction or maintenance matters.

Operating Statistics, Canadian National Rys.

The Bureau of Statistics, Canadian National Rys., has issued rules and definitions governing the compilation of operating statistics, with the following introduction by Sir Henry Thornton, President:—"The rules and instructions herein presented have in view the compilation of operating statistics in such form and method, as will provide divisional and district officers with first hand information as their own immediate efforts in conducting transportation; provide general and executive officers with data reflecting the development of tendencies in the production of transportation and develop statistical data called for in the annual or monthly report schedules prescribed by the several regulatory commissions, government bureaus, etc. The elements entering into the production of transportation will be portrayed, in the several reports prescribed, in sufficient detail to permit analysis of the working of each operating division, but in the freight train performance the determination of loading and movement ratios will be carried down to the subdivision or locomotive-run basis. With these data in their early possession, it becomes the duty of all members of the operating staff to search out the favorable and unfavorable tendencies, and co-operate in the formulation of policies which will bring about and maintain that standard of performance so necessary to true economy and dependable service."

Railway Excursion Rates.

T. L. Church, Toronto North, asked the following questions in the House of Commons, recently, the answers being given by the acting Minister of Railways, Mr. Graham:

Q. "Is it the government's intention to introduce legislation this session to amend the Railway Act, so as to restore cheap, special rate excursion tickets (as was the custom before the war) on such special occasions as public holidays, week-ends, fall fairs, sporting contests, games and conferences?" A. "It is not the government's intention to introduce such legislation. This must be left to the initiative of the railways, subject to the supervision of the Board of Railway Commissioners, in regard to discrimination, etc., as provided by the Railway Act."

Q. "If the government does not propose such legislation this session, in view of the special and many urgent requests for these special rates last session from numerous fall fair organizations, the Canadian National Exhibition and many sportsmen's organizations and agricultural societies in Canada, will the Government or Minister of Railways use their good offices with the railway companies to restore this old and long established custom and practice as to special rates?" A. "The Government understands that the railways, in 1922, made the following arrangements for specially reduced fares, and is assured that they will carefully consider whether it is advisable to make any other special fares along the lines indicated in the question. Effective July 10, 1922, the Canadian railways voluntarily put the following reduced fares into effect:

"Organized excursions and pilgrimages, 100 or more adult fares guaranteed, lowest one-way first class, fare and one-third for the round trip, minimum fare

50c per adult ticket and 25c per child's ticket.

"Celebrations, demonstrations, regattas and political meetings, lowest one-way 1st class fare and one-half for the round trip, minimum fare 25c for adults or children.

"Round trip party fares, 10 or more adults travelling together on going trip, one-way 1st class fare and one-half for the round trip.

"Circuit tour party fares, 10 or more adults travelling together for entire trip, 75% of one-way 1st class fare between stop over points.

"Week-end fares, 2½c a mile. From industrial centers to country districts. Good going Saturday and Sunday; return limit Monday.

"Larger agricultural exhibitions, lowest one-way 1st class fare and one-third for round trip; minimum fare for adults or children 25c; territory to be agreed upon between interested lines.

"Smaller agricultural exhibitions and fall fairs, lowest one-way 1st class fare and one-third for round trip, minimum fare for adults or children, 25c; territory, from points where the lowest one-way 1st class fare to place of exhibition does not exceed \$3."

Shipments of Grain to Atlantic Ports.

In answer to questions by Hon. J. B. M. Baxter, St. John, N.B., the Minister of Trade and Commerce gave the following information in the House of Commons recently:—

The receipts of Canadian grain at Portland, Me., since Nov. 1, 1922, via Canadian Government Rys. were as follows, in bushels: wheat, 11,133,180; oats, 1,649,892; barley, 612,955; rye, 1,360,781; total, 14,756,808. The receipts of United States grain are not available.

The following bushels of grain were carried to St. John, N.B., since Nov. 1, 1922, by Canadian National Rys. for shipment:—

	Canadian	U.S.	Total
Wheat	957,085	55,107	1,012,192
Oats	585,282	585,282
Barley	174,009	174,009
Corn	12,495	12,495
Rye	299,680	299,680
Total.....	1,716,376	367,282	2,083,658

The following bushels of grain were carried to St. John, N.B., since Nov. 1, 1922, by the C.P.R. for shipment:—

	Canadian	U.S.	Total
Wheat	8,635,368	102,994	8,738,362
Oats	1,764,921	1,764,921
Barley	647,692	647,692
Corn	628,686	628,686
Rye	1,470,441	1,470,441
Total.....	11,047,981	2,202,121	13,250,102

No grain has been carried to Halifax, N.S., since Nov. 1, 1922, by the Canadian National Rys. for shipment.

Safety appliances on electric locomotives in road and switching service.—The Board of Railway Commissioners has issued a circular, transmitting rules and regulations for safety appliances on electric locomotives in road and switching service, which it proposes to embody in a general order to railways, and has asked for comments thereon.

Hudson Bay Railway Project. — J. L. Thomas, Secretary, Hudson Bay Tourist Association, Winnipeg, addressed the Westerners' Club, Montreal, June 14, on the trade and tourist possibilities of the Hudson Bay area, and advised the completion of the railway from Pas to Port Nelson, Man., and the development of the ocean route therefrom.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Merchant Marine.—C. K. JAMES, of the head office staff, has been appointed acting Purchasing Agent, at Montreal, consequent on the appointment of J. W. Corbett, formerly Purchasing Agent, C.G.M.M., as Assistant Purchasing Agent, Canadian National Rys., Toronto.

Canadian National Railways. — W. J. ATKINSON, heretofore Superintendent, St. Maurice Division, Quebec, Que., whose appointment as Assistant Superintendent, Quebec Terminals, Central Region, was announced in our last issue, has been appointed Superintendent, Quebec Terminals, Central Region, with jurisdiction over all train operations and handling of traffic within the following territory: east of Charny to Quebec, Palais terminal; Allenby Jct. to Quebec, Parent Square, Champlain spur and Quebec wharf, and his former position has been abolished. Office, Quebec, Que.

W. J. DONALLY, heretofore yard master, G.T.R. yard, has been appointed yard foreman, in charge of yard locomotives, C.N.R., Ottawa, Ont.

P. K. HUNT, heretofore, Manager, Macdonald Hotel, Edmonton, Alta., has been appointed Assistant to General Manager of Hotels, Winnipeg.

G. H. LASH, heretofore editor, Toronto Sunday World, has been appointed Publicity Representative, Office, Toronto. He reports to the Director of Publicity, Montreal.

C. C. McCULLOCH, heretofore General Yardmaster, G.T.R., yard, Ottawa, Ont., has, with the closing of Hurdman yard, been given charge of the entire Ottawa terminals. Office, Ottawa.

A. S. McLEAN, heretofore Superintendent of Hotels, Winnipeg, has been appointed Manager, Macdonald Hotel, Edmonton, Alta., vice P. K. Hunt, appointed Assistant to General Manager of Hotels, Winnipeg, and his former position has been abolished.

J. A. MILLER, heretofore shop foreman, has been appointed General Foreman, Mechanical Department, Island Division, Atlantic Region, Charlottetown, P.E.I.

H. G. O'LEARY has been appointed Division Engineer, Bridge and Building Master, and acting Roadmaster, Lakehead Division, Manitoba District, Western Region. Office, Fort William, Ont.

See also under "Redistribution of Western Region, Canadian National Railways."

Canadian National Rys. Express Department.—G. E. BELLEROSE, heretofore General Assistant, Express Department, has been appointed General Superintendent of Transportation, Express Department. Office, Montreal.

Canadian Pacific Ry.—W. J. ANDERSON, heretofore Travelling Freight Agent, London, Ont., has been appointed District Freight Agent, there, vice H. G. Buchanan, appointed District Freight Agent, Toronto.

H. G. BUCHANAN, heretofore District Freight Agent, London, Ont., has been appointed District Freight Agent, Toronto, vice G. C. Cochlan, deceased.

J. H. WILSON, heretofore Locomotive Foreman, John St., Toronto, has been appointed Division Master Mechanic,

Sudbury Division, Algoma District, at North Bay, Ont., and not at Sudbury, Ont., as stated incorrectly in our last issue.

Temiscuata Ry.—T. N. WALSH, heretofore Freight Claim Agent, Riviere du Loup, Que., has been appointed General Freight and Passenger Agent, vice A. Nadeau, deceased, and his former position has been abolished, all freight claims being dealt with by him as General Freight and Passenger Agent. Office, Riviere du Loup, Que.

Ties Bought for Canadian National Railways.

The following questions were asked in the House of Commons recently by H. A. Stewart, Leeds, Ont., and answered by acting Minister of Railways Graham: Q. "What quantities of cross ties were purchased from Canadian Tie & Lumber Co. during 1922, for use on any of the lines now included in the National Railway system, and on what dates were such purchases made?" A. "750,000 on Oct. 23, 1922."—Q. "What quantities of hardwood and soft wood ties were bought on each occasion?" A. "Approximately 50% of each."—Q. "What prices were paid?" A. "Hardwood, 35c to 75c; cedar, 40c to 85c; and small quantities of the following: hemlock, 30c to 70c; red oak and chestnut, 50c to \$1; white oak, 70c to \$1.30."—Q. "By whom were such purchases made?" A. "General Purchasing Agent, G.T.R. System."—Q. "Were tenders invited in connection with any of the purchases, and if so, on what dates; in what manner, and in connection with what purchases?" A. "No."—Q. "Were any such purchases made without tender, if so, on what dates, for what amount of ties and why were tenders not invited?" A. "Yes. Purchase made under contract entered into by the late G.T.R. management in July, 1917."

Transportation Specialist, Agriculture Department.

The Minister of Agriculture stated in the House of Commons, recently, in answer to questions: "Leonard Cook's position is that of transportation specialist, Agriculture Department. He has charge of preparing cases for live stock shippers and exporters, in connection with applications for reduction in freight rates, or improved service, for presentation to the Canadian Freight Association or to the Board of Railway Commissioners. He arranges for informal interviews with railway officials, for the purpose of securing improved rates, and of eliminating delay in the transportation of live stock; he checks the accommodation provided by the railways, in the way of cars and equipment, in connection with the transportation of live stock to domestic markets, or for export; he arranges for interviews with steamship companies for the reduction of ocean freight rates on live stock and live stock products; he supervises the movement of exhibition stock to and from our larger exhibitions; he answers numerous enquiries from live stock shippers re rates on live stock and checks rates charged; he addresses live stock meetings re transportation problems, and as a result of his work numerous resolutions have been received from various live stock associations commending in the highest possible terms the service that he has rendered

the transportation service since the Dominion Live Stock Branch was initiated. His time is fully occupied in carrying out said duties. His salary, when transferred to the Live Stock Branch, July 1, 1921, was \$2,280; it is now \$2,400. His travelling expenses from July 1, 1921, to March 31, 1922, were \$1,972.56; from April 1, 1922, to March 31, 1923, \$3,372.60."

Canadian National Rys. Directors' Occupations, Etc.

G. G. Coote, Macleod, Alta., asked in the House of Commons recently: "What are the names, addresses and occupations of the Canadian National Rys.' directors; for what length of time are they appointed; what is the salary of each; is the salary fixed by the Government, and if not, who by?" The acting Minister of Railways, Mr. Graham, replied as follows: "Major-General Sir Henry Worth Thornton, K.B.E., President and Chairman, Canadian National Rys., McGill St., Montreal, Railway President; John H. Sinclair, K.C., New Glasgow, N.S., barrister; Major G. A. Bell, C.M.G., Vice President, Canadian National Rys., Ottawa, Ont., also Deputy Minister Railways and Canals; Gerard Ruel, Vice President, Canadian National Rys., McGill St., Montreal, also General Counsel; Richard P. Gough, Sellers-Gough Fur Co., Toronto, merchant and banker; James Stewart, Winnipeg, grain merchant; Ernest R. Decary, Director-General, Title Guarantee & Trust Co. of Canada, Montreal, Vice President and Director, General Title Guarantee & Trust Co. of Canada; Frederick G. Dawson, Prince Rupert, B.C., merchant; Tom Moore, Ottawa, President, Trades and Labor Congress of Canada; Col. O. E. Talbot, Quebec, Que., Collector of Provincial Revenue, Quebec.

"The incorporating act, 1919, chap. 13, sec. 2, provides that 'The directors shall hold office from one annual meeting to another, or until their successors are appointed, unless removed by the Governor in council for cause.' The remuneration received by the directors as provided in sec. 5 of the act, has been approved at \$2,000 each per year. The directors may be paid by the company such sums for their services as the Governor in council may from time to time approve."

Railway Commissioners' Former Occupations.

G. G. Coote, Macleod, Alta., asked in the House of Commons recently: "What was the address and the occupation of each member of the Board of Railway Commissioners previous to his appointment?" The acting Minister of Railways, Mr. Graham, replied as follows: Hon. F. B. Carvell, K.C., Chief Commissioner, Minister of Public Works, Ottawa. S. J. McLean, Asst. Chief Commissioner, Professor of Economics and Transportation, University of Toronto, Toronto. Hon. W. B. Nantel, K.C., Deputy Chief Commissioner, barrister, St. Jerome, Que. A. C. Boyce, K.C., Commissioner, barrister, Sault Ste. Marie, Ont. Dr. J. G. Rutherford, C.M.G., Commissioner, Superintendent of Agriculture and Animal Industry, Natural Resources Department, C.P.R.; President, Western Canada Live Stock Union, Calgary, Alta. Calvin Lawrence, Commissioner, Legislative Representative, Brotherhood of Locomotive Engineers, Ottawa.

Canadian National Railways' Coal Supplies.

The following questions were asked in the House of Commons recently, by J. T. Shaw, Calgary West, Alta., and answered by the acting Minister of Railways, Mr. Graham:—

Q. "What persons, firms and corporations in Alberta supply coal to the Canadian National Rys.?" A. "Brazeau Collieries, Big Valley Collieries, Blackstone Coal Co., Blue Diamond Coal Co., Bush Mine Coal Co., Coal Valley Mining Co., Ellis Coal Co., Lakeside Coals, Coal Sellers, Ltd., Spicer Coal Co., Tofield Coal Co., Marcus Collieries, Mountain Park Coal Co., Rosedale Coal Co., Cadomin Coal Co., Humberstone Coal Co., Mount Cavell, Superior Collieries, Sterling Collieries."

Q. "What price is paid per ton?" A. "As tenders are now being asked for supplies for the coal year commencing April 1, next, the management does not consider it in the public interest to bring down the information at present."

Q. "Are the contracts for such coal awarded by tender?" A. "Yes."

Q. "For what period of such contracts, if any, have been awarded?" A. "Such contracts run from April 1 to March 31 each year."

Chinese Officials' Study of C.P.R. Methods.

During the visit of G. M. Bosworth, Chairman, Canadian Pacific Steamships, Ltd., to the Orient in 1921, an arrangement was made with the Chinese Government Railways Director General, under which six of the officials of the Peking-Mukden line were to visit Canada and spend some considerable time in the C.P.R. offices in Montreal, to secure an insight into C.P.R. methods. The officials selected were: Chung-Hsi Kwo, age 29, Assistant Traffic Inspector, Tientsin, Lang-fang section; Edward Tsung-Yuan Ch'ian, age 33, Assistant Secretary to Engineer in Chief and General Manager; James Houghtai Tong, age 32, completed education at Glasgow University, Scotland, Assistant to Store Superintendent, Stores Department; Ke-Fung, age 28, Translator, General Department, head office; Yen-Lin Kwan, age 29, Chief of Transportation Division, Traffic Department, head office; Huan Wen Wang, age 33, Chief of Land Department and association member of standing committee on the unification of railway accounts and statistics. With the one exception mentioned above, all these officials received their education in business or technical institutions in China, the second named holding the degree of B.Sc., and had been Professor of Mathematics before he entered railway service. Their railway experience has varied from five years, in the case of Ke-Fung, to 13 in the case of Chung-Hsi Kwo.

These officials reported at the C.P.R. offices in Montreal, June, 1921, and were assigned to different branches of the service, according to the work they would be performing in China. Chung-Hsi Kwo and Edward Tsung-Yuan Ch'ian started in the Operating Department and, with the exception of two or three months spent in the Accounting and Traffic Departments, they confined themselves to the operating end. They started in the yard and freight offices and went through the successive departments and offices, including the Superintendent of Car Service and General Manager's offices, being

given access to all records and information to enable them to obtain a complete grasp of the work. James Houghtai Tong started in the General Stores Department and spent most of his time going into all branches of the work. He spent the last two or three months in other branches of the Operating Department. Similarly Ke-Fung and Yen-Lin Kwan started in the Freight and Passenger Traffic Department, and spent most of their time there, putting in the last two or three months in the Operating Department. Huan Wen Wong spent all of his time in various branches of the Audit Department.

During their extensive stay, which came to an end recently, the officials secured a good working knowledge of methods and conditions far more so than they would have been able to do had their time been limited. Canadian Railway and Marine World is advised that they showed themselves to be apt students, and quick to grasp things, especially in view of the entirely different conditions existing in Canada, and on the C.P.R., as compared with conditions in China and on lines in that country.

A DeWitt Foster's Position on Canadian National Railways.

The following questions were asked in the House of Commons recently, by L. J. Lovett, Digby-Annapolis, N.S., and answered by the acting Minister of Railways, Mr. Graham:—

Q. "Is A. DeWitt Foster an employee of the Canadian National Rys.; if so, what position does he hold, and what salary does he receive?" A. "Yes. Superintendent of Resources, Chicago, \$450 a month."

Q. "Was he a former member of the House of Commons?" A. "Yes."

Q. "Was he compelled to resign his seat in the House; if so, for what cause, and is he the same A. DeWitt Foster who was implicated in scandals arising out of purchases of horses in Nova Scotia, for military purposes, during the late war?" A. "He resigned his seat on April 24, 1915, following a discussion in Parliament concerning the purchases of horses for war purposes. There is no official record as to why he resigned."

Q. "Is it the Government's intention to retain him in his present position?" A. "Mr. Foster entered the Canadian Northern Ry.'s employ on May 20, 1916, as Travelling Passenger and Immigration Agent, Chicago. The question of his retention is not a matter for the consideration of the Government, but of the Canadian National Rys. management."

Michigan Central Railroad Niagara Falls Bridge.

Sir Henry Drayton asked in the House of Commons recently:—"Is the new international Bridge of the Michigan Central Rd. Co. at Niagara Falls to be constructed by Canadian contractors, either in whole or in part? If in part, what work is being carried on by Canadian contractors? What are the names and addresses of Canadian contractors taking part in the construction of the bridge, and the amounts of contracts awarded each? What is the total cost of construction of the bridge?"

The acting Minister of Railways, Mr. Graham, replied:—"Plans and description of the bridge were approved by the Governor in council on recommendation

of the Minister of Public Works, as required in the case of navigable waters, by the Railway Act, sec. 248, and afterwards, as required by the same section, the plans were approved by the Board of Railway Commissioners and construction authorized. The Engineering News-Record of March 1, 1923, stated that the contract had been awarded to the American Bridge Co. for the steel work, which will require about 7,500 tons, contract price for which is about \$116 a ton. Abutments and other items of substructure, requiring about 11,000 cubic yards of concrete, are to be built under a separate contract as to which we have no information. The Railways Department understands that contract for the steel work was let after public competition, in which Canadian firms participated."

Editor's Note.—The official in the Railways Department, who prepared the reply for the acting Minister, might have stated that the information as to the letting of a contract, the weight of steel required, and the price per ton were announced in Canadian Railway and Marine World for February, which was a month before the belated announcement appeared in the Engineering News-Record.

Lawyers' Fees for Railway Arbitrations.

The House of Commons, on June 14, 1922, passed an order on motion of L. H. Martell, Hants, N. S., for a statement of all monies paid by the Dominion Government to barristers and solicitors for legal services in connection with the arbitrations respecting the acquisition of the Canadian Northern and Grand Trunk Railways' stocks, etc. The return, which was submitted in the House of Commons on Feb. 9, shows that \$35,000 was paid in connection with the Canadian Northern Ry. arbitration, and \$179,228.64 in connection with the Grand Trunk arbitration as follows:—

Canadian Northern Ry. Arbitration—W. N. Tilley, Toronto, \$25,000; Strachan Johnston, Toronto, \$10,000.

Grand Trunk Ry. Arbitration.—W. N. Tilley, Toronto, \$90,000; Estate of Z. A. Lash, Toronto, \$5,000; H. A. Lovett, Montreal, \$42,464.59; J. C. H. Dasseault, Montreal, \$9,164.05; H. McInnes, Halifax, \$23,910; E. F. Newcombe, Ottawa, \$8,690.00.

Varnish Purchases for Canadian National Railways.

The following questions were asked in the House of Commons recently, by S. Charters, Peel, Ont., and answered by the acting Minister of Railways, Mr. Graham:—

Q. "What purchases have been made since the present Government came into power, by the Canadian National Rys., or by the G.T.R., from Scarfe Varnish Works, Brantford, Ont.?" A. "\$14,203."

Q. "Were such purchases made after public competition, and if so, in what cases?" A. "All such purchases are made after public competition."

Q. "Is the President of this firm the Reginald Scarfe who is President of the Liberal Association at Brantford?" A. "No information; but, in any event the holding of such a position by the President of the firm would neither help nor hinder the purchases, which, quality established, are determined by considerations of price, not politics."

Canadian Railway AND Marine World

Founded in 1896 by Acton Burrows.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Cir-
culations, Business Newspaper Association of
Canada, Canadian National Newspapers and
Periodicals Association, Canadian Press Associa-
tion.

Authorized by the Canadian Postmaster General
for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session, (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA. JULY, 1923.

Sectionalism and the Canadian National Railways.

Sir Henry Thornton, President, Canadian National Rys., in speaking before the Pittsburgh, Pa., Traffic Club, some little time ago, referred to the assurances given him by the Dominion Government as to the absence of political interference in C. N. Rys. management, and said: "I will say frankly that thus far there is every evidence that the Government intends scrupulously to stand by the assurance which was given me before I undertook my present task. But there is another form of political interference which is more dangerous, and more difficult to avert, than the ordinary or garden type, and that is that form of sectionalism which translates itself into terms of political influence."

There can be no doubt of the correctness of Sir Henry's statement concerning sectional feelings, both as to its danger and the difficulty of guarding against its effect. That sectionalism—which is nothing more nor less than an expression or desire on the part of people in a given community for things calculated to be of advantage to that community—should exist, is the most natural thing in the world, and so long as the thing desired may be obtained without undue harm to other parts of the country, and so long as the means taken to gratify that desire are legitimate and proper, then sectional feeling, and the effort to improve matters for which it is responsible, is not only proper, but is an indication of a desirable ambition to accomplish improvement. But, as the Canadian National President suggested, great potentialities for danger are to be found in the fact that communities, like individuals, are often prone to seek desirable ends by undesirable means.

The potential danger exists because of the prevalence of either ignorance, or disregard, of the difference between the function of Parliament and the Government, political institutions, on the one hand, and of the Canadian National Rys. management, an economic institution, on the other hand, and because a great many people, either failing to differentiate in these functions, or proceeding despite their knowledge, are bound to go to Parliament, or the Government, by direct or indirect routes, with local matters which should be dealt with solely by the Canadian National Rys. management. Not only is there a tendency for people to bring such matters to the political body, but some members of the Senate and House of Commons themselves, as evidenced by the numerous questions having to do purely and simply with problems of operation and management brought up in both houses, introduce into the political arena matters concerning their home territory which are primarily economic, and which should be the concern of the railway management only. It is a natural thing that people should want matters affecting their provinces, cities, towns or rural municipalities dealt with by the political authority, and as the danger from sectionalism is therefore a natural danger, it is one that should be doubly guarded against.

If it be but sought for, there will be evident a clearly defined line of demarcation as between governmental and parliamentary functions with regard to the Canadian National Rys., and managerial functions, and it will be evident that the vast majority of local and sectional matters are among those that come under the latter head. The manage-

ment of a large railway system necessarily has a hard time of it trying to please everybody in the territory served, and sectional desires and demands are a continual source of worry to railway officers, but if Canadian citizens will recognize, as they should, that the things they want from the Canadian National Rys. for their particular communities should not be sought after through political channels, but should be taken up with the railway management in a straight-forward manner, then the troubles the management will experience with sectional demands should not be greater than those experienced by the managements of privately owned railways. It should be recognized that while the Government must function in regard to matters of broad policy in the National Railways experiment, the matter of management is the responsibility of Sir Henry Thornton and his associates, and the Canadian people should see to it that those officers are not handicapped by sectionalism. It should be remembered, as we have pointed out, that ever present sectional and local ambitions are enough of themselves to give sufficient worry to operating and traffic men, without those entertaining such ambitions undertaking to hasten their gratification through the exercise of undue political influence, to the advantage, possibly, of the community directly concerned, but to the detriment, most probably, of the greater community extending from the Atlantic to the Pacific and therefore to the great majority of its individuals.

Canadian Pacific Railway Co's Reports Wanted.

Canadian Railway and Marine World wants, to complete a file, one copy each of the C.P.R. Co's directors' annual reports for 1881, 1882, 1883, 1884 and 1886, together with the proceedings at the annual meetings at which those reports were adopted. Anyone who has them, and is willing to dispose of them, is requested to communicate.

American Railway Association, Car Service Division.—R. W. Edwards has been appointed District Manager, car Service Division, Toledo, Ohio, with jurisdiction over territory as follows,—Michigan, lower peninsula; Indiana, north of line from Michigan City, through to Watah, Fort Wayne and Decatur; Ohio, north of line from Decatur, through Mansfield and Cortland; Pennsylvania; New York, north of line from Cortland, Ohio, through Meadville to Jamestown, to Buffalo and Niagara Falls; Ontario, west of line through Toronto to southern end of Georgian Bay.

Beer and Wine on Dining Cars in Quebec.—It was stated in Canadian Railway and Marine World for February that we had been officially advised that the Canadian National Rys. management had decided to obtain a license from the Quebec Liquor Commission for the sale of beer and wines on dining cars in that province. A license has now been issued by the Commission, and the sale of beer and wine, at meals on C.N.R. dining cars was started early in June. Such sale has been in effect on C.P.R. dining cars for a considerable time.

Canadian National Rys. Branch Lines, Construction, Etc.

The House of Commons, on June 15, passed the following motion by Hon. E. M. Macdonald, Pictou, N.S., Minister without portfolio, who moved it in the absence of the Minister of Railways, Hon. G. P. Graham: That the House, at its next sitting, go into committee of the whole to consider the following proposed resolution: That it is expedient to bring in a measure respecting the construction of Canadian National Railway lines, and to provide,—That the Governor in council may provide for the construction and completion by the Canadian National Ry. Co. of the lines of railway mentioned or referred to in the schedule to these resolutions. That any of the said lines connecting with the Canadian Government Rys. may be declared by the Governor in council to form part of the Canadian Government Rys. Lines of railway so declared shall be constructed by the company on behalf of His Majesty and the company shall cause the title to the necessary lands or interests in lands to be acquired in the name of His Majesty. That with respect to Government railway lines the Governor in council may authorize advances to be made to the company, from the consolidated revenue fund, to cover the necessary expenditure in acquiring such lands or interests in lands and in constructing and completing such lines of railway. That with respect to the lines of railway mentioned or referred to in the said schedule other than Government railway lines (which other lines are hereinafter referred to as National railway lines) the Governor in council may authorize the guarantee of the principal and interest of the securities of the company issued under the provisions (save as herein varied) of the statutes of 1919, chap. 13, sec. 26, to an amount approved by the Governor in council, but not exceeding \$40,000 a mile of such National railway lines. That the certificate of the Minister as to the mileage of the national railway lines shall for these purposes be conclusive, but the Minister may issue interim certificates from time to time based upon the estimated mileage and a final certificate to accord with the miles and fractions of miles actually constructed, each line of railway being treated as a

separate line. That the mileage of the said lines of railway and the cost of construction thereof mentioned in the schedule hereto shall be deemed to be merely estimated distance and costs. That the nature and form of securities to be issued and guaranteed shall be approved by the Governor in council and signed by the Minister of Finance, and may, as the Governor in council decides, be secured by mortgage or deed of trust. That to enable the work of construction and completion of the National railway lines to proceed forthwith the Governor in council, pending the issue and disposal of such guaranteed securities, may authorize advances to be made to the company from the consolidated revenue fund, such advances to be reimbursed to His Majesty by the company from the proceeds of the sale or disposition of such guaranteed securities.

The House went into Committee of the whole, on the resolution on June 21, on the Minister of Railways' motion. In the discussion which followed, the question of service on the railways in the Gaspé Peninsula, Que., and the proposals to buy the Kent Northern Ry. in New Brunswick and the Inverness and Richmond Ry. in Nova Scotia were mentioned, and the Minister stated that he would bring the first matter to Sir Henry Thornton's attention. With regard to the two other lines, it might be possible to do something later next spring.

Members taking part in the discussion mentioned a number of areas in various parts of Canada where they claimed new lines are required, and the Minister in reply stated that there was not a single line in the schedule that had not been recommended by the C.N.R. directorate. The present programme will extend over three years, so that for the present year the appropriations required will be about \$9,000,000. The construction of about a hundred lines were being pressed on the board, only so much money could be provided and the Government told the directors to clarify the list and the present schedule is the result. If the directors see their way to recommend further construction, the Government, so far as the country will warrant, will meet the situation.

The resolution was reported read a second time and concurred in, and a bill to give effect to it was introduced by the Minister of Railways and read a first time.

During the discussion on the motions for the second and third readings of the bill on June 25 and 26, amendments were moved by the opposition leader, Mr. Meighen, but were defeated by large majorities, and the third reading given.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues, or deficits, for the Canadian Northern Railway System, including the Duluth, Winnipeg & Pacific Ry.; Canadian Government Railways, including the Intercolonial and Prince Edward Island Rys., and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government; Grand Trunk Pacific Ry.; Grand Trunk Railway lines in Canada and the United States, and Central Vermont Ry., steam lines only.

	Revenue.	Expenses.	Net.	Increase.
April	\$21,056,312	\$18,826,000	\$2,230,312	\$3,197,173

Grand Trunk Railway.

Following are total operating revenues, total operating expenses, and net operating earnings, or deficits, of the G.T.R. system, for 1923 and 1922:—

	Revenue.	Expenses.	Net.	Increase or Decrease.
Jan.	\$8,623,348	\$7,937,775	\$ 685,573	\$ 89,768
Feb.	7,942,776	7,582,837	359,939	*836,517
Mar.	10,197,599	8,408,341	1,789,258	613,898
April	10,838,158	7,763,879	3,074,279	2,771,740

\$37,601,881	\$31,692,832	\$5,909,049	\$2,638,899
Inc'se	\$7,380,705	\$4,741,816	\$2,638,889

*Decrease.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross.	Expenses.	Net.	Increase or Decrease
Jan.	\$13,148,914	\$12,423,888	\$ 725,026	\$ 236,549
Feb.	11,159,865	10,664,371	495,494	*158,994
Mar.	13,585,763	11,606,049	1,979,714	*440,793
April	13,651,494	11,700,615	1,950,879	402,107

\$51,546,136	\$46,399,923	\$5,146,113	\$38,868
Inc'se	\$2,725,371	\$2,686,503	\$ 38,868

*Decrease.

Approximate gross earning for May, \$13,828,000, and for three weeks ended June 21, \$9,535,000, against \$13,253,000 and \$9,064,000, for same periods 1922.

Delaware & Hudson Co's Canadian Subsidiaries.

The D. & H. Co.'s report for the calendar year 1922 contains the following: "The Quebec, Montreal & Southern Ry. Co.'s operating revenues for 1922, increased \$7,493, or 1%, and the operating expenses increased \$27,563, or 3%. Income from rent of freight car equipment increased \$60,294, or 23%; and the net deficit, before deducting interest due your company, was \$65,080, a decrease in the net deficit of \$37,384. The freight movement increased 2,577,319 ton-miles, or 15%; and freight revenues increased \$22,077, or 5%. The passenger movement decreased 367,722 passenger-miles, or 9%; and passenger revenues \$15,253, or 10%. The Napierville Junction Ry. Co.'s operating revenues decreased \$6,189, or 1%; operating expenses decreased \$105,989, or 22%; and net income increased \$94,811."

Questions About a Canadian National Railways' Director.

The following questions were asked in the House of Commons recently, by R. W. Grimmer, Charlotte, N.B., the answers being given by the Minister of Railways, Mr. Graham:—

Q. "Is the recently appointed director to the Canadian National Rys., Mr. Onesiphore Talbot, an employe of the Quebec Government?" A. "Mr. Talbot is reported to be an employe of the Province of Quebec."

Q. "If so, when was he first engaged by the Quebec Government, for what department, and at what salary? When he was appointed director to the Canadian National Rys., what position did he fill in the Quebec Government service and what salary was he paid?" A. "No information."

Q. "Does the Government insist that Mr. Talbot resign from his employment in the Quebec Government service, or is he continued in such service?" A. "The Government does not require of Canadian National directors that they give up their regular employment."

Q. "What remuneration and privileges does Mr. Talbot enjoy as director of the National Railways?" A. "Director's fee, \$2,000 a year, and necessary transportation and living expenses when attending meetings of the board."

Q. "Was Mr. Talbot a defeated Liberal candidate in the general elections of 1911, and if so, for what constituency did he run?" A. "Mr. Talbot, like many other very worthy gentlemen, failed of re-election in 1911, when he stood for the County of Bellechasse, which constituency had honored him in 1896, 1900, 1904 and 1908."

Mr. Grimmer brought the matter up a second time in the Commons, asking the following questions, which were answered by Mr. Graham.

Q. "Is the Mr. Talbot who has been appointed a director of the Canadian National Rys., the same Mr. Talbot that was appointed to the department of the collector of provincial revenue of the Province of Quebec in the district of Quebec, on Nov. 18, 1911, at a salary of \$2,500 a year, and whose name appears in the Comptes Publics, 1921-22, of the Province of Quebec, as being still employed at the same salary?" A. "No information, but probably is the same gentleman."

Q. "If the fact is that this employe of the Quebec Government has been appointed to the board of the National Railways, does the Government propose giving other provincial governments similar representation on the board by appointing one of their servants to that body?" A. "No director has been appointed to represent a provincial government."

Mr. Grimmer, on bringing up the matter a third time, asked the following questions, which were answered by Mr. Graham:—

Q. "Is it the Government's view that the position of director of the Canadian National Rys. is of so little importance as to be properly filled by a civil servant, whose business ability is represented by a yearly salary of \$2,500 since Nov., 1911, with no increases?" A. "The remuneration of a Canadian National director, \$2,000 a year, is not necessarily indicative of the business ability of the directors, nor is the fact that the direc-

tors have had no increase since the board was appointed a reflection on the manner in which they have discharged their duties."

Q. "In view of the fact that Mr. Talbot is continuing his service with the Quebec Government, is the Dominion Government nevertheless of the opinion that should occasion arise, he would not follow the instructions, or representations, of his provincial employers?" A. "In the Government's view, Mr. Talbot's experience and acquaintance with conditions pertaining to the Quebec district, will be a distinct advantage in the consideration, by the Canadian National board, on railway questions affecting that province, in the welfare of which the Dominion Government, the Canadian National board, and the Quebec Government are, in their respective spheres, equally concerned."

Freight Loaded Contrary to Embargo Restrictions.

The Railway Association of Canada has issued the following revision of the Canadian Railway War Board's circular 115:—Difficulties in connection with disposition of freight loaded contrary to embargo restrictions have emphasized the importance of arranging through movement to destination before car is allowed to leave originating point, or of otherwise satisfactorily disposing of the shipment. Therefore, it is recommended that member lines adopt the following regulations for the guidance of agents and others concerned: "In the case of cars loaded or partly loaded prior to agent's receipt of embargo restrictions, or if an agent, in error, allows cars to be loaded to an embargoed destination, he will advise the shipper of the situation, and endeavor to arrange to have cars billed via an open route, or to an open destination or have the shipment unloaded; having failed to arrange disposition in this manner, he will report the circumstances to the proper officer for instructions. In the case of failure of shippers to observe embargo restrictions of which they have information, the agent will insist that cars be billed via an open route, or to an open destination, or be unloaded, and will assess proper demurrage charges during period cars are held awaiting disposition. If an alternative route to desired destination is open, but agent's tariffs do not provide rates, he will immediately ascertain from the proper traffic officer whether rates are available. In no case is the agent at shipping point to allow cars to go forward in the face of embargoes of which he is informed, except upon special authority of the proper officer."

The C.P.R. Summer Bungalow Camps.

The C.P.R. has opened a new summer bungalow camp at the southern end of Lake Helen, Ont., which has been named the Nipigon River Camp. It consists of a community house, 6 double bungalows, each with 2 rooms and 2 beds in each, and 9 one-room single bungalows. The buildings are of rustic frame construction with shingle roofs. In addition to the permanent bungalows, 7 canvas houses are provided which can be erected speedily as necessity arises. The camp

is about a third of a mile from a special flag station on the main line; a bus service is provided between the station and the camp, and there is a ferry service between the camp and Nipigon on the west side of the river. The camp is lighted by a gasoline and coal oil system. The company has a camp on the shore of French River, near French River station, similar to the Nipigon River one, with a capacity for 50 guests; and another at the southern end of Devils Gap, on the Lake of the Woods, the nearest station being Kenora. It has 8 double bungalows and 12 single ones, with capacity for 50 guests. It is lighted by electricity. These bungalow camps are operated on the American plan at \$5 a day, or \$30 a week for each person. Launches, canoes and boats are provided at moderate charges, and experienced guides are available for fishing or explorations. The camps are open from July 1 to Sept. 15. The company has operated similar bungalow camps successfully in the development of its tourist traffic in the Rocky Mountain district, for several years.

Proposed Changes in Railway Act.

A bill was introduced in the House of Commons, recently, by Hon. H. H. Stevens, Conservative, Vancouver Center, proposing several amendments to the Railway Act 119. The first is to sec. 52, subsec. 1, which gives the Governor in council power at any time to "vary or rescind any order, decision, rule or regulation of the Board (of Railway Commissioners)." Mr. Stevens wants this clause made to read "to vary, rescind or refer back to the Board for further consideration. . . ." The balance of the proposed changes have to do with the matter of discrimination, and the sum and substance of them is that in all clauses having to do with discriminatory practices, the words "unjust," "unjustly," "undue," "unreasonable," etc., as commonly used throughout the act, as qualifying the word "discrimination" should be removed. For example, in sec. 314, subsec. 4, Mr. Stevens wants the word "unjustly" struck out, so that the clause would read, "No toll shall be charged which discriminates between different localities," instead of "No toll shall be charged which unjustly discriminates . . ." etc. Other changes of like nature he wants made in section 316, subsection 3, paragraphs (a), (c) and (d); in section 317, subsections 1 and 2, and in section 319.

Mr. Stevens advised Canadian Railway and Marine World recently that the bill had been held over pending further consideration by the Government of the whole freight rates question as applying to British Columbia; that he was expecting such consideration in the then near future, and that it was not likely that the bill would be proceeded with during the session.

Pensioners Passes on Canadian National Rys.—The acting Minister of Railways, Mr. Graham, stated in the House of Commons recently, in answer to questions by C. A. Gauvreau, Temiscouata, Que., that old pensioners of the G.T.R. are still entitled to an annual pass on the National railways, and that the question of granting the same favor to old pensioners of the Intercolonial Ry. was under consideration by the management.

C.P.R. Providing Labor for Western Farmers.

The C.P.R. has started a plan to encourage immigration and supply the labor required by western farmers. Forms have been prepared to delivered to station agents for distribution among farmers, on which the latter are invited to state their requirements as to the class and nationality of labor required, when desired, wages offered and other details. These forms are used as the basis of reports to C.P.R. agents in Great Britain, Belgium, Denmark, Holland, Norway, Switzerland and other countries, who are in touch with prospective immigrants, and are in a position to judge of their suitability. No expense to the farmer applying for labor will be entailed; the labor will be delivered at the station specified on the form on or about the date required, the company looking after all details. It is felt that as, in the majority of cases, farmers will prefer to hire labor of their own nationality, the scheme will not only furnish the exact type of farm labor required, but will also bring to the country a large number of immigrants of the most desirable type.

Grand Trunk Railway Acquisition and Results.

The following questions were asked in the House of Commons recently, by A. J. Benoit, St. John's and Iberville, Que., and answered by the acting Minister of Railways, Mr. Graham:—

Q. "What was the purchase price paid by the Government for the Grand Trunk Ry?" A. "The Government acquired control of the Grand Trunk under the terms of the agreement embodied in chap. 17, of 1919, and chap. 13, of 1920, by which the Government guaranteed the interest upon the debentures and guaranteed stocks, and undertook to acquire, at a valuation to be established by arbitration, the preference and common stocks. The annual interest charges upon the debentures and guaranteed stocks amount to \$8,984,634.58. The board of arbitration held that, at the time of taking over, the preference and common stock were valueless, in view of the unsound financial condition of the company. Under the agreement, the Government became responsible for Grand Trunk financing as of May 21, 1920, and has, through the receiver, been responsible for Grand Trunk Pacific financing since the default of that subsidiary of the Grand Trunk on March 9, 1919. What these responsibilities have cost the Government to December 31, 1922, will be disclosed by the acting Minister of Railways in his annual statement to Parliament."

Q. "Who were the arbitrators employed by the Government in connection with the G.T.R. arbitration, and what fees were paid them?" A. "The late Sir Walter Cassels, chairman, \$25,000 by the Government, and \$25,000 by G.T.R. shareholders; Sir Thomas White, \$29,000."

Q. "Since becoming part of the Canadian National Rys., has the G.T.R. section of said railways, in the last annual financial statement, shown a profit or loss?" A. "The results for 1921, including the Central Vermont, were a net deficit, after fixed charges, of \$15,672,299.34. The 1922 results will be disclosed by the acting Minister of Railways in his statement to Parliament."

Purchase of New Brunswick Railways by Dominion Government.

Acting Minister of Railways G. P. Graham, stated in the House of Commons recently, in answer to questions by R. B. Hanson, York-Sunbury, N. B., that the Government had completed the purchase of the Caraquet and Gulf Shore Ry., and had paid the purchase price, with the exception of \$550, which had been retained at the Justice Department's request, to protect the Post Office Department's claim against the railway for registered letters lost before it was taken over. One creditor's claim filed with the Department had been withdrawn, and the others were not considered valid.

The Moncton and Buctouche Ry's purchase price had not been paid by the Government, owing to the owner's failure to convey the railway free of encumbrances. In answer to the questions: "Is it the Government's intention to see that the creditors of the railway are paid in full before anything is paid to the company, and what steps, if any, are being taken by the Government or the Railways Department to compel the company to pay its creditors?" Mr. Graham said: "The obligation is on the company to convey the property free from encumbrances. Upon this being done to the Justice Department's satisfaction, the purchase price will be payable to whoever may be entitled to it. When the agreement to sell was reached in 1918, the Bank of Montreal filed with the Government a power of attorney from the company to receive all monies due or to become due."

Maritime Provinces Ask Lower Freight Rates.

The following motion by J. W. McDonald, Pictou, was passed by the Nova Scotia House of Assembly recently: "Whereas the freight rates charged by the railways connecting the maritime provinces with the rest of Canada are so high as to very seriously affect the commercial and industrial interests of the maritime provinces, therefore resolved that this Legislature is of the opinion that immediate action should be taken to secure the co-operation of the Governments of New Brunswick and Prince Edward Island with the object of securing united action to preserve and protect our interests by securing the services of a competent freight rate expert for the maritime provinces, and by impressing upon the Dominion Government the importance of putting into effect at the earliest possible moment the recommendation of the House of Commons special committee on railway transportation costs, in regard to a general reduction in freight rates."

Enquiries About Railway Traffic in Quebec and Ontario.

On Sir Henry Drayton's motion, the House of Commons made an order recently, for a return giving the following information, for the last completed annual accounting period:—1. The amount of revenue, freight and passenger traffic originating on the different divisions of the G. T. R. in Quebec and Ontario, and the earnings therefrom. 2. The amount of revenue, freight and passenger traffic originating on the G. T. R., in Montreal, Ottawa, Toronto, and Hamilton, and the earn-

ings therefrom. 3. The amount of freight moving in less than carload lots from Montreal, Ottawa, Toronto and Hamilton on the G. T. R., and the earnings therefrom. 4. The number of way freight trains operated, their mileage and earnings, from Montreal, Ottawa, Toronto and Hamilton on the G. T. R. 5. The amount of revenue, freight and passenger traffic originating on the different divisions of the Canadian National Rys. in Quebec and Ontario, and the earnings therefrom. 6. The amount of revenue, freight and passenger traffic originating on the Canadian National Rys. in Montreal, Ottawa, Toronto and Hamilton, and the earnings therefrom. 7. The amount of freight moving in less than carload lots from Montreal, Ottawa, Toronto and Hamilton on the Canadian National Rys., and the earnings therefrom. 8. The number of way freight trains operated, their mileage and earnings, from Montreal, Ottawa, Toronto and Hamilton, on the Canadian National Rys.

Valuation of C.P.R. Lines in the United States.

At the end of 1922, the Interstate Commerce Commission's Valuation Division has made over 300 reports, on the value of some 450 railway corporations having about 50,000 miles of line. These valuations are being made in accordance with the Valuation Act of 1913, and since the Transportation Act was passed the work has been speeded up considerably. Most of the valuations so far made by the Commission have been tentative, although a few final ones have been served.

The Commission recently fixed the value of C.P.R. lines in the U.S. as \$,069,000. This is for the lines in Maine and Vermont and does not include the Minneapolis, St. Paul & Sault Ste. Marie or other subsidiary lines.

In almost all cases where the Commission has served notice on U.S. lines as to the sum determined as their value, the railways have protested and claimed their properties to be worth more. Under the Transportation Act, the roads are supposed to be entitled to earn a stated percentage on their property valuation, so it is evident that the more any railway is valued at, the greater will its justified net operating income be. No statement has been made as to the value the C.P.R. places on the lines reported upon by the Commission.

English Farm Girls in Canada.—Sir Henry Thornton, President, Canadian National Rys., offered recently, through the London Daily Mail federation of Young Farmers, four travel scholarships for young women. The Misses Joan Moore, Leicestershire; Ivy Townsend, Surrey; Mildred White, Devon; and Emma Absolon, London, the latter interested particularly in beekeeping, were selected, and sailed from Southampton, May 27. After visiting the agricultural and domestic science teaching institutions in Quebec and Montreal, they were taken on a trip across Canada by the C.N.R. lines. On returning Misses White and Townsend will stop at Winnipeg to attend some courses at the Manitoba Agricultural College, and Misses Moore and Absolon will put in some time at the Ontario Agricultural College, Guelph. They will return to England in October, and during the winter will address meetings throughout the country in connection with the C. N. Ry's emigration campaign there.

Canadian National Railways Construction, Betterments, Etc.

New Glasgow Station.—The fire of March 7, which destroyed the upper portion of the station building, also used as divisional headquarters, at New Glasgow, N.S., did considerable damage to the ground floor. The building was a one and a half story brick structure 180 x 30 ft. We are officially advised that it is being rebuilt as a 2-story structure using the existing first story walls. The new portion of the building will be faced by pressed brick with common brick backing, precast concrete cornice and copings, a flat roof draining to the center of the building, the roof being covered with built-up roofing and pierced with outlets for rainwater leaders. The ground floor will contain the waiting room, smoking room, ticket office, telegraph office, baggage and express rooms. The second floor will contain the Superintendent's and Assistant Superintendent's, and other division offices. The interior trim of the principal offices will be of Douglas fir, with plastered ceilings. The trim of the second story will be of pine, with hardwood floors, and burlap wall covering, and a vault will be provided for the accounting office records. The reconstruction is being done by the railways' own forces.

Wellington St. Subway, Montreal.—Montreal City Council executive committee is reported to have obtained a grant of \$2,000 for preparation of plans for a new subway under the old G.T.R. tracks on Wellington St. The estimated cost of the work is \$200,000 but it is not expected that a start will be made on it until early in 1924.

Ottawa cross town tracks.—Sir Henry Thornton, President, attended a meeting held in Ottawa, recently, to consider the question of the cross town tracks, which has been under discussion for some years. He is reported to have stated that they must ultimately be removed, and instructions would be given C. S. Gzowski, Chief Engineer, Construction Department, to confer with any competent engineer appointed by the city to discuss the whole situation and to draw up a plan for work to be done which would represent the commencement of the removal of the tracks. The city council subsequently appointed A. F. Macallum, City Engineer, and N. Cauchon, to discuss the matter with Mr. Gzowski.

Oshawa Improvements.—A press report states that the Oshawa, Ont., Town Council has asked the C.N.R. to build a subway at Simcoe St., and also to build a new station.

Irondale Subdivision Bridges.—We are officially advised that the Board of Railway Commissioners has approved of the rebuilding of four bridges crossing the Burnt River, Irondale Subdivision, Central Region. Following are particulars of the present bridges which were built about 30 years ago, and of the new ones.

Mile 35.4, timber trestle 30 ft. long, resting on stone filled cribs, to be replaced by a 50 ft. deck plate girder, resting on 2 concrete abutments.

Mile 36.7, timber trestle 70 ft. long, resting on stone filled cribs, to be replaced by a 58 ft. deck plate girder, resting on 2 concrete abutments.

Mile 37.1, timber trestle 65 ft. long, resting on stone filled cribs, to be replaced by one 50 ft. deck plate girder span, with a 13 ft. approach span, resting

on 2 concrete abutments and one concrete pier.

Mile 41.1, timber trestle 90 ft. long; to be replaced by one 60 ft. deck plate girder span, and one 13 ft. beam span resting on 2 concrete abutments and a concrete pier.

Burlington Beach Second Track.—Work is reported to have been started on laying of a second track between Burlington, Ont., and Hamilton.

Hamilton Station, etc.—Following Sir Henry Thornton's recent visit to Hamilton, Ont., the city council appointed a committee to confer with C.N.R. officials as to a new station and other improvements. Sir Henry Thornton advised the Mayor, June 16, that he had appointed C. G. Bowker, General Manager, Central Region, and F. L. C. Bond, Chief Engineer, Central Region to deal with the matter.

London Diamond Relaying.—The no. 10 diamond between Richmond and Talbot Sts., London, Ont., is reported to have been replaced by a larger one, with longer approaches, to accommodate the larger locomotives now being used.

Trowbridge Freight Yard.—A press report states that it is proposed to lay out a freight classification yard at Trowbridge, Mich.

Midland Grain Elevator.—We are officially advised that the construction of an extension to Tiffin no. 2 grain elevator at Midland, Ont., has been authorized. The extension will increase the storage capacity by 2,125,000 bush., and a third marine leg will be added. It is expected to have the extension completed for the close of this season's business.

Sudbury District Bridges.—The Board of Railway Commissioners has authorized the rebuilding of bridges over the Apishkanogana and the Muskego Rivers, in Sudbury district, Ont.

Indian River Bridge.—The Board of Railway Commissioners has authorized the building of a bridge over the north branch of the Indian River, Fraser Tp., Algoma. We are officially advised that the bridge is at mile 98.3, Beechburg Subdivision, and consists of a timber trestle of 14 bays, with a 43 ft. steel girder carried on timber bents in the center. This is to be replaced by a steel and concrete bridge, consisting of three deck plate girder spans, 52 ft. 4 in., 98 ft. 1½ in., and 43 ft., out to out, respectively, resting on 2 concrete piers and 2 concrete abutments. The bridge is designed so that all masonry will be built in the dry, no cofferdam being required. The overall length of the bridge will be 198 ft. 4 in., face to face of backwalls. The concrete piers and abutments are being put in by the railways' own forces, and tenders for the superstructure were received to June 30.

Shekak River Bridge.—The Board of Railway Commissioners has authorized the building of a bridge over the Shekak River, Algoma. We are officially advised that the existing bridge consists of a standard timber trestle of about 22 bays, and is to be replaced by a permanent bridge of one 225 ft. through truss span, with approach girder spans of 36 ft. at one end, and of 40 ft. at the other, resting on 2 concrete piers and 2 abutments. The abutments will be in about 6 ft. of water, and timber cofferdams will be

used in their construction. The superstructure is being removed from an abandoned section of the Grand Trunk Pacific Ry. The over all length of the bridge will be 306 ft. 4 in., face to face of backwall. The entire work is being done by the railways' own forces.

Longlac-Nakina Cutoff.—Senator Dandurand stated in the Senate recently, in answer to questions by Senator Lynch-Staunton, that a contract had been let for clearing, grading, culverts, and bridges on this line, to Foley Bros. & Hervey, the estimated cost being \$775,980. The amount required to cover expenditure to March 31, 1923, was provided by Parliament last year, in vote 112. Since that reply was given, a bill has been introduced to cover the C.N.R. general construction programme, which includes \$1,944,000 for this line. Foley Bros., of Foley Bros. & Hervey, who have the contract for the cutoff, is an old contracting firm which has built thousands of miles of railway in Canada and the United States. O. W. Swensen, its Secretary-Treasurer, who is in charge of the Longlac-Nakina work, had charge of the following construction in Canada for Foley Bros. and their associates: Algoma Central Ry., from Sault Ste. Marie to Josephine Mine, including branch to Helen Mine Jct., Ont.; C.P.R., Bolton Jct. to Sudbury line, from Byng Inlet to Rainford, Ont.; G. T. Pacific Ry. Lake Superior branch, from Fort William to Lake Superior Jct., Ont.; National Transcontinental Ry., from Quebec City to Cochrane; Canadian Northern Ry., from Ruel to Port Arthur, Ont. In addition to these lines, Foley Bros. and their associates did the second track construction from Fort William to Winnipeg; built the G. T. Pacific Ry. to the Pacific coast through the Yellowhead Pass and the C.P.R. Connaught tunnel.

Grant-Nakina Terminal Facilities.—As stated in Canadian Railway and Marine World for February, in connection with the building of the Longlac-Nakina cutoff, the terminal facilities at Grant, Ont., the present divisional point, 254.2 miles west of Cochrane, will be removed 15.9 miles west to Nakina next summer. They consist of passenger station, National Transcontinental Ry. type D 116½ x 30 ft.; storehouse, 48 x 20 ft.; locomotive house, 12 stalls; machine shop and 75 ft. turnable; coaling plant, 200 ton capacity; cinder hoist, single; ice house, 1,000 ton capacity; water tank, 70,000 gall. capacity; trainmen's rest house, 39 ft. x 37½ ft.; 5 double cottages, providing 10 dwellings for employees; 10 miles of yard tracks, with capacity for 700 cars.

Port Arthur-Kakabeka Falls Second Track.—We are officially advised that a second track is being laid from mile 2.74 west of Port Arthur, Ont., to mile 23, Kakabeka Falls. This work was begun in May, 1922, and is expected to be completed by Aug. 31. Between miles 8.2 and 11.2, two main line tracks have been diverged round the new Neebing yards, westbound to the north and eastbound to the south.

Neebing Yard.—The Ontario Legislature has approved of an agreement, dated May 17, 1922, between the Canadian Northern Ry. Co. and the Neebing Township Council, with respect to the installation and permanent establishment in the township of the general receiving, sorting and distributing yard for the

traffic of the whole group of Canadian National Rys. and the necessary locomotive house and equipment therefor, whereby the annual assessment for the same is fixed at \$19,000 for 10 years.

Kashabowie Subdivision Line Revision.—Tenders were received recently for the construction of a line revision between miles 32 and 35.65, Kashabowie Subdivision, Ont. We are officially advised that this revision will provide a second main line, with improved gradients of 0.5%, which will form a part of the double track line which will eventually be built between the point of connection now under construction between the Graham and Kashabowie Subdivisions and Port Arthur. The material involved in the grading consists of rock, loose rock and common excavation—rock predominating. The construction will be C.N.R. main line standard; culverts, reinforced concrete boxes, or reinforced concrete pipes. The work is to be completed by Dec. 31.

Brandon to Regina Track Relaying.—A large gang is reported to be replacing the 60 lb. rails between Kipling, mile 263, and Regina, mile 356, with 80 lb. rails. The track between Brandon and Kipling is reported to have been already relaid.

Glenavon Subdivision Ballast Spur.—Tenders were received recently for the construction of a 4-mile spur to a ballast pit, and for the stripping of the pit at mile 239.4, Glenavon Subdivision, Sask.

Kipling and Avonlea Water Supplies.—Tenders were received recently for the provision of a water storage and a pipe line at Kipling, Sask., mile 207, Glenavon Subdivision, and at Avonlea, Sask., mile 50.9, Avonlea Subdivision. A press report states that these are to be gravity plants, and that the capacity of the reservoirs at these places will be 50,000,000 galls. each.

Regina Water Supply.—A press report states as follows: Plans have been prepared for the provision of a water supply for Regina, Sask., at an estimated cost of \$200,000, that the work will be gone on with this summer. The plans provide for the construction of a reservoir, with a capacity of 400,000,000 gallons, at Condie, on Boggy Creek. The reservoir will be about a mile and a half long, and cover approximately 180 acres. The depth of the water impounded will vary, but will be 10 ft. at the earthwork dam, the construction of which will involve the placing of about 40,000 cu. yd. of material. The spillway will be 10 ft. below the top of the dam. On the south side of the reservoir, opposite its deepest point, a pump house will be built, to pump the water to the steel tanks in the North Regina yards, the pipe line being laid mainly along the railway right of way.

Hudson Bay Ry. Expenditure.—A. Knox, Prince Albert, Sask., drew the House of Commons' attention recently, to a western press dispatch which said that on the 332 miles of line on which rails had been laid, \$30,000,000 had been expended, and added: "It is generally known and acknowledged that the cost of the railway was, roughly speaking, only \$14,000,000, and the cost of the terminals some \$6,000,000."

Brule to the Grande Prairie Country.—A press report states that a topographical survey has been ordered of the country between Brule, Alta., 199 miles west of Edmonton, and the Grande Prairie country, across the Smoky River. The region through which such a line

would pass is said to contain large deposits of hard coal, and the prairie district beyond to be good agricultural land and pretty well settled. The distance between Brule and Grande Prairie is about 150 miles, but allowing for deviations to serve coal mines, and to overcome natural obstacles, etc., a railway would be about 200 miles long, which would make the distance between Edmonton and Grande Prairie about 400 miles. At present Grande Prairie is reached by the Edmonton, Dunvegan & British Columbia Ry. by a branch line from Spirit River, the mileage from Edmonton being 406. The C.N.R. has a line in operation from Peace River Jct. to Whitecourt, 72 miles, which was projected originally to the Grande Prairie country. It is said that the coal areas could not be advantageously reached by either of these lines.

Edmonton Yard Facilities.—A press report states that the C.N.R. has bought 9½ acres adjoining Columbia Ave., between 113th and 119th Sts., Edmonton, Alta., to extend its yard accommodation.

Kamloops Interchange Track.—The interchange track with the C.P.R. at Kamloops, B.C., the construction of which was authorized by the Board of Railway Commissioners, recently, will, we are officially advised, start from the eastern end of the C.N.R. yard and run southeasterly for about 2,500 ft. to a connection with the C.P.R. at 10th Ave.

Bulkley Subdivision Improvements.—Tenders were received recently for a line revision and the construction of a retaining wall at mile 1,573.5 from Winnipeg, also for the construction of a reinforced concrete culvert and the partial filling of a bridge at mile 1,576 from Winnipeg, on the Bulkley Subdivision. These works are both located between Bulkley Canyon and New Hazelton stations, B.C. We are officially advised that the revision is to eliminate a timber bridge 65 ft. high and 500 ft. long, crossing a drain from the Bulkley River. To fill the bridge on the present line would be very costly and there would be danger of slides, as the slopes of the fill would be over 300 ft. long, and reach the Bulkley River. To avoid this it is proposed to revise the alignment, thus throwing the line more closely into the side hill, and to retain the embankment, it is proposed to build a concrete retaining wall 240 ft. long, and of a maximum height of 16 ft. By this means the permanent embankment will be built on a rock bank and rock foundations will be secured for the retaining wall, with an excavation of only a foot or so. The construction proposed is less expensive than either attempting to fill the present line or by the construction of a steel viaduct. The curvature will not be over 6 degrees, and the present gradients will be of rock, secured from immediately opposite the bridge which is to be filled. Traffic can be maintained without difficulty while the work is in progress.

Track Connection at Queensboro.—The Board of Railway Commissioners has approved of a track connection between the C.N.R. and the British Columbia Electric Ry. at Queensboro and Steveston, B.C. We are officially advised that this connection was built several years ago with the approval of the British Columbia Railways Department, and that the present order was obtained for the purpose of having the plans on record with the Board of Railway Commissioners.

Vancouver Station Grounds.—We are officially advised, in regard to the arrangement between the C.N.R. and the

Vancouver City Council, with reference to the paving and other work on the grounds around Vancouver station, that it covers the paving of a driveway in front of the station from Terminal Ave. to the northerly limits of the railway property; the paving of a 50 ft. approach from Main St. to the station driveway near the northerly limits of the railway property, and the paving of a portion of Terminal Ave. from Main St. to the station driveway, together with a sewer system to drain the roadways. The city has also arranged to grade and beautify the areas in front of the station, enclosed by these roads and Main St., converting the present unsightly fill into a park with walks, grass and shrubs.

Sunday Trains in Manitoba.

For some years past there has been considerable agitation in Manitoba in favor of running trains on Sundays, to the Winnipeg Lake beaches, and other summer resorts. The general situation in Canada as to Sunday labor is governed by the Dominion Statutes, R.S.C., 1906, chap. 153, sec. 9, which provides that: "It shall not be lawful for any person on the Lord's Day, except as provided by any provincial act or law now or hereafter in force, to run, conduct or convey by any mode of conveyance, any excursion on which passengers are conveyed for hire, and having for its principal or any object the carriage on that day of such passengers for amusement or pleasure, and passengers so conveyed shall not be deemed to be travellers within the meaning of the act."

The operation of excursion trains on Sundays was not permitted among the exceptions contained in the Manitoba Lord's Day Act, Revised Statutes of Manitoba, chap. 119, sec. 2. In 1922 it was proposed to amend the section by adding a provision that "it shall be lawful for any person on the Lord's Day to run, conduct, or convey, by any mode of conveyance, any excursion on which passengers are conveyed for hire to summer resorts, beaches or camping grounds, within the province." After meeting with considerable opposition, the bill was abandoned, following the Government's defeat for other reasons. It was reintroduced at the recent session, but contained a provision permitting the advertising of proposed excursions. The Lord's Day Alliance promoted opposition to the bill, but it was passed, the clause as to advertising being struck out; the Government undertaking to submit a test case as to the validity of the Lord's Day Act. The case was argued before the Court of Appeal at Winnipeg, a series of questions having been drafted by the Attorney General for consideration. On May 23 Chief Justice Perdue and Justices Fullerton, Dennistown and Trueman, each submitted written judgments, giving reasons for their answers to the questions. These declared that it was perfectly lawful for any person or corporation to carry passengers for hire to summer resorts, etc., under the amendment to the Lord's Day Act, presuming it was brought into effect by proclamation of the Lieutenant Governor. Following the delivery of judgment, the Lieutenant Governor proclaimed the act to be in effect, and the first Sunday trains were run to the beaches on June 10. The Court of Appeal, on June 12, granted the Lord's Day Alliance leave to appeal direct to the Imperial Privy Council.

Redistribution of Western Region, Canadian National Rys.

General Manager Warren, of the Western Region, at Winnipeg, has announced its division at Jasper, Alta., 1,030.2 miles west of Winnipeg, and 234.1 west of Edmonton, Alta. The lines east of Jasper are placed under H. H. Brewer, Assistant General Manager, Winnipeg, whose territory extended formerly west to Union Jct., 793.6 miles west of Winnipeg, and 6.3 miles west of Edmonton. The lines west of Jasper to the Pacific coast, including Vancouver Island, are placed under J. R. Cameron, Assistant General Manager at Vancouver, the eastern boundary of whose former territory was Union Jct.

The lines east of Jasper are divided into Manitoba District, under A. Willcox, General Superintendent, Winnipeg; Saskatchewan District, under B. T. Chappell, General Superintendent, Saskatoon; and Alberta District, under W. A. Brown, General Superintendent, Edmonton. The lines west of Jasper, under J. R. Cameron, Assistant General Manager, Vancouver, are all comprised in the British Columbia District.

The distribution of the districts, with their superintendents and headquarters, is as follows:—

Manitoba District.—Lakehead Division, R. S. Richardson, Fort William, Ont., heretofore Superintendent, old Fort William Division there.

Port Arthur Division.—W. T. Moodie, Port Arthur, Ont., heretofore Superintendent, old Rainy River Division there.

Duluth, Winnipeg & Pacific Ry.—J. H. McKinnon, Virginia, Minn. No change.

Winnipeg Terminal Division.—M. B. Murphy, Winnipeg. Slight change in territory.

Portage Division.—W. I. Munro, Fort Rouge, Winnipeg, heretofore Superintendent, old Portage Division.

Brandon Division.—G. A. Cunliffe, Brandon, Man., heretofore Superintendent, old Brandon Division, Saskatchewan District.

Dauphin Division.—T. J. Brown, Dauphin, Man., heretofore Superintendent, old Dauphin Division, Saskatchewan District.

Saskatchewan District: Melville Division.—D. W. Steeper, Melville, heretofore Superintendent, old Edson Division, British Columbia District.

Regina Division.—I. A. Macpherson, Regina, heretofore Superintendent, old Melville Division, Manitoba District.

Saskatoon District.—J. P. Johnson, Saskatoon, heretofore Superintendent, old Prince Albert Division, Saskatchewan District.

Prince Albert Division.—J. Irwin, Prince Albert, heretofore Superintendent, old Biggar Division, Alberta District.

Alberta District: Edmonton Division.—J. E. Nelson, Edmonton, heretofore Superintendent, old Edmonton Division.

Calgary Division.—R. King, Calgary, heretofore Superintendent, old Calgary Division.

Edson Division.—A. E. Macdonald, heretofore Superintendent, old Saskatoon Division, Saskatchewan District.

British Columbia District: Kamloops Division.—L. F. Muncey, Kamloops Jct., heretofore Superintendent, old Kamloops Division.

Smithers Division.—N. B. Walton, Assistant General Superintendent in

charge, Prince Rupert, B.C., heretofore Assistant General Superintendent, old Edson and Smithers Divisions. He also has jurisdiction over Edson Division, of which A. E. Macdonald is Superintendent.

Vancouver Island Division.—W. S. R. Cameron, General Agent, Victoria. No change.

Marine Division.—J. Y. Rochester, Vancouver, formerly Superintendent, Barge & Ferry Service there.

Among the Express Companies.

A Board of Railway Commissioners' order, fixing express rates on fish, in car loads, from Northern Alberta to Chicago, is given in full on another page, under "Traffic Orders by Board of Railway Commissioners."

The Canadian National Rys. Express Department has opened offices at St. Judes, Varennes, Gentilly, Becquets, Que., Leaside, Ont., Victoria Beach and Grand Beach, Man., and closed offices at Windsor Jct., N.S., Smoky Falls, Ont., and Merid, Sask.

Forrester Wiggins Branscombe, heretofore Superintendent, Dominion Ex. Co., Montreal, has been appointed General Superintendent, lines east of Port Arthur, Ont., Dominion Ex. Co. at Montreal. He was born at St. John, N.B., Nov. 16, 1866, and entered the company's service, Oct. 26, 1889, since when he has been, to Nov. 21, 1892, night transfer man, Smiths Falls, Ont.; Nov. 1892 to Dec. 1899, in messenger service; Dec. 1899, to April 1905, tonnage clerk, Audit Department, Toronto; April 1905 to April, 1907, agent, Kingston, Ont.; April, 1907 to Nov. 1912, route agent, St. John, N.B.; Dec. 1912 to June 1917, Assistant Superintendent, St. John, N.B.; July 1917 to May 1923, Superintendent, Montreal.

Ernest D. Riley, heretofore special representative to Vice President and General Manager, Dominion Ex. Co., Toronto, has been appointed Superintendent, Atlantic Division, Dominion Ex. Co., at Montreal, with supervision over the territory to the Atlantic seaboard, covered by the C.P.R., Dominion Atlantic Ry., and Quebec Central Ry. He was born at Harrogate, Eng., Jan. 7, 1884, and entered express service in 1905, since when he has been, to 1906, stenographer, United States Ex. Co., Chicago, Ill.; 1906 to 1908, secretary to Inspector, same company, Chicago; 1908 to 1910, secretary to General Superintendent, same company, Chicago; 1910 to 1912, secretary to General Superintendent, Western Ex. Co., Chicago; 1912 to 1918, chief clerk to General Superintendent, same company, Chicago; Oct. 1, 1918, to June 1 1923, special representative, Dominion Ex. Co., Toronto.

Telegraph and Cable Matters.

The Commercial Cable Co.'s cable ship Restorer has completed some cable repair work at Bamfield, B.C., and has laid about 15 miles of new cable, replacing a similar length of old cable, for the Pacific Cable Board.

The Pacific Cable Board's cable ship Colonia, was reported to have sailed from London, Eng., during June, with the cable to be laid between Fanning Island and Bamfield, Vancouver Island, in connection with the duplication of the board's Pacific cable, which it is the intention to complete this year. The laying of this portion of the cable is expected to

commence during July, and the ship is expected to arrive at Bamfield, to complete the laying, about the end of August.

C. H. Mackay, President, Postal Telegraph-Commercial Cable System, is reported to have stated that an agreement has been entered into with the C.P.R., whereby the two companies will, for 10 years, exchange telegraph and cable traffic, the C.P.R. handing over to the cable company the traffic collected in Canada for all parts of the world, and the cable company handing over to the C.P.R. all traffic destined for Canadian points.

The Postal Telegraph - Commercial Cable Co. has arranged to lay an additional trans-Atlantic cable between New York and London, this year. It is stated that the cable will carry 600 words a minute in each direction at the same time, making it the fastest cable in service. The route will be from New York to Nova Scotia, about 1,000 miles, thence to the Azores, about 1,750 miles, where it will connect with a cable already laid to Ireland. From Ireland a new cable, 350 miles long, will be laid to London. The approximate cost is stated as \$10,000,000, and about 3,000,000 lb. of copper will be used in the conductor.

In the past, interruptions to telegraph service, caused by damage to outside wires, could only, in the majority of cases, be rectified by daylight, when the damaged section could be located readily, a disadvantage which delayed the recovery of interrupted services. Where the trouble may have been anywhere along the line, between points some 20 to 100 miles apart, it was not possible to take care of the interruption, especially at night. To overcome the disadvantage due to night interruptions to its wires, the Canadian Pacific Telegraphs provided a special electric light, and all the linemen on the system were equipped with it, enabling them to successfully take care of interruptions and do their work at night as well as by day. The special light is of simple construction, the power is derived from the dynamo turbine with which all C.P.R. locomotives are equipped, and which provides electricity for the illumination of the headlights and cab lights. A headlight globe is used, and an especially designed reflector throws a beam sufficiently strong to allow working operations at a distance of 600 ft. A conducting wire, attached to a socket in the cab of the locomotive, is of sufficient strength to enable the operator to work any place within two car lengths of the locomotive. There is also a semi-permanent stand, to which the lamp can be attached for the convenience of men working at night on bridges, or anywhere that requires a steady flow of light. The lamp can also, by interchange of globes, be used where there is a domestic current, but not with such good effects. As there is so much that can affect a telegraph system, such as fire, aurora, lightning, snow, wind and rain, the advantage of being able to locate the source of trouble cannot be over-estimated, and time and time again, when the lines have been seriously damaged during the night, it has been found that the electric hand lamp has been of a great benefit. During the past winter, when the service experienced a considerable number of interruptions, the lamp was often used during snow and sleet storms, and not one instance is known of it having failed to meet all services put upon it. The perfection of this lamp has been a decided progressive step in telegraph maintenance at night.

Electric Railway Department

Canadian Electric Railway Association's Annual Meeting at Toronto.

As this issue of Canadian Railway and Marine World goes to press, the Canadian Electric Railway Association's annual meeting, fixed to be held in Toronto from June 27 to 30, is in progress, all the indications at the time of writing (June 26) being, that it will be most successful in every way. The general arrangements have been directed by the President, Major F. D. Burpee, assisted by the Secretary, D. N. Gill; D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., has arranged for the papers to be read; and local committees at Toronto have dealt very thoroughly with the programme for the business meetings; the arrangements for display of exhibits, and the entertainment of the members and guests. Toronto City Council has given the use of the Music Building and the Press Building on the Canadian National Exhibition Grounds. The members' meetings take place in the amphitheatre in the Music Building, and the exhibits are displayed in the main portion of the building. The Press Building is devoted to the use of ladies attending the meeting. The Toronto Transportation Commission is operating buses between its nearest electric railway terminal, terminating outside the Exhibition Grounds, and the Music and Press Buildings, and also between those buildings and the Sunnyside Pavilion, on the lake front, where the luncheons are being held.

The general programme is as follows:
 June 27, Wednesday. 10 a.m.—Registration at Music Building. 11 a.m.—Association meeting in Amphitheatre, presentation of Secretary's and Treasurer's reports. 1 p.m.—Luncheon at Sunnyside Pavilion. Address by President. 2.30 p.m.—Inspection of exhibits in Music Building. 4.30 p.m.—All types of Toronto Transportation Commission rolling stock on view at loop east of exhibition grounds.

June 28, Thursday. 9.30 a.m.—Association meeting in Amphitheatre. Reports from committee on public relations and standards. Paper: "The operation of a scientific survey of traffic movements on urban railways," by Alex. Jackson, Superintendent of Timetables, Public Service Railway Co., Newark, N.J. Discussion on timely topics. 1 p.m.—Luncheon at Sunnyside Pavilion. Address by Mayor of Toronto. 2.15 p.m.—For ladies: Trip around harbor and tea at Royal Canadian Yacht Club. 2.30 p.m.—Inspection of exhibits in Music Building. 7.30 p.m.—Annual dinner, King Edward Hotel. (Informal).

June 29, Friday. 9.30 a.m.—Association meeting in Amphitheatre. Report of committee on valuation, maintenance and depreciation of street railway assets, by H. E. Weyman, Manager, Levis County Railway Co. Paper: Deciding on the proper motor for a given cycle of duty, by W. G. Gordon, Railway and Traction Engineer, Canadian General Electric Co. 1 p.m.—Luncheon at Sunnyside Pavilion. 2.30 p.m.—Inspection of exhibits in Music Building. 2.30 p.m.—For ladies; motor trip, with tea at Old Mill on Humber River. 5 p.m.—Baseball game; associates vs. members. Harry Jones, captain for associates; W. R.

Robertson, captain for members. 9 p.m.—Dance at King Edward Hotel with supper.

Major F. D. Burpee,
 Manager, Ottawa Electric Ry.; President, Canadian Electric Railway Association, 1922-1923.

H. H. Couzens,
 General Manager, Toronto Transportation Commission, and Vice President, Canadian Electric Railway Association, 1922-1923.

June 30, Saturday. 9.30 a.m.—Association meeting in Amphitheatre. Dis-

cussion on timely topics. Election of officers.

The following is the dinner toast list:—The King, proposed by the President. Canada, proposed by Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., responded to by P. W. Ellis, Chairman, Toronto Transportation Commission; Our Industry, proposed by G. Gordon Gale, Vice President and General Manager, Hull Electric Co., responded to by Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.; Our Guests, proposed by F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario, responded to by a representative of the American Electric Railway Association; The Ladies, proposed by Hugh Millar, Managing Director, Lyman Tube & Supply Co., responded to by Don M. Campbell, Preston, Ont.; The Technical Press, proposed by E. P. Coleman, General Manager, Dominion Power & Transmission Co., responded to by Acton Burrows, Proprietor, Canadian Railway and Marine World.

The very complete arrangements made for the entertainment of the members and ladies accompanying them are in charge of the following committee:—W. R. McRae, Superintendent of Rolling Stock and Shops, Toronto Transportation Commission, chairman; I. S. Fairty, K.C., Solicitor, Toronto Transportation Commission; E. W. Oliver, General Superintendent, Electric Railways, Central Region, Canadian National Rys.; F. S. Livingstone, Traffic Manager, Hydro Electric Rys., Toronto and York District; F. J. Neale, Vice President, Dominion Wheel & Foundries, Ltd.; H. A. Moore, Toronto District Manager, English Electric Co. of Canada; W. R. Carr, Editor, Electrical News; and Aubrey A. Burrows, Business Manager, Canadian Railway and Marine World.

Discussion of Timely Topics.

In response to an invitation from the Secretary, officials of member companies submitted the following questions for discussion:—

What is the experience of members who have tried automatic heater control?

Does the Peter Witt type of car increase or reduce the abuse of transfers?

Has actual experience proved the claims that have been made for the Peter Witt cars as regards increase of schedule speed?

What steps have been taken by city authorities to restrict vehicular traffic at congested loading points during rush hours?

Has the re-dipping of old armatures in dipping varnish been tried and what is thought of it?

To attain the highest degree of efficiency, having in mind rapid transit and safety, what is the highest schedule speed at which urban street cars can be operated?

What steps are taken to overcome cars loafing, when traffic is light, in order to keep in their proper place in the service?

What can be done regarding "pirate trucks" competing for freight traffic? Such carriers pay no business taxes, township taxes; run as they please; charge what they like; take only what freight suits them; and use the roads

which the railways help to pay for.

Which type of trolley wire is in more general use—round, groove or figure 8, and from which type have best results been obtained?

What has been the experience with phono-electric, steel clad, steel and cadmium copper trolley wire?

Will the trolley shoe replace the trolley wheel and what is thought of the use of bow collectors?

What size and type of trolley contact is in general use for urban and interurban cars?

In repairing end housings on 101 B motors is the practice to build up end housing with welding apparatus, turn down worn housing and shrink on band or to scrap all worn housings?

Should free transportation be provided employees, if so, why and how much?

Should trolley wire and trolley spans be slack or tight?

Is it advisable to use special cars for rail sanding?

What is the best type of welded track joint?

are exhibiting, and the names of their representatives in attendance. Where full data is not given, it is owing to the fact that it was not supplied to us up to the time of closing for the press:—

30. Allen General Supplies, Ltd., Toronto. Gears and pinions. A. W. Roberts, President. Allen General Supplies; C. E. Sawtelle, General Manager, Tool, Steel Gear & Pinion Co.

8. Canadian Car & Foundry Co., Montreal. Trucks and other electric railway car accessories. D. R. Arnold, Sales Manager, E. R. Viberg, Mechanical Engineer.

1. Canadian Cleveland Fare Box Co., Preston, Ont. Change carriers; fare boxes; fenders; lifeguards; light metal handles; power saving recorders; trolley catchers and retrievers; universal lubrication. M. C. McElligott, President & General Manager; L. L. McElligott, Vice President and Secretary Treasurer; W. Shaw, Vice President, Cleveland Fare Box Co., Cleveland, Ohio.

28 & 29. Canadian General Electric Co., Toronto.

C. E. A. Carr, E. J. Smith.

11. Cheatham Electric Switching Device Co., Louisville, Kentucky.

32. Differential Steel Car Co., Findlay, Ohio.

4 & 5. Dominion Insulator & Manufacturing Co., Niagara Falls, Ont. Car equipment, catenary materials, couplers, headlights, line materials, porcelain insulators, rail bonds, retrievers and bases, trolley catchers. E. F. Wickwire, Secretary; E. W. Loughridge, J. R. Palmer, D. MacLaughlin, C. H. Burkhalter, P. A. Hinds.

22. Dominion Wheel and Foundries, Ltd., Toronto. Chilled iron wheels. F. J. Neale, Vice President; C. H. Ley, E. E. Ritcey.

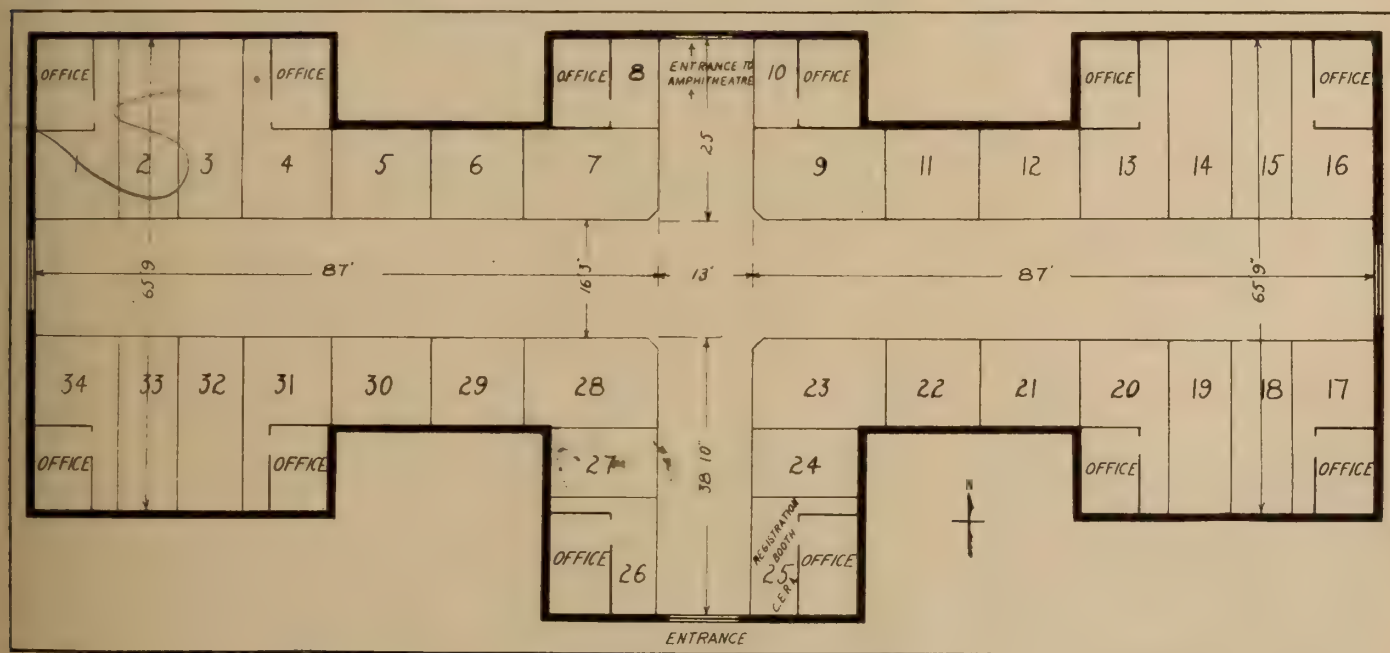

26. Electrical News, Toronto. W. R. Carr, Managing Editor.

27. Electric Railway Journal, New York. H. H. Norris, Engineering Editor.

Exhibits Spaces at Canadian Electric Railway Association's Annual Meeting at Toronto.

Exhibits by Manufacturers, Etc.

The exhibits of electric railway supplies shown in connection with the meeting are even more numerous than were those at the meeting at Quebec last year. Very complete arrangements in regard to them were made by the following committee:—C. L. Wilson, Assistant Manager Hydro Electric Ry., Toronto & York District, Chairman; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Couzens, General Manager, Toronto Transportation Commission; D. W. Harvey, Assistant Manager, Toronto Transportation Commission; W. J. Radford, Assistant Manager, Toronto Suburban Ry.; D. M. Campbell, Preston, Ont.; W. G. Gordon, Traction Engineer, Canadian General Electric Co.; H. T. Gibbs, Sales Engineer, Canadian Westinghouse Co., and O. C. Rehfus, Mechanical Engineer, Canadian Steel Foundries.

The accompanying plan shows the space in the Music Building, on the Canadian National Exhibition grounds, devoted to the exhibits display. Following are the numbers of the spaces occupied:—the names of the exhibitors, arranged alphabetically, the principal things they

3. Canadian National Carbon Co., Toronto.

24. Canadian Railway and Marine World, Toronto, the Canadian Electric Railway Association's official organ. Acton Burrows, Proprietor; A. A. Burrows, Business Manager; E. Winfield, Assistant Editor.

7. Canadian Steel Foundries, Ltd., Montreal. Electric railway track work. W. E. Horwood, Sales Manager.

9 & 10. Canadian Westinghouse Co., Hamilton, Ont. Working models of electrical and air brake equipment, with safety features used on standard safety car, also of supervisory control for automatic substations; load air brake equipment for electric railway service; 533-T-4 motor with all individual parts; mill type Mazda lamp. G. F. Foot, Hamilton Sales Department; H. T. Gibbs, Sales Engineer, Toronto.

6. Don M. Campbell, Ltd., Preston, Ont.:—Armature and field coils; overhead material; treated poles; Don M. Campbell, President; Noel S. Campbell, Secretary.

17. C. E. A. Carr Co., Toronto. Peter Smith forced ventilator hot air heater.

Manufacturing Co., Toronto. Disconnecting switches, meters, outdoor metering equipment, outdoor switching equipment, railway resistance grids and transformers. Lt. Col. G. C. Royce, President; A. B. Cooper, General Manager; A. Schofield.

2. Walter M. Graham, Toronto.

12 & 13. Lyman Tube & Supply Co., Montreal, Que. Anti-climbers; automatic compensating lighting fixtures; ball and roller bearings; brakes; car lighting fixtures; car signs; carbon brushes; commutator truing stones and slotting files; gears and pinions; gear cases; hand strap covers; headlights; lamp guards; lightning arresters; mechanical ties; oil-less bushings; roller and block chain; sand traps, valves and handles; signal systems; track brooms and scrapers; trolley bases; trolley catchers; trolley cord; trolley harps; trolley wheels; vacuum oilers. Hugh Millar, Managing Director; H. M. Fierro, Engineer, Montreal. H. A. Jones, Toronto Manager; O. H. Willison, Bearings Engineer, Toronto. Concerns for which Lyman Tube & Supply Co. are agents and distributors are also represented as follows:—Electric

Service Supplies Co., Philadelphia, H. G. Lewis, Vice President & Sales Manager. National Brake Co., Buffalo, F. D. Miller, Manager; W. D. Brewster, Treasurer. R. D. Nuttall Co., Pittsburgh, Milton Rupert, Vice President & General Manager; W. R. Phillips, Chief Engineer. Dayton Mechanical Tie Co., Dayton, Ohio, R. J. Wells, Vice President and Secretary-Treasurer. Electric Railway Improvement Co., New York, N.Y., H. R. Ransom. Samson Cordage Works, Boston, F. J. Coakley, Secretary. O. M. Edwards Co., Syracuse, N.Y., Harold Edwards, Vice President & General Manager, E. F. Chaffee, Vice President & Sales Manager. Hunter Illuminated Car Sign Co., Flushing, Fenley Hunter, Vice President and General Manager.

18. Metal and Thermit Corporation, New York, N.Y. Apparatus and material for Thermit rail welding; including self luting mold box, and lightweight double burner preheater; samples of tested Thermit rail welds, including specimens subjected to rail bending and drop tests, also section of Thermit welded rail removed from Pittsburgh Street Ry. track after 10 years service; samples of frogs constructed by means of Thermit welding. W. R. Hulbert; J. H. Deppeler; J. G. McCarty; C. F. Lederer.

16. Ontario Safety League, Toronto. Automobile wrecked by coming in contact with electric suburban car; photographs of other wrecks; automobile fender for pedestrians' protection; bulletins dealing with accident prevention; drawings by school children, depicting accident and fire prevention; map of Toronto, showing location of traffic accidents; safety devices. Gramophone talks will be given on safety subjects. Lyn Hudson.

20. Ottawa Car Manufacturing Co., Ottawa, Ont.—bushings; car trimmings; handbrakes; pressed steel fittings; slat and upholstered seats; trolley wheels. W. H. McIntyre, General Manager; F. S. Beattie, Superintendent Car Department.

21. Railway & Power Engineering Corporation, Toronto.—Armature coils; automatic window cleaners; commutators; couplers; door and step mechanisms; electric heaters; forged trolley ears; gear cases; sanders; signal and trolley cords, tail lights; ventilators. F. J. Neale, Vice President; W. E. Foreman, Sales Manager; A. L. Lye, Secretary; A. F. McLachlin, Montreal representative. Concerns for which Railway & Power Engineering Corporation are agents and distributors are represented as follows:—National Pneumatic Co., A. F. Paul; Nichols Lintern Co., W. Lintern, Chillingworth Mfg. Co., Mr. Wanamaker; Van Dorn Coupler Co., Mr. King; Electric Materials Co., Mr. Donahue.

15. Sarnia Bridge Co., Sarnia, Ont. International twin tie; steel curbing angles. R. M. Norton, President; H. B. Fenton, Vice President.

14. Southam Press, Ltd., Montreal, Canadian National and Canadian Pacific Rys. booklets, posters and other transportation literature; general display advertising, showcards, cut-outs, and catalogues. W. W. Southam, J. R. Bowles.

23. United States Steel Products, New York. Electrical wires; rail bonds; rails; special track work; steel axles, ties and wheels. W. B. Gresham, Manager, Lorain Department; J. H. McAlarney, Manager, Specialties Department; W. H. Lipscomb, Manager, Electrical & Wire Rope Department, New York; A. W. Allyn, Manager, Montreal Office; F. C. Brunke,

Manager, Toronto Office; C. H. Brunke, Assistant Manager, Toronto Office.

19. Witherow Steel Co., Pittsburgh, Pa. Rolled tie rods. W. C. Emory, Sales Department.

33. Chas. S. Wright Co., Toronto. Buzzer equipment; caps for conductors and motormen; car curtains, seats, signs and ventilators; electric heaters; line material; office furniture; one-man car and lifeguard; push-buttons; thermostatic control. C. S. Wright, T. H. McCauley; A. F. Old, Eastern Sales Manager, Hale & Kilburn Corporation; W. S. Hammond, Vice President, Consolidated Car Heating Co.

Montreal Power & Tramways Co's Control, Finances, Etc.

Patrick Dubee, Secretary-Treasurer, in Canada, Montreal Tramways and Power Co. has issued the following circular to shareholders:—"The directors of the company, having received a requisition from certain shareholders to convene an extraordinary general meeting of the company, I am directed to give you notice that an extraordinary general meeting of the above named company will be held at the principal offices of the company in Montreal at 78 Craig Street West on July 3, at 11 a.m., for the purpose of considering the following objects set forth by the requisitionists, viz.: (1) To receive and consider the profit and loss account, the balance sheet and the report of the directors, copies whereof are enclosed herewith. (2) Election of directors, no general meeting for such elections having been called or held within the last twelve months. (3) Appointment of a committee of shareholders to inquire into the affairs of the company since the last general meeting. (4) Appointment of inspectors. The stock transfer books (or stock transfer record and registrar of members) will be closed from June 23 to July 3, both days inclusive.

"In connection with the extraordinary general meeting of the company, the directors are advised that it will not be competent for the meeting to proceed with the election of directors, no time or place having been prescribed by the company in general meeting for the holding of the ordinary general meeting. The ordinary general meeting will be held under the articles in December next, at such time and place as may be determined by the directors, and at such meeting the election of directors will take place. If the shareholders desire that there should be an election of directors before December next your directors are advised that the proper course to adopt will be for the meeting of which notice has been given to prescribe such earlier date as it may deem wise."

The notice was accompanied by financial statements from which the following are extracts:—

Assets.

The financial report was signed on behalf of the board by E. A. Robert and J. M. Wilson. The report states that W. C. Finley has succeeded J. W. McConnell as Vice President. Other directors are Senators G. G. Foster, J. M. Wilson, L. C. Webster and N. Curry, also J. M. McIntyre.

The Montreal Tramways & Power Co., was incorporated Dec. 1910, in London, Eng., under the Companies (Consolidation) Act, 1908, and is licensed by the Quebec Government and registered at the Montreal Court House. It is a holding company, controls the Montreal Tramways Co., Canadian Light & Power Co., Montreal Public Service Corporation, Montreal Hydro Electric Co., and owns, direct or through Canadian Light & Power Co., all the St. Paul Electric Co's stock.

Operation of Double-Truck One-Man Cars in Toronto.

Canadian Railway and Marine World has given, in previous issues, descriptions of the 50 motor cars ordered by the Toronto Transportation Commission from Canadian Car & Foundry Co., and the 50 from Ottawa Car Mfg. Co., which were illustrated in our Sept. 1922 number. It was explained that these cars, of the double truck type for two-man operation, are readily convertible for one-man operation. They are about 4 ft. shorter than the motor cars ordered previously by the Commission, but much larger than any cars operated heretofore by one man in Toronto.

The Commission, represented by D. W. Harvey, Assistant Manager, and I. S. Fairty, Solicitor, appeared before the Ontario Railway and Municipal Board, on June 20, asking permission to operate the new cars over specified routes, with one man at all times on some routes, and with one man at certain times and two men at other times, principally rush hours, on other routes. They claimed that large economies would result from the operation planned.

City Controller Gibbons, business agent of the street railway employees' union, opposed the application, arguing that the cars are too large to be safely operated by one man, and that the introduction of one-man operation would reduce some employees in rank and earning capacity, and deprive others of their positions.

The Board reserved its decision, and directed that tests of the proposed operation be made, and that a report on it be presented. The Chairman intimated that if satisfactory conclusions could not be drawn from tests made in Toronto, it would send an electric railway expert to cities where one-man operation is carried on with similar cars, to study the matter.

The London, Ont. St. Ry. has started using a new form of transfer, to prevent transfers being used as stop over tickets.

Toronto Transportation Commission's Eglinton Car House.

The car house built recently by the Toronto Transportation Commission at the corner of Yonge St. and Eglinton Ave. was described in Canadian Railway and Marine World for Nov. 1922, and drawings were given showing the car house plan and layout of the tracks for car storage and operation. The illustrations given herewith show, in fig. 1, the

tion promote more than ordinary facility in car inspection.

The inspection bays have a capacity of 30 cars, and the repair bay 4, while the yard tracks will hold 137 cars and the trailer storage tracks 36. Detailed information regarding the house dimensions, the layout and materials of construction of the house and the office

Fig. 1, Toronto Transportation Commission's Eglinton Avenue Car House, north side view.

exterior of the north side of the house, and in fig. 2, an interior view of one of the two inspection bays, showing the pit arrangement. The 2 doors at the left in fig. 1 lead into the repair bay, which extends back about two-thirds of the house length, the remainder of the section being occupied by the boiler room. The central group of 3 doors, and the group of 3 doors to the left, lead into the inspection bays, each of which is equipped with 3 pit tracks. The entrance doors are of the roller folding type, of horizontal metal slat construction, being rolled up at the top to open, window blind fashion, by a motor controlled by a switch. As shown in fig. 2, the pits are continuous across the bay, i.e., all 3 pits are in one, the house floor between the inspection tracks being supported on horizontal steel channels, supported on vertical channels. The house and pit floors are of concrete. The pit is adequately drained, so that when a car is washed while standing on a pit track, the pit is dry again in a very short time. A complete installation for car washing is provided on each pit track; vertical and horizontal pipes, with rows of holes drilled therein, being arranged to shower from all angles the car to be washed. Some of the pit tracks are equipped with wheel grinding machines, arranged to take flat spots out of car wheels without the necessity of removing the latter from the trucks, the grinding wheels being adjustable horizontally and vertically, and driven by motor in a direction opposite to that in which the pair of wheels to be ground are driven by one of the car motors. An idea of the adequacy of natural lighting in the inspection bays may be gained from fig. 2. The removable section of rail, backed by the wooden slatted sections fitting into the house floor, as indicated by the arrow in fig. 2, are worthy of note. Removal of the short rail section and slatted sec-

building at the southeast corner, and the methods of operating the yard and trailer storage tracks, were given in our Nov. 1922 number. Since the house was placed in service, the facility of operation has more than met expectations,

Fig. 2, Toronto Transportation Commission's Eglinton Avenue Car House, showing inspection bay.

and justified the intensive study which was applied to the layout, the modern features introduced being the means of effecting large and important operating economies.

The London Railway Commission, operating the London & Port Stanley Ry. for the London City Council, handed into the mayor's office, on June 5, a list of all officials and salaries paid to them during 1922. In a covering letter the Commission stated that the publication of the list of employes, with their pay, in the city year book, as proposed, would not be in the railway's best interests.

The Toronto-Port Credit-Oakville-Hamilton Hydro Electric Ry.

The result of the conference of representatives of municipalities between Toronto and Oakville, which met at Oakville, Ont., April 16, and passed resolutions favorable to the construction of an electric railway to be operated by the Hydro Electric Power Commission of Ontario, under the act of 1922, has been the passing by the Ontario Government of two orders in council, dated June 9. The first authorizes the construction of a line from Toronto to Port Credit, and the second authorizes the construction of a line from Port Credit to Oakville, at an estimated cost of \$1,065,667. The second order was made on a report by the Premier, dated May 23, which recommended that the agreements between the Hydro Electric Power Commission of Ontario and the municipalities of Toronto Tp., Trafalgar Tp., and the town of Oakville, which authorized the construction of an electric railway within their limits as part of a line from Port Credit to St. Catharines, be approved and the line from Port Credit to Oakville be authorized to be built under the provisions of the 1922 statutes, chap. 57, subject to a new apportionment of cost. The H. E. P. C. of Ontario is authorized to proceed with the construction of the line and for that purpose is authorized to dispose of its bonds, heretofore authorized, for \$1,065,667.

It is reported that the present Toronto-Port Credit line, the old Toronto & York Radial Mimico Division, will not be used in connection with the present project, but that a line will be built on private right of way.

The Hamilton Radial Ry., owned by the Dominion Power & Transmission Co., extends from Oakville to Hamilton, and in a general way the municipal repre-

sentatives at the meeting of April 16 discussed making the projected new line from Toronto connect with it, so as to give a through line to Hamilton.

St. Thomas, Ont., Municipal Ry. is reported to have rearranged its car service—one car operating along Ross and Talbot Sts., and three on the belt route to the park, giving a 20-minute service.

The Toronto Transportation Commission has received an additional 10 motor cars from Ottawa Car Manufacturing Co., making a total of 16, out of an order for 50, and also 35 trailer cars from Canadian Car & Foundry Co.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	Apr. 1923	Apr. 1922	10 mons. to Apr. 30, 1923	10 mons. to Apr. 30, 1922
Gross	\$852,992	\$818,177	\$8,683,208	\$8,589,842

Calgary Municipal Ry.—A press report states that the operating deficit for May was \$4,459.94, against \$7,130.52 for May 1922. While there was an increase in the number of passengers carried, of 11,635, there was a decrease of \$96.28 a day in the revenue. Operating expenses for May were \$70,842.92, against \$80,602.40 for May 1922.

Cape Breton Electric Co. —

Deficit	5,845	8,471	12,294	38,296

*Deficit.

Quebec Public Service Corporation.—A press report states that at a meeting of shareholders held in Quebec, Que., June 13, bylaws changing the name to that of the Quebec Power Co., and increasing the capital from \$3,000,000 to \$10,000,000, were approved. The increase of capital is stated to have been made necessary in consequence of the taking over of the Quebec Ry., Light, Heat & Power Co., and the change in name is stated to have been considered advisable in order to prevent confusion with the Quebec Public Service Commission.

St. Thomas Municipal Ry.—A press report states that the operating deficit for May was about \$1,500, mainly due to track repairs and other necessary work.

Waterloo-Wellington Ry.—Bridgeport, Ont. village ratepayers voted May 19, by 63 to 0 to grant a 25-year franchise to the Kitchener Light Commissioners, for the operation of an electric railway on Lancaster St., Bridgeport. This piece of line is part of the old Berlin and Bridgeport Electric Ry., which runs from Kitchener to half a mile beyond Bridgeport, 3.45 miles. Kitchener ratepayers on May 30 defeated by 12 votes a by law to issue \$70,000 of debentures to purchase the entire line as well as the Waterloo-Wellington Ry. Co's charter rights, and to provide for rehabilitating the line. The property which it was proposed to transfer under the agreement with the Waterloo-Wellington Ry. Co., is as follows:—The track and overhead system from the corner of Ahrens and Victoria Sts., Kitchener, to easterly limits of car house property in Bridgeport, including turnouts, railway crossings, bridges, etc., as then operated; the right of way, lands, comprising 5.69 acres, from Lancaster St. to Bridgeport, including all excavations and embankments; lots on Wellington and Louise Sts., car house property in Bridgeport; and all shelters and fencing along the railway and road by it; 3 cars; 10 gravel cars, and 110 sections of folding and 36 sections of non-folding snow fencing.

Windsor, Essex & Lake Shore Rapid Ry.—The following are the directors for the current year, as elected at the annual meeting recently: T. P. Pinckard, Windsor, Ont., President; A. Eastman, Windsor, Vice President; J. W. McColl, Toronto, Secretary-Treasurer; G. R. Cottrelle, Toronto; W. R. Phillimore, Leamington,

Ont. The principal officials are: L. A. McLarty, General Counsel; H. F. MacDonald, Assistant Secretary, Treasurer and Auditor; C. P. Cooper, General Superintendent; E. S. Hughes, Assistant General Superintendent and Traffic Manager.

Winnipeg Electric Railway.—

	Apr. 1923	Apr. 1922	4 mons. to Apr. 30, 1923	4 mons. to Apr. 30, 1922

Fixed charges, taxes, etc.	90,015	81,008	345,970	663,232
Surplus	55,118	46,834	253,641	263,454

The New Brunswick Power Co. and St. John City.

After the failure of the negotiations between the New Brunswick Power Co. and the St. John City Council, with respect to the distribution of electric power from the New Brunswick Government's hydro electric development plant at Musquash Falls, the city proceeded with its plans for the installation of its own plant. The N.B. Power Co. at once applied for an injunction to prevent the city going ahead, and the case was argued before Chief Justice Hazen, April 5. An interim injunction was refused, but the Chief Justice said that he viewed with apprehension the plan of going ahead with another distribution plant, and intimated that if the city did so before the main suit was tried, it would be at its own risk.

The N.B. Power Co., which passed under new control recently, made another offer to the city council on April 3, to take over the power distribution contract from May 1, and in consideration therefor, to provide city street lighting at 1½c. per kilowatt hour; to extend its electric railway to Lily Lake; to buy not less than 10 new street railway cars, and to retain the \$1 a week railway pass. Subsequently, the company offered to administer the contract under a board of directors to be appointed by the company and the city council, which would buy the power from the city. These offers were rejected on April 5.

Manitoba Public Utilities Commission.—We are officially advised that under the act, passed at the Manitoba Legislature, last session, the Provincial Secretary will act in all cases in the place of the former Public Utilities Commissioner. Clause 3, in the bill as introduced, was modified, and now reads, "In cases of special difficulty or importance the Lieutenant Governor in council may appoint any fit and proper person to act as assistant to the Provincial Secretary in carrying out the provision of this or the said acts." It is not intended to appoint a permanent assistant to the Provincial Secretary to take charge of these particular duties.

Victoria, B.C.—The Victoria Colonist says: "Owing to increasing costs there are not many, if any, street car services that can now operate a 5c fare. Seattle, which has a municipal system, tried the experiment, and it has broken down in less than two months, the deficit being nearly \$5,000 a day. Seattle is now to have a 10c fare. In view of the experience of other cities, and especially those cities where municipal systems are in force, Victorians may consider themselves fortunate to enjoy a 6c fare."

Limitation of Period Within Which Accident Actions May Be Started.

All electric railways, no matter whether municipally or privately owned, suffer from claims being made, in some cases at a very considerable time after accidents have claimed to have happened, and of which it may not be possible then to obtain any details or witnesses. To obviate this, J. E. Thompson, North Toronto, introduced a bill in the Ontario Legislature recently to repeal the Ontario Railway Act, sec. 265, subsecs. 1 and 2, and to substitute therefor the following:—

"(1) Subject to subsec. 4 of sec. 139, an action shall not lie for the recovery of damages for the breach of any contract, express or implied, or for trespass or negligence in the construction, equipment, maintenance, or operation of a railway after the expiration of three months from the time when the cause of the action arose, or if there is a continuance of the damage, within three months next after the doing or committing of such damage ceases.

"(2) No such action shall lie unless notice in writing containing a statement of the particular act or omission complained of has been served upon, or sent by registered post, to the company or to one of the chief officers of the company within seven days after the happening of such act or omission. (a) Where by reason of death or from any other cause the court or judge before whom the action is tried is of opinion that there is reasonable excuse for the want or insufficiency of any such notice and that the company was not thereby prejudiced in its defence, the court or judge may direct that the failure to give, or the insufficiency of the notice, shall not be a bar to the action."

Such determined and unreasonable opposition to the bill was shown that it was withdrawn.

Electric Railway Notes.

Montreal Tramways Co., asked tenders recently for 25 motor cars and trailer cars, of its standard p.a.y.e. type.

London St. Ry. Co. has appealed against an assessment of \$10,000 a mile made on its 23 miles of track, by the city.

The Kitchener & Waterloo St., Ry., has bought a 4,000 gall. railway sprinkler and flusher, from Don M. Campbell, Ltd., Preston, Ont.

The Toronto Transportation Commission has bought 7,000 standard Canadian white oak ties, from Don M. Campbell, Ltd., Preston, Ont.

Hamilton Radial Ry. put its usual summer half-hourly service between Hamilton, the Beaches and Burlington, Ont., into effect on June 17.

London & Port Stanley Ry. is reported to have carried about 7,500 passengers from London to Port Stanley, Ont., on May 24, the opening day of the summer traffic.

Ottawa, Ont., city board of control is reported to have passed for payment accounts for \$7,294.51 for services rendered and \$2,387.08 for expenses, by the engineers employed by the city in the valuation of the Ottawa Electric Ry., in connection with the purchase proposal plan which was defeated at the municipal election, Jan. 1.

The Toronto Transportation Commission's Activities.

Re-routing of Cars.—The Commission will place in operation on July 1 a complete new system of car routing. We are officially advised that the question of car routing has been allowed to stand over for some time on account of so much rehabilitation and new construction work being in progress, but now that the track work is nearing completion, attention can be given to the route changes necessitated by the extension of the street railway system, the area now served being about 35 square miles, compared to 17 square miles at the time the Commission assumed control. The new routing will be in the interest of both the public and efficient operation, and while some of the present routes will be maintained practically unchanged, others will be revised radically. Coincidentally with the introduction of the new routing, a system of employing the equipment on hand will be introduced, by which the 575 new cars will be used to give the basic service, and additional service in rush hours will be given with the 70 cars taken over with the Toronto Civic Ry. lines and the 350 p.a.y.e. cars taken over from the Toronto Railway Co., the latter to be converted into front entrance cars with the same fare collection system as on the new equipment.

New Loops.—Construction is now proceeding on two loops, one at Dundas and Vincent Sts., in the west end of the city, and the other at Broadview Ave. and Erindale Ave., in the east end. They will be used by cars on the King St. run, the route on which changes on July 1. The King St. cars will run up Roncesvalles Ave. and loop at Vincent st., about 400 ft. north of the intersection of Bloor and Dundas Sts., and at the other end of the run will run up Broadview Ave., north of Danforth Ave., and loop at Erindale Ave.

Dundas St. Cross Town Line.—The connection between Bay St. and Victoria St., along Dundas St., designed to furnish a new east and west cross town line, is practically completed. During June the intersections at Bay and Dundas Sts., Yonge and Dundas Sts., and at the junction of Dundas St. and the new line, have been installed, and the connecting tracks laid.

Roncesvalles Car House.—Sullivan & Fried, Toronto, to whom the contract for the construction of the car house at Roncesvalles Ave. and Queen St., was awarded, have begun work, and are making good progress with the foundations. Demolition of the old car house, the contract for which was awarded to W. H. Bagshaw, Toronto, is proceeding, the expectation being that all the material would be removed by June 30. A contract for retaining walls at two points on the property has been given to Power & McAllistair, Toronto, who have begun work on their construction. A preliminary description of the new house was given in Canadian Railway and Marine World for April, pg. 181.

Track Construction and Rehabilitation.—At the time of writing (June 18) the Commission is proceeding with track work as follows: Intersection installation, Dundas and McCaul Sts.; rehabilitation of north track on Front St., between York and Simcoe Sts.; repaving of track allowance, Front St., between Yonge and Bay Sts.; repaving of track allowance on Adelaide St., between Simcoe St. and Spadina Ave.; construction

of loop at Broadview and Erindale Aves.; rehabilitation of both tracks on Queen St., between Don bridge and Broadview Ave.; construction of loop at Dundas and Vincent Sts.; finishing of track laying and intersection installations on Dundas St., connecting line; miscellaneous repairs and renewals.

Car Deliveries.—Up to June 18, 16 motor cars had been received from Ottawa Car Mfg. Co., and it was expected to have 4 more before June 30, leaving 30 more to be delivered. All the trailers ordered from Canadian Car & Foundry Co., Montreal, have been delivered.

Materials Ordered.—Orders have been given recently for 15 pieces of special work; 185 tons rails; 1,050 pairs welding plates; 10,000 lb. T.B.W.P. cable; 430 50-ft. tubular steel poles; 1 reciprocating track grinder; 1 no. 4 Champion crusher.

Passing Sidings, Hydro Electric Railways, Toronto & York District.

The Hydro Electric Railways, Toronto & York District management planned the construction of five passing sidings on the Metropolitan Division at mileages 5.3, 7.5, 8.8, 11.6 and 19.5 north of Toronto, and applied to the Ontario Railway and Municipal Board for approval of plans. The Ontario Department of Public Highways claimed that it, as represented by the Minister of Public Works and Highways, alone could give the railway management permission to proceed with the proposed sidings, and at a hearing before the Railway and Municipal Board in Toronto, on June 11, the Highways Department was represented by S. P. Biggs and T. J. Agar, who disputed the Board's jurisdiction, basing their argument on the Act to Provide for a Provincial Highway System, Ontario Statutes, 1917, chap. 16, sec. 19, which is as follows: "Notwithstanding anything in any general or special act or in any bylaw, resolution, license of occupation, agreement, or other act of a municipal corporation, no street railway or electric railway shall be laid down, constructed or operated upon a provincial highway except with the consent of the Lieutenant Governor in council, and under and subject to such terms and conditions as he may impose, but this section shall not apply to any railway or part of a railway now in operation, and shall not be construed to affect or prejudice the rights, franchises and privileges of any company owning or operating such railway; provided that such company shall not move its rails to or upon the highway except with the consent of the Minister."

W. W. Pope, Secretary and Solicitor, Hydro Electric Power Commission of Ontario; W. R. Robertson, General Superintendent of Electric Railways, Hydro Electric Power Commission; and C. L. Wilson, Assistant Manager, Hydro Electric Railways, Toronto & York District, appeared for the railway. Mr. Wilson submitted evidence as to the necessity of the sidings in the interest of efficient transportation service, which was not contradicted by the Highways Department representatives. Mr. Pope argued that as the Hydro Electric Power Commission had taken over the Toronto & York Radial Ry. franchise, that of an

operating road with certain vested rights, the Commission was free to exercise those rights, among which was the right to construct and maintain such switches and turnouts as may from time to time be found necessary.

The Board approved of the plans submitted to it, but its judgment provided that construction should be delayed a week to give the Highways Department time to apply for a stated case if it so desired. The Department, on June 14, applied to Chief Justice Meredith, in the First Division Court, for leave to appeal, which was refused, on the ground that the work would involve no damage to the highway. At the time of writing (June 19) no further action had been taken by the Highways Department to attempt to prove that the railway management must apply to it for permission to construct the sidings.

Mainly About Electric Railway People.

Lewis Burran, Electrical Engineer, Quebec Ry., Light, Heat & Power Co., was given a gold mounted walking stick, and a number of other articles by members of the power division and head office staffs, on June 14, on retiring after about thirty years service with the company. Mr. and Mrs. Burran sailed from Quebec on June 16 for England, on a three months holiday trip.

A. G. Grout, heretofore of the Toronto Globe's city news staff, has been appointed to a position in the Toronto Transportation Commission's executive department.

Sir Ernest Harvey, K.B.E., of London, Eng., one of the British Columbia Electric Ry. Co's directors, visited the Pacific coast recently to inspect the company's properties. He spoke at a dinner given by the company to a number of public officials at the Stave Falls plant, and was the principal guest at a luncheon given at Ocean Falls by George Kidd, General Manager.

Arthur Lee, formerly of the Canadian Car & Foundry Co., has been appointed General Foreman, Car Body Shop, Toronto Transportation Commission.

Michael Power, formerly Master Car Builder, Toronto Ry., and latterly General Foreman, Car Body Department, Toronto Transportation Commission, has been transferred to the T. T. C.'s Purchasing Department, as Material Inspector.

M. C. Smith, heretofore Superintendent, Light, Power and Railway Departments, Nova Scotia Tramways & Power Co., Halifax, N.S., has been appointed Manager, Cape Breton Electric Co., Sydney, N.S., succeeding C. C. Curtis, who has been appointed Vice President, Fall River Gas Works Co., a property managed by Stone & Webster, at Fall River, Mass.

The Regina, Sask., City Council has offered to accept \$2,100 a year for advertising privileges on the municipal railway cars provided the Canadian Street Car Advertising Co. will enter into a contract for five years. The company asks for a 10-year contract.

Montreal City Council's special committee appointed to study the tramways question, is reported to have drawn up a large number of suggestions for the improvement of present service, for extensions of lines, and for the construction of additional lines.

Niagara, St. Catharines & Toronto Railway Proposed Improvements.

We are officially advised that the Canadian National Railways management has developed plans for extending and improving the Niagara, St. Catharines & Toronto Ry. service, as concerns both the interurban lines and terminal accommodation at St. Catharines, and the urban lines in St. Catharines, Port Dalhousie, Niagara Falls, Thorold and Merritton. The amount to be spent will be about \$2,500,000; about half of which will be used for rehabilitating and improving the interurban lines and repairing bridges, so as to place the track in condition for high speed operation; additional equipment; the electrification of the G.T.R. branch line between Port Dalhousie and Merritton, to provide for its operation in conjunction with the present N.St.C.&T.R. interurban lines; and rehabilitation of the docks at the east side of the Welland Canal at Port Dalhousie, to place them in good condition for handling freight to and from the railway's ships. The other \$1,250,000 will be used in improving the local services in the municipalities served and in providing terminal accommodation at St. Catharines, and the expenditure of the part of the amount which will be necessary for local line improvement will be contingent upon the municipalities entering into franchise agreements on the conditions desired by the railways management. The expenditure for the interurban line improvements, the Port Dalhousie dock improvement, the G.T.R. branch electrification, and the St. Catharines terminal construction has been definitely decided upon. Upon completion of the improvements to the interurban system, the cars on the Welland Division, which now operates between Port Colborne and Thorold, will run through from Thorold to St. Catharines.

The present fares in St. Catharines, Merritton, Thorold and Niagara Falls are 5c, with 6 tickets for 25c, and only 5c is charged between Port Dalhousie and St. Catharines. E. W. Oliver, General Superintendent of Electric Railways, C. N.R., met committees of the municipal councils during the first half of June and explained the situation from the railway viewpoint, which is, in effect, that the local services have been losing money steadily and that the improvement in service sought will be impossible without fare increases. The railways management will not undertake to furnish the improved service at less than cost; it contends that in addition to paying operating expenses the returns must at least cover the charges on the new capital to be invested, although earnings to cover charges on expenditures made before are not insisted upon. The fare calculated as necessary is 7c cash, with 4 tickets for 25c, in St. Catharines, Thorold, Merritton and Niagara Falls, and a 15c return fare between Port Dalhousie and St. Catharines. While the railway franchises in some of the municipalities have expired, in others they have not; but irrespective of the present franchise situation, the management desires new franchise agreements with all the municipalities. In addition to increased fares, the management asks that it be guaranteed freedom from bus competition, the method of preventing such competition to be determined by the municipalities, and agreements respecting paving allowances are sought to provide that the railway

pay for all paving and road work required over what would be required were the railway line non-existent.

The track work proposed in St. Catharines would include rehabilitation of from 85 to 90 % of the present lines, the construction of short connections to provide for re-routing of cars in such a way as to have all of them run on a loop route and to reduce all double track operation to a minimum, which is desirable on account of the narrow main streets; and track extensions on Carlton, Lake and Geneva streets. The track work in Niagara Falls would include rehabilitation of existing lines and track extension on Lundy's Lane and Stanley St., making possible a much more comprehensive service than now given, and the work in Merritton and Thorold would be confined to rehabilitation only. All of this local improvement work is contingent upon the municipalities meeting the railways' franchise conditions, but there is said to be every prospect that agreements embodying these conditions will be entered into without undue delay.

In addition to the track work planned for St. Catharines, a large passenger terminal will be built facing Geneva St., at Balfour and Welland Sts. This station, to be served by 7 tracks, will be of brick construction, 2 stories high, and will contain waiting room, ticket office, etc. on the first floor and the railway general offices on the second floor. All interurban lines entering St. Catharines, will enter this terminal. Provision has also been made for the construction of a modern freight terminal on property acquired on Church St., very centrally located and convenient to the majority of the city's industries. A freight shed, probably of wood, will be built, and tracks laid to enable 27 cars to be placed for loading or unloading at the shed, and 52 at the team tracks.

As stated above, the G.T.R. Port Dalhousie-Merritton branch is to be electrified, which will enable the railway to transfer a large part of its interurban traffic from St. Catharines streets to private right of way. It is a first principle in electric railway operation, that the total running time on any run of such length that it approaches an interurban service, is much longer if all or part of the run is on the public streets, than it is if the cars operate on a right of way which is closed to the public, and by acting on this principle the railway will be able to furnish a much better service than heretofore, on interurban lines touching St. Catharines. We are officially advised that between Port Dalhousie and Niagara Falls the time will be cut in half, it being the intention to institute a 45 minute schedule between those points when the contemplated improvements are effected.

While plans for additional equipment, are not complete, we are officially advised that it is the intention to introduce multiple unit operation on the interurban lines, and have it supplement the single car operation existing at present.

The general plans provide for an improvement of the whole system, by providing a much faster interurban service, and an improved local service. While there is naturally some opposition on the part of the travelling public to paying increased fares, it appears to be pretty well recognized that it is unreasonable

to expect the railway management to continue to operate at a 5c fare, which has been demonstrated as a losing proposition. The management is prepared to go ahead with the interurban line and the St. Catharines terminals and if its conditions as to fares, paving costs and absence of bus competition are met, both the interurban and local improvements could be proceeded with as one undertaking.

Toronto Suburban Railway City Lines Sale.

Gerard Ruel, K.C., Vice President and General Manager, Canadian National Rys., wrote City Comptroller Singer, of Toronto, recently, in regard to the sale to the city of the Toronto Suburban Ry. lines within the city, as follows:—"I am advised by our railway authorities, who have the matter in charge, that a valuation has been agreed upon, and am also advised from Ottawa that the necessary legislation has been obtained enabling us to sell. There remains the preparation of the papers, which include principally the designation of the properties and rights to be transferred. I have asked our officials to consult with representatives of the city with a view to preparing the schedule to be attached to the transfer, and I should suggest that you people take steps at once to name the proper official or officials to deal with this feature of the transaction. Heretofore we have dealt with Mr. Couzens, of the Toronto Transportation Commission, and I presume that he will be designated by the city. It is necessary, however, that we should be advised of the officials or official selected by the city in order that final results may be quickly obtained."

The city board of control has appointed H. H. Couzens, General Manager, Toronto Transportation Commission; R. C. Harris, City Works Commissioner, and G. R. Geary, Corporation Counsel, to deal with the matter as suggested by Mr. Ruel.

Sunday Traffic Over Niagara Bridges.

—A United States Federal Court, sitting at Buffalo, N.Y., June 17, is reported to have granted the International Ry. Co. a temporary injunction restraining the Collector of Customs at Buffalo from closing the upper steel arch bridge, and the Lewiston-Queenston bridge, against electric traffic on Sundays and public holidays. Arguments in the main action were fixed for June 25. The Collector demands that the International Ry. guarantee payment for customs officers employed at the bridges on Sundays and holidays, for overtime at double the regular rates of pay. This the company refuses to do. The matter was argued in the U.S. courts about two years ago and a decision adverse to the then Collector was given.

The Winnipeg Electric Ry. is reported to have advised the city council's public safety committee, that if the city will pave streets in certain districts the company will establish bus services thereon, but it will not operate buses on unpaved streets.

Brantford City Council has authorized the purchase of a new motor car, to cost \$10,000 for the municipal railway.

Electric Railway Projects, Construction, Betterments, Etc.

The British Columbia Electric Ry. Co. is reported to have arranged a comprehensive plan for the further development of its water power resources, at an estimated cost of \$10,000,000, which will increase the total capacity of the plants from 153,000 to 268,000 h.p. The plans are subject to the approval of the B.C. Government. Surveys are reported in progress for a pole line from the present Slave Lake plant to Alouette Lake, 10 miles, where a 10,000 h.p. plant is to be installed. An 80,000 h.p. plant is to be installed near Ruskin.

Work on the reconstruction of the track on Hastings St., between Cambie and Granville Sts., Vancouver, is reported to have been started June 4, and was expected to be completed by June 30. A city gang followed up the company's tracking laying gang, completing the paving. (June, pg. 295.)

A press report states that the company's substation at Port Coquitlam, was burned during an electric storm, June 7. The damage is estimated at \$10,000.

Calgary Municipal Ry.—Recent heavy rains flooded a considerable area of Calgary, Alta., causing a good deal of damage to the street railway tracks. Settlement of the tracks, owing to washouts under the pavement, were reported June 6, and other settlements were expected to develop.

A press report states that general repairs to the lines are being done, at an estimated cost of \$60,000. (Sept., 1922, pg. 479.)

Fort William Municipal Ry.—We are officially advised that the Fort William, Ont., City Council and the Mount McKay and Kakabeka Falls Ry. Co., are negotiating with respect to the electrification of that line. The M. McK. and K.F.Ry. Co. was incorporated by the Ontario Legislature in 1904 to build an electric railway from within Fort William to Kakabeka Falls, 15 miles. In 1907 a route was surveyed and approved for the line within Fort William, and an agreement was made that in the event of Fort William acquiring the electric lines in the city from Port Arthur, running rights would be obtained over them. About 2.5 miles of track were laid, principally in Paipoonge Tp., in 1907-8, and in 1909 a connection was made with the Fort William tracks and a park site was laid out in Paipoonge Tp. The railway was never completely electrified, steam being used mainly as motive power, and the principal traffic consisted of gravel. The Fort William City Council, in 1914, had a valuation made of the line, and the additional 2.5 miles of right of way on which grading had been done, with a view to taking over the property. The proposition under discussion provides for the electrification of the line, and the extension of the city's electric car service to King George Park, and the new Canadian National Rys. yards in Neebing Tp., a total distance of 5 miles. (April, pg. 181.)

Grand River Ry.—A press report states that plans have been prepared for the G.R.R. and Preston, Ont., town council for a new traffic bridge across the Speed River, in Preston, that it will consist of 8 spans, carrying a 42 ft. highway, with a 6 ft. sidewalk on each side, and that the G.R.R. tracks will be laid on the highway over the bridge. (Sept., 1922, pg. 479.)

Hamilton Radial Ry.—Residents along the Hamilton Beach are urging the removal of the company's tracks from the side to the center of the highway. The Dominion Power and Transportation Co. management is reported to have stated that the Beaches Commission and the Ontario Government had refused to pay the cost of removal of the tracks, estimated at \$50,000, and that the company would certainly not move them, voluntarily.

Hamilton St. Ry.—We are officially advised that about half a mile of the double track line on Main St., Hamilton, Ont., from Ottawa St. to Kenilworth Ave., is being rebuilt. The rails have been ordered from United Steel Products Co. (May, pg. 238.)

Hull Electric Co.—We are officially advised that the company is replacing the 65 lb. rails on the south end of the Laurier Ave., Hull, Que., line, with 85 lb. rails; and replacing the 72 lb. 5 in. rail on Youville St. line with 80 lb. 7 in. rail. The relaid track on the latter street is to be repaved with sandstone blocks. The company is also repaving the north end of the line on Bridge St. with asphalt, on concrete base. It is proposed to replace the present 56 lb. rails from mile 4 to mile 7 on the Aylmer line with 85 lb. rails. (Nov., 1922, pg. 581.)

Oshawa Ry.—A press report states that a spur line to Lakeview Park, Oshawa, Ont., is likely to be built during the summer. (Aug. 1922, pg. 429.)

Ottawa Electric Ry.—Eastview Board of Trade is reported to have passed a resolution June 4, favoring the laying of street car tracks on the Montreal road, as far as Eastview town limits, and suggesting that, if necessary, the town should build the line, and arrange with the company to take it over.

Quebec Ry., Light & Power Co.—In connection with the increasing of the capital of the Quebec Public Service Corporation, which now owns the Q. R., L., & P. Co., it is reported that, in addition to the purchase of some new rolling stock, it is proposed to build several extensions of the car lines in the city and suburbs. (April, pg. 181.)

Regina Municipal Ry.—Regina, Sask., City Council has under consideration a plan to build loops at the ends of the Red and of the Red and Green lines, to facilitate service. (June, pg. 295.)

St. Thomas Municipal Ry.—A press report states that considerable track repair work has been done by the St. Thomas, Ont., City Council on the railway, including the putting in of a large number of new ties, and the construction of a loop at the rear of the car house.

Three Rivers Traction Co., Three Rivers, Que., is building a single track extension from the corner of Des Forges and Notre Dame Sts., via St. George and St. Philippe Sts., to the St. Lawrence Paper Mills, Ltd. new mill at the western limit of the city, close to the St. Lawrence River. Seventy-five pound T rails are being used, and the overhead system is part steel pole and part wooden pole construction. The estimated cost is about \$78,000. It is expected to finish it by the end of the summer.

Three Rivers Traction Co.—A press report states that it is proposed to build a 5 mile extension. (March, pg. 135.)

Winnipeg Electric Ry.—We are officially advised that the company is recon-

structing the grand union intersection at Higgins Ave. and Main St., and is arranging for the rehabilitation of 4,000 ft. of double track on Main St., and of 1,000 ft. of double track on Higgins Ave., and for the construction of an extension of 5,600 ft. of single track on St. Marys Rd., and of 1,500 ft. of double track on Sargent Ave. The company is also contemplating the erection of an addition to the St. James substation, and the addition of the second story over the whole building. In connection with its subsidiary, the Winnipeg, Selkirk and Lake Winnipeg Ry., the company proposes to build a dining room and dance pavilion at Selkirk Park, to accommodate 500 people.

The St. Vital Citizens' Association is reported to be asking for the construction of a second track on the line serving that municipality.

The Winnipeg City Councils' transportation committee is reported to have had under discussion recently the question of car line extensions in the city, it being claimed that certain extensions are overdue under bylaw 543. It was stated that the company was spending \$300,000 on rehabilitation of tracks, and renewals of the system and had no money to provide the proposed extensions.

Provincial Taxation of Electric Railways.

The Citizens' Research Institute of Canada has issued a report on the provincial taxation of public utility corporations, in which the following refers to electric railways:—

Prince Edward Island: No special tax. [Editor's Note.—The Island has no electric railways.]

Nova Scotia: 1% of gross income, if paid-up capital is \$30,000 or over.

New Brunswick: In the discretion of the Lieutenant-Governor, but not less than \$50 a mile, nor more than \$100 for each mile operated by the company.

Quebec: \$50 for each mile of single track in operation; \$100 for each mile of double track.

Ontario: When mileage within city does not exceed 20 miles, \$20 a mile; when mileage within city exceeds 20 miles, but not 30, \$35 a mile; when mileage within city exceeds 30 miles, but not 50, \$45 a mile; when mileage within city exceeds 50 miles, \$60 a mile. Every company shall pay in addition a tax of 1% upon net earnings from within the municipality. One mile of double track equals 2 miles single track. Switches, sidings, etc., exempt.

Manitoba: The tax is levied on the same basis as in Ontario, but varies somewhat as to grades as follows: Railway 15 miles or under, \$30; 15-30 miles, \$40; 30-50 miles, \$50; over 50 miles, \$60. Exemptions and computation of mileage the same as in Ontario.

Saskatchewan: No special tax.

Alberta: Where whole line of track is 20 miles or less, a tax of \$200, and \$10 for each mile in excess of 20. Exemptions and computation of mileage the same as in Ontario.

British Columbia: 2% upon gross income.

A Port Arthur, Ont., press report states that a Duluth, Minn., bus proprietor proposes to run a daily bus service between there and Port Arthur, starting July 1, with \$10 fare.

Electric Railway Wages, Working Conditions Etc.

Brantford Municipal Ry.—The board of conciliation appointed to investigate a dispute between the Brantford, Ont., Railway Commission and its employees, consisting of J. G. O'Donoghue, chairman; F. H. McGuigan, representing the Commission, and James Simpson, representing the men, presented a unanimous report on May 22, which said in part: "As a result of the good feeling displayed by all parties, prompted as they were by a sense of fairness towards one another, the board was enabled to bring them together in an agreement. Special circumstances that need not be referred to here governed both parties in their attitude towards each other."

The agreement annexed to the report was made retroactive to April 1, and is to continue in force for one year, and from year to year thereafter, except upon 30 days notice by either party. It provides that 9 hours, to be consecutive if possible, but in any event not to be spread over more than 12 hours, shall be a day's work, and that time and a half be paid for overtime. The wages fixed for motormen and conductors per hour are: First year, 46c; second year, 48c; third year and thereafter 50c.

Hull Electric Co's employees are reported to have asked for a revision of the wage schedule and for the adoption of an 8-hour day. The present schedule, which was agreed to in Aug. 1922, after a conference following the findings of a board of conciliation, and which came into operation as from July 1, 1922, gives motormen and conductors a maximum rate of 44c an hour. The men are reported to be asking for a 10% increase. They now work 9 hours.

Hydro Electric Railways, Toronto & York District.—Wages and working conditions were agreed on at a conference, in the early part of June, between the management and the employees, the conductors and motormen affected being members of Amalgamated Street Railwaymen's Union, Division 113, and the other employees members of the Canadian Electrical Workers. Conductors and motormen, who were formerly paid on a monthly basis, receiving \$100 a month during the first year of service, \$105 during the second year, and \$110 thereafter, with overtime pro rata after 10 hours service, are to be paid by the hour, the rate being 44c during first year of service, 47c during second year, and 50c thereafter, with overtime after 11 hours service paid for at 20c an hour in addition to the regular rate. Linemen, formerly paid 45c to 47½c an hour, receive increases ranging from 8c to 10c an hour, the new rate for the majority of the employees in this class being 55c. Overtime for linemen will be paid, after 10 hours service, at time and on-half. Substation operators, heretofore paid at various rates and working varying shifts, will be paid \$120 a month, on the basis of a 56-hour week. No overtime provision for operators was made, on account of three shifts being worked, with no prospect, therefore, of any operator being called upon to work overtime. Dispatchers, heretofore receiving \$125 a month, on a 48-hour week basis, were increased to \$140 a month, hours of work remaining as before. The rates for groundmen, maintenance men and meter men were advanced from 37½c to 45c, from 32½c to 37½c, and from 42½c to 50c an hour,

respectively. No holidays will be given, with pay but employees may arrange for time off without pay. The railway management was represented by W. C. Robertson, General Superintendent of Hydro Electric Rys., and C. L. Wilson, Assistant Manager, Hydro Electric Rys., Toronto & York District. The settlement terminates a long negotiation. In April, 1921, the employees, dissatisfied with wages and working conditions, applied for a board of conciliation under the Lemieux Act, which was granted, with Allan Purvis, formerly General Superintendent, Ontario District, C.P.R., as chairman, but the railway management refused to appoint a representative. The Minister of Labor thereupon appointed F. H. McGuigan, of Toronto, as the railway representatives. After hearings, the board issued a statement in which it said that, in view of the negotiations then proceeding for the control of the railway, it did not see fit to make any definite award.

London St. Ry.—A press report of June 11 stated that the company had advised its conductors and motormen of an advance of wages, which would have the effect of restoring the maximum rate of 48c an hour which was in effect two years ago, the advance to date from June 1. The men accepted the offer which followed the result of negotiations that had been going on for some time.

The schedule agreed to June 16, 1922, provided for the following rates per hour: First year, 41c; second year, 44c; third year and thereafter, 46c an hour. The new rate adds 2c an hour, thus returning to the wage schedule agreed upon in June, 1921. Other working conditions remain as before, including the differentials of 12c an hour for overtime over and above the schedule time, also the following additions: 5c an hour for operating one-man cars; 3c an hour for operating sweepers, and 3c an hour for training new men. Certain adjustments were made in the shops, and other departments, according to the local conditions existing in the various crafts involved.

Montreal Tramways Co.—We were advised June 5 that no official demand had been made by the employees for an increase of wages. The men held a meeting some time ago and it was stated that they decided to ask for an increase.

Ottawa Electric Ry.—The board of conciliation appointed to investigate the dispute between the company and its employees, consisting of F. T. Costello, Alexandria, Ont., chairman; G. D. Kelly, Ottawa, representing the company, and H. J. Burns, Ottawa, representing the men, concluded the hearing of evidence, May 25, and then spent several days reviewing it. On June 1, a majority report was signed by the chairman and Mr. Burns, and, on June 6, Mr. Kelley submitted a minority report. The majority report states that on May 9 it was suggested that the parties get together and agree on as much as possible of a new agreement. This was done and on May 15, it was reported that everything except the wages, hours of labor and working conditions had been settled. After reviewing the arguments on the question of working hours, the majority report said:—"This board recommends the establishment of the principle of the 8-hour day, but that this be actual plat-

form time, i.e., to be from the actual time a run is started from the shed until it is completed at the shed. The board further recognizes that in the business of a street railway it is impossible to adhere to a strict 8-hour day, and in view of this it recommends that where a run can be completed within 20 minutes in excess of the 8 hours, the same shall be worked by the men and shall be paid for by the company at only regular rates. Only where a man works in excess of 8 hours and 20 minutes shall he be paid overtime, and then he shall be paid time and a half over the 8 hours. The question of the spread of time is another case where the board feels that the company is experiencing difficulty, having regard to the fact that at certain times of the day it is necessary to provide a great number of cars for the convenience of the public which are not used at other times when the traffic is light in comparison, and for that reason the board does not consider that the men's demand that the work be completed in 10 consecutive hours is feasible, and therefore recommends that the work, where possible, be completed in 10 hours, but in no case is the spread to exceed 12 hours. In regard to the men's demand for an increase of 25% in wages, the board, from the evidence submitted, finds that the cost of living has increased somewhat, but, because of the financial burdens which the inauguration of an 8-hour day would impose upon the company it recommends an increase only of 6c an hour, which would bring the older employees up to the daily wage which they are at present receiving for a day of 9 hours. The rates of pay per hour recommended for motormen and conductors are:—First year, 50c; second year, 52c; third year, 53c; fourth year and thereafter 54c. These rates to be retroactive to May 1. The report added that it was stressed by the company's representatives that the establishment of an 8-hour day and an increase in hourly wages would entail such a financial burden that the profits would be cut down to nothing, or a loss might be caused. The company is obligated to the city for 5 years to maintain a 5c fare generally. In the majority of the board's opinion this is not a matter for their consideration they considering that the matter might be adjusted by an appeal to the Board of Railway Commissioners.

The minority report by G. D. Kelley, the company's representative, deals with the three matters really at issue between the parties: the rate of wages; the 8-hour day, and the spread. He points out that it was shown that the increases granted to the company's employees were 7% higher, than relative increases elsewhere; and that the wages paid to motormen and conductors were actually higher than those paid to skilled classes of workmen in Ottawa. He points out that one of the representatives who argued the men's case while the board was sitting also argued the Brantford Municipal Ry. employees' case before a board of conciliation, and that a maximum rate of 50c an hour was agreed to. The public, he points out, have an interest in these matters, as the increased cost to the company could only be met by an increase of revenue, which must come from passengers. It was argued that postmen and civic employees in Ottawa have an 8-hour day and therefore the street railway employees should have it also, and that the

work done by motormen and conductors is of such an onerous nature that it tends to shorten their lives. It was admitted that, except in a few isolated cases, an 8-hour day is not worked on Canadian electric railway, and that it is not generally observed in other industries. In regard to the second point, 41 of the company's employees have been in the service for over 20 years, their average age being 55. The Brantford board, to which reference has already been made, had before it the same evidence as to hours of labor, and all parties were satisfied to accept a 9-hour day; there should be some consistency shown. With regard to the spread, Mr. Kelley points out that by altering certain runs the spread could be reduced and the company's representative promised to work out a plan to bring this about. In conclusion, Mr. Kelley says: "Having regard to existing conditions in Ottawa, as they affect the company, its employees and the public, I am of the opinion that it would be fair to all parties if the hours and wage rates at present existing were to continue in force, provision being made, if at all possible, for the spread of hours."

The company's management, on receipt of the board's majority report, immediately issued the following statement: The company cannot accept the board of conciliation's majority report, recommending the 8-hour day and 6c an hour increase in the wage rates of its employees, and has so advised the Labor Department. The following facts were submitted by the company to the board of conciliation. No reasonable arguments were presented to the board, on behalf of the employees, proving the necessity for the 8-hour day in the street railway business. To increase the hourly wage rates 6c an hour, as recommended by the majority report, would cost \$115,440 a year, without adding anything to the daily earnings of any employee, because each man would work one hour less per day. The institution of the 8-hour day would not increase the street railway revenue or the efficiency of the service. The street railway property is generally conceded to be worth between \$4,500,000 and \$5,000,000. The actual cash investment to March 31, 1923, was \$4,220,762.52. The net profits for 1922 were \$278,914; for 1921, \$235,615; for 1920, \$282,250; the average for the past 3 years was \$265,593. The 8-hour day cannot be introduced on the company's present revenue, and, if adopted, must inevitably require an increase in the rates of fare.

We have always done everything we can to improve the working conditions of our employees. Up to the time when the cost of living reached its peak in 1920, increases in wages recommended by various boards were accepted, because the cost of living was abnormal. The company knew that such rates of wages could not be continued indefinitely. The board of conciliation last year brought out the fact that the cost of living had dropped 24%. It recommended a reduction in wages of 12½%, still leaving a large margin in favor of the employees, which is still enjoyed by them. Under the present wage scale a conductor or motorman can earn, without working overtime, \$1,500 a year. Our steady employees averaged \$1,455 during the past 12 months. The board's majority report indicates that an increase in yearly wages was not considered necessary, but recommends the 6c an hour increase for the single purpose of establishing the 8-hour day in this business. In fact, the

adoption of the majority report would mean a slight decrease in wages to the individual conductor, or motorman, because it recommends the abolition of the "pull out" and "pull in" time allowance, about \$25 a man per year. The work performed by the employees has not increased in value to the community or the company, and requires no more skill or training than it ever did. At least 300 applications a month are being received for employment on the cars at the current wages. These applicants can be trained to do the work satisfactorily in from 6 to 10 days, and are quite willing to work the 9-hour day.

Since 1918 six boards have been created by the Labor Department to deal with the disputes between this company and Division 279 (the street railway employees' union). For years prior to 1918, a board was formed every two years. It is obvious that the company cannot continue to accept recommendations from boards of conciliation which constantly add large sums to its operating expenses. The majority report of this year's board states that the financial ability of the company to carry out its award is no concern of the board, and that the company can, if it wishes, apply to the Board of Railway Commissioners for permission to increase its rates of fare, in order to adopt the 8-hour day. We do not think the 8-hour day is necessary, or justified. We believe the working conditions of our employees are good, and that they are well paid for the work they do. We do not consider it fair to the public, or ourselves, that the present wage rates should be increased, and therefore cannot accept the board's majority report. Those of our employees who are not satisfied should look for work in some other occupation.

The employees held several mass meetings. At the first, on June 2, they decided unanimously to accept the conciliation board's majority award. At the second, on June 12, when they were convinced that the company would not recede from its position, they talked strike, and decided to apply to the international union for authority in that connection. On June 16 the Mayor attempted to secure a settlement, first meeting the men's committee, and then the company's Manager, Major Burpee, who adhered to the decision that the majority award could not be accepted. The city authorities also communicated with the Board of Railway Commissioners, and the Ontario Railway and Municipal Board, to ascertain what steps, if any, those bodies could take to secure a continuation of service should a strike occur. On June 19, W. D. Mahon, International President, Amalgamated Association of Street and Electric Railway Employees of America, announced that a strike had been authorized. The men's third meeting was held on June 21, when they decided to postpone action until June 25, the Minister of Labor having promised to arrange for a conference between the management and the men, to try and avert a strike.

The Montreal Tramways Co., as stated in a previous issue, called for tenders in April for 25 motor cars, and 25 trailer cars, of its standard p.a.y.e. type. We are officially advised, June 5, that none of the tenders had been accepted, and that the question of purchasing had been left in abeyance.

Dominion Power & Transmission Co., has ordered 150 tons of steel girder rails 87-38 section

Toronto Eastern Railway Construction.

Canadian Railway and Marine World for May published a letter from Sir Henry Thornton, President, Canadian National Rys., to a Toronto alderman, who was also chairman of a committee representing the city in connection with electric railway matters, which said in part:—"It is our intention to proceed with the construction of the Toronto Eastern Ry. immediately, and to connect it with the Toronto Suburban Ry's Guelph Division, by the electrification of the Belt Line Ry., thereby providing a rapid radial service from Guelph to and through Toronto, and over the Toronto Eastern territory. This will provide a suburban service for the part of Scarborough Township lying north of East Toronto, and the portion of York Township lying north of St. Clair Ave. and west of Yonge St., and passing through the proposed York City. This system will provide connections with the Toronto Transportation Commission lines at Queen St., (at the Don), Bloor St. viaduct, Yonge St. and Weston Road."

We are officially advised that S. B. Wass, Terminal Engineer, Canadian National Railways, has been transferred from Fort William, Ont., where he was in charge of the Neebing terminal yard construction, to take charge of the work on the Toronto Eastern, which will be started in the near future. His office will be in Oshawa, Ont. during the first part of the construction, at least.

The beginning of the Toronto Eastern Ry's construction, and the progress made with it, have been mentioned in preceding issues of Canadian Railway and Marine World. Its history briefly, is that it was a Mackenzie, Mann & Co. undertaking which passed to the Dominion Government with the Canadian Northern Ry. The Hydro Electric Power Commission of Ontario negotiated for some time to take it over from the Government, and complete its construction, on the strength of guarantees from municipalities through which it is located, but, as stated in our Dec. 1922 issue, representatives of the municipalities met S. J. Hungerford, then Vice President and General Manager, Canadian National Rys. and Gerard Ruel, then General Counsel, Canadian National Rys, and made representations which resulted in the C.N. R. management deciding to keep the line and, after finishing its construction, to operate it as a part of a complete electrified system for the Toronto territory. The way in which the Toronto Eastern would fit in with the plans for such an electrified system was described in Canadian Railway and Marine World for January, pg. 27, in which the disposition of the Canadian National Rys. Orono Subdivision line, which will be used in part in the electrification scheme, was also dealt with.

Construction is completed on the Toronto Eastern from the east end of Wellington St., Bowmanville, Ont., to Whitby, and from Whitby to the west town line of Pickering the grading is done and structures built, but no rails laid. The first work to be undertaken in the near future will be the rehabilitation of the portion of the road which was completed, and which has deteriorated to some degree, after which the grade on the remaining portion will be placed in good condition, and rails laid and ballasting done.

Marine Department

Shipbuilding and Ship Repairing Throughout Canada and Newfoundland.

Canadian Vickers Ltd., Montreal, did the following repair work during May, at its main plant.—Canada Steamship Line's s.s. Mapleboro, 1,151 tons, fitting derricks and winches on deck, repairs to derrick gear; s.s. A. E. McKinstry, 1,999 gross tons, general repairs; Canadian Government Merchant Marine s.s. Canadian Aviator, 3,388 tons; s.s. Canadian Raider, docked for survey; s.s. Canadian Pioneer, 5,399 tons, survey and underwriters' repairs, also extensive fire damage repairs to upper deck and shell; L. Dreyfus and Co. s.s. Louis L. D., 4,981 tons, survey, heavy bow damage by ice, sternpost top gudgeon broken, rudder mainpiece bent out of line; Glen Line Ltd. s.s. Glengeldie, 1,930 tons, docked for survey and bottom repairs; George Hall Coal and Shipping Corporation s.s. Brignogan, 1,594 tons, survey, underwriters' repairs and shell damage; Imperial Oil Ltd. s.s. Albertolite, 8,461 tons, general repairs and painting; s.s. Iocomia, 1,669 tons, extensive general repairs, 66 shell plates removed for renewal, fairing, etc., repairs to framing, bulkheads and tank top, 4 oil cargo tanks arranged for carriage of case goods or bulk oil, installation of cargo derricks and winches, deck and engine room equipment reconditioned for sea going service, crew's accommodation enlarged and improved and wireless operator's room equipment added, ventilation improvements and refrigerating plant with cold storage space for use in tropical climates; Union Transit Co. s.s. Wahcondah, 1,575 tons, survey, underwriters' and general repairs. The following repairs were done at the company's harbor department,—Anchor-Donaldson Line s.s. Concordia, Coracero, 5,388 tons. and s.s. Gracia,

ary repairs to bow damage; Kawasaki Dockyard Co. s.s. Kifuku Maru, temporary repairs to bow damage; Lloyd Adriatico Societe di Navigazione s.s. Adamello, 5,890 tons, temporary repairs to bow damage; Mount Royal Steamship Co. s.s. Belchers, 2,251 tons, general deck and engine room repairs; Navigazione Libreria Triestina Societe in Azioni s.s. Recca 5,400 tons, engine room voyage repairs; Rederiaktieb Svenska Lloyd s.s. Invernina, 2,120 tons, temporary repairs to bow damage; Texas Steamship Co. s.s. Pennsylvania, 6,499 tons, temporary repairs to bow damage; United States Shipping Board s.s. Sinasta, 6,052 tons, superheat-

room and deck equipment is of the highest class in every respect. The dimensions are,—length over all 218 ft., beam 35 ft., depth moulded 19 ft.. The loaded draft will be 16½ ft., when the hopper is filled with about 1,250 tons of spoil. The propelling machinery consists of triple expansion engines, supplied with steam by 2 Scotch boilers, all by Canadian Vickers, Ltd. The dredge was built under the supervision of C. F. M. Duguid, Naval Architect, Marine Department, and J. A. Alderson, representing Lloyd's Register of Shipping.

Cholberg Shipyard Ltd., Victoria (B.C.) Shipowners Ltd., Victoria B.C.—The case

Steamship Dalrymple, Main Transit Co., built by Collingwood Shipbuilding Co.

ers retubed and general voyage repairs.

The steam hopper barge no. 3, which was launched at Maisonneuve, Montreal, recently, by Mme. Lapointe, wife of the Minister of Marine, is for dredging service in the St. Lawrence River, in con-

of the King, represented by the Dominion Government, against Cholberg Shipyard Ltd. in connection with the operation of the yard by the Government, for the completion of the barquentine Simon F. Tolmie, one of four ships which were to

Steamship Glenlinnie, Glen Line, Limited.

This is one of the nine steamships built in Great Britain recently, for James Playfair and associates, for the Great Lakes trade.

6,000 tons, voyage repairs; s.s. Parthenia, 4,753 tons, deck alterations and repairs; Anglo Saxon Petroleum Co. s.s. Crenatula, 5,563 tons, temporary repairs to bow damage; Clarke Steamship Co. s.s. Gaspesia, engine room and voyage repairs; Cunard Line s.s. Andania, 13,050 tons, propeller examination by diver; Intercontinental Transports s.s. Hoerda, tempor-

junction with dredge 16, built by the same company about a year ago. It has a hopper capacity of 950 cub. yds., with a massive hopper beam spanning the entire length of 80 ft. and carrying the guide pulleys of the hopper door chains. There are 12 hopper doors, operated by 2 specially designed powerful Clarke-Chapman hopper winches. The engine

be built by Victoria (B.C.) Shipowners, Ltd. under special aid from the Government, was before the Supreme Court at Victoria, in June. The Government is suing to foreclose a chattel mortgage for \$18,711 on Cholberg Shipyard Ltd. property, on the old Songhees Indian Reserve. The company denies that there is anything due under the mortgage,

and claims that the Government owes it about \$88,000 for occupation of premises, etc.

Collingwood Shipbuilding Co., Collingwood, Ont.—The Great Lakes Transportation Co's s.s. Matoa, which arrived at Collingwood, recently, after having been cut in two at Montreal, is being rejoined and is being lengthened by 36 ft.

Halifax Shipyards Ltd., Halifax, N.S. did the following repair work during May,—Dominion Coal Co's s.s. Hochel-

Prince Rupert Drydock and Shipyard, Prince Rupert, B.C. did the following repair work during May,—steam tugs Evergreen and Olallie, miscellaneous machinery repairs; 5 scows, docked, cleaned, painted and repaired, and 34 fishing ships given general overhaul.

Victoria Machinery Depot Co., Victoria, B.C., completed a general overhaul of the C.G.S. Estevan, prior to her starting on a cruise to the west coast of Vancouver Island, in the government light-

docked, cleaned, hull chipped and painted, spare propeller blade fitted; C.P.R. s.s. Princess Charlotte, 3,844 tons, dry-docked, propeller blades changed, cleaned and painted; C.P.R. s.s. Princess Royal, 1,997 tons, manganese propeller blade; C.P.R. s.s. Princess Louise, 4,032 tons, docked, cleaned and painted, zincs renewed and work on rudder; C.P.R. s.s. Princess Victoria, 1,943 tons, docked, cleaned, chipped and painted, tailshafts drawn and new one installed; Commercial Cable Co's s.s. Restorer, 3,180 tons, sundry deck and engine room repairs, and new derrick boom; Cosmos Line's s.s. Theben, 2,989 tons, boilers cleaned for inspection, repairs to dynamo engines, zincs renewed, and sundry small repairs. The motor-car ferry Motor Princess was completed early in May and turned over to the C.P.R. for service between Sidney, B.C., and Bellingham, Wash. On her trial trip she developed a speed of 14½ knots, about ¾ of a knot over her contract speed. Her building occupied 97 working days.

Esquimalt Drydock.—When the House of Commons was in committee of supply recently, on the item of \$1,500,000 for the drydock under construction at Esquimalt, the Minister of Public Works said the amount of the contract was \$4,217,400. There was an appropriation in 1919-20 of \$500,000, of which only \$4,994 was expended. For the year 1920-21 \$500,000 were voted, of which \$13,536 were expended. For 1921-22 \$1,300,000 were voted, of which \$1,164,000 were expended. In 1922-23 the expenditure was \$547,720. Over \$2,000,000 will be required to complete the work. The contract expires in Jan. 1924. There have been certain delays, and probably an extension will be required, and he did not think the drydock would be ready for operation before 1925. The repairs to the outer cofferdam, made necessary by the breakage caused by storms and high seas on Jan. 2, were completed June 9, and excavation work on the dock was recommenced. A press report states that the locomotive men, pile drivers and derrick men struck immediately for increases in pay, ranging from about 10%

Steamship John C. Howard, for George Hall Coal & Shipping Corporation, at time of launching, May 5. This is the last of four steamships built for the corporation, at Three Rivers, Que., recently. Length b.p. 230 ft., breadth 43½ ft., draft loaded 16½ ft., d.w. tonnage 3,270.

aga, docked April 28, for bottom damage repairs, tail shaft drawn, rudder lifted, sea connections opened up and closed in good order, furnaces jacked up and ship painted, 10 plates faired in place, 12 plates off and faired and 9 renewed, undocked May 9; Dominion Coal Co's s.s. Lingan, docked May 9, for general repairs, furnaces jacked up, and hull scraped and painted, undocked May 11; Dominion Iron and Steel Co's s.s. Watuka docked May 12, propeller removed, tail shaft drawn for examination, sea connections opened up and closed in good order, stern gland packed, ice damages repaired and hull painted, 7 plates off and faired and replaced, 4 plates faired in place and 1 plate renewed, undocked May 20; Imperial Oil Ltd. s.s. Tronto-lite, docked May 22, for preliminary work in connection with bow damage, scraping and cleaning hull, straightening out propeller blade, renewing studs and caps for one propeller blade, renewing zincs, fan water rope guard and miscellaneous repairs, including making pattern and supplying casting, machining and fitting steering engine control valve and valve chest liner, forging 1 new propeller blade nut wrench, and forging coupling on tail shaft, undocked May 28; H.M.C.S. Patriot, docked May 12, for miscellaneous engineering work, drawing starboard shaft, etc., and scraping and painting hull, undocked May 20; Anglo-Belgique Shipping Co's s.s. Cymric Queen, docked May 21, for work in connection with survey, undocked May 22; Preston Steamship Navigation Co's s.s. Gyp, docked May 28, for extensive repairs to occupy about 15 days.

house service. The Union Steamship Co. of British Columbia's s.s. Chilliwack has been undergoing repairs at the company's plant and will be fitted with new furnaces, and new boiler parts. The C.P.R. s.s. Tees has been fitted with a new smoke stack.

Yarrows Ltd., Victoria, B.C., did the

Automobile Ferry Motor Princess, Canadian Pacific Railway.

following repair work during May: British Columbia Cement Co's s.s. Matsqui, docked for survey and bottom damage repairs due to stranding; Canadian Government dredge Ajax and tug Point Ellice, docked, cleaned, painted and sundry repairs; Canadian National Ry. car ferry Canora, 2,383 tons, docked, cleaned and painted, sundry repairs and overhaul and repairs to propeller; Canadian Pacific Ry. s.s. Princess Adelaide, 3,061 tons,

to 15%, but it was subsequently stated that only two had ceased work, and that the excavation work was not being held up.

Western Freighters Ltd. has been incorporated under the British Columbia Companies Act, with \$25,000 authorized capital, and office at Vancouver, to own and operate ships, and carry on a general transportation and navigation business.

Great Lakes Grain Rates Commission's Report Criticised by J. W. Norcross.

J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines Ltd., gave out the following statement in Montreal, recently:—"The findings of the commission, as reported in the press, (See Canadian Railway and Marine World for June, pg. 305), are so radical in their scope that it is almost impossible in a brief review, to show how unfair and even futile are the recommendations that they make. Even a superficial study of the situation as it exists, and a comparison with conditions as they were in the last ten years, will indicate that the commissioners have not taken into account the abnormal and even extraordinary results that accrued as a consequence of the United States railway strike in 1922, but have seemingly taken the occurrences of that year as being generally applicable to the grain carrying trade every year.

"Much is said in the report about the high level of the rates in 1922—the commission might have referred to the figures compiled by the Dominion Bureau of Statistics, Transportation Branch where they would have seen that the rates charged not only to Canadian ports from Fort William or Port Arthur, but to U.S. ports were less last year than they were in 1920 and in several years previous to that, despite the abnormal conditions that existed in 1922 through the railway strike across the border and the consequent increased demand for shipping.

"Furthermore, while admitting that grain can be more rapidly discharged from Fort William than it can be transferred at Port Colborne, Montreal and Quebec, the commission does not place its finger on the crux of the whole situation, and deal boldly with the lack of elevator storage at what may be described as 'the neck of the bottle.' Ten years ago the elevator accommodation at Fort William provided for the storage of 35,000,000 bush. of grain, while the elevators of the Georgian Bay ports had a capacity of 11,000,000 bush., at Port Colborne of 4,500,000, and at Montreal of 8,500,000. 'Since that time Fort William elevator capacity has been increased to 60,000,000 bush. in order to cope, in some measure, with the much heavier annual crop, but the elevator space at the Georgian Bay ports, at Port Colborne and at the neck of the bottle,—Montreal,—has not been increased by a bushel. True there is an elevator at Depot Harbor, belonging to the Dominion Government, but that has been leased to the Armour Co. of Chicago, for the handling of U.S. grain, and so cannot be taken into consideration as a means of aiding in the rapid handling of Canadian grown grain.

"Instead of dealing with this question the royal commission proposes that there should be a maximum rate fixed by a commission similar to the Board of Railway Commissioners, and that the coastal laws of the Dominion should be suspended by the Governor-in-council, when the commission so advises, in order to allow U.S. shipping, fully protected in its own coastal trading, to compete with Canadian ships in the coastal trade of the Great Lakes. Has a thought been given to what effect this will have on the Canadian inland merchant marine and on the shipbuilding industry of Canada?

"At present the U.S. ships are engaged throughout the summer, under the protection of their coastal regulations, in carrying coal and ore between U.S. ports.

As a rule they go into the grain carrying business only for one or two trips in the spring and in the late fall, when they carry grain from Fort William to Buffalo. The Canadian ships are practically barred from the coal and ore trade in the summer, except an occasional cargo from a U.S. to Canadian port. Consequently, their average earnings are less. And yet it is proposed to fix a maximum rate for Canadian ships during the spring and fall, and allow U.S. boats to enter into competition with them with no restrictions whatever. The advent of U.S. bottoms into the Dominion coastal trade would only make confusion worse confounded—the elevator capacity at Canadian ports is insufficient to handle the Canadian borne cargoes, with the addition of U.S. tonnage, and the delays in unloading would be greater, with a consequent increase in the rate to allow for demurrage.

Dominion Marine Association.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

"If the shipping companies could fix a rate for transportation and have in their contracts a demurrage clause, the question of rates would be one easy of settlement, by an agreement between producers and carriers. But the grain shipper cannot do business with a demurrage clause. He has to quote an inclusive price for the shipment of grain he wishes to sell to the foreign buyer, and he will not take the risk of gambling on the amount of demurrage that may or may not have to be paid, owing to the lack of facilities for handling the grain at either the Georgian Bay ports, Port Colborne or Montreal. The facilities for handling grain at Buffalo are greater because of the rail connections that can be made with the U.S. sea ports, and if there is any question of demurrage the shipper will have his cargoes sent to Buffalo and thence to the seaboard instead of by the Canadian route.

"The practically unanimous testimony given before the royal commission that the suspension of the coastal regulations would mean the killing of the Canadian

shipbuilding industry cannot be swept aside by the assertion, made by counsel for the Government, that the shipbuilding business was at a standstill before the war. Practically all of the Upper Lake Canadian tonnage was built at Canadian yards prior to this period, and if there is no capital provided to replace these ships, when they become obsolete, it will not be long before there are no Canadian ships nor any Canadian shipyards. And capital will certainly not be attracted for Canadian built ships, sailing under Canadian registry, if there is no guarantee to the investor that his ships, when built, will be protected in their Canadian coastal trade, but will be subjected to the competition of U.S. ships, that are strongly protected in their own coastal trade and yet will have the full privileges of the Canadian coastal trade. The incentive to invest money in Canadian tonnage would disappear, Canadian boats would gradually disappear from the lakes, and the enormous grain harvest of Canada, valued at something like \$500,000,000 would be gradually diverted to U.S. lake ports, feeding U.S. railways and U.S. ocean tonnage, while the Canadian railways and the port of Montreal would cease to have their fair quota of the Canadian grown product. If this policy were carried out there would be no need of the Government considering any addition to the existing elevator space, it would be more than ample for the little grain that the Americans would send through the Canadian ports at either Port Colborne or Montreal.

"Any Canadian ship owner is entitled to a fair return on his investment—if, through reasons over which he has no control, his ships are delayed at the unloading points, with consequent loss of earnings, it is the duty of the Government, not to fix a maximum rate which takes no account of such delays, but to take such steps as are necessary to minimize the delays as much as possible and thus allow of greater average earnings and consequent cheaper rates. While the Government may, through the Board of Railway Commissioners fix railway freight rates, with more or less success, they would be undertaking an entirely different proposition in handling waterborne freight rates, for conditions are not only entirely different from a basic standpoint, but there are a hundred and one factors that have to be taken into consideration, from week to week, and almost day to day in calculating a fair rate for such a seasonal traffic as grain. The various owners of lake steamships may have conferred together with a view to protecting themselves last year against the decided disadvantage under which they were operating—due entirely to the congestion caused by the U.S. railway strike and the consequent long delays in unloading cargoes—but no evidence was submitted to the commission to enable them to declare that unfair rates were charged or unduly large profits secured.

"According to the Dominion Bureau of Statistics the average figure for Georgian Bay ports was, per 100 bush., \$4.13, for Port Colborne \$3.81, and for Buffalo \$4.49, while the rate from Fort William to Montreal by the all-water route was \$10.60. Those were for 1922, an abnormal year. In 1920 the Georgian Bay rate was \$4.17; Port Colborne \$4.57; Buffalo \$5.70; and Montreal \$11.04. In 1918 the Georgian Bay rate was \$4.32,

in 1917 it was \$4.25, and in 1916 the same as last year, \$4.13. The rate to Port Colborne was \$4.48 in 1918, \$4.18 in 1917, and \$3.89 in 1916, while the rates to Buffalo were \$5.70 in 1920, \$5.00 in 1917 and \$4.25 in 1916. The all-water rate to Montreal last year was \$10.60, in 1921 it was \$10.86, in 1919 it was \$10.76 and in 1918 it was \$11.39. It will thus be seen that the rates charged by Canadian ships to Port Colborne, under the protection of the coastal regulations, were much less than the U.S. rate to Buffalo, and it is safe to assume that the advent of U.S. shipping into the Canadian port-to-port trade would only make congestion worse and add to the cost of transporting the cargo.

"Another point that would have to be carefully considered in fixing a maximum rate would be the cost of operating different sizes of ships. The cost of operating a ship which could carry approximately 450,000 bush. is not three times the cost of one that can carry 150,000 bush., and if the maximum rate were fixed on the operating cost of the larger type of tonnage, it would naturally mean that those operating ships of a limited capacity would have to carry a larger proportion of operating cost and would soon be forced out of business. The Government ships now operating on the lakes are an example of the wide variation in operating cost. Two of these, carrying 100,000 bush. each, take 24 hours to unload at Port Colborne, whereas a ship specially built for the grain trade carrying 400,000 bush. can be unloaded in 20 hours. How can any commission fix a rate that would be fair in such a case? If a maximum rate is fixed, without a demurrage clause, which is not sufficient to take care of the cost of operation owing to congestion, the result would be that the ships would be tied up, and the Canadian grain crop, in place of moving east of Fort William, would congest west of Fort William and would not get out of the country, with disastrous results to the producers. The history of water transportation includes a number of attempts by governmental bodies to control freight rates on water transportation, but so far without success, and in the interests of everybody connected with the grain business, the producer, the shipper, and purchaser, and above all in the interests of the development of Canadian trade through Canadian channels, it would be better if the idea of fixing a maximum rate were discarded, the coastal regulations left to protect Canadian trade, and the Government devote its energies to increasing the facilities for the more rapid handling of grain at the Georgian Bay ports, Port Colborne, Montreal and Quebec, and reducing the terminal charges on the transfer or unloading of grain at these points, these being matters which are supposedly under the Government's control. If the Commission's recommendations were carried out, it would mean the sacrificing of Canadian capital, shipbuilding, shipbuilding and other industry for the benefit of the U.S. ship owners and ship builders."

La Cie de Transport de Fret de Gaspé Ltee. has been incorporated under the Quebec Companies Act, with \$20,000 authorized capital, and office at Quebec, Que., to own and operate ships, and carry on a general transportation business by water. The incorporators are,—Alphonse Gustave, Edmond, Arthur, Ulric and Alphonse Tremblay, Jr.

Dominion Marine Association's Activities.

The Dominion Marine Association's executive committee met in Toronto, June 5, and dealt with a number of matters relating to Great Lakes and St. Lawrence River navigation.

It was decided to urge the Dominion Government to intervene and ask for prompt measures to restrain the diversion of more than the permitted amount of water from the Great Lakes through the Chicago Drainage Canal. The diversion to the Gulf of Mexico of water which should reach the Gulf of St. Lawrence has already had a serious effect upon lake levels, with corresponding effect on the carrying capacity of ships, which may lose from 35 to 75 tons for each inch of draft. The treaty of 1910 placed the users of water in the order of, sanitation, navigation, and power. Chicago is using a wasteful method of sanitation, by dilution and flushing. The Association wants the diversion limited to 4187 cu. ft. a second, as authorized at Washington in 1912 and greatly exceeded in practice.

Permission will be sought for steamships to carry through the Welland Canal at a slightly greater draft than 14 ft. Their construction is sufficiently rigid to prevent "hogging" and if 14 ft. 4 in. is available, it should be utilized.

The dangerous upper entrance of the Morrisburg Canal should be improved, without more delay, either by extending the south bank upstream, or moving the lock farther down the canal. Representations will be made to the Railways and Canals Department that as the larger scheme of development of the river is being deferred, a small expenditure should be made to prevent the constant repetitions of disasters.

The Association will join with the Shipping Federation of Canada, representing ocean tonnage, in asking for abolition of the compulsory payment of pilotage dues on the St. Lawrence below Montreal. Legislation will be sought at the next session of parliament to remove this tax which serves no necessary purpose. Pilotage is not compulsory.

The committee appointed to interview authorities at Ottawa regarding steamboat inspection rules and fees presented a long report, and was continued. It will compile further data for action at the next meeting.

The official closing of the Sault Ste. Marie Canal on Dec. 14 was agreed to, and the Dominion Government will be asked to consider contracting for ice breaking on the St. Mary River, with due regard to the opening and closing of navigation, artificial or otherwise, at Fort William.

Representations are to be made to the Montreal Harbor Commission as to the urgent need of improvements in conditions at that port, with reference to lake ships. The Grand Trunk Ry. elevator is doing very little to help discharge lake cargoes. Up to June 4 only 6 ships had been unloaded at that house. Even at the Commission's elevators 1 and 2, cars are engaging a great deal of attention at the expense of water borne traffic, conditions being worse than last year, when lake ships suffered so much through lack of dispatch. Complaint will also be made to the Commission concerning the very excessive charges for shoveling grain, which result in excessive profits to the Commission, and with reference also to the extremely un-

satisfactory service given both in the matter of delays and overtime charges.

Beyond offering its assistance, the Association did not, as an organization, take any part in the hearings of the royal commission on grain freight rates, as the question of rates does not come within the scope of its constitution or duties; but as two of the commission's recommendations involve points in which the Association is very deeply interested and upon which it has repeatedly declared itself, it was resolved to protest to the Dominion Government against any interference with the coasting laws, even to the extent of giving power to the cabinet to suspend them in whole, or in part, unless similar action is taken by the United States Government. The Association would welcome reciprocity in coasting, and would be well content with the resulting increased competition, but it continues to protest emphatically against anything so unjust and destructive of stability as the one sided arrangement recommended. It was also resolved to point out that the fixing of a maximum rate proposed by the commission is impracticable, for many reasons, all of which were successfully advanced by the Association at successive sessions of Parliament, in opposition to the Armstrong bill designed to place all ships under the Board of Railway Commissioners, prominent among which are the facts that the life of the bulk freight business throughout the world is freedom of competition, and ability to meet changing conditions on the instant; that if ever a commission succeeds in fixing a maximum rate fairly, that maximum will naturally become the rate, that booking will consequently be affected, adversely to the shipper, who, himself, wishes to be free, and that with a fixed rate a demurrage clause in the contract, such as the Association has always advocated, will be necessary, in order to provide protection against loss of dispatch such as was suffered by the ship owners in 1922, and that the shipper has always consistently opposed any move for a demurrage clause, and will presumably do so again.

Welland Canal Navigation Notices.—

Until further notice, no ships will be allowed to enter and pass down the Welland Canal, drawing more than 14½ ft. of water, and no ship will be allowed to enter and pass up the Welland Canal, drawing more than 14 ft. The minimum clearance is only about 12 in. between the face of the walling and the steel work of the new single track swing bridge, carrying the Canadian National Rys. Welland Division tracks over the canal immediately below lock 25, south of Thorold. Ships bound both up and down, must exercise the greatest possible caution when passing through the draw of this bridge, and, in order not to strike the bridge members, all ships must have nothing extending beyond her sides nor any list. Upbound ships, in particular, must proceed at slow speed and be exceedingly careful to enter the draw in parallel alignment with the axis of the open bridge.

Mowat Towing Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$75,000 authorized capital, and office at Vancouver, to own and operate ships, and also carry on towing business.

Canadian Government Merchant Marine Operations, Etc.

Appointment.—C. K. James, of the C.G.M.M. head office, has been appointed acting Purchasing Agent at Montreal, consequent on the appointment of J. W. Corbett, formerly Purchasing Agent, C.G.M.M., as Assistant Purchasing Agent, Canadian National Rys., Toronto.

Officers of Steamships.—The following appointments and changes of captains have been made since those mentioned in our last issue:—Canadian Beaver, A. E. Seamen; Canadian Carrier, W. B. Armit; Canadian Farmer, J. McKernon; Canadian Sailor, O. C. Percival; Canadian Traveller, W. G. McConechy; Sheba, H. J. Hubley. The following chief engineers have also been appointed: Canadian Beaver, W. R. Jones; Canadian Logger, C. Underwood; Canadian Trader, G. Dennison.

The s.s. Canadian Explorer, which ran aground in the St. Lawrence River, near Vercheres, Que., June 2, after sailing from Montreal for Cardiff, was refloated the same day, without damage, after about 450 tons of grain had been lightered. She returned to Montreal to reload her cargo, and resumed her voyage the following day. The master, Capt. W. Wyman, stated that, shortly after leaving port, he found that progress was impossible, on account of the dense smoke from forest fires, and when near Vercheres he decided to anchor, and in doing so, grounded on the south side of the channel.

The barquentine S. F. Tolmie, which arrived at Victoria, recently, from the southern Pacific, reported a considerable amount of damage due to heavy weather. Some repairs were made at Honolulu, and complete repairs will probably be done at Victoria. Among the repairs required are new topgallant mast, yards, sails, rigging and some repairs to the hull. Tenders will be received to July 2, for the purchase of this ship, as she lies at Victoria, B.C., where she may be inspected. She was built in 1921 at the Cholberg shipyard, by Victoria (B.C.) Shipowners Ltd., under special aid from the Dominion Government, and was taken over and completed by the Government, on the bankruptcy of the building company, and handed over to the Canadian Government Merchant Marine for operation. She has since made two trips, one to Japan, and one to Australia, on which latter trip, she suffered considerable damage in heavy storms. Her dimensions

are,—length 235 ft., breadth 45 ft., depth of hold 19.9 ft.; tonnage 1,612 gross, 1,497 net.

Cattle Shipments to Great Britain.—It is announced that, as a result of negotiations with the Dominion Agriculture and Marine Departments, six C.G.M.M. ships will be fitted to carry cattle to Great Britain. As they were not designed for this traffic, the cost of completely fitting them would be prohibitive, so they will only be partially equipped, to carry 208 cattle each, the cost of such equipment, being comparatively small. Wooden stalls will be fitted on the fore and aft decks, under the Marine Department's approval. It is said that the service will be given during July, August, and September, when weather conditions are at their best and that shipments will be made from Quebec, as well as from Montreal, the Quebec Harbor Commissioners having on short notice, provided special cattle shipping facilities.

Montreal Sailings.—

London and Antwerp service;—Canadian Challenger, July 4; Canadian Planter, July 18; Canadian Commander, Aug. 1; Canadian Conqueror, Aug. 15; Canadian Challenger, Aug. 29.

Cardiff and Swansea service;—Canadian Victor, July 4; Canadian Mariner, July 13; Canadian Explorer, July 27; Canadian Leader, Aug. 10; Canadian Victor, Aug. 24.

St. Kitts, Antigua, Barbados, Trinidad and Demerara service;—Canadian Carrier, July 11; Canadian Otter, July 25.

Hamilton, Nassau, Kingston, Belize service;—Canadian Fisher, July 6; Canadian Forester, July 27; Canadian Fisher, Aug. 17.

St. John's, Nfld., via Charlottetown, P.E.I. service;—Canadian Sapper, July 17.

Australia and New Zealand service;—Canadian Constructor, July 28.

Vancouver, B.C. Sailings.—

Australasian service;—Canadian Importer, July 30, for Sydney and Melbourne; Canadian Scottish, Aug. 25 for Auckland and Sydney; Canadian Traveller, Sept. 15 for Melbourne and Adelaide.

Oriental service;—Canadian Highlander, July 15; Canadian Freighter, Aug.

10; Canadian Skirmisher, Sept. 10, for Yokohama, Kobe and Shanghai.

Indian service;—Canadian Britisher, Aug. 10, for Bombay.

Coastal service, Vancouver to San Francisco;—Canadian Observer, July 1; Canadian Volunteer, July 8; Canadian Rover, July 15.

Montreal Ship Checkers' and Coopers' Wage Dispute.

A board of conciliation, consisting of E. McG. Quirk, chairman; Bernard Rose, named by the Labor Department to represent the employers, who refused to name anyone, and J. G. O'Donoghue, K.C. on behalf of the men, appointed under the Industrial Disputes Investigation Act, to enquire into differences between the Shipping Federation of Canada, Canadian Pacific Steamships Ltd. and certain checkers and coopers, members of the Brotherhood of Railway, Steamship Clerks Freight Handlers, Express and Station Employees, reported June 1, that every effort had been made to get the parties to meet and effect an adjustment, but no settlement could be reached that was mutually satisfactory. The employers' position is, that owing to conditions prevailing, the low rates paid for freight, and business being carried on at a loss during the past two seasons, they cannot afford to pay more than they are doing. The board reported that it found itself in a quandary, owing to the fact, that it ascertained that checkers employed on the wharves by railways, are paid at a rate even higher than that which the employees are demanding from the shipping interests. It therefore reported as being unanimously of the opinion, without going further into the merits of the matter, that the employees are entitled to consideration in the matter of an increase. We are advised that the employers have decided not to accept the board's suggestion, owing to the unsatisfactory condition of the shipping industry.

Pacific Navigation Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$50,000 authorized capital, and office at Vancouver, to own and operate ships, and carry on a general transportation and navigation business.

Ships Registered in Canada in March, 1923.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Stranding of the s.s. Gyp.

Held at Halifax, N.S., May 23, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. Neil Hall and F. H. Lardner, as nautical assessors, into the strandings of the British s.s. Gyp at Port Medway, N.S., on April 19 and 23, when she received material damage to her hull on the second occasion. The evidence of Capt. G. W. Wood, master of the Gyp, showed that she left Port Medway wharf, for Rouen, with a full cargo of pulpwood, and when at about $\frac{3}{4}$ mile off, a buoy being seen on the starboard side, the pilot, whom he had been specially instructed to employ, and no one else, gave the order to port, which was obeyed immediately. The ship was moving very slowly, and another buoy was reported ahead, and the third officer, who was at the wheel, was told to steer between the two buoys, the ship grounding in soft mud. There were two pilots on the bridge, but only one gave orders, and as soon as the ship was found in a dilemma, they pulled ashore and never offered help, suggestion or excuse. After several days, during which several efforts were made to refloat the ship, and the discharging of some 200 tons of the cargo, she floated off uninjured, and reloaded her cargo at the wharf. On the occasion of the second stranding, the two pilots were again on board, and on nearing the last buoy in the channel, the order hard to starboard was given, and the ship grounded after several shocks. Soundings were taken, and water was found in holds 1 and 2. She was refloated with the assistance of tugs. The pilots left the ship immediately after she grounded, without offering assistance or suggestion. In view of the incomplete evidence, and the absence of the self styled pilot, the officers' certificates were returned.

The court pointed out that the master was a stranger in the neighborhood, not provided with the necessary local chart, and relied on the strong recommendation of his agent as to the efficiency of the pilot, and, in connection with the first grounding, there being so little time between the pilot's order and the grounding, for a decision to be arrived at as to the desirability of countermanding the order, the master was exonerated. The second grounding was attributed solely to the pilot's carelessness, and the court stated that on both occasions the pilot, or pilots, showed unjustifiable carelessness in placing the ship in such a dilemma, and indifference in leaving the master without help or suggestion. The master, though exonerated, was cautioned that, in the future, when obliged to employ, upon outside recommendation, any local assistance, to bear in mind that it is his duty to scrutinize and question the orders given by local pilots unrecognized by any competent authority. Moreover, he should have secured, at St. John, or Digby, a chart of larger scale than the one he had, which was of no use for practical purposes, but on this point, the court expressed the opinion that as he had a letter from his agent with the recommendation to employ no one else but the party whose name was mentioned, he felt the purchase of a chart unnecessary. The

pilot, named Mathers, of Halifax, recommended by the agent, does not hold a license as a pilot, but the other man claimed to have a pilot's license, though he did not produce it, and as the pilotage commission for the district has ceased to exist, such a license cannot be valid. The court suggested that if ships are to frequent such harbors it would be well to have some supervision over men directed to pilot them, the statement that such men hold a pilot's license, unrecognized by the Government, may lead agents and masters into grave errors. It was stated in evidence that the buoys were weather worn, and could scarcely be recognized, and the court stated that it understood that the contract for the laying of the buoys in the spring, when the ice has gone, calls for the placing of them in their proper positions, and bearing their distinctive signs, i.e., painted the color indicating the edges of the channel. It was also stated that the port buoy was only 2 ft. above the surface, and therefore could not be seen readily. The court recommended that, if this is the case, the spars used for marking channels be placed at least 6 ft. above the water.

United States Merchant Marine Affairs.

The U.S. Shipping Board received an offer, at the end of May, of \$1,051,000, from Columbia Postal Supply Co., Silver Creek, N.Y., for all its ships, active and inactive, and all its other property, real, personal and mixed. The offer was subject to acceptance up to July 1, and a bond of \$1,000,000 was offered as a guarantee for the signing of the contract if awarded. The offer provided for payment of \$51,000,000 on Oct. 1, and \$50,000,000 annually, in quarterly payments, with interest on deferred payments at 4½%, the Board to have the right to extend payments of principal or interest, such extensions to be at 5% interest. The company offered to agree to operate the present lines with at least as good service as rendered by the Shipping Board during the entire life of the agreement, the Board to have the right to repossess the property at any time there might be default in any payment of principal or interest. The offer was not considered seriously, the chairman of the Board having made the following statement: "Not one cent accompanied the offer. The \$1,000,000 guaranteed to be paid down represents one-tenth of 1%, down payment, and it is asked that we hold all our property intact and do nothing until next October, when \$50,000,000, or 5% of the purchase price, will be paid. While, of course, the Board

would like to sell its fleet for \$1,000,000,000, it should be said in passing that that amount is several times the highest inventory value of the fleet the Government owns, based on present world market prices, since this inventoried value does not exceed \$300,000,000."

It was announced later that the bid for the ships had "exploded," the President of the company being reported as having stated that he had no intention of paying that sum for the ships, but that he might pay \$250,000,000, and was going ahead with his plans to get a bond.

Canadian Navigation Claims Against Germany.

Under the treaty of peace between the allied and associated powers and Germany, Hon. Wm. Pugsley, K.C., formerly Lieutenant-Governor of New Brunswick, has been appointed a royal commissioner, under the Inquiries Act, to investigate all claims for reparation, and to report, to the Government. In all, 837 claims have been made, the commissioner being empowered to deal only with civilian claims. Sittings have been held at Ottawa and Montreal, and a number of claims have been heard, the sittings mentioned dealing at present with local claims only. The German Consul was notified of the hearings, but was not represented. The largest claims up to the present, are Canada Steamship Lines Ltd., \$3,651,639.38, and Battle Line Steamship Co. Ltd., \$3,400,000. Considerable evidence has been taken on the first claim, but the second one has been adjourned to September. Numerous claims of a more or less minor nature have also been heard, and on the adjournment, June 19, it was stated that 62 claims, involving about \$6,000,000 had been accepted for consideration. Canada Steamship Lines' claim is for the loss of 11 steamships, as follows,—

Name	Date lost	Value	War risk insurance received
Midland Queen	Aug. 4, 1915	\$560,000	\$162,546
Empress of Fort William	Feb. 27, 1916	760,000	194,666.65
Empress of Midland	March 27, 1916	760,000	194,666.65
Dundee	Jan. 31, 1917	580,000	305,955.57
Strathcona	Apr. 13, 1917	540,000	294,433.33
Neepawaw	Aug. 2, 1917	432,000	321,200.
C. A. Jacques	May 1, 1917	630,000	364,999.99
D. A. Gordon	Dec. 13, 1917	660,000	255,350.50
Armonia	March 15, 1918	1,490,000	1,010,681.33
Tagona	May 16, 1918	550,000	485,900
Acadian	Sept. 16, 1918	669,000	388,960
		<u>\$7,631,000</u>	<u>\$3,979,360.02</u>

The Battle Line Steamship Co's claims is for the internment of two ships by German enemy during the war.

Atlantic and Pacific Oceans.

The Gulf of St. Lawrence was finally reported to be clear of ice, June 7, after a season of unprecedented conditions.

The Danish s.s. Maersk, in endeavoring to force a passage through ice off Anticosti Island, at the end of May, sustained extensive damage to her propeller and had to be towed to Gaspé by the C.G.S. Montcalm.

The Ratchitch Steamship Co., Dubronivik, Jugo-Slavia, is reported to be arranging for the establishment of a service between Serbia and St. Lawrence ports. The company's s.s. Marija Ratchitch, which arrived at Montreal recently, took grain for Western Italy.

The White Star-Dominion Line's s.s. Doric arrived at Quebec, June 18, on her maiden trip from Great Britain, and proceeded to Montreal, where she arrived the following day. She is 16,600 gross tons, and is said to be the largest ship to enter the port. She was open for public inspection, June 20, and on June 21, a luncheon was given to a number of ticket agents from large points.

The C.P.R. s.s. Empress of Canada, which arrived at Victoria, B.C., June 17, from Yokohama, Japan, in 8 days, 10 hrs., 53 min., made a new record, and broke the record of the company's s.s. Empress of Russia, of 8 days, 16 hrs., 31 min., which has stood since 1914. The average speed between Yokohama and Vancouver Island, was 20.6 knots.

The Head Line s.s. Torr Head arrived at Montreal at the end of May from Belfast, Ireland, on her maiden trip. She was built at Belfast and has a d.w. tonnage of approximately 8,000, and is named after the old s.s. Torr Head, which operated on the St. Lawrence route for several years, and was torpedoed during the war. In addition to her cargo capacity she is fitted with accommodation for 16 first class passengers.

A direct steamship service between Montreal and Central American ports is announced for early July, with the sailing of a 7,000 ton steamship by the Aube Steamship Co., under the management of Mapes and Ferdon, Montreal. It is stated that a round trip, calling at the principal ports of Mexico, Colombia and Venezuela, will be made, in 60 days, to ascertain the possibility of developing sufficient trade to warrant a permanent service.

The Donaldson Line s.s. Coracera arrived at Montreal at the end of May on her maiden trip. She was built at Glasgow, Scotland, has a d.w. tonnage of 8,950, and has been specially built for carrying frozen and chilled meats, etc., every hold being fitted so that the temperature can be maintained at 5° below zero F. She is equipped with reciprocating engines, and uses oil fuel, maintaining a speed of about 13 knots on a consumption of 329 tons of oil. She is running between Liverpool and Montreal.

It is reported from Victoria, B.C., that an intercoastal service between Victoria, Vancouver and Montreal, via the Panama Canal, will be established shortly, with the steamships Margaret Coughlan, City of Victoria and City of Vancouver, operating via the Panama Canal. The s.s. Margaret Coughlan has already made trips from the Pacific Coast to Montreal, chiefly with lumber for the Montreal Harbor Commissioners' use.

Maritime Provinces and Newfoundland.

The s.s. Stellenwerf, owned by H. L. Thorne, St. John, N.B., has had her name changed to Bo Peep.

The Commercial Cable Co.'s new cable steamship Marie Louise Mackay, arrived at Halifax, N.S., June 11, from Plymouth, Eng. On the voyage out, she made soundings between the Azores and Halifax, in preparation for the laying of an additional trans-Atlantic cable.

The Clarke Steamship Co. is reported to be contemplating the extension of its north shore steamship service to Newfoundland. D. A. Clarke, President, visited various ports along the route on the s.s. Gaspesia, recently, and continued to Newfoundland, to examine the possibilities of such an extension.

The C.P.R. s.s. Marvale, which was wrecked off Cape Freels, Nfld., May 21, broke up on June 11, while salvage operations were being conducted. It is stated that the mails and three safes containing cash and valuables, from the purser's office, and the ship's log, manifests and other papers were salvaged.

Imperial Oil Ltd. tank s.s. Imperoyal, while proceeding from Montreal to Halifax empty, ran ashore on Grimes Rock, near Canso, N.S., June 15. She was refloated later in the day and is stated to have been badly damaged. She proceeded to Halifax, under her own steam, accompanied by the C.G.S. Arras.

The Newfoundland Shipping and Trading Co. has been formed to operate a steamship service between St. John's and Montreal, and between St. John's and Labrador, and will, it is said operate three ships. The s.s. Mons sailed from Montreal recently on the first trip to St. John's direct, and on subsequent trips, calls will be made at Charlottetown, P.E.I.

A St. John's, Nfld., press dispatch states that, as the result of the recent general elections, several changes have been made in the Government, that Hon. Walter Cave, formerly Minister of Shipping, has been appointed Minister of Finance, and that the Shipping Department is to be abolished, and its work transferred to a bureau under the Marine and Fisheries Department.

The Maritime Wrecking and Salvage Co.'s s.s. Maggie Marshall, which was wrecked at Cape Hogan, near Halifax, recently, is a total loss, having had her back broken and her stern post lost. She was built at Manistee, Mich., in 1873, and was screw driven by engine of 54 h.p. Her dimensions were,—length 150 ft., breadth 30 ft., depth 11.3 ft., tonnage 572 gross, 385 net. She was fully equipped with pumps and machinery, and was a most efficient wrecking and salvaging ship.

The Intercolonial Navigation Co. has commenced a fortnightly steamship service with the s.s. Advance, between Boston, Mass., Halifax, N.S., and St. John's, Nfld., and, during July, it will put the s.s. Alliance on a semi weekly service between Boston and Halifax. These steamships were owned formerly by Panama Canal Ry. Co., and ran between New York and Colon. The Intercolonial Navigation Co. was incorporated recently of Maine, U.S.A., with an authorized capital of \$500,000 and R. H. Brann, as President.

Province of Quebec.

The Montreal Harbor Commissioners' machine and carpenter shops on the Mackay pier were destroyed by fire towards the end of May, the damage being estimated at \$175,000.

The Bay Line Steamship Co.'s s.s. Oakbay, formerly the French s.s. Marineur, underwent temporary repairs at Montreal, recently, following an accident when her stem was bent and 12 plates damaged.

The Marine Department's s.s. Eureka was offered for sale by tender, to June 20, as she lay at Sorel, Que. She was built at Glasgow, Scotland in 1893, her dimensions being, length 94.7 ft., breadth 22 ft., depth of hold 11.9 ft., tonnage, 170 gross, 70 net.

The Dominion Public Works Department is continuing the dredging of the north channel at the Island of Orleans, in the St. Lawrence River, which was suspended during the winter. It is anticipated that the work will be continued through several seasons, so that the passage may be used by ships of a large type.

Canada Steamship Lines' s.s. Richelieu sailed from Montreal, June 9, on a preliminary trip to Quebec, prior to being placed in the regular tourist service between Montreal and the Saguenay. As she left the pier at Montreal, she was christened by Mrs. J. W. Norcross, wife of the Vice President and Managing Director. The party on board consisted of about 400 business men, who were accompanied by W. H. Coverdale, President of the company. Her dimensions are, length overall 332 ft., breadth over guard 66 ft., depth moulded 21½ ft., draft 15½ ft. The planning of the passenger accommodation allows for 220 outside rooms, and permits, besides the ordinary outside type rooms, parlors with twin beds facilities, staterooms with double lower and single upper berths built in echelon, verandah rooms, etc., from which the scenery may be viewed without having to go out on deck, and offering privacy for those who desire it.

The contract for the operation of the ferry service between Quebec and Lévis, was offered at auction at Quebec, May 30, at the upset price of \$4,000, and was immediately knocked down to Lévis Ferry Ltd. for \$4,001. No other bid was made, although the Quebec and Lévis Ferry Co. which had been negotiating for the contract, had deposited \$50,000 as a guarantee. The contract is for 15 years, similar to the one at present in force, which does not expire until April 30, 1925. It is provided in the new contract that the boats used will have to give more accommodation than at present, but the present boats may be used, provided they are altered to suit the conditions laid down. Some changes in rates for passengers and automobiles are provided for in the new agreement. The Lévis Ferry Co.'s annual meeting was held June 5. Following are the directors for the current year,—G. E. Tanguay, President; H. A. Galipeault, K.C., Vice President; J. Demers, G. Cote, J. Gosselin, J. Carrier and M. Dion.

Vancouver Grain Shipments.—During April, 1,554,099 bush. of wheat were shipped by ocean steamships from the Dominion Government elevator at Vancouver, B.C., in 18 ships, of which 9, with 1,076,966 bush., were for United Kingdom ports, and 9, with 477,133 bush., for Japanese ports.

Ontario and the Great Lakes.

The Chicago, Duluth and Georgian Bay Transit Co's steamships North America and South America, which have been converted into oil burners, have been replaced in service.

The Lake Superior Paper Co. is reported to have bought the steam tug Gargantua, to replace the steam tug Reliance, which was lost on Lake Superior at the end of 1922. The Gargantua's dimensions are, length 150 ft., breadth 30 ft., depth 17 ft. She was overhauled by Toronto Dry Dock Co. recently.

The Great Lakes Transportation Co's s.s. Matoa, which was cut in two at Montreal, recently, for passage through the canals, is being rejoined, and lengthened by 36 ft., by Collingwood Shipbuilding Co., Collingwood. The s.s. George E. Hartnell which was rebuilt and remodelled recently by Midland Shipbuilding Co., Midland, is operating between Midland and Fort William.

The United States Lake Survey reports the stages of the Great Lakes for May in feet above mean sea level as follows:—Superior, 601.65; Michigan and Huron, 579.60; St. Clair, 574.55; Erie, 571.87; Ontario, 245.62. Compared with the average May levels for the past 10 years, Superior was 0.49 ft. below; Michigan and Huron, 1.13 ft. below; Erie, 0.97 ft. below; Ontario, 1.07 ft. below.

The Montreal Transportation Co., a subsidiary of Canada Steamship Lines Ltd., has appealed against the Exchequer Court's judgment in connection with the loss of the barge Quebec, as a result of an explosion at the Dominion Government grain elevator at Port Colborne. The company failed in its claim for \$125,000, it being held that the government and its employees were not responsible for the damage.

The George Hall Coal and Shipping Corporation's s.s. James W. Follette which was badly damaged recently in a storm on Lake Ontario, is lying at Ogdensburg, N.Y., and will, it is said, be dismantled and broken up. She was built at Gibraltar, Mich in 1881 and was originally named Jesse H. Farewell. She has an oak hull of the following dimensions,—length b.p. 212 ft., breadth moulded 35 ft., depth moulded 12 ft. She is equipped with fore and aft compound engine, with cylinders 27 and 44

in. diar. by 40 in. stroke. 600 i.h.p., supplied with steam by a firebox boiler 10 ft. diar. by 16 ft. long at 125 lb.

Canada Steamship Lines Ltd. contemplates building a steamship for its Toronto-Niagara service, and we are officially advised that plans and specifications are being prepared by A. Angstrom, naval architect, Toronto, for a ship to carry approximately 4,000 passengers. It is expected that the plans will be ready by Sept. 1, when tenders will be invited for the ship's construction, with the intention of having it ready for service in 1924. A few years ago the company considered the building of an additional ship for its Toronto-Niagara service, and plans were drawn by Mr. Angstrom, but work was not proceeded with on account of general business conditions. The plans for the new ship will not be the same as those prepared a few years ago.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Hudson's Bay Co's steamboat Athabasca River, arrived at Fitzgerald, May 22, from Waterways.

The Alberta and Arctic Transportation Co's steamboat Slave River was the first to get through to Chipewyan, Lake Athabasca, this season. She was held for 5 days in ice at the mouth of the Athabasca River.

British Columbia and Pacific Coast.

The Union Steamship Co. of British Columbia is preparing plans for a new steamship for its Howe Sound service, and expects to place the contract for its construction in sufficient time to have the ship ready for next year's work.
